FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 24, 1889.

VOL. XXXII.—No. 1. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

A PROPOSED ZOOLOGICAL GARDEN.

BILLS have been introduced in the New York State Senate and Assembly, providing for the appropriation of $300,000 for the establishment of a zoölogical garden in the Central Park in New York city. The fact that New York has no garden of this kind has long been felt to be a shame to this city. But, while we ought to have such a garden, it may be questioned whether it is wise to attempt to establish one in the way provided by these bills.

Although Central Park is at present much nearer to the thickly settled portion of the city than any other park which would be available for the purposes of a zoölogical garden, there is in the public mind a well settled feeling that no part of that pleasure ground should be given up to this purpose. The project has been started again and again, but has always been met with the objection that there is in Central Park no tract of land which can be used as a zoölogical garden without seriously injuring the park as a whole. We do not believe that this objection can be overcome, for it is well founded. The proper place for such a garden is in one of the smaller, newer parks, which, though further up town, will eventually be in the central part of the city. In more than one of these parks there is abundant room for such a garden, with land sufficiently varied in character to give to many animals surroundings which approach in some degree those amid which they dwell in nature.

Nearly ten years ago the Universal Conservatory and Zoölogical Garden Company was formed for the purpose of starting here in New York a "zoo" on the plan of that of London or of the Paris Jardin des Plantes. Connected with this company was some one who clearly knew one of the chief requirements of such a garden, and the ground selected by the company is probably the best adapted plot of land on New York Island for such a purpose. This is near Ninth avenue on the north side of 155th street, and as it has recently been included in the new High Bridge Park, it would be available for any project of this kind which should be controlled by the city.

The Universal Company, after having selected its site as above stated, and promised to break ground in the spring of 1881, disappeared from public view, and so far as we know has not since been heard of. It is earnestly to be hoped that the present attempt to establish a satisfactory permanent zoölogical garden in this city will prove something more than a mere flash in the pan. Philadelphia, Chicago, Cincinnati and San Francisco have collections of living animals which do them credit, New York, with its wealth and intelligence, should no longer be left behind by its younger sisters.

ARMY RIFLE PRACTICE.

GEN. SCHOFIELD has signalized his coming into command of the U. S. Army by a revision of the regulations for rifle practice. His changes seem to be well advised, for it is not to be gainsaid that the rifle practice of the regulars was getting into a perfunctory stage, where the filing of reports with figures was of more importance in the minds of many officers than the creation of self-confident individual marksmen from the boys in blue.

The aim has been to make the course of practice such that the soldier should know as much as possible of the science of rifle shooting and pretty much all of the art connected with accurate hitting. Then turned loose on his own resources, with an enemy in front and an unknown distance to fire over, he would first of all know his arm and in the next place would know how to use it.

Instead of an annual round of practice, the new system gives something akin to a three years' course in marksmanship, so that a man makes a gradual increase in result through greater exertion and exercise of skill until he has become as proficient as any reasonable system could demand. Another point in the new rules is that each arm of the service will use its service arm, and cavalry men will shoot with carbines, as they would be required to do in actual warfare, and not with the rifle as now, for the mere purpose, seemingly, of giving them some practice of some sort and keeping up the department or division totals.

Revolver shooting, too, will come in for a share of consideration which has hitherto been denied the side arm. It will be interesting to find out just what can be done in a practical way with these hard-hitting service weapons, if for no other purpose than comparison with the excellent records made on the civilian ranges.

In all the new firing regulations the General commanding and the Secretary of War have been careful not to cut off the spur of competition. Rivalry will go on as before for places on the several teams, and even more so, for now there will be carbine as well as rifle teams. A liberal supply of ammunition is to be given out to the various posts, and no doubt if it be found that the burning of more powder will result in better showing and better marksmen, then the powder and bullets will be forthcoming. It is poor economy to save a few pounds of powder and leave the Army short of the highest-hitting proficiency.

CUSTODIAN SQUATTERS.

IN their preliminary report, just sent to the Legislature by the New York Forest Commission, the problem of what to do with the custodians of State lands again comes up. In their manner of treating the question we see indications that the Commissioners are less anxious for the interests of the State, into whose service they have entered, with so much show of public spirit, than to make friends of the mammon of unrighteousness. In the matter referred to they may be animated by pure philanthrophy, but the aim and tendency of their recommendations is to benefit individuals at the expense of the public, by legalizing the most impudent attempts to grab public domain; and the public will hardly give them credit for disinterested motives. If their office is without emoluments, they are certainly not likely to win much honor by praying the Legislature to introduce such legislation as shall empower the Forest Commission to grant relief to those custodians whose unscrupulousness is only equalled by their impudence.

The history of these custodians is simply stated. Between the years 1875 and 1885 certain persons set envious eyes upon the islands in the Lake St. George and choice tracts of State land in the Adirondacks, and there being no provision of law to enable them to acquire the tracts by purchase, they moved the State Board of Land Commissioners to appoint them "custodians" of the chosen tracts. This meant that the individuals so appointed were given leave to occupy the islands and choice tracts of Adirondack lands, and they set to and erected "camps" or cottages, and settled down to enjoy their possession of public property. As the Commissioners put it:

> Some of these so-called custodians having accepted the appointment on behalf of the State Board of Land Commissioners in good faith, and supposing (in the absence of any legislative or judicial definition of the duties and rights of "custodians") that it gave them practically a lease of the premises named in the resolution making their appointments, went on to expend considerable sums of money in the erection of summer houses and in beautifying and adorning their grounds.

This is evidently an attempt to darken counsel by specious pleading. The plea that "because the rights of the custodians were not legally or judically defined, they supposed that their appointment practically gave them a lease of the premises named in the resolution appointing them," has a strong flavor of Celtic originality about it. One might as well argue that the present warden and his forest guards have, by their appointment, practically acquired a lease of the whole State domain; but conceding even that they were right in their supposition, their appointments have since been revoked, and the leases naturally terminate with them.

Attorney General O'Brien having been consulted by the Forest Commissioners, replied simply that the Board of Land Commissioners had no power to make appointments, and that the custodians gained no rights through their appointments. Nevertheless, in spite of so decisive a legal opinion in favor of the public, the Commission which professes to guard the public interests, does not scruple to petition the Legislature for power to grant the custodians relief from the unfortunate dilemma in which they have placed themselves—in other words to legalize their attempted appropriation of some of the most beautiful spots in the Wilderness.

Some of these custodians, probably all of them, are very estimable gentlemen; we are quite ready to believe that they are, and, doubtless, endowed with a high appreciation of the beauties of nature; but they knew that their appointment was a job, they were assigned no duties, given no pay; they knew that the Land Commissioners had no power to confer any legal rights in respect to the land; nevertheless they entered on possession, and assumed and asserted all the rights of ownership, and built and improved, and spent money, confident that cheek backed with dollars would be mighty and prevail.

To oust these squatters would as a matter of course entail some hardships upon them; but it is the duty of the Legislature to consider first the public interest; and the public interest most certainly does not sanction the proposition to perpetuate the privileges of the squatters on State lands. Keep the people's possessions for the people. There are square miles of property which may be bought and paid for by individuals in search of delectable summer homes. Available land is not yet so scarce that it is necessary to give over the State lands to private control, more particularly when that control has been acquired by jobbery.

SNAP SHOTS.

MASSACHUSETTS is considering a bill which provides that all damages to persons or property caused by dogs shall be paid by the treasurer of the town or city in which such damage is done, the act not to affect the double damage done to persons; and that all female dogs shall be prohibited from running at large in places of more than 5,000 people. As the taxes are high in Massachusetts, dogs $2 and bitches $5, it would be no more than right that damages should be paid out of the great revenue thus received. The clause to restrict running at large, if it be correctly reported, is a senseless piece of crankiness which will never get beyond the committee room.

The acquisition of hunting and fishing territory goes on apace. The latest enterprise is that of certain New York parties, headed by Mr. Austin Corbin, who are negotiating for an 8,000 acre tract on Corydon Mountain, New Hampshire. The purpose is to stock the reserve with moose, deer and other game.

The Sportsman Tourist.

EARLY MORNING IN THE WOODS.

ABOVE the eastern mountain tops,
A narrow line of gray
Proclaims the vanishing of night,
And coming of the day.

Upon the lake the first pale rays
Caress the watery plain,
While in the forest's lonely aisles
Dark shadows still remain.

The morning mist like drapery
Hangs over reach and bay;
And through it, faint and fainter still,
The shore lines fade away.

The water with the vapor blends:
The lake appears to be
As limitless as the ocean,
An endless, unknown sea.

But up the bay, the golden shafts
Have pierced the misty rim,
And in the distance, far and vague,
I see the islands swim.

Vast, dim and shadowy beyond,
The ghosts of mountains stand:
Mysterious and stern as fate
They guard the silent land.

The ripples lap along the beach
In changing crystal lines;
On every leaf of birch and brake
A dewdrop spangle shines.

From stately pine and silver birch
Sweet notes melodious ring,
As feathered songsters of the wood
Their matin carols sing.

And thus the glad day cometh on
Across the mountain walls,
And down their ancient, rugged slopes
A slanting splendor falls.

Down through the whispering treetops
The yellow sunbeams pour,
And carpet with a cloth of gold
The mossy forest floor.

* * * * *

A silver light to the westward,
To eastward, light of gold,
And the spirit of the morning
To me a tale has told.

W. A. B.

A BREATH FROM THE MAINE WOODS.

[*Concluded from page 514.*]

ONE evening we were awakened by something gnawing at the door, and on looking out there was seen a large black porcupine, or "quill pig," as Bill called him, trying industriously to get in, probably tempted by our provisions. A shout caused him to scamper away and seek shelter in the top branches of an ash tree close by.

The day opened foggy and the Governor Coburn, which was crossing the lake to the outlet, had the appearance of a vessel standing out toward the open sea, the fog so blended with the water on the horizon line.

Bill gave us this morning an exhibition of one of his accomplishments in the culinary art, frying flapjacks. When the fritter was ready to turn he would take the spider, and, with a dexterous turn of his wrist and a jerk, toss the delectable bit of dough into the air, and then catch it the other side up as it came down. I never knew him miss catching it just as he wanted it, and he would never spill a drop of fat. After breakfast we crossed the narrows and fished off a point, where a few days before a Boston merchant had taken sixty-five trout with the fly, but on this morning there were no fish there. We had, however, fair success, keeping on the move, and landing a fish now and then. Some of them were of good size, and we caught both square-tails and togue till we had quite a mess. Harry wanted one of the larger ones cooked for dinner, and we returned to camp, where I left him and the guide.

I took the boat and rowed up the bay for a mile or more, and then, seeing an opening in the forest where the water appeared to set back among the trees, I pulled through and found myself in a large lagoon of much greater area than appeared from the lake. A row of trees and bushes separated it from the lake, except at the narrow passage through which I entered, and as I penetrated further, other trees came between me and the opening.

The lagoon was a good-sized pond, and the water being so high there were no shores, the trees which surrounded it standing in the water; so that I was literally afloat in the forest. The silence was that of death. Not a breath of wind; not a ripple on the dead water; not the rustle of a leaf. There was no flight of birds; no movement of animal life; no leaping fish; no hum of insects.

The forest was damp and dark, and here and there against the sombre background gleamed the white bleached trunk of a dead pine, stretching out its sharp, broken branches. Long festoons of gray moss hanging from the trees added to the funereal aspect of the place. Altogether it was the most lonesome, desolate place I ever saw, and to add to its forbidding aspect, black clouds were obscuring the sky. I wondered if such a scene might not have been upon the earth in the old geologic ages, and if some hideous antediluvian monster had reared its head from the black water it would not have seemed incongruous. Only one thing there was to remind me of the world outside—a water-logged barrel which had floated against some bushes and lodged there.

I thought of Adirondack Murray's weird tale of the lonely lake and the story which the keg told him; but as this barrel did not have the appearance of having hidden a miser's hoarded gold, I did not seek to investigate its past history, but turned the boat and pulled back to the opening through the trees and into the broad bay again, and I was glad to leave the lagoon behind me. Before I got back to camp the rain was falling, and I arrived just in time to escape a severe thunder shower, which spoiled the fishing for the balance of the day. A shower is not unpleasant, though, if one has good shelter over his head, and we sat around the fire and listened to the drops pattering on the roof and watched them through the open door dripping off the leaves and spattering on the ground.

Late in the afternoon a heavy wind came up, and before bedtime there was a surf of which the ocean need not have been ashamed. That night as we sat around our fire Bill told us of his three-months' hunting trip for fur during the winter, with Cy for a partner.

Like all men whose lives were spent in woods, Bill was inclined to taciturnity, but by questioning could be drawn out, and would relate an interesting narrative. Life in the forest, surrounded by the eternal silence of the wilderness, unbroken except by the sounds with which nature seeks expression, tends to make men reserved, and this reserve, and the silent caution necessary to the successful pursuit of the wild animals, becomes a second nature. "Bill," said I, "How would you like to live in the city?" "The city," repeated he, with a disdainful inflection of his voice, "I have brothers in the city who want me to come, but all my life has been spent in the woods, and you might as well try to cage a wild man as to inclose me in brick walls."

In the morning it was still rough, but another hard shower beat down the waves, and after the rain we went out. We had fished for some time and taken several good fish, when a steamer from Kineo came through the narrows and dropped her anchor. Three canoes were dropped over the side, and in a few minutes as many rods were whipping the water. The new comers were a judge of the Supreme Court of Massachusetts, his brother, and the gentleman who had taken the sixty-five trout the week before; but on this day their success was no better than ours, and most of the fish taken were caught by the guides with bait.

There did not seem to be many trout, or if there were they were not very hungry, but after a while Bill said, "I guess we'll get some fish now; there comes the Coburn with her raft." It is a well-known fact that the trout follow the timber rafts as they are towed across the lake, and the unwieldy masses of logs move so slowly that a canoe can be fastened to them, while the occupants angle for the trout which are sure to be underneath. The wind, which had been so capricious all the morning, was freshening up again, and there was every appearance of a heavy blow, so when the Coburn got to the narrows she tied her raft to a large tree, by means of a stout cable, and leaving it in the bay went across the lake alone.

A choppy sea was now tossing us about, and it was no use to cast a fly, so we tied up to the lee of the raft, and resorted to bait. We removed the flies from the ends of our leaders, substituted hooks, and then fished under the edge of the raft. Harry soon caught a handsome speckled trout, which weighed just 2½lbs., and before he had it off the hook I had one which fell short only a quarter of a pound.

We kept Bill busy with the landing net, and did not notice the weather, except that there seemed to be more wind, till he suddenly exclaimed, "If we want to get back to camp before that squall strikes us, we shall have to hustle pretty lively." And no wonder, for on looking toward the north, we saw that the horizon was entirely obscured, and hidden by a dense wall of clouds, as black as midnight, and others were rolling in, and adding their bulk to the inky mass, which was increasing rapidly in height and breadth. The wind came in fitful gusts, and a few large drops of rain began to strike the water. The sky had become almost wholly overcast, and was nearly as dark as night, and we expected every moment that the black squall would break. The trees had already begun to sway. Bill sprang to untie the painter, and as he did so I dropped my line over, and immediately I felt the most vicious tug a trout had ever given to a hook of mine. I struck and had him fast, and by the way my line went out, I knew I had a good one. Bill had been so busy that he did not notice that I had a fish, and said as he drew the painter in, "We've got to make her hum or else get drenched," and then as he took the oars and looked up he exclaimed "What have you got on that line?" "I don't know," I answered, "but it's pulling like a steam engine, and I wish you would get the boat away from the raft, so as not to foul the line."

"We haven't much time to fool away," said Bill.

"I know it, but we must have this fish," and as my captive had slacked up I began to reel him in.

The boat was now tossing and slapping against the waves, and as I was standing up to manipulate the trout, I had about all I could attend to to retain my balance, and keep one eye on the squall, and the other on the fish, as it were.

I worked him up nearly to the boat, and Harry had the net all ready, when he began to fight again, and I had to let him go. This time he leaped into the air, in his endeavors to shake himself clear of the hook, and we saw that he was a large square-tail trout.

"Four pounds," observed Bill laconically, "He's a good one, but get him in here as quick as you can."

But the fish had some objections to make, and again after getting him nearly in, I was obliged to give him more line, but he was getting tired, and the next time, Harry had the net under him and lifted him in.

The moment Bill saw that he was in the net, his oars went into the water, and we were making for camp at a pace which made the boat fairly fly. The muscles on the guide's brawny arms stood out like cords, and he pulled as I never saw a man pull a boat before, but before we could make the shore, the squall broke. We were nearly in, however, and just waiting to fasten the boat, we made a break for the camp, and reached it without getting very wet. Five minutes more would have given us a drenching. Our friends from Kineo also came to the camp, and we all dined together.

The fire soon dried our clothing, and while the guides were preparing dinner, we spent a pleasant half hour chatting and watching the storm, which was severe while it lasted, but the waves were again beaten down by the rain, and before our meal was over the sun was struggling through the clouds. The steamer had anchored in the bay, just off the camp, and as the force of the squall came in that direction, and the great raft was to windward of her, one of the guides remarked, "The cap'n better get out of that, or the raft will shove him up on shore, high and dry, and smash his boat to kindling wood."

It did not seem possible that the wind would move the great mass of timber lying so low in the water, but when we went out after dinner, the raft was up against the shore, and the steamer was in the lee of the point across the narrows.

Our *carte du jour* that day at our *Hotel des Forêts* was as follows:

POISSON.
Trutte. Togue.
ENTRÉES.
Porc salé frit. Pommes de terre.
DESSERT.
Flapjacks à la mélasse. Pain et beurre.
VINS.
Eau de Moosehead.
Café.

If I could always sit down to dinner and have it relish as that one did I should never complain, but, alas! no city *chef* can give us that *sauce piquante*, which is concocted of wild woodsy odors, pure air, aroma of balsam, and evergreen and other ingredients, which are only to be procured "under the greenwood tree."

Dinner disposed of, we went out and cut large sheets of birch bark to wrap our fish in, and then our friends bade us "good-by," and went aboard the steamer. As it had ceased raining, we decided to try our luck again, and went up the bay. The raft was lying against the shore, and we had to go out around it. We fished with small success, the storm of the forenoon seeming to have driven the fish away, but we caught two, which weighed nearly three pounds apiece.

We spent most of the afternoon till it was time to return to camp, and then found that we had some hard work before us, for the wind had veered around till it blew directly through the narrows, and was kicking up a nasty sea.

I never saw a lake where a wind will spring up and a sea begin to run as quickly as they will on Moosehead, and on this trip we had a constant succession of calm and wind, sunshine and rain. If we could have kept along by the shore we should have had no trouble, but the raft prevented that, and we were obliged to go out around it, with wind and sea dead against us.

Bill took the bow oars, and I the others, and we started. For a while it seemed that pull as we would we made no headway, and it was about all we could do to hold our own.

We had to watch every wave and hold her with all our strength as we went over, and then get in a few strokes when we could; but the boat was staunch and strong, and we kept her from taking any water aboard, except in the form of spray.

So we fought our way back for a mile, but finally reached camp without accident, and we were all glad when we were beneath its friendly shelter.

My knee was blistered where I had braced it against the side of the boat, and my arms were stiff from the strain they had been subjected to.

Soon after supper my companions went up the ladder and disappeared through the trap door, which gave access to our sleeping apartments; but I did not feel sleepy and remained below alone.

Outside everything was in total darkness; the wind did not abate, and I sat there musing and listening to the water, and to the mournful swaying and rustling of the trees and the soughing of the wind through their branches.

The fire had burned low, but still diffused a faint glow, and the flickering light of a candle, stuck in a bottle in lieu of a candlestick, cast weird shadows on the walls and in the corners. As I sat there alone in the dim light, the sight of the rods, nets and creels, and other accessories of outdoor life with which the walls were decorated, started me into a train of thought which carried me back to other days and other scenes, and in my reverie I lived over again the happy old time of boyhood and student days. There was nothing to disturb my retrospection, and out of the blackness of the night came visions so vivid that they seemed reality, and not the "unsubstantial fabric of a dream." Instead of being in this lonely camp in the Maine woods, I was transported by the swift flight of memory to an old brick farmhouse on a Vermont hillside, from which I could look away over a great stretch of hilly, rolling landscape, and down through the peaceful valley of a pleasant river.

Down there in the green meadow still flowed the brook where I was wont to fish, where as a little lad I first began to feel the witchery of nature's charms. There by the bend was the big black rock, under which was a pool, where the fish loved to lie, and where I would peer over and watch them gliding about in the shadow.

Over there beyond the road still runs the old Virginia rail fence, with the row of elms and maples, where we hunted gray squirrels and where I first learned to use a gun.

The fence ran back up into the woods and divided a pasture from a cornfield; and when the corn was ripe the squirrels used it as a highway and came down after the sweet corn.

The row of trees gave them shelter when alarmed, and we would stand, one in the pasture and one in the field, and as they dodged around a tree to escape one, the other would be pretty sure to get a shot.

How it all came back—all the little details. The bushes and piles of stones in the angles of the old fence, the woodcock burrows and the chipmunks and crows, the hollow butternut tree, which had been struck by lightning, and the gnarled old apple trees in the pasture. I thought of these same scenes as I had looked on them when snow lay deep on the ground, and I heard again the rustle of the dead oak leaves which clung to the trees long after the other leaves had fluttered to the earth. I saw again the tracks in the clean snow of the little dwellers of the woods—the rabbits and coons and foxes. Even little incidents like the finding of a phebe bird's nest, saddled on to the top of the stovepipe in the little red schoolhouse, and a bluebird's nest in a hollow fence post came to mind as if they were but of yesterday.

Back up on the hill, behind the house, I saw in fancy the great white quartz rock, where my brother caught a big hawk in a trap. The rock is just outside the edge of the woods, and not far away is where he shot four coons out of one tree. The skin of the largest coon now serves as a mat on the library floor and the hawk is perched on top of the cabinet of birds' eggs in the hall at home; not quite so fierce now as when he fought with wings and beak in his endeavors to escape from the steel trap which gripped his ankle. From the hill I took one of these unaccountable strides, which one's memory makes sometimes, to another brook, leaping noisily down a rocky channel at the bottom of a steep-sided narrow ravine,

where the trees and underbrush are so dense that passage through is difficult.

It was further up this stream, up near the cave in the ledge, that I shot a mink one day, and at the entrance to the ravine we saw five minks come through the arch where the brook runs under the road.

One after another different incidents, some of them almost forgotten, came to mind. Faces of old friends came back again, looking as they used to look. Even the sounds I used to love to listen to I seemed to hear again, and I thought, "Can it be true that I hear again the music of that brook of my boyhood, and the gurgling and splashing of its waters?"

But no. It was the restless element of Moosehead Lake, beating on the adjacent shores, and I awoke from my reverie to see my candle sputtering in its socket. It flickered a moment and went out. The fire was out, too, and I climbed the ladder and was lulled to sleep, not by the rustle of Vermont maples, but by the wind which sang in gentle cadence through the pines of Maine.

"Manly men need the wilderness and the mountains." So wrote Theodore Winthrop, and recalling the words, I echo and approve the sentiment, for I know that in the wilderness and among the mountains is that which is worth seeking and worth finding.

At last the morning came for our departure. We were up early, and Bill served us our breakfast in his best style. We loaded our dunnage into the boat and set out for Kineo, after taking a last look at the pleasant camp, which we abandoned reluctantly, with many happy recollections of the days we had spent there. We had time enough, so that we did not need hurry, and we caught a few trout on the way up.

The morning was still gray when we started, but the sun was soon gilding the landscape, and the rays falling full on Kineo burnished the flinty surface of the cliff till it shone like gold. The water was smooth, and the mountains vague and misty, till the sun dispelled the vapor.

We landed at Dry Point and rested, and then resumed our journey, but a breeze had sprung up, which would prevent us from reaching Kineo in season to get the boat to Greenville, so we pulled across to Moody's Island and lay in the lee for the steamer. The island is small, and is composed of great granite boulders, and is covered with weather-beaten pines and underbrush. While we were waiting I clambered over it, and Bill put his dunnage ashore, so as to lighten the boat, for to board the steamer we had to go out into the open lake. From my position, on top of a big boulder, I saw her coming, and we pulled out to meet her. We waved our hats, and she whistled to show that our signal was seen, and changed her course to pick us up. We were soon aboard of her, and Bill handed up our traps, and after extending him a farewell hand, we watched his little craft as it danced over the waves back to the island.

So ended our holiday, and as I write I look back on it with pleasure, and know that the mountains and the wilderness did me good. As Winthrop said, I needed them, and I shall need them again next year; and next year, God willing, I shall look on them again.

W. A. B.

Natural History.

A NATIONAL ZOOLOGICAL PARK.

THE need for a National Zoölogical Park at Washington is a pressing one. Whether Congress shall see fit to authorize the purchase of the land required for this park or shall neglect to do so, the day is surely coming when such a park will be established. The National Museum now has a number of rare and interesting living animals on exhibition, but these specimens cannot be seen to advantage under present circumstances, and what is more important, are so cramped and confined that the percentage of loss by death is far greater than it ought to be. The best of care will not keep animals alive if they are wholly deprived of exercise, and exercise these animals cannot get if they are cooped up in little cages or narrow pens. Besides this, the miserable sum now available for the care and feeding of this living collection is already being exceeded, and the authorities are forced to refuse the donations offered them by the public. They are hard put to it to feed the animals they now have on hand, and have been obliged to recently decline a number of valuable specimens, among which were a camel, an aoudad, a lioness, an ibex, an ostrich, a black leopard, eighteen buffalo, two manatees, three moose, a caribou and three prong-horned antelope.

The list of living mammals which the National Museum has on hand at present is quite long, and taken in connection with the important contributions declined, shows what a National Zoölogical Park might become if Congress would provide funds for its maintenance. The list includes among others:

Two American bison (*Bison americanus*), from Nebraska.

Three elk (*Cervus canadensis*), from Wyoming Territory.

Two Virginia deer (*Cariacus virginianus*), from Florida and Alabama.

One Columbian black-tailed deer (*Cariacus columbianus*), from Washington Territory.

One Rocky Mountain sheep (*Ovis montana*), from Montana.

Four Angora goats (*Capra hircus angoriensis*), parents imported from Angora, Turkey.

One jaguar (*Felis onca*), from Texas.

One panther (*Felis concolor*), from Montana.

Five black bears (*Ursus americanus*), from South Carolina, Texas and West Virginia.

One cinnamon bear (*Ursus americanus*), from Montana.

One grizzly bear (*Ursus horribilis*), from Montana.

Besides these there are wolves, foxes, various *Mustelidæ* and many other mammals, besides birds and reptiles in considerable numbers. The collections attract great attention in Washington, and there is no doubt of their importance from an educational standpoint.

No one seems to have anything to say against the project, but like so many other worthy matters before Congress, it is neglected because there is neither money nor politics in it.

More and more interest in this matter is felt as time goes on, and a few days ago the New York *Tribune* had the following editorial:

It would be an excellent thing if the two Houses of Congress could pass, even at this short session when general legislation has so little chance, the bill introduced by Mr. Breckinridge, establishing a National Zoological Garden in Washington. If the bill does not pass now, there must be at least a year's delay and probably more in getting the project under way; and every delay is a serious loss. With every year the rate of extinction of our wild animals which this garden is expected to preserve, becomes more rapid, and it is also to be considered that delay means the loss of both instruction and pleasure to a great number of visitors to the capital.

There can be no doubt that if Congress should once authorize this institution it would grow with surprising rapidity. Large numbers of offers have been received from various parts of the world, from consuls and others, of animals to be placed in the garden, but these cannot be accepted until Congress makes some provision for them. The nucleus of such a collection already exists under the charge of the officers of the Smithsonian Institution. There is no politics in this scheme. It originates with scientific men who see that unless some steps are taken to preserve classes of animals that are fast disappearing before the advance of civilization, there will soon be a most lamentable, not to say discreditable, gap in the history of the animal life of this continent. There is no job in it. The appropriation asked is too small to give enough margin for anything of that sort. All that is required is $200,000, of which not more than seven-tenths probably would be needed for the purchase of the most beautiful site, so it is said, for such a garden to be found in any capital of the world. The expenses of maintenance need not be great, especially as, judging from the experience of other collections, it is believed that gifts would represent 75 per cent. of the acquisitions. Every consul in a tropical country would take a patriotic interest in securing specimens for such a collection at the National capital, and the same rule would doubtless hold good regarding native specimens.

Every civilized government regards the establishment and support of such collections as part of its legitimate work, and the United States should not be left behind. It is the poorer people who are chiefly benefited by the information and the amusement thus to be obtained, and it is in their interest that Congress should pass the bill. The project was approved by a large majority of the Senate at the last session in an amendment to the Sundry Civil bill, but failed in the closing hours through opposition in the House when that body was far from full. It ought to be possible now to secure favorable action in that body.

PHILOSOPHICAL SOCIETY MEETING.

AT the 329th meeting of the Philosophical Society of Washington, Jan. 19, Prof. W. O. Atwater, of Wesleyan University, compared American and European food consumption from physiological and economic standpoints.

Prof. Atwater showed graphically, by means of diagrams, the relative values of American and European dietaries, demonstrating the fact that the American obtains nearly twice the amount of protein, or muscle-forming compounds, and fat-producing materials as compared with the European. This result is brought about largely by our enormous use of fat meat. As a consequence it has been observed that the American workingman will do about twice as much work in a given time as the European. The excessive conversion of proteine into fat by changing the rich grasses and grains of the western plains into fat cattle and hogs is unnecessary for Americans, who need the unchanged cereals and protein and water of comparatively lean meat; but the exclusion of American meats, and particularly the fat pork, from Germany, deprives the Germans of an element of strength which they greatly need, and unnecessarily limits a profitable industry of the West. This highly instructive and able address met with a cordial reception, and was freely discussed.

Prof. Atwater is spending the winter in Washington, to aid in the organization of the work of the agricultural experiment stations.

THE BATS.—II.

BY R. W. SHUFELDT, M.D., C.M.Z.S.

FORMERLY, and from the time of Linnæus down, systematic zoölogists classified the bats with the Primates, or with men and the apes, but they are now generally regarded as greatly modified Insectivora. This latter view has been arrived at by our more thorough knowledge of their anatomy as an entirety, while previously their Primate affinities were jumped at simply because upon a more superficial examination it was found that bats generally possessed four upper incisor teeth, and that the mammæ, two in number, were situate on the chest, as in the female of the human kind. These characters were also supported by some other structures which also seemed to point to a primate affinity, but, as I say, recent researches have fully shown that the nearest existing kin of the Chiroptera are the Insectivora. The position of the mammæ in the female is imperative, as bats nurse their young during flight, which they could not do were the teats located lower down on the body.

As we know, bats are all mammals, possessed of volant powers by reason of their specially modified forelimbs and other parts of their organization, which enter into the problem of true flight. In the forearm but one long bone is fully developed, a curved radius, while the ulna is invariably rudimentary. A small thumb is present, with four greatly elongated fingers (see Fig. 18), which latter support the tegumentary membrane composing the wing. An auxiliary flight-membrane also usually exists between the hinder pair of limbs, and this may include in its folds the tail. Supporting the posterior regions of this latter expansion, on either side, we find in the vast majority of species a cartilaginous process known as the *calcar*, which springs from the inner side of the ankle-joint, and passes in the direction of the tail (Fig. 18, *cm*). The hemispheres of the brain are non-convoluted, and do not project backward over the cerebellum. According to Dobson, "the dental series consists of four kinds of teeth, incisors, canines, premolars and molars; and the dental formula never exceeds, $i\ \frac{2}{3}$, $c\ \frac{1}{1}$, $pm\ \frac{3}{3}$, $m\ \frac{3}{3}$; total 38 teeth."

On referring to my drawing, in Fig. 18, it will at once be observed how greatly the skeleton of the forelimb preponderates in size over that of the hinder extremity, while the most superficial dissection of any bat is sufficient to impress upon us the subservience of the thorax and its contents to meet the requirements of an animal given to aerial locomotion and a life on the wing; the heart and lungs are found to be, comparatively speaking, of great size, while the broad and flat ribs are well adapted for the attachment of the highly developed muscles of flight. A marked rotation outward is always to be noted in the case of the posterior limb, on either side, owing to the action of the wing-membrane, and this forces the knee to a backward position, compelling it to assume relations more nearly like those enjoyed by the elbow of the arm with respect to surrounding structures. Bats when resting usually catch on to something by means of the claws of their feet, and thus hang head downward; sometimes, however, in hollow trees or other places, I have found many species rest on their nether parts, with their wings drawn up on either side of them. Few species accomplish anything that might be compared with walking, most of them scrambling round in clumsy and shuffling way when placed upon the ground. A species of *Nyctinomus*, however, of which I give a description in the Standard Natural History, and of which I collected quite a number in New Orleans several years ago, seemed to be more particularly favored in this respect, for I found it could scramble round on my study table with an agility almost equal to some mice, which its long tail, unsheathed in any interfemoral membrane, caused it not a little to resemble in general appearance.

To those interested in osteology, the skeletal structures of the Chiroptera offer a great deal that is of extreme interest, for all the way from such a skeleton as is possessed by one of the great fruit bats of the East Indies down to some such form as our own little hoary bat, this first part of their anatomy is more than notable for the departures it makes from anything we might choose as being typical in the way of a Chiropterine skeleton. It will be observed that in my figures illustrating this article I have been careful to present some of the more interesting bones of a bat's osseous framework; and I find among others in my collection a very good set of skeletons, represented by an adult female and her two young of *Atalapha noveboracensis*, which I prepared about five years ago when collecting in Louisiana. From these we will be able to briefly point out some of the most salient features of the skeleton. In the skull we are to note the broad and peculiar median notch in the premaxillary region; the large parietals; the comparatively capacious cranial cavity or brain-box; the slender zygomatic arches; the very large foramen magnum; the easily detachable tympanics; the minute and splint-like malar bones, one beneath either zygoma; and the well-developed mandible or lower jaw. In the *Phyllostomidæ* the zygomatic arches are absent, while it is alone in *Pterotus leucopterus* that a process on either side from this arch meets the postorbital, and thus completes the osseous periphery of the orbit. Other species possess marked variations of interest in their skulls, too numerous to mention in the present connection.

The long bones of the limbs are conspicuous for their curvatures, their slenderness, and the large size of their interior or medullary canals. The neck vertebræ are very large, while these bones gradually diminish in size until we arrive at the tip of the tail. As a rule, they are notorious for their lack of prominent processes, and for the great caliber of the neural tube for the spinal marrow in the region of the neck. Bats as they approach maturity possess marked rigidity of their backbone, while at no time are these joints distinguished by any great amount of mobility of one upon another. Of the ribs I have already spoken, and the sternum or breast-bone is peculiar in being keeled, in order to afford greater surface for the attachment of the powerful pectoral muscles, so important in the matter of flight. Dobson tells us that he has dissected species where the contiguous margins of the ribs are actually anchylosed together, and this fact must give still greater rigidity to the thoracic walls. Collar-bones are always present, and the shoulder-blades conspicuous for their long, curved coranoid processes, and I have intentionally taken the pains to present figures of these parts, in order that such important points may not by chance be overlooked. Figure 18 will give a very fair idea of the skeleton of the hand of a bat, and a fairly good notion of the lower extremity, which its size makes perhaps less clear in the illustration. Marked weakness characterizes the bones composing the pelvic girdle or pelvis, and chief among its interesting features is the fact that in male bats of most species the pubic elements do not fairly meet in front, while in females they are widely separated. The eminent authority last quoted, tells us that "in the family *Rhinolophidæ* alone do these bones form a symphysis." The foot of the bat, as in all its kin, is an interesting little structure, with its distinctly curved and sharp little claws; its laterally compressed toes, and its unique tarsus and other parts. Bats are distinguished from all other representatives of their class, in presenting striking differences in form between the two sets of their teeth, *i. e.*, the permanent and milk dentition. This feature is well seen in the specimens before me; but the study of these parts in the Chiroptera is indeed a long, long subject when thoroughly entered into.

In throwing out, as I have, these few hints upon the skeleton, representing as they do mere dottings here and there over this part of the structure of a bat, I have had the hope only in my mind of inciting some of the younger anatomists to carefully prepare such specimens, and to make careful comparisons in the osteology of the Chiroptera, and note how the skeleton in the more typical mammalia may become profoundly modified to meet certain ends.

My figures go to show the marvelous development that takes place in the ears of certain species of bats, and still further, other forms are characterized by peculiar, flexible, tegumentary, leaf-like foliations that ornament the parts surrounding the nose and muzzle and chin. Now, without entering upon a detailed account of the anatomy and physiology of these strange-appearing structures, I will briefly state that in the case of the so-called "leaf-nosed bats" these parts fulfill a very definite purpose, being in reality powerful auxilaries to the sense of touch, enabling their possessors in their rapid, graceful and varied aerial evolutions to detect with marked precision the presence of objects of any kind in their immediate vicinity. This faculty is further enhanced by the highly sensitive vibrissæ, or whiskers in other species (Fig. 4), so that it is said that even the slightest vibrations of bodies may with ease be detected by bats when in rapid motion. Spallanzani found that when he robbed bats of their senses of sight, smell and hearing they would avoid, during flight, with great precision and nicety, festoons of thread which he hung across his room in many directions where these animals so dealt with were forced to fly about. No less keenly sensitive is the sense of hearing in all Chiroptera, and their widely dilated ear-couches catch the very breaths of nature as they are wafted by them, while, as Dobson has demonstrated, all bats possess the power of moving the external ears independently of each other. In summing up his researches upon these "leaf-nosed bats," and the function of the organs in question, the same authority states that "The nasal appendages of Chiroptera, then, may be regarded as performing the

office of an organ of a very exalted sense of touch, standing the same relation to the nasal branches of the sensory divisions of the fifth nerve, as the aural apparatus to the auditory nerve; for, as the latter organ collects and transmits the waves of sounds, so the former receives impressions arising from vibrations communicated to the air by approaching objects." Certain specialized glands in these leaf-like appendages, analogous to the ear glands, maintain the exquisite sensitiveness of these organs, so that their functions are in continuous and acute operation, and bats possessing them are ever conscious of the most breath-like movement of objects which take place anywhere in their immediate neighborhood. Marvelous, indeed, are some of the secrets of nature as they come to be revealed to us!

Other structures in bats also present us with their peculiarities; in the two main sub-divisions of the order, we find two corresponding types in the form of the stomach; the liver also possesses interesting features for the anatomist, while in such a species as *Epomophorus franqueti* of the African continent south of the Sahara Desert, we find an extraordinary modification in connection with the air passages, consisting of a large pair of air sacs which communicate with the pharynx. Well-known variations, often very great ones, also occur in the volar membranes: and some species are distinguished by remarkable secondary sexual characters, as the odoriferous glands and pouches, which are most frequently found in the males, though the females may also possess them. Doctor Dobson, in describing these in *Cheiromeles torquatus*, a large and peculiar bat of the Indo-Malayan subregion, says that this "species is nearly naked, a collar only of thinly spread hairs half surrounding the neck, and is further remarkable for its enormous throat sac and curious nursing pouches. The former consists of a great semi-circular fold of skin forming a deep pouch round the neck beneath, concealing the orifices of large subcutaneous pectoral glands, which discharge an oily fluid of insufferably offensive smell. The nursing pouch is formed on each side by an extension of a fold of skin from the side of the body to the inferior of the humerus and femur. In the anterior part of this pouch the mamma is placed." Some species possess suctorial disks at their ankles and wrists, to assist their owners in maintaining a hold when climbing up vertical and smooth surfaces (see Figs. 14, 15 and 16). Indeed there seems to be no end to the novelties in structure among this more than highly interesting group of mammals.

About 450 species of bats are known to science, inhabiting nearly all quarters of the globe, even extending their range northward as high as latitude 60°, while some of the islands of the Pacific and Indian oceans can boast of these animals alone as representing their indigenous species. No doubt they have thus been enabled to become so widely dispersed, even to islands, by virtue of their highly developed powers of flight. As a rule the large and formidable species are found only in the tropical and subtropical regions. In cold countries the Chiroptera always resort to hibernation during the winter months, usually collecting together in vast hordes for the purpose. It is a notorious fact that among many species the sexes when they thus congregate, keep apart, though it is not uncommon to find a few males mixed up with the host of females thus herded together.

While collecting about Fort Wingate, New Mexico, I captured several species of our smaller varieties of bats, and also had the opportunity of examining specimens of the peculiar "pale bat" (*A. pallides*), sent me from Arizona. One of the specimens I collected at Fort Wingate is shown in Fig. 13 of the present article, and this was kindly determined for me by Dr. Dobson, to whom I sent specimens to England. In writing me about it he says: "It is a variety of *Vespertilis evotis* Allen, one-tenth larger in all dimensions, and with the last caudal vertebra alone free, otherwise it agrees with the specimen from which I took my description in my catalogue of the Chiroptera. This species has not hitherto been found east of the Rocky Mountains, but New Mexico, according to the maps, is on the Rocky Mountains, so this does not count for much. Before recognizing your specimen as even a variety it will be necessary to obtain many more examples. The type of *V. evotis* may be an example of a not full grown specimen or of a small form of the species." (Under date of Dec. 5, 1886.) Such words as these, and coming from such high authority ought to be sufficient in themselves to impel collectors to take as many of our more uncommon species of bats as possible, with the view of more accurately determining their precise geographical ranges and their affinities. No doubt we have still many new species of these little animals to be added to our fauna; and I dare say many of the Mexican forms cross our border, as yet unknown to us and so have no place on our List.

For the most part our United States bats belong to the insectivorous branch of the family, and as I say are all small representatives of the group. The largest bats in the world are fruit eaters (see Fig. 6). In the African *Epomophorus*, alluded to above, I mean the species wherein the males have the large distensible air-sacs in the neck, this species I say lives principally upon figs, while *Pteropus*, of which genus there are over forty species, lives largely upon a variety of fruits, and it is said, will even sometimes prey upon small quadrupeds and birds. These huge *Pteropodidæ* often in some species attain the size of a small dog, and are spoken of by Europeans in India as the "flying foxes;" they are usually tailless, and possess pointed muzzles like a raccoon. *P. edulis* is hunted in Java, and is eaten by the natives with great relish, it having a rabbit-like flavor to its flesh. The East Indian group of islands, Australia, Madagascar, Ceylon, southern Japan and Burmah, dot out the extreme ranges of this genus; while none are said to occur in Africa. Mr. Macgillivray says of *Pteropus conspicillatus* that "on the wooded slope of a hill on Fitzroy Island I one day fell in with this bat in prodigious numbers, looking while flying in the bright sunlight (so unusual for a nocturnal animal) like a large flock of rooks. On close approach a strong musky odor became apparent, and a loud incessant chattering was heard. Many of the branches were bending under their load of bats, some in a state of inactivity, suspended by their hind claws, others scrambling among the boughs and taking to wing when disturbed." So destructive to fruit and vegetables is *Pteropus* in some parts of Java that the natives are obliged to protect their trees and gardens by cages, which they construct of split-bamboo; while during the day these plunderers hang by their claws, head downward, in prodigious groups in the trees in the most shady parts of the dense forest—a sight once seen never to be forgotton—looking like great-winged, black fox squirrels.

Another species (*Cynonyctius ægyptica*), allied to *Pteropus*, is found in the deserted buildings of Egypt, and even intrudes itself upon the sanctity of the royal chambers in the Great Pyramid, where it flits about in the dimly-lighted rooms of that gloomy structure.

Of another related, and almost strictly, Oriental form of the Pteropodidine bats, *Cynopterus marginatus*, Dobson says "is very common in India, and extremely destructive to ripe fruit of every description. To a specimen of this bat obtained by the writer at Calcutta uninjured was given a ripe banana, which, with the skin removed, weighed exactly 2oz. The animal immediately, as if famished with hunger, fell upon the fruit, seizing it between the thumbs and the index fingers, and took large mouthfuls out of it, opening the mouth to the fullest extent with extreme voracity. In the space of three hours the whole fruit was consumed. Next morning the bat was killed, and found to weigh 1oz., half the weight of the food eaten in three hours. Indeed the animal when eating seemed to be a kind of living mill, the food passing from it almost as fast as devoured, and apparently unaltered, eating being, as it were, performed only for the pleasure of eating."

Harpyia is still another extraordinary type of the fruit-eating bats, and I give herewith a figure of its curious face, showing the projecting nostrils. (Fig. 2.)

Our United States bats, as we are aware, are almost entirely of the insectivorous varieties, and by habit either nocturnal or crepuscular. Sometimes they spend the day up among the thicker branches of trees, or in caves, or very frequently in the most inaccessible recesses of unused buildings. Several times, however, while collecting a number of years ago in northern Alabama, I shot specimens of our *Vespertilio subulatus*, the little brown bat, while it was actively engaged in hunting insects at midday. And I have often seen them issue forth just prior to a heavy thunderstorm, and when the sky was dark and lowering. Formerly our early settlers spoke of the bats as the "flitter mice," bringing the word with them across the water, and when we come to dip down into the earliest days of natural science, we find Pliny classifies them with the birds, although he well knew they suckled their young; and surely when Virgil comes to describe his horrid harpies, the "*diræ obscenaque volucres*," he must have had the bats in his mind. During all ages, either in rhyme or prose, where a touch of the weird or uncanny was demanded, the effect was generally enhanced by throwing a bat in, nor are our recent writers altogether oblivious to such subterfuges. Prosperine, the Empress of Hell, claimed as her own the bat as her sacred creature, and Homer of olden time did not hesitate to skillfully introduce them into his vivid word-pictures of the regions below, with their howling and semi-accursed inhabitants. A writer before me has it when he says that "even to this day, painters must borrow the wings of bats for their devils, in the same way that they borrow the wings of doves for their angels; and one has only to throw a deep Rembrandt shade over a piece of canvas, and show a bat's wing partly displayed from a cave, in order to give an infernal air to it, and make it, with very little painting, a good pictorial representation of the gates of hell. It is easy to see how a race which is linked with such associations should have but a scanty measure meted out to it by the half-superstitious naturalists of the Middle Ages; and a remnant of the same superstition is, no doubt, the cause of much of the horror which is still connected with some of the larger species of warm countries.

How rapidly, though, is science dissolving such crude notions of animal forms, to say nothing of the change in the spirit of our dreams in reference to a hell, which also seems to be vanishing before the penetrating rays of the same agency. Why, we may even live to see the time, when in a cultured circle of people—an evening party say—in one of our own civilized cities, when a bat flits in through the open window, the ladies will not all scream out in affright, cover their heads with their outer dresses, and with horror exclaim: "There's a bat; and if it gets into our hair it will have to be cut off, for it can never be taken out again!" and then rush from the room.

Passing now to the consideration of some of the forms which represent the Vespertilionine Alliance, to some of which we have already alluded in foregoing paragraphs, we find them in this country in the well-known genera of *Vesperugo*, *Atalapha*, *Vespertilio* and *Nycticejus*. I have found several species of *Atalapha* breeding about New Orleans during the very hottest part of the year; yes, in the month of July, and upon capturing a mother with her one or two tender little young clinging to the hair over and about her mammæ they seemed to me to be actually suffering from the heated air, and panted and perspired when held in the hand in a most distressing manner. Only one bat has been thus far recorded as inhabiting both hemispheres, and this is the little Serotine bat (*V. serotina*).

In coloration, bats of this group, or of any group in fact, may be almost entirely black, others may be of all shades of brown, tan and ochre, while the Indian species *Kerivoula picta*, has a brilliantly colored orange fur, with orange and black wings, a most gaudy little fellow to behold. Again their fur may be wooly as about the neck in certain forms of *Pteropus*, or soft and smooth almost as in the moles, or their bodies may be nearly naked.

In the family *Nycteridæ* we have but two genera, *Megaderma* (see Fig. 10) and *Nycteris*. The Megaderms have been known to eat smaller species of bats which they capture, and are in part no doubt carnivorous in their habits.

Another foreign group is seen in the family *Rhinolophidæ* containing a number of species wherein the "nose-leaves" have arrived at the very acme of development, and indeed they appear to be the most highly organized, in all respects, of the insectivorous bats. Much of their structure and many of their forms are full of interest. The bat (*Triænops persicus*) is notorious for the extraordinary leaf-like integumentary foliations that project from above its muzzle.

We next pass to the Emballonurine Alliance, the last group which we have, and it contains some still more wonderful types of these strange forms. I have already alluded to some of the species of the first family we meet with in this group (*Emballonuridæ*), as *Rhinopoma* and others, while some of the *Molossinæ* are found in our own fauna.

Some of these latter are among the most graceful and expert of all the Chiropterine flyers, capturing their insect prey upon the wing in a manner interesting to behold. Their organization is specially modified in several particulars to meet such an end.

To this subfamily *Molossinæ*, too, belongs the curious species *Mystacina tuberculata*, the sole representative of the genus. It is characterized by having its tail perforating its interfemoral membrane; the central portion of its wing-membranes markedly attenuated, while the borders are thick, so that when folded the parts are neatly tucked out of the way, and it then becomes, as Dobson remarks, the most quadrupedal of bats. It is restricted in its habitat to New Zealand, and presents us with a number of other peculiar structures in its physical economy.

Last of all we have the family *Phyllostomidæ*, which group contains the famous vampires or blood-suckers. *Mormops blainvillii* (see "List") comes in here, a most peculiar appearing bat, with a fringe of leaf-like appendages ornamenting its chin. It belongs to the subfamily *Lobostominæ*, and the subfamily following it, or the *Phyllostominæ*, contains the celebrated "Javelin bats" (see Fig. 1), species which subsist upon a mixed diet of insects and fruit, and the spectre bat, long supposed to be a "blood-sucker," but now known to be wholly frugivorous. (See Fig. 3.) Not so, however, with *Macrotus waterhouseii*, found in California, Mexico and the West Indies, for this species varies its diet by preying upon other and smaller species of bats, as does the Megaderm of the Old World.

The peculiarly-shaped tongue in such a form as *Chæronycteris mexicana* (see Fig. 4), is not intended to suck the blood of its victims, as was almost universally believed heretofore, owing to the vivid descriptions of Spix, but as has been shown by Osborn, Dobson and others, this tongue is simply used to lick out the pulpy parts of certain fruits having dense rinds to them; these bats being fruit-eating species. The last-named writer also states that they use it to extract insects from the corollæ of certain tubular flowers, much, as I imagine, hummingbirds do. Here, too, we have the *Centurio senex*, of which it is said that "this most remarkable form stands alone among the species of the Chiroptera, and, indeed, in its peculiar and grotesque physiognomy is unrivaled among known mammals."

Finally we have the *Desmodontes*, the last group of the family *Phyllostomidæ* which we have been considering. The *Desmodontes* contains the well-marked genera, the *Diphylla* and *Desmodus*, both sanguivorous bats, and restricted in their habitat to Central and South America. Dobson says of *D. rufus*, the commoner species, that it "is a little larger than the noctule bat of Europe, and abundant in certain parts of South America, where it is very troublesome, owing to its attacks upon domestic animals, sucking their blood and often leaving them much weakened from repeated bleedings."

It is said, however, that hoofed animals rarely die from the effects of the vampire's bite, but that fowls do. It makes its attacks in the night time, and an old current notion still exists that it fans its victim to sleep with its wings. Men are no exception to the vampire's propensities, and if any parts of the body are left exposed, in the forests inhabited by these animals, it is more than likely that one will fasten upon the inviting site. Most of the accounts, however, that have come to us about these creatures are much exaggerated, and people who have sustained bites from *Desmodus* say that the effects soon pass off, the spot being only a little sore for a few days. It is all nonsense about their finding one of the larger arteries from which to draw the blood, and the puncture made with their teeth is by no means deep, and may occur at any part of the body. In Paraguay, says Azara, the inhabitants have no especial dread of this bat, and they frequent the houses, and people are often bitten by them. A big mammalian mosquito, that's all—and, I do

THE FIGURES.

Fig. 1. Face of the Javelin Bat (*Phyllostoma hastatum*), a Microchiropterine species of South America. Drawn life-size by the author from a figure in Goodrich's Natural History.

Fig. 2. Head of *Harpyia major*, a Megachiropterine species of the Austro-Malayan subregion; life-size. By the author after Dobson.

Fig. 3. Life-size head of the Spectre Bat (*Vampyrus spectrum*); the largest bat in the New World; an Emballonurine species of South America; wholly frugivorous. Drawn by the author from a cut in Goodrich's Natural History.

Fig. 4. Head of *Chæronycteris mexicana*, showing fibrillated tongue, and the peculiar extensibility of this organ in this South American species. (For related species see "List.") By the author after Dobson.

Fig. 5. Head of *Molossus glaucinus* (see "List"), a South American Emballonurine Bat, which has its ear-conch peculiarly divided by a prominent keel. Life-size by the author after Dobson.

Fig. 6. Life-size head of the Kalong (*Pteropus javanicus*), a large fruit-eating Bat of Java, the wings of which measure 5ft. from tip to tip. Drawn by the author from Goodrich.

Fig. 7. Life-size head of the Long-eared Bat (*Plecotus auritus*) of Europe. Drawn by the author after a figure in Goodrich.

Fig. 8. Superior aspect of the right clavicle or collar-bone of a female specimen of the Red Bat (*A. noveboracensis*), ×3. From nature by the author.

Fig. 9. Left lateral aspect of the skull of the curious tailed *Rhinopoma microphyllum*, an Egyptian Bat, which walks when on the ground; the only species of the kind; ×2. By the author after Dobson.

Fig. 10. Face of *Megaderma gigas*, life-size; a Bat of Central Queensland, and the largest representative of the suborder Microchiroptera. By the author after a cut in Goodrich.

Fig. 11. Dorsal aspect of the left scapula or shoulder-blade of a female specimen of *Atalapha noveboracensis*, the Red Bat, viewed somewhat obliquely, and nearly three times the size of life. By the author from the specimen. The curious processes over the glenoid cavity are to be noted.

Fig. 12. Left anterior oblique view of the pelvis of a female specimen of the Red Bat (*A. noveboracensis*), nearly ×3; showing the normally parted symphysis between the pubic bones. Part of the vertebral column and tail left *in situ*. By the author from the specimen.

Fig. 13. Anterior view of a life-size male specimen of *Vespertilio evotis*. (See "List.") Drawn by the author from a specimen taken by him in New Mexico.

Figs. 14-16. Suctorial Disks in *Thyroptera tricolor* (a Brazilian Bat belonging to the *Vespertilionidæ*); fig. 14 side and 15 concave surface of thumb disk; fig. 16 foot with disk, and calcar with projections (all much enlarged, and drawn by the author after Dobson). These disks enable bats of this species to maintain their hold when they climb up vertical surfaces, acting at such times as suckers.

Fig. 17. Superior view of the skull of a nurseling specimen of the Red Bat (*A. noveboracensis*), ×3; *s.o.*, supraoccipital; *p*, parietal; *z*, zygoma; *f*, frontal; *n*, nasal; *pmx*, premaxillary; *mx*, maxillary; *j*, jugal or malar. By the author from the specimen.

Fig. 18. Skeleton and Volar Membranes of the Noctule Bat (*Vesperugo noctula*) ×⅓; *c*, clavicle; *h*, humerus; *r*, radius; *u*, ulna (rudimentary); d^1, first digit or pollex; d^2, d^3, d^4, d^5, other digits of the manus supporting *um*, the wing-membrane; *m*, metacarpal bones; p^1, first phalanx; p^2, second phalanx; p^3, third phalanx; *am*, antibrachial membrane; *f*, femur; *t*, tibia; *fb*, fibula (rudimentary); *cn*, calcaneum or calcar supporting *im*, the interfemoral membrane; *pc.l*, post-calcaneal lobe. Drawn by the author after Dobson and somewhat altered.

THE BATS.

not believe, half to be as much dreaded as the swarms of the genuine article that I have seen down on the Mosquito coast in Old Mexico, or in Hayti, or Jamaica, or Cuba, and similar places where it has been my fortune to face them.

Studies of fossil Chiroptera go to prove that the order is of a very remote origin, and specimens of fossils from the Pliocene bone caves show little or no change in their osteology as compared with existing forms of bats. Remains have also been secured from the upper Eocene of both this continent and Europe.

In closing I would beg those who have the opportunity anywhere west of the Mississippi, more especially in lower California, Arizona and the Northwest, to capture and preserve in alcohol all the specimens of Chiroptera they can secure. A large, entomological net is a capital thing to take them with, and warm evenings in June and July excellent times for collecting. I have often succeeded by placing my lamp in an open window just before a storm, and the bats will fly into the room, where they may be taken with the net after the window is closed. Remember to split up the abdomen before consigning the specimen to alcohol, and label fully, giving complete data. In my next contribution I trust to give a short account of the Order Insectivora, and continue the publication of the List.

In studying the Chiroptera the following will be found to be some very useful works to consult, viz.: "Catalogue of the Chiroptera in the Collection of the British Museum," 1878, by Geo. E. Dobson, F.R.S., a work which gives full descriptions and a good deal of the anatomy of all the bats then known; also many excellent papers since by the same author in P.Z.S. in Rep. Brit. Assoc. Adv. Science, and "*Ann. Mag. Nat. Hist.*" and elsewhere. Also the classic work and papers on the "North American Chiroptera," by Dr. Harrison Allen, of Philadelphia. The accounts in the *Monatsb. Akad. Wissensch.*, Berlin, by Prof. Peters. The excellent revision of the order Chiroptera under article "Mammalia" in the ninth edition of the Encyclo. Brit. The "Bats," in the Standard Natural History. Accounts in *Ann. Mag. Nat. Hist.*, by Mr. Oldfield Thomas, F.Z.S., and Mr. J. Scully, F.L.S., F.Z.S., Surgeon-Major H. M.'s Bengal army. "Osteology of the Mammalia," by Prof. W. H. Flower, F.R.S., etc.; also "Comp. Anat. and Phys. of Verts.", by Sir Richard Owen, F.R.S., etc., 3vols. Chapters in several of the standard works by Prof. Huxley. "*Recherches Anatomiques sur les Mammifères de l'Ordre des Chiroptères,*" Paris, 1881, by Prof. H. A. Robin, and many other sources too numerous to enumerate in the present connection.

Game Bag and Gun.

THE NEWFOUNDLAND GAME SEASONS.

42d Victoria, Cap. 12.

VI.—No person shall hunt, take, kill, wound or destroy any deer within this Colony or its Dependencies, by slips, pitfalls, traps, or otherwise than by shooting, nor between the first day of March until the fifteenth day of July in any year.

VIII.—No person shall hunt, take, kill, wound, sell, barter, receive, purchase or give away, any wild rabbit or hare within this Colony and its Dependencies, from the first day of March until the first day of September in any year.

IX.—No person shall take, kill, wound or destroy any otters or beavers within this Colony between the first day of April and the first day of October in any year.

49th Victoria, Cap. 9 (May 19, 1886).

I.—No person shall hunt, kill, wound, take, sell, purchase or give away, or have in his possession, any willow grouse, commonly called partridge, or any other kind of grouse, or any other wild or migratory bird (excepting wild geese), or the eggs of any such birds within this Colony, from the passing of this Act until the fifteenth day of September in this present year, or between the twelfth day of January and the fifteenth day of September in each succeeding year.

II.—No person shall hunt, kill, wound or take any deer within the Peninsula of Avalon, from the passing of this Act until the fifteenth day of September, which will be in the year of our Lord 1888.

IV.—No person shall hunt, take, kill, wound or destroy any black game, capercailzie, or other game birds now or hereafter to be imported into this Colony, nor have in his possession, take, or destroy the eggs or progeny of such birds for the period of five years from the first day of January, 1886.

VII.—No person shall hunt, kill, wound, or destroy any moose or elk, now or hereafter to be imported into this Colony, or their progeny, for a period of ten years from the first day of January, 1886.

X.—Nothing contained in Sections One and Two of this Act shall extend to any poor settler, who shall kill the game mentioned in the said sections for his immediate consumption or that of his family.

[*See angling columns for fishing seasons.*]

A BRACE OF ELK.

TO the FOREST AND STREAM and its many readers and writers I offer my best wishes. The camp-fire is still burning brightly in memory. Business, work, care and trouble are laid aside sometimes, and in fancy we go back, it may be years, to some incident of our past lives. Then is it any wonder that the lover of the wild, free woods turns often and hunts again the old hunts in fancy's realm? Is it any wonder that in his day dreams he will visit his old camp-fire far away in some rocky glen? It is so with me to-night. I am going on a hunt up among the wilds of northwestern Wyoming.

There were three of us. We had more time than money, and we knew if we staid long in the wild little city of Milestown or Fort Keogh we would have still less of the last named needful; so we concluded to go and have a hunt and let our horses get fat. We chose the country east of the upper Tongue River as the one most likely to give us plenty of sport and good grass; so getting our grub stake we started up the country, and after five days of travel came to a range of pine-clad hills which we thought would suit. It was two o'clock in the afternoon when we made camp, the tent was set up, a lunch eaten, and we were ready to go and look up some fresh meat. Each went as fancy led. I took my way toward a high ridge, it might have been a mile away. Gaining the top I sat down to take in the view of the country around, and what a country. I was on one of the highest ridges between Tongue and Powder rivers. To the east the country broke away in pine-clad hills; then beyond I could see the prairie rolling away toward the Black Hills like a great yellow ocean; to the west I could look down into the valley of the Tongue; then on the other side I could plainly see the white-capped peaks of the Big Horns. I had been sitting for a half hour or more, when I saw an animal come out of a thicket about a half-mile below me. I made it out to be an elk, and alone as I thought. Slipping back over the ridges I made a circle until I got the wind right, then started toward my game. Cover was good, and I was not long in getting in the vicinity of the gulch where I saw the elk. Going to the top of a little rise I cautiously raised my head, and to my surprise found myself within twenty yards of a magnificant buffalo bull. He was about a five-year-old; his long, sharp, black horns were a perfect pair; and what a head, black and majestic, while his bright eyes blazed upon me half in defiance, half in terror. He was lying down, but made no effort to move. Was this my elk? I thought. I did not think so. I was not after buffalo, so I crept into a little gulch out of his sight, and kept on toward the main draw. No sooner was I out of his sight than he was up and away, running swiftly and silently up the gulch and soon disappeared among the pines.

I crept onward, and once more raised my head cautiously above a little ridge. A thicket of plum and wild cherry brush was growing along the bottom of the main gulch. Here I was sure I had seen an elk. While I was looking the brush parted, some hundred yards from me, and there stepped out into the open the very prince of mountain game—a full grown bull elk, sleek, fat and round. How grand he looked as he stood there, his head thrown back. His horns, which were in the velvet, made me think of a dead juniper. How daintily he sniffed the air. My moment had come. I brought my Sharps to my shoulder, and as I glanced through the sights I knew the game was mine. Crack! An instant, and I heard the dull thud of the heavy ball strike his body. A convulsive spring and he disappeared in the thicket. Crash, crash, and out he came on the other side of the gulch. Again I brought my rifle up and fired, again I heard the lead strike. There was no frantic leap this time. He took a couple of steps forward, dropped his head, then went down upon his knees, rolled over on his side and lay still. I went down to where I had seen him cross the gulch, and what was my astonishment to find a full-grown elk lying dead in the little draw, and not ten steps away his exact counterpart lying also dead. There had been two, and I had killed them under the impression there was but one. I was sorry for this double streak of luck, for I had no use for so much meat; but this question will always remain unanswered: if I had seen the two elk, would I have had mercy and spared one? Does any one know of a hunter who has fairly got within range of two such grand game animals, and after shooting one quietly taken his rifle from his shoulder and allowed the other to walk off?

To finish my story, I dressed my beef, and left it spread out to cool. It was too late to return for it that night, so I had to take the chances of bears and other carnivorous animals. Early the next morning we took our pack animals and went for our meat. Finding it as I had left it, we concluded to make some dry beef, and a nicer lot of dry beef I have never seen than we made from my brace of elk.

J. J. FULTON.

MASSACHUSETTS GAME INTERESTS.

IN their annual report the Commissioners on Inland Fisheries and Game say:

"The change of the law, whereby the close season for ruffed grouse begins Dec. 1, is believed by many to be a mistake.

"Legislation concerning the protection of game has been capricious and largely unwise. It is the result of pressure from different sections of the State, each having in a degree differing conditions affecting the game birds, and in some measure of mistaken although honest zeal from the friends of the game.

"It is probably impossible to frame a law applying to the whole Commonwealth, that would satisfy entirely people desiring the efficient protection of game; but, in the light of our past experience, of present observation and careful consideration, we recommend a law which shall give a uniform open season of the months of October, November and December, for woodcock, quail and partridge. This will best secure the protection desired, and give ample time and the best time for the pursuit of these birds.

"Complaint is made from the Cape that the protected deer are killed illegally. We have no doubt that this is true. Because of lack of definite and sufficient evidence, no prosecutions have been instituted. To protect a close district like the Cape requires more instrumentalities than we have at hand without the earnest coöperation of the residents.

"A few successful prosecutions for violation of the game law in a neighborhood always results in practical protection for the game in that region thereafter. Prosecutions are instituted whenever the evidence can be had.

"The public sentiment in favor of the protection of our song and insectivorous birds is growing, and the moral sentiment of the State is tending strongly in favor of the law for their protection. The diffusion of intelligence concerning all our birds, and concerning the purposes of legislation for close seasons and for protection, is the strongest factor in aid of our efforts. As the people learn the facts, they help us."

NATIONAL PARK GAME.—Gardiner, Park County, Montana, Dec. 29.—*Editor Forest and Stream:* This town is within a few feet of the Yellowstone National Park boundary line; most of the buildings face the Park. From the front doorways game can often be seen on Mt. Evarts and the flat east of Gardiner River. Last night a large bull elk came off Mt. Evarts, crossed Gardiner River near its mouth, where the town stock is watered, came up the trail and remained about the east end of town until morning, spending most of the time about McCartney's barn. He was in the edge of town by sunrise. Early risers saw him feeding around just in front of the barn and along the fence inside the Park. He was in sight for a long time. This is not the first one that has been in the edge of town. Antelope come down on the flat within a few hundred yards; elk, sheep and deer are very common and tame; parties passing often speak of seeing the mountain sheep by the road side.—H.

PHILADELPHIA SPORTSMEN are talking of revising the game laws of that State.

THE SHOOTING CLUBS OF CHICAGO.

III.—THE FOX LAKE SHOOTING AND FISHING CLUB.

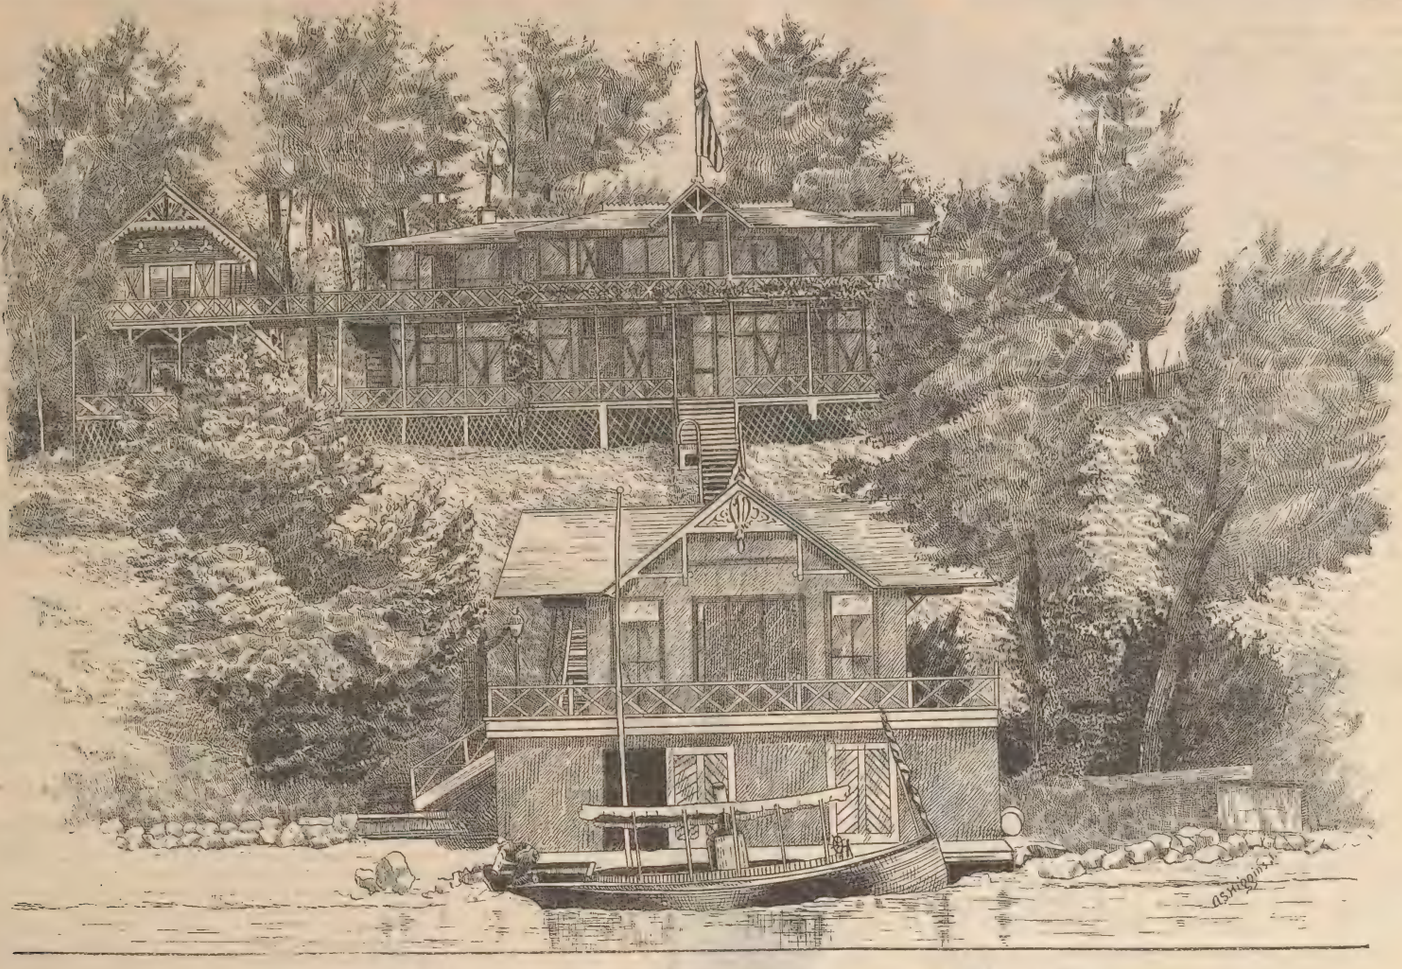
NEARLY eighty feet above the level of the inland sea which breaks in miniature waves upon its boat house stairs is situated the comfortable and commodious house of the Fox Lake Shooting and Fishing Club, one of the best known, if not the very best known, sporting organizations about the lakes, and one which certainly brings together a grand lot of thorough goers.

This club, which is popularly known as the "Fox Lake Club," has several acres of more or less steep wood and open, and a good reach of well pebbled shore line. The grounds are well fenced, well shaded, well tufted, and in every way sightly. Some of the big oaks and elms are beautiful old trees. The view from the piazzas is a grand one, and admits miles of gentle lake and rural scenery to the vision. A more suitable and altogether commendable site for a club house does not exist about the lakes than this, well toward the top of the big bluff which adds more than anything else to the picturesque quality of the lake landscape. Of a good summer day one can catch here the best of the air as he swings in his hammock, or plays at tennis when the fish won't bite; and here, too, the stern duck hunter, quite above tennis and hammock swinging, may in his season sweep the lake with his glass in the early morning, and mark out the banks of redheads and canvasbacks, or note the mallard flight over Grass Lake and the channels.

The club property, including the house, has necessitated an outlay of $14,500. The main building is of wood, two stories high, and provided with two glorious balconies or galleries, which are nothing short of a joy forever. These balconies run around three sides of the house, and have lately been extended across to the "cottage," which is now practically merged into the main building. It stands upon the right of the main house, looking from the lake, and not upon the left, as the artist has it. I should think the total frontage of the buildings upon the lake side was considerably over 120ft. The balconies and parts of the house are overgrown with woodbine. It is not, strictly speaking, a reproach for a friend to say of a Fox Lake Club man that he has "gone where the woodbine twineth," inasmuch as it twineth in other places besides up the spout in this pleasant and old-fashioned abode of comfort.

On the lower floor of the club house is the dining room, which seats fifty persons comfortably. Near this is the gentlemen's room, nicely fitted up with lockers for the individual members' guns, tackle and general outfit. The ladies' parlor, also upon this floor, is a handsomely furnished room, with rugs, big chairs, piano, etc. It has also evidences of luxury and good taste in the paintings, etchings and engravings, in the books and flowers that adorn it. Upon the first floor, naturally, are also the kitchen, store rooms, pantries and wine closets, and it need not be said that each is well provided.

Upon the second story, lengthwise of the entire house, in much the same plan as in the Mineola club house, there runs a wide hall, which at its extremities opens upon the big gallery. The sleeping apartments flank this big hall, and they are provided with wide transoms which open upon it; wide doors also open out to the balcony, and furnish a perfect circulation of air in the warmest of weather. The sleeping rooms are nicely and uniformly furnished with rugs, good beds, fine matresses, fine linen, good blankets, mirrors and wash stands, and one fortunate to rest himself in one of them need not compare his apartment to a bunk in a logging camp, by any means.



Creature comforts of a perishable nature are well cared for by the product of a big ice house, which holds seventy-five tons; and they do say some of this ice, mingled with some of the water from the big well that goes down ninety feet to the bottom of the hill, makes a cooling and refreshing drink on a warm summer day.

At the foot of the big bluff, under a spreading chestnut tree, which would grace the forge of any village blacksmith in verse or sober fact, stands the club boat house, a neat and tasty two-story edifice, as the engraving ought to show. In the lower story are kept the boats of the club, and also those which are the private property of individual members. Here also are lockers for decoys, seat cushions, minnow pails and other loose gear, and this is in general the room for the sporting appliances of the club. Upstairs, in this very remarkable and commendable little boat house, there is an elegant billiard table and all its paraphernalia; also six beds, which fold back into the wall, and which can be used if rare occasions should so demand. The upper story of the boat house has a pleasant little verandah on three sides, and the big overhanging Swiss roof make this a pleasant corner of the world if the day is warm.

In boats this club is certainly well provided. It owns as an organization a number of small hunting boats, also six rowboats, two small sailboats, and a rattling yacht, the Frolic, which was built in 1884, which flies 200yds. of canvas, and is pronounced by yachting men to be built on most effective lines. A skipper, Mr. Alberg, is regularly employed to sail this tidy craft, and no charge is made to members who wish to take a trip around the lakes. There is also a good steam launch. In the fleet of private boats, fifteen or twenty in number, each man has followed his own idea as to his own boat, and the results are somewhat different, although there is a general closeness to the model before mentioned as found well fit for these waters, the short double-end clinker, decked and combed.

The Fox Lake members are all general sportsmen, and you can't get one to say that he likes shooting more than he does fishing, or *vice versa*. More than this, the club contains some of that most ardent and most genial of all discovered species of the genus crank, the canoe crank. Prominent among these delightful water dippers are Dr. Fuller, Messrs. Geo. E. Cole, W. D. Porter and Geo. M. Millard, who all have elegant little craft. Dr. Fuller's canoe was made by Douglass, of Waukegan, who has, by the way, built several of the other boats. Mr. Porter's cockleshell is also an ornament to the profession. These are all paddling canoes, and I believe never use a sail.

Pushers for shooting or oarsmen for fishing are always obtainable at Fox Lake, and this work is really the main source of revenue among some of the lake dwellers. Among these men are some of the best pushers and hunters I ever saw, and it is really to their skill and experience that the shooter must look in securing a bag in these much-hunted regions. The regular pusher's rate

CLUB HOUSE OF THE FOX LAKE SHOOTING AND FISHING CLUB, FOX LAKE, ILL.

at Fox Lake is $3 a day; for this the pusher will be at your service from any hour in the morning until after dark at night; he will, if desired, furnish his own boat, decoys and blind, will do all the work if you are that sort of a man, will clean your gun at night, and give you what ducks he kills, which will be a good many more than you will kill yourself. George Beckwith and Chet. Howard are the two best pushers on the lake. They are at the disposal of members of the Fox Lake Club, or of any other gentlemen who may first bespeak their services, though they don't like to go out with a tenderfoot.

Enough has been said to show that the Fox Lake is a body thoroughly conversant with the methods of having a large-sized and wide-reaching good time. They go out for fun, and they get it every time. The wives and families of the members come in for all of their share of the good times, it being no part of the club policy to bar out the ladies, but rather to make a pleasant home for them. Some families spend five or six weeks or even two months in the club house during the heated season, the heads of the families escaping from business as they may, perhaps two or three times a week. At such times tennis parties, dances, fishing, boating, sailing, concerts and games of all sorts come in for their share in this go-as-you-please summer resort. Meals are ready at any time of the day, the lake and all outdoors lie ready at hand, and one's own sweet will is the only arbiter of his conduct.

Besides being mighty men among the ducks, snipe and rail, each in their season, some of the members of the Fox Lake Club are noted anglers. Mr. Chas. F. Hills is held to be the champion bait caster of Fox Lake, and with his 80yds. jeweled Milan reel can lay out 150ft. of G silk pretty nearly every time. Mr. Chas. E. Hyde, the president of the club, is another angler whose head is circled with a bright wreath of froggy fame, and many others might be named if it did not seem more fit to wait till spring before going into the fishing business very extensively. Mr. Hyde has a record of a 6½lbs. large-mouth bass in 1886, and last year Mr. Hills killed one of 5½lbs. All the club fishing, or most of it, is done with the short casting rod, fine line and single hook and the bait of the live frog. Bait-casting is coming rapidly into favor here, and sometime there will be plenty to say about that.

A regular steward and full hotel force are employed by the club during the entire season, and at the disposal of these the best of the market is always placed. To go toward the expense of this *menage*, each member pays at the rate of $8 per week during his sojourn at the club house. As these contributions do not always cover the actual expense of this rather liberal plan of living, any deficit is made up by the members at the regular business meetings. A guest may be invited by any member of the club, subject to conditions named in the by-laws.

The membership of the club is limited to forty, and at present is constituted as follows: Chas. E. Hyde, President; Geo. E. Cole, Vice-President; Dr. Chas. G. Fuller, Secretary; Wm. D. Cooper, Treasurer; Victor D. Gowan, Manager; Egerton Adams, W. L. Brown, A. P. Callahan, Geo. T. Cook, W. J. Collins, Fred W. Croft, Dr. S. C. DeVeny, David B. Dewey, Dr. Walter C. Dyer, Lawrence C. Earle, Marcus A. Farwell, C. H. Foster, F. A. Hardy, A. V. Hartwell, Philip Henne, Dr. F. Henrotin, Chas. F. Hills, John J. Knickerbocker, C. J. Mauran, Horatio N. May, Geo. M. Millard, R. B. Miller, Jas. A. Miller, Chas. Morris, J. W. Nye, W. D. Porter, Geo. C. Prussing, Fred A. Ray, Leo Schmidt, W. R. Selleck, Frank W. Stanley, Harold Smith, Henry L. Turner, J. H. VanVlissingen, John B. Wright.

This is a list of names very well known in Chicago business circles, as well as in the sporting fraternity, and as to business employments are truly many men of many minds. Mr. Hyde runs a big tailoring establishment; Mr. Cole is a heavy stationer; Messrs. Cooper, Turner and Van Vlissingen are real estate men; Messrs. Adams and Brown are interested in iron, and Mr. Cook in lumber; Mr. Farrell is president of Oakwood Cemetery, and Mr. Foster secretary of the Alton Railroad; Mr. Hills is secretary of the Wright & Lawther Oil Co., and Mr. Selleck is manager of the McCormick Co.; Mr. May is a wholesale grocer, and Mr. Morris has an acre or two of buildings where he makes fireworks. But, whatever be the diversity of business interests of the members, they meet on a common plane when it comes to a long shot or a big fish story, and in their outdoor home dwell in harmony together.

The Fox Lake Fishing and Shooting Club is a corporation duly organized under the laws of the State of Illinois, and the purpose clause in its charter states its object is "recreation and improvement of its members in the use of firearms and fishing tackle." This is certainly refreshing, and a vast contrast to the reading of most corporation charters. The charter members of the club, which was organized in 1879, were Chas. A. Alexander, John Addison, James W. Nye, Albert Willey and M. N. Bassett. The duties of the president, secretary and treasurer are the ones usual in an association of this size. The manager has custody of the property of the club. The board of directors have general management of the affairs. The three first-named officers constitute the auditing board.

It would be interesting, more especially for the sake of clubs purposing to organize, to quote the by-laws of this association in full, but they must be abridged, as follows:

The membership is limited to forty. To become a regular member of the club a lady or gentleman must be duly proposed by two members in good standing, be elected by the Board of Directors, and pay initiation fee to the treasurer. If the payment is not made within thirty days after notice of election shall have been sent, said election may be declared void by the Board of Directors.

Any member whose conduct shall be hostile to the objects or injurious to the character of this club, or who shall willfully violate its by-laws or established rules, may be suspended or expelled from the club by a two-thirds vote of the members present at any meeting, provided that charges in writing signed by three members have been preferred, a copy of which shall have been served upon him, and he shall have had an opportunity to be heard in his own defense.

The resignation of a member indebted to the club shall not be accepted.

Membership in this club shall be transferable upon the approval of the Board of Directors, and subject to the restrictions governing the admission of new members.

All interest in the property of the club, of members resigning or otherwise ceasing to be members, shall be vested in the club.

The initiation fee shall be one hundred dollars until the membership shall have reached forty, after which it shall be one hundred and fifty dollars.

The annual dues of members shall be fixed and assessed by the club at the annual meeting, in an amount not to exceed fifty dollars per annum, and shall be payable within thirty days after notice thereof has been sent.

When the dues, or other indebtedness, of any member shall remain unpaid for the period of thirty days after proper notice has been given, his membership may be declared forfeited by vote of the Board of Directors, and he shall thereupon cease to be a member of the club. A member thus forfeiting his membership may be re-instated within three months of such forfeiture by the unanimous consent of the Board of Directors, upon payment of all arrears.

No one who has forfeited his membership in the club shall ever be admitted to any of its privileges unless he is re-instated or re-elected.

This club has purchased and maintains its club houses, boats and divers and sundry appurtenances thereunto belonging, at Fox Lake, Ill., for the use and enjoyment of its members. Visitors, except they be members of the family of a member of this club, shall not be admitted more than once in each club season to the use of its privileges without the unanimous consent of the Board of Directors.

HOUSE RULES.

Members will please register immediately upon arrival. Rooms will be assigned by the housekeeper, who is strictly prohibited from reserving rooms in advance for any one. The housekeeper is instructed to make such changes in rooms already occupied, as may be necessary for the better accommodation of all. Members intending leaving on the morning boat, should settle their bill on previous evening. Shooting from any part of the club premises is forbidden; also the carrying of loaded firearms. No card playing for money in the club house. Promptness to meals is especially requested. Only luncheon served after regular meal hours. Those wishing club boats for hunting or fishing should apply to man in charge of boat house, who will make all necessary arrangements It is not expected that the pleasure boats will be used for such purposes. Any one taking club boat from landing is expected to return the same, failing in which, he will be held responsible for any damage to the boat or cost incurred in securing its return. No one allowed to use any private boat without written order from owner to the housekeeper. Guests may be introduced as provided by the by-laws, and are entitled to same privileges, and subject to same restrictions as members. Courtesy to those who wish to sleep will suggest the propriety of refraining from all noise in the club house after 11 P. M. Members bringing families or a number of guests, will insure better accommodations by advising the housekeeper in advance. Any incivility on part of employes should be reported at once to the manager, or in his absence to the housekeeper. Housekeeper will see that these rules are strictly enforced.

This is the way one big club does it. Next week it is intended to give shorter notice to several clubs of less generous proportions, and to say a word or so about some of the old landmarks and houses where the disengaged public are wont to congregate.

CHICAGO, Ill., Jan. 17.—Members of the Mak-saw-ba Club who attended a recent trap shoot at the grounds on the Kankakee, state that numbers of mallards were seen. A flock of twenty mallards is at English Lake, and, in fact, there are numbers of birds on the Kankakee. Two shooters leave to-morrow for a try at them. This is phenomenal news for this date in Illinois. The extremely mild weather is the cause of it. It is a trifle colder to-day, but still bright and pleasant. It has been raining for the last few days. The Kankakee River is all open, and there is water all over the marsh.

In the issue of Jan. 10 I made a little mention of the fact that Mr. John Gillespie and Mr. John B. Ostell were no longer with Spaldings, and hoped they would both be soon employed. The note served a very good purpose. Mr. Gillespie is now with the Jenney & Graham Gun Co., and Mr. Ostell will doubtless soon be under an engagement. A Syracuse, N. Y., firm, who never had met either, wrote both the above gentlemen and offered them employment. Thus fare all lovers of the FOREST AND STREAM. If anybody else is out of work, we can get 'em a job.

E. HOUGH.

ONTARIO MOOSE.—Mattawa, Ont., Jan. 11.—*Editor Forest and Stream:* There is work up here for the game wardens, for the beautiful weather, with just snow enough for tracking, has sent scores of parties into the woods, and many a moose is being laid low. Moose meat is a common article of diet in some places in this vicinity, though in most cases when a moose is killed the skin is taken and the carcass left for the bobcats and foxes. The present law is a dead letter; and there is work for the Alliance to enforce this law.—STANSTEAD.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

On Jan. 9 Caterer Besse, of this city, served twenty-four partridges (ruffed grouse) at a banquet of the Veteran City Guard Corps. In behalf of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish the writer had Mr. Besse arrested for a violation of Connecticut's game law, which reads:

SECTION 2,530. Every person who shall buy, sell, expose for sale, or have in his possession for any purpose, or who shall hunt, pursue, kill, destroy, or attempt to kill any woodcock, quail, ruffed grouse, called partridge, or gray squirrel between the first day of January and the first day of October, the killing or having in possession of each bird or squirrel to be deemed a separate offense, shall be fined not more than twenty-five dollars, provided that no person shall be imprisoned more than thirty days for failure to pay any fine under the provisions of this section.

Mr. Besse claimed that he bought the ruffed grouse in New York city, and produced a bill from a New York dealer in game dated Jan 7. Mr. Besse testified that in his opinion "the ruffed grouse had been killed some six weeks, for their backs and legs were decayed." This was rather rough on the Veteran City Guard Corps, being fed on "decayed" game. We also listened to some expert testimony from a wholesale dealer in game and poultry. Among other gems of his I will quote one: "A partridge would hang in this [court] room for two weeks before it would show the least sign of decay." As the temperature was about 80° you will see the above statement will not but speak for itself. The drift of this line of argument was evidently to show that the grouse in question were killed in December. Judge Henney took the correct interpretation of the law and fined Mr. Besse, and a bluff was made to appeal to the Superior Court.

HARTFORD, Conn., Jan. 16. A. C. COLLINS, Pres.

DOMINION GUN ALLIANCE.

Editor Forest and Stream:

An energetic effort has recently been made here in the Canadas to band the different gun clubs together and form a Dominion Gun Club Alliance for the purpose of encouraging legitimate sports with the rod and gun, frame new laws and to enforce the present law protecting our game and fish during the close season. To facilitate matters in organizing the Alliance, representatives were called for from a few of the leading clubs (one club in a place) and a meeting was held Dec. 21 in the Toronto Gun Club rooms, Toronto, where the Alliance was organized and the following officers elected: President, Judge Chadwick, Guelph; Vice-Presidents, George Pearsall, Toronto; Phil. Thompson, Ottawa; Secretary, E. W. Landys, Toronto; Treasurer, Alex Ramsay, Montreal; Executive Committee, called scouts, N. P. Leach, C. H. Wallace, Lewis Trotter, Montreal; A. W. Throop, Ottawa; W. B. Wells, Chatham; Fred Martin, F. G. Verity, Toronto.

Nearly all the gun clubs in the Dominion are ready as soon as requested by the secretary to elect their representatives and join the Alliance, then the present scheme —I inclose you a copy—will be amended so as to form a suitable code of by-laws.

As each Province makes its own game laws, the gun clubs in the Province of Quebec and in Ottawa city will quite likely form into an eastern branch of the Alliance, so as to be able to look more closely after the game interests in their own Province.

The intelligent portion of our citizens are convinced that unless more stringent measures are taken at once to protect and propagate our game it will become, like the buffalo, a thing of the past.

Gentlemen, no more apathy in this matter; throw aside all envy and jealousy so as to work together harmoniously; convert or turn out, if any, pot-hunters in your clubs; be alive to help on this movement, unless you are prepared to put aside your gun and give up the sport that we love so dearly. STANSTEAD.

TORONTO, Canada, Jan. 13.

THE PROPOSED SCHEME.

For some time past there has been considerable discussion going on among sportsmen about the working of the Dominion Gun Alliance. To-day our readers are presented with the scheme which the Alliance proposes. Copies will be sent to each gun club for their consideration, when the matter will be digested and the delegates from the different organizations instructed accordingly, so that when the general meeting is held everything will assume a definite shape. The objects of this Alliance are for the purpose of enforcing the Dominion and provincial laws protecting our game and fish and also for the purpose of promoting and encouraging legitimate sport with the rod and gun. All gun clubs joining the Alliance shall be entitled to one representative for every ten active members in good standing on the club's books. The representatives may elect the officers of the Alliance by proxy. The representatives shall also assist in carrying out the general purposes of the Alliance. The officers of the Alliance shall consist of one president, two vice-presidents, one secretary, one treasurer, who shall perform the usual duties belonging to their offices. There shall also be an active or working committee of five elected, called "Scouts," whose duties shall be to attend to the interests of the Alliance and to see that proper laws are made for the best propagation and protection of our game and fish. They shall also work up as far as possible a general public interest in fish and game protection, etc., etc.

All amendments to our present laws shall first be passed by the "Scouts," then sent to the representatives, and if adopted by the majority sent to the president, and if approved by him, with his signature attached, the scouts shall use their best endeavors to have them become law.

All actions for prosecuting violators of the fish and game laws shall be entered by one or more representatives in the name of one of the scouts, or the president. All fines so collected shall be sent to the treasurer of the Alliance.

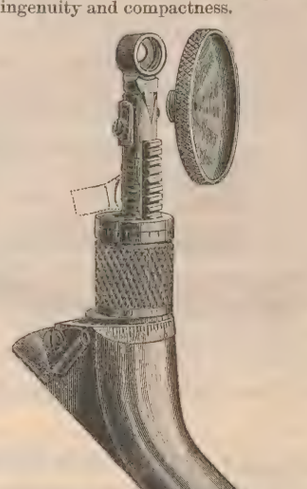
Each club may be assessed by the scouts, with the president's approval, for the sum of $10, to be used for business purposes of the Alliance, and to defray costs of prosecuting violators of the game and fish laws.

Each club shall be known by its number, which is given it when it joins the Alliance. The charter clubs draw lots to determine their numbers.

The president shall appoint two scrutineers to act with the secretary in counting votes sent in by proxy.

Newly-elected officers take their offices one month after the election takes place—the last week in December.

Resignations must be sent to the president, who may appoint a person to fill the office during the remainder of the term.



Tournaments held under the management of the Alliance may be governed by the local laws of the club where they are held, provided that at least three traps are used and set to throw the targets at least 45yds. from the trap, and only the center trap set to throw straight away. To raise funds for the Alliance it would be advisable for the president to appoint a day for a grand tournament, to be held on the different club grounds, and a sum equal to one-half the entrance fees to be divided into ten prizes. Class shooting at thirty artificial targets such as are in general use, by the club; ties to be shot off within one week, or as the president may direct. Results to be wired to the president and secretary. Entrance $1.

The president to appoint, at the scouts' suggestion, the umpires and scorers, who must be disinterested persons. All entries must be sent to the treasurer, at least five days before the tournament.

Appeals from the umpire's decision may be made to the president, whose decision shall be final. The cash given for prizes to be one-half the entrance money, the balance to be paid into the treasury for the benefit of the Alliance.

LYMAN'S WIND-GAUGE SIGHT.

THE rifle sights invented by Mr. William Lyman have done more than any other adjunct to the rifle to facilitate good shooting. They have been of the greatest possible aid in shooting, and, as the correspondence in these columns frequently shows, they are in high favor among sportsmen. To his other sights Mr. Lyman has now added a new device, a wind-gauge sight, which is a marvel of ingenuity and compactness.

The wind-gauge sight is the result of much study and has many original features. The principle of sighting is the same as that of the combination sight. A detachable cup, however, is substituted for the small aperture which is in the combination sight. The elevation of this sight is rapid and positive, being obtained by turning a knurled sleeve which has a triple thread. At every ¼ revolution of the sleeve a spring snaps into a small notch, which enables the shooter to quickly adjust the sight without looking at it, as is sometimes necessary in hunting. In very accurate adjustment, as in target shooting, a micrometer scale is used, which is at the top of the knurled sleeve.

The wind-gauge operates from the left hand side of the sight, and is the most simple, compact and durable device ever employed for the purpose. The lower graduated marks show the windage.

The upper part of the sight folds down forward when not in use, as is shown by the dotted lines in cut. Although the sight folds forward it is not easy to knock it out of position when shooting, for unless it is pressed forward more than 90 degrees, it will spring back to its place.

The form of the base of this sight is such that it fits the shape of the hand, and is quite as much of an improvement as the pistol grip for grasping the rifle easily and holding it steadily. The symmetry of this sight adds much to the good appearance of a rifle.

NEW HAMPSHIRE DEER SEASON.—Charlestown, N. H., Jan. 21.—In the letter you publish headed "Protection in Central New York," I find the following most remarkable statement, or misstatement, made by Mr. S. K. Fuller, viz.: that "no other State (with the exception of New Hampshire) or Territory in our latitude allows the killing of deer in August, or prohibits it in the month of November." Now, New Hampshire does neither of these things. I aided in the revision of her statutes in 1878, and they have been published in FOREST AND STREAM annually since. The open season for deer begins Sept. 1 and lasts until Jan. 1, and since the revision of the statutes one or two amendments have been made by which practically all of our shooting (except ducks and plover) begins the 1st of September. I cannot imagine how Mr. Fuller blundered on to such an idea.—VON W.

PITTSBURGH, Pa., Jan. 14.—The officers of the United Hunting, Fishing and Camping Clubs of western Pennsylvania for 1889, are: Pres., F. K. Gearing; Vice-Pres., Wm. Scandrett; Sec., J. W. Hague; Treas., M. F. Cassiday; Directors, Geo. Weaver, W. G. Schirmer, L. G. Schattenbrand, J. C. Wiegel, Hon. B. C. Christy, Hon. M. B. Lemon, Ed Melich, Dom Maguire and Jacob Moschell. This association has done good work in the past year and has better indications for the future. The annual report will be published in April.—J. W. HAGUE, Secretary.

ST. LOUIS NOTES.

ST. LOUIS, Mo., Jan. 10.—The weather in this locality has been more like spring than winter. The past week has been a most remarkable one, and all settlers say they have not seen so open a winter for years in these parts. Sportsmen were predicting that ducks would undoubtedly begin to come up from their southern quarters, and they have certainly predicted most truthfully, for several fair bags have been made in the vicinity by gunners from this city.

Several days ago a gentleman from this city bagged a few snipe over on Wet Prairie, Ill. He says he saw a good many, but they were wild and very hard to approach.

Superintendent Damsel, of the Adams Express Co., did something last Wednesday that will make him very popular with sportsmen throughout this broad land. The company's agents along the line of the Frisco Railway were ignorant regarding the closing of the open season on deer on the 15th of the present month, and received venison for transportation to commission houses in this city, when it was too late to deliver it before the season closed. Tuesday evening's trains brought in quite a lot of venison, which could not be delivered until the next day, the 16th, which would have been a violation of the law. Superintendent Damsel when he heard of the matter gave orders to have it all returned to the country merchants who shipped it. The shippers will no doubt be considerably surprised when it is returned to them, and some perhaps will feel very indignant toward the express company for the action taken by its superintendent. If all the express companies were to follow the example of the Adams country shippers would be more careful, and would post themselves on the game laws of this State.

Some unknown party in the vicinity of Eureka, about twenty-five miles west of here, on the Missouri Pacific Railway, who is opposed to hunters invading his domain, has distributed poison throughout the surrounding country, which is playing havoc with field dogs owned by sportsmen of Eureka, and about ten days ago three of them died from the effects of the poison, and now comes word that two more have turned up their toes to the daisies. The Eureka sportsmen are making an effort to learn, if they can, who this party is, and should they succeed in finding out, will make it warm for him.

UNSER FRITZ.

HALIFAX SPORTSMEN TAKE NOTICE.—New Glasgow, N. S., Jan. 16.—*Editor Forest and Stream:* A terrible story of game slaughter comes to us from Newfoundland. It appears that an Englishman named Musgrave went to the island in July, returning in September; during that period he killed eighty caribou, brought them, or at least the antlers and some of the hides, to Halifax and shipped them there to Great Britain. I am informed by a reliable party who saw Musgrave in Halifax, who showed him the antlers and hides. Perhaps your Little Bay correspondent can give us some light on the subject. If it is a fact that the above number of caribou were killed by one party, it is high time that some of the St. John sportsmen took the matter up with the government of Newfoundland to prevent such wholesale slaughter of game. Mr. Musgrave is now encamped at Mooselands, near Tangeir; he is waiting for snow in order to make a raid on several moose yards he has discovered. He can rest assured that should he attempt any such a repetition of his Newfoundland experience among the moose and caribou of this Province he may find it expensive sport. Let the Halifax sportsmen keep a sharp lookout for him and we will do the same here. True sportsmen are welcome at all times; but game butchers we can do without. —GLOBE SIGHT.

THE NEW YORK LEGISLATURE.

[*Special Correspondence of Forest and Stream.*]

ALBANY, Jan. 21.—The only bill introduced in the Legislature of interest in the game line was one by Assemblymen Cronin making it unlawful to catch menhaden, or other fish, by any means except with hook and line, in the waters of Jamaica Bay. Any offender against this act shall be liable to a fine of $100 or thirty days' imprisonment, or both. It is complained that those who take menhaden by nets for their oil, take a great many game fish of all kinds which they do not hesitate to use in the process. There are also complaints that the deep nets drag the oyster beds and do much harm. A similar bill to this has been here before.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. This book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Camp-Fire Flickerings.

"That reminds me."

255.

ON a calm still day in October, I was in a boat waiting for the evening flight of ducks. I had not had a shot for an hour, and as I lay in my boat I fell into a doze. The whir of wings roused me, and looking cautiously through my blind, I saw very near a big mallard drake, standing on a muskrat house. My gun was lying on the seat, with its muzzle the other way. I slid very slowly and quietly, feet foremost until I reached it, and turned it in the right direction. I then tried to rise to my feet but a heavy weight oppressed me, something was holding me with superior force; I turned my head and found that I had slid under the seat of the boat. Before I could crawl out Mr. Quack had left. F. McC.

PITTSBURGH, Pa.

KIMBALL'S SMOKING TOBACCO AND CIGARETTES are justly the most famous and highly prized made in this country to-day. Their preëminence was attained years ago, and it is maintained in all respects. The Vanity Fair trade mark is known universally as a stamp of excellence; it stands for the highest perfection in delicate and dainty smoking products.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

Sea and River Fishing.

NEWFOUNDLAND FISHING SEASONS.

Cap. 103.—Consolidated Statutes.

SEC. 1.—No person shall at any time catch, kill or take any kind of trout or other non-migratory fresh-water fish in any inland lake, river or stream within this Colony, by the use of any net, baltow, weir, fishing otter, lime, or other deleterious compound.

2.—No person shall catch, kill or take any kind of trout, char, whitefish, landlocked salmon, or any fresh-water or migratory fish in any lake, river or stream of this Colony between the 15th day of September and the 1st day of December in any year.

Cap. 102.—Consolidated Statutes.

5.—No person shall by spearing, or sweeping with nets or seines, take, or attempt to take, any salmon, grilse, par or trout in any bay, river, stream, cove or water course, above where the tide usually rises and falls, or in any pond or lake.

6.—No stake, seine, weir or other contrivance for taking salmon shall be set, except nets placed so as not to extend more than one-third across such river, stream or water course.

7.—No person shall construct any mill dam, weir, rack, frame, train gate or other erection or barrier in or across any river, stream, etc., so as to obstruct the free passage of salmon, grilse, par, trout or other fish resorting thereto, for the purpose of spawning.

No person shall permit any sawdust or mill rubbish to be cast into any such river, stream, cove, lake or water course.

MAINE TROUT NOTES.

I CANNOT learn that a heavy run of blueback trout was observed this fall in the Mill Brook and other brooks running into Richardson Lake, Maine. It will be remembered that a great run of these fish was observed in the fall of 1887, especially in Mill Brook, by guides and others, and soon afterward mentioned in the FOREST AND STREAM. The bed of the stream was literally covered with these fish, and hosts of them could be taken out of the water with almost any sort of a net. It was also curious to note that they were working up the same stream over the bed of which hundreds of brook trout had gone only a few days before, and evidently for the same purpose, that of spawning. So far as the man who saw the bluebacks observed, there were at that time no brook trout in sight, and it was also a matter of some comment as to where the brook trout had gone in so short a time. It is, however, highly probable that the same run of trout took place this fall, though it failed of being observed for the good reason that careful observers were not there at the time. Indeed, a run of these peculiar fish has for several years been observed at the Upper Dam, where the trout come up from the same lake as in the case of the Mill Brook run. Neither have I any doubt but what a run might also be observed as well in Beaver Brook, and in fact in any of the brooks which run into Richardson Lake, were careful observers on the grounds at the time.

Blueback trout are to be found in Richardson Lake as well as Mooselucmaguntic. Some authors rely greatly upon color and teeth at the root of the tongue as a matter of distinction of species; but they admit that specimens of the brook trout are occasionally found with these teeth at the root of the tongue. Well, if they had fished the streams and ponds of Maine a little more thoroughly than they evidently have done, and fished with an eye to the peculiarities of the trout they were taking, they would have observed that teeth at the root of the tongue are really very common in this species of trout. Any one who will take the trouble may become convinced that coloring in the brook trout, or shades of coloring, beyond the red spots, are very uncertain. There is a pond in Somerset county, Maine, where the trout are so black as to often be mistaken for chub or some other fish, till close examination shows that they are really trout. At the same time one of the inlets of this pond has a clear stony bottom, and a trout taken from this brook is noted for the lightness of its coloring. Again, this inlet to the pond happens to run out of another and a smaller pond. The upper pond has remarkably clear water with a stony bottom. In this pond the trout are remarkably light colored, and yet, in the spawning season, the larger trout of the lower pond, which, by the way, has a very black and muddy bottom, run up the inlet to spawn, and often into the upper pond, across it and up its inlets, there to spawn. At least the very black trout of the lower pond have been found in the inlets of the upper pond. Now, what conclusion do we come to from these facts? Simply that these trout are one and the same species, regardless of the pond in which they are found, and that the bottom of the home of the trout has very much to do with its coloring.

My wife has for a long time been interested in trout painting, and the peculiar colorings of individuals of the brook trout have been a special study with her. I have been aware from my boyhood that in a particular stream in Oxford county, in Maine, the trout are particularly beautiful as to coloring. Not only are they mottled in a very distinct and beautiful manner, but they are also painted with waves of color along their sides to an extent greater than any other trout I have ever seen. In the summer of 1883 I determined to procure one of these trout for my wife to paint, and if possible to get the peculiar coloring for which they are noted. We went to our friends, within some twenty miles of the stream in question, and with a team my brother and I started the next day for the mountain stream. We had procured a tin pail with a cover, and we were determined to bring home specimens of those beautifully-marked trout to be copied in painting. We procured several. By carefully changing the water every few miles, from wells and streams, we got two of them over the drive of twenty miles alive. We put them into a well that night in an improvised car for the inspection of my wife the next day. In the morning one of them was dead. The other was lively enough, but alas for his beautiful coloring of the day before! It was all gone. It was about as pale and colorless a specimen of a trout as I ever saw.

There is a lady living a few miles from Rumford Point, Maine, who has a tame trout. That is, she has a trout that the family has kept for several years in an aqueduct tank in the house. The water runs from a mountain spring into the tank at all times. The trout has become very tame. It readily comes up to the top of the water at call; suffers its back to be rubbed, in fact seems to like this sort of treatment. It takes food from the hand readily; often jumping out of water for earthworms or grasshopper, of which it is especially fond. But as to coloring, what has this trout? Simply nothing, except almost an entire absence of the wavy brightness that characterizes the trout from the same brook from which this specimen came a few years ago.

Many brook trout of 10 and 10½lbs. have been recorded by careful and truthful anglers. One of 11½lbs. was taken in Mooselucmaguntic Lake a year ago last June. In the fall of 1880, Sept. 29, a brook trout was taken at the Upper Dam which weighed 11½lbs. This trout was at once forwarded to Prof. Baird, who had the skin mounted, and it is, or should be, in the Smithsonian Institution to-day. If that specimen has been destroyed, another specimen can probably be obtained next season, that will weigh 10lbs. at least. Indeed, if the Government will furnish the jar and the alcohol, and have it at the Upper Dam next summer, there is no doubt that one or two specimens of these great trout would be contributed to the Smithsonian by sportsmen who happen to be so fortunate as to take them.

Even the lovers of the rod and reel are sometimes the recipients of Christmas remembrances. In one case Mr. Geo. B. Appleton, for several years a fellow salesman with the lamented and much beloved Prouty, was made happy on that happiest day of all the year. He received, much to his surprise, the very gold watch that Prouty used to carry. Mrs. Prouty accompanied the gift with an explanation, stating that she had for some time contemplated the gift, well knowing that it would be the wish of her husband, could he speak from the land where gifts are not needed. Inside the watch is inscribed, "My companion, and my own familiar friend."

Even "Special" himself was not forgotten on that day, and a gold trout now ornaments his watch chain, a gift from Geo. T. Freeman, the Court street jeweler. It is all the more a welcome trout from the fact that George and "Special" have camped together and fished together many a time, taking trout other than golden, but bright and shining all the same. SPECIAL.

NOTES ON SALMON, TROUT AND EELS.

THE following notes from the returns of 1887 of the Board of Conservators of the Dart Fishery District, England, are of interest to us because we have the fishes mentioned, and know very little of their habits and movements:

Young of salmon twelve months old are termed spawn; they go to sea at this age at various periods from March to June; they vary in length from 6 to 8in.; maximum weight, 2oz. On their first return from the sea in July and August of the same year they are termed peel [The Inspector thinks the observer has confused migratory trout (*Salmo trutta*) with salmon, yet he has known a grilse of 1lb. weight, and Yarrell records one of 15oz.], and weigh from ¼lb to 1½lbs. The following summer they come up the river again, about July and August, weighing from 4 to 6lbs., and are then termed harvest fish, being about two and a half years old. The following summer, about three and a half years old, they run about 8 to 12lbs. each. Besides these there is a small fish throughout the year in the fresh water termed a hepper. I consider this is the young of peel [*Salmo trutta*]. I have seen these latter spawning under ½lb. in weight.

I notice that whenever there is a good freshet in the river, salmon will ascend to the fresh water, and they quickly drop back again to the tidal water. They certainly do not come up then for spawning, and, I believe, only for a change, a taste of fresh water.

Sea lice are the only parasites I have seen on salmon, and I have not seen these above Totnes Weir (the highest point the tide flows), about twelve miles from the sea. Possibly they may at times carry them to the fresh water, but it is generally believed they die and drop off within twenty-four hours of the time the fish enters the river.

Formerly, while the fish were obstructed at Totnes Weir, very few salmon were seen in the river before May. For some years they were netted early in September and put over the weir. These fish spawned in October, returned early to sea and came back in March as fresh run fish, and always the largest caught during the season, 15 to 20lbs. each. This continues, though the fish-pass at Totnes Weir renders netting now unnecessary.

Since salmon have been able to get over Totnes Weir they get to the highest water on Dartmoor, and spawn about the middle of October; this has continued for many years, but this last season was an exception; the dry weather continued late and very few salmon got up the river till the end of October. There is an old saying among the fishermen on Dartmoor that very few salmon are ever seen there after Christmas, and that unless fish can spawn there early they are afraid of being left by failing waters. This theory is fully confirmed this last season; very large numbers of fish have spawned in November in the lower parts of the river; they could then have got to the moor, but not one was seen in the East Dart and very few in the West Dart above the junction at Dartmeet.

Most of the salmon spawn from the middle of October to middle of December, and a few down as late as April. Brown trout spawn early in October and November.

The Dart is a very swift flowing river, and most kinds of crustacea get washed away. The trout in winter are short of food, dependent a great deal on worms, not a fattening diet, but they get rapidly into condition when the natural flies appear. The better the food the earlier the fish spawn. A remarkable instance of this occurs in this district. A small brook empties into the Slafton Lea, a sheet of fresh water close to the sea coast between Dartmouth and the Start Point. The trout in this brook are in first-rate condition as early as January; the owner will not allow any fishing after June 30, and the fish spawn in July. I consider this is caused by abundance of food in the winter at the spot where it enters the Lea, where thousands of young perch and roach abound.

The trout in the fresh water of the Dart are all white flesh except when they drop down to the tidal water below Totnes Weir, and all of them get pink flesh from the difference in food—shrimps, etc.

Salmon run mostly on spring tides and freshets, and with a northwest wind blowing off-shore, causing smooth water at the rocky entrance of the river at Dartmouth.

Eels are very abundant both in the fresh and tidal portion of the river. They are taken occasionally by "clotting" (a bunch of worms strung on worsted, which they hold fast on), as many as 30 to 40 dozen at a time.

ONEONTA, N. Y.—The Fish and Game Protective Association members propose to put out some quail in this vicinity.—X.

BLACK BASS IN PONDS.

TAUTON, Mass.—*Editor Forest and Stream:* We have near here a large pond that has been stocked with small-mouth black bass for seventeen years, and yet it is the exception and not the rule to catch one out. When one is caught it is always a large one. I have fished it for ten years and never saw a small one. The pond has an outlet into the river by way of numerous mill dams, etc. What is the reason they are so scarce? Can it be they have run the dams to the river? Perhaps the pond is not well adapted to them. There is another pond near by of spring water but small outlet, some sand, a good deal of mud, and some small boulders for bottom. Is there anywhere I can get bass fry or spawn to stock this pond? Would not the large-mouth be more likely to succeed than his brother the small-mouth? There is very good feed in it for bass, as it is alive with shiners and small perch, etc. I would willingly go to a little expense and trouble to see this pond stocked. I think that it would make good sport without going too far for it. I have tried the other pond with all the lures that I know, including the fly, which is the most successful, but I have very indifferent success. In the Fall River ponds the bass are very plentiful and I have good success. They have not been stocked any longer than our ponds here. I would be more than pleased to hear of anything that would catch them. G. E. W.

[It is difficult to tell why small bass are not caught in the Taunton pond. Perhaps they may be present, but remain in seclusion and refuse to bite. If they have access to the river they will go into it, and the dams, unless provided with fishways, will prevent their return to the pond. Possibly there is not enough food for the bass and the big ones have eaten the small ones. If there is an abundance of minnows there should be plenty of bass. The other pond described should certainly grow good bass of both kinds. The two species thrive equally well in Massachusetts. Waban pond, at Wellesley, Mass., has the same peculiarity with regard to its bass. It has been stocked twenty years. There are plenty of large small-mouthed bass, but it is a rare thing to catch a small one. A resident of Wellesley, who has fished in this pond both before and after it was stocked, informs us that he has seen as many as a hundred large bass at a time on the bottom, but they would not bite. In his long experience of nearly a quarter of a century he has caught only one half-pound bass on a hook, but he has captured many large fish. The fry are common in shoal water near the shore. Shiners are very abundant. He has caught minnows on one side of his boat and used them in a little deeper water on the other side to catch bass. This pond empties by a brook into Charles River. Bass of all sizes are found in the river. The biting of the bass in Waban pond is extremely capricious and disappointing. Our informant has been most successful trolling with a frog, having his line sunk a little below the surface. Farm pond, in Sherborn, has plenty of bass of both kinds, and a good catch can be made almost any day. A permit is necessary for non-residents. This pond has no shiners in it; there is no inlet and only a small outlet. Barker's pond, Wellesley, Mass., is artificial, and has neither inlet nor outlet. It contains no minnows, but has plenty of small bullheads or catfish. This pond has many small bass, but no large ones apparently. In the spring one can take all the small bass of ¼ to ½lb. he wants with worms. In these ponds bass take the hook best where there are no minnows. Besides frogs we know that small catfish are very tempting to bass. In the Susquehanna River they are used sometimes in preference to all other baits. Small bass can be had from Mr. R. Winsford Denton, Wellesley, Mass., at a reasonable price in the spring.]

LAKE TROUT.

Editor Forest and Stream:

I have always been mixed up in the matter of lake trout, and since reading Mr. Cheney's letter I am more so. "Forester" records three distinct lake trouts—the lake trout (*Salmo confinis*); the siskawitz or northern lake trout (*Salmo siskawitz*), and the greatest lake trout (*namaycush*). Mr. Cheney tells us a great deal about his lake trout being known by so many different names in different places; but he fails to make the most important matter clear by not dwelling upon the three kinds of lake trout. "Forester's" "lake trout," "greatest lake trout" and "siskawitz" are all different. Are there three lake trouts? Does "Forester" enumerate them correctly? You will see by the outlines I send you that his lake trout and greatest lake trout, according to his drawings, are as different as any two fishes that swim. I am not the only one who is puzzled in this direction, and I think a short but clear item from you on the subject would prove an appropriate, interesting and instructive feature. Which of these three fishes is commonly called "Mackinaw trout," "Mackinaw salmon," "lunge," "longe," "togue," "forked-tailed trout," "tuladi," "red trout," "gray trout," "lake salmon," "salmon trout," if these are vulgar names? KAHKAHLIN.

[Only one lake trout is recognized at present by students of the salmon family—the *namaycush* of Walbaum. The siscowet or siskawitz is regarded simply as a local race of the *namaycush* differing only in being shorter and fatter. "Forester" took his ichthyology principally from De Kay and some of his figures of lake trout are poor copies of illustrations in "The Natural History of New York." This was considered an excellent work several decades ago and is now one of the classics, but it is not accepted as a guide to the present state of knowledge concerning fishes. The names given in the closing paragraph, with the exception of red trout, refer to the common form of the lake trout with its color variations. Tuladi is the New Brunswick name; togue is heard in Maine, and some togue are nearly black; longe is attributed to Vermont; namaycush is the Indian name in the far North; trout is the appellation in Winnipiseogee; Mackinaw trout appears on lakes Huron, Michigan, and Superior: lake salmon, lake trout, and salmon trout are names used in northern New York; peet is the most curious name of all and its locality for the moment is forgotten.

If we were to describe the variations of color and form observed in the lake trout through its wonderfully wide range from both sides of Arctic America southward to Idaho, the Great Lakes, and New York, we might be charged with romancing, but in this case "truth is stranger than fiction."]

WHAT'S IN A NAME?

EVERYTHING. "Sardines in olive oil" sell readily as disguised Eastport herring in cottonseed oil. "Ocean trout" and "Alaska mackerel" are considered far superior to the common menhaden from which they spring. "Pickled whitefish" are much more satisfactory to the imagination than the weakfish which represent them in the market. "Cod steaks" sound promising even when cut from the savage wolffish. "Kennebec salmon" are always in demand whether from Maine or in the guise of redfish and steelhead from Oregon. It is, therefore, with little surprise that we hear just at this time of the wonderful dinners provided by a celebrated restaurateur in Washington with "young halibut" from Norfolk as the chief attraction transformed and idealized from the homely and humble winter flatfish, which has approached our shores, not to thrill epicures, but to deposit its eggs peacefully.

We are reminded of a circumstance in a noted coffee house in Melbourne a few years ago which created a great deal of excitement. The proprietor introduced a fish of surpassing sweetness and delicacy of flavor, under the name of "Sweet William." His patrons eagerly devoured "Sweet William" and the fish had a tremendous run. It was tender, juicy, and entirely free from bones. All went swimmingly for a time. Inquiries failed to reveal the name of the new favorite until one luckless day somebody saw a barrelful of young sharks go into the establishment, to be translated into "Sweet William." Then the volume of business suddenly shrunk and the air was black with threats of suits for damages by enraged customers. And so—what's in a name?

THE MENHADEN QUESTION AGAIN.

Editor Forest and Stream:

It was a surprise to me to see one or two well known anglers upholding the policy of the "menhaden pirates," as we call them down East. I am satisfied that they had not investigated the question fully or their opinions would have been changed. A few years ago the menhaden men skinned our noble river, and fishing it to the bottom with their purse seines, destroyed all food fishes that came into them. They did the same again this year, on our coast, within a hundred yards of the shore, in open defiance of the law, but we are going for them and they'll probably pay the penalty. The great Mr. Maddox, I learn, is going to have the law repealed so that the pirates can gobble up all the fish in our rivers, as well as on the coast, and grind them into porgie chum. But, I rather guess not. G. E. N.

BATH, Maine.

Editor Forest and Stream:

At a meeting of the Menhaden Association last week it protested against the closing of Raritan Bay to their nets as a discrimination in favor of sportsmen. To again open the bay to menhaden fishers would be a discrimination in favor of the oil men. Do these men want the earth with a shawl strap around it? Is there to be no bit of water closed to their devastating work, where the fishes can find a place to breed and rest from the pursuing steamers? It is evident that the menhaden men will be satisfied with nothing but the right to pursue their prey in every nook and corner where they may go. They are bold and aggressive, and it is time that they should learn that the people have some rights in the matter of food fishes, and that the manufacture of an oil which the world can get along very well without, in order to enrich a few who have money invested in the business, is not the first thing to be considered in legislating for our fisheries. The closing of Raritan Bay to menhaden fishermen is one of the best pieces of fishery legislation we have had. Let us guard against any movement to change this law. RARITAN.

NEW YORK, Jan. 15.

SAIBLING IN STERLING LAKE.

ON Dec. 28, 1888, Mr. E. G. Blackford, with that penetration for which he is famous, discovered in a "mackerel trout" given him by Mr. A. S. Hewitt, Jr., a species unlike the natives of his acquaintance, but as he supposed, similar to a trout which we had together examined in the National Museum. This specimen, therefore, was sent to Washington, and it proved to be the first return of the imported saibling, as far as we know. It was caught with a worm by Mr. Hewitt in Sterling Lake, Orange county, New York. Mr. Blackford, quoting from Mr. Hewitt, says: "They come up only about spawning time in November. The biggest run was about the 15th. The water in the lake is from 500 to 700ft. deep. The bottom is mostly rocky. Mr. Barlow owns part of the lake and set a net to catch some of these fish, but was not successful. Mr. Seth Green tried to catch some of them with bait, but was unsuccessful and caught only two trout." Mr. Blackford says that the workmen who were repairing the dams when the water had been drained rather low claim to have seen these saibling all the way up to 30lbs. each, but Mr. Hewitt discredits this. The trout struck at a spoon, but Mr. H. could not hook them.

The length of the specimen is nearly 9¼in. It is a male with the spermaries moderately well developed. In its stomach, besides traces of the bait, were remains apparently of some kind of shellfish, and there were two trout eggs of a pale amber color, the largest one about ½in. in diameter. The oil globule of the eggs had broken into about ten or more secondary spheres. The appendages at the pyloric end of the stomach are very short and thick and thirty-six in number.

There are teeth on the root of the tongue, and five pairs on the free portion. The teeth of the lower jaw and the front part of the upper jaw are somewhat enlarged. The lower jaw projects very slightly, and has an incipient knob which can be received into a faint emargination of the snout. The breast fin is long, and the belly fin when laid back reaches within about ½in. of the vent. The tail is deeply forked.

There are eleven parr marks on the sides, with six or seven intermediate dark bands on the back extending only slightly below the top of the parr marks. The belly and sides up to the middle line, and back almost to the tail fin, are rosy. The sides have numerous small vermilion spots, showing very faintly. The large back fin and the tail fin are dusky without mottling; the latter has a broad pink tinge on its lower lobe and around its hind margin. The fins of the breast, belly and behind the vent are vermilion, the two latter with milky white margins in front. The eye is silvery with brassy reflections. The scales are very small, in about 200 rows from the head to the tail fin.

It is somewhat significant that this saibling is similar to the Sunapee trout in its habits, making its appearance in November only about spawning time. We shall await with much interest further information about the history of this really beautiful trout. Before leaving it, however, we may state that it looks very different from Sunapee trout of nearly equal size, and does not closely resemble the blueback.

"MORE ABOUT THE BLACK BASS."

IN this supplementary book* Dr. Henshall has added much new material, and many new facts, to his original work, which he has thought best to let stand as it is, and, instead of a new edition with additional matter, has given us the volume now under consideration. It is a valuable addition, containing as many chapters as the first book, and covering all that is to-day known of this fish, and of the methods of angling for it.

Many writers have tried their hands at defining the qualities that entitle a fish to rank as game. Dr. Henshall gives his ideas on this elastic subject as follows: "But what are the qualities of a game fish? As I understand it, they are: its aptitude to rise to the artificial fly, its readiness to take a natural bait, and its exhibition of strength and cunning, persistence and activity, in its efforts to break away after being hooked." In going over the disputed merits of the two species, in the matter of gameness, the author takes the position which we have long held, that the big-mouth is underrated as to its game qualities mainly because of traditional prejudice handed down from some of the early writers, and cites several well-known angling authorities in support of this position. The Doctor valiantly defends the black bass, and he properly includes both species in this name, against the charge of being unduly destructive to other fishes, but does not approve of placing them in waters where trout live.

Under the heading of "Material for Rods," after giving all the proper proportions of calibre and length for bait, trolling, and fly-rods, when made of different woods, we again agree with him that "ash and lancewood, greenheart, bethabara, and some other woods, when carefully selected, make excellent rods, but the best are inferior to a good split-bamboo rod. On the other hand, a first-class bethabara, or ash and lancewood fly rod is better than many split-bamboo rods as now made." In the matter of doweled ferrules Dr. Henshall still retains his dislike of them, and here we find ourselves again in line with him; in fact, we are so all through the book, unless in some small matters, such as his broad statement that all predaceous fishes feed almost entirely at night.

There is a marked absence of nonsense about the coloration of leaders, and a plain way of stating what the author believes to be facts, that make the book not only of value to the young angler, but to the veteran also, whether he agrees with the writer on all points, as he is sure not to do, or holds different opinions. It is only within the past dozen years that the black basses have been prominently brought before our anglers as wonderfully game fish, and to no one are we more indebted for bringing their claims to be ranked next to the salmon and trout, in the list of our angling game, than to the learned and genial writer, whose portrait the publishers have placed in the front of this interesting little book.

* "More About the Black Bass," being a supplement to the "Book of the Black Bass," by James A. Henshall, M. D.; fully illustrated: Robert Clarke & Co., Cincinnati, 1889.

MARTIN VAN BUREN AS AN ANGLER.—Marietta, Ga.—*Editor Forest and Stream:* In an article, apparently editorial, in FOREST AND STREAM of Jan. 10, it is suggested that Martin Van Buren could not have been an angler. It so happens that I can furnish evidence to the contrary. About 1845 I fished at Ottawa, Ill., in the Fox River, for black bass and pike, in company with the champion angler of that time, named Delano, hotel keeper and sportsman. We had fine sport in the stream, bringing home 400 black bass in three days, 300 of which were taken by Delano. He was an earnest Democrat, and was fond of telling that he never was outfished by any man except Martin Van Buren, who did it on that river, as I understood him to say. I never was an admirer of Mr. Van Buren, either as politician or President, and I voted for Harrison in 1840, but I am willing to give the former the credit of being a member of the brotherhood of anglers.—S. C. C.

BILLINGSGATE MARKET.—From the second annual report of the Inspector of Sea Fisheries (England and Wales) for 1887, we learn that the weight of fish delivered at Billingsgate Market, London, during the year was 308,182,000lbs., of which 1,810,000lbs. were seized and condemned. This amount includes shellfish. Nearly two-thirds of the total was carried by land; 8,000lbs. of American lobsters, sent in boracic acid as an experiment, were bad on arrival; 24,000lbs. of skates, sent in July from West of England, were out of season and could not be sold. Herrings and whitings, however, outnumbered all the other species in the percentage of condemned products.

BUCK-EYE MACKEREL AND SALT MENHADEN IN WASHINGTON.—We are informed that "thimble-eye" or "chub" mackerel (*Scomber colias*) are common as a salt fish in the markets and stores of Washington, D. C. By some of the dealers they are called "buck-eye" mackerel. The demand for these fish is constant and the quality usually very good. Salt menhaden, which were packed extensively last summer and imposed upon the uninitiated and unsuspecting under various names, such as "Alaska mackerel" and "chub mackerel," found little favor with Washington merchants, and still less with consumers.

FLEXIBLE FERRULES.—*Editor Forest and Stream:* I notice the claim, in your paper, by Mr. Kirker, of the invention of the flexible metal ferrule for rods. I have no doubt that it was new to him, but I invented and made such a ferrule three years ago, but never patented it.—W. HOLBERTON.

PASSAIC RIVER.—Commenting on Mr. Geo. Shephard Page's report in our last issue of stocking the Passaic River, N. J., with bass and carp the Newark *Call* says: "Since Mr. Page put the thirty-five bass in the river it has been replenished every year by hundreds of thousands of fish from Greenwood Lake, Hopatcong and all the chain of ponds on the Rockaway, Whippany and Pompton rivers. And large accessions of carp have recently been added by the breaking away of several carp ponds in Morris county. The trout he put in have probably been relished by the bass."

THOS. H. CHUBB sends us his catalogue of angling goods, rods, reels, hooks, flies, and all the rest of the paraphernalia which make up the necessities and the luxuries of the modern fisherman. There are subjects in these pages for many hours of cogitation and study, and if one cares to go into the rod making business for himself Mr. Chubb will supply all the component parts of a rod. Mr. Chubb claims the title of "The Fishing Rod Manufacturer," and his address is Post Mills, Vt.

Fisheulture.

NOTES ON FISH FUNGUS.

WE learn from a note on the cause of death of fishes in the National Park Dam, New South Wales, by J. D. Ogilby, that specimens of black bream, a fish resembling our scup, were picked up dead or dying above the weir in the National Park, at Sydney, from the attacks of a species of *Saprolegnia*, the well-known salmon fungus, whose ravages in the fresh waters of the British Isles and the United States are only too familiar to fishculturists. While examining into the cause of the mortality a large eel was found trying to climb up the face of a sloping rock, evidently with the purpose of ridding itself of the fungus by exposing it to the air, in which it cannot long survive. The head, and especially the soft parts about the eyes and lips, was covered in many places to the depth of an eighth of an inch with the fungus. The gills were nearly destroyed, and the remnants were thickly covered with a fungoid growth. White patches showed here and there on the body and tail, and the breast fins had in a great part disappeared.

The prevalence of this disease is ascribed to a drought of several months, during which the water was almost stagnant. The remedy advised was to let the water escape, and as far as possible dry up the bed of the river and run off the spores of the fungi, while at the same time the surviving fish would escape to the saline estuary, in which the *Saprolegnia* would quickly die.

In the report of the Inspectors of Fisheries (England and Wales) for 1888, it is stated that "The disease caused by fungus still prevails, but with less severity, in most rivers of Great Britain in the months between autumn and spring. It is not due to pollutions or overstocking, for it occurs in pure waters and where fish are scarce. Low water is not the cause, since it is often most destructive in a wet season. Sea water appears to kill the fungus, and yet diseased fish have been occasionally taken in brackish water, and even in tideways. Sometimes, but not always, a small freshet in May is followed by the temporary disappearance of the fungus from fresh waters. The disease prevails also in European Russia and in Asiatic and American rivers which flow into the Pacific."

WHITEFISH FOR ENGLAND.

THE Midland Counties Fishculture Establishment, at Malvern Wells, has gone actively into the work of hatching out eggs free of charge for public bodies. Perch, tench, carp and roach have been artificially reared, and so successfully that Mr. Burgess, the proprietor, will enlarge his establishment to increase its efficiency. Last season's work resulted in the distribution of large quantities of fish into various lakes and other waters in England

The acclimatization of the American whitefish will be attempted with the co-operation of the U. S. Fish Commission. Special reservoirs of great size and depth will be provided for the experiment. Judging from the success with whitefish in ponds in Michigan, there should be no great difficulty in rearing them in England, provided the eggs are not injured in transportation.

INTRODUCTION OF A SUPPOSED CARP SUCKER INTO NEW SOUTH WALES.—At the meeting of the Linnean Society of New South Wales at Sydney, Oct. 31, 1888, Mr. Macleay exhibited four specimens of a species of carp sucker, which had been taken from a nearly dry waterhole close to the Wingecaribee River at Elvo, Burradoo, a few days before. Several hundred of these fishes were removed from the holes and placed in the river in the immediate vicinity. Mr. Macleay finds the sucker to belong to the genus *Carpiodes*, which includes several species, all of them presumably limited to fresh waters of the United States, and concludes by saying that "it would be interesting to know how and when the fish was introduced into this country, where its acclimatization, as far as Wingecaribee is concerned, seems to have been so perfectly successful." If the carp sucker has gone to New South Wales from the United States, it may have been carried unintentionally along with carp or bass, associated species in some Eastern waters of our country. We hope, however, that this inferior fish, which has nothing to recommend it but its pleasing form and colors, may not eventually be charged against us. We have failed to find any record of a shipment of carp from the U. S. Government ponds to Australia.

On a recent trip Gov. Routt gave me permission to tell a fish story, which, he says, Gen. Grant enjoyed exceedingly. In the early days of Leadville's boom a group of miners and good fellows were gathered around the tavern stove spinning yarns. One had caught a 10-pound trout, another had harpooned a whale in the Arctic seas, and so on, when up spoke the little Governor: "Well, boys, all that's nothing to my luck; I once caught a pickerel that weighed 180 pounds." "Oh, Governor! a pickerel weighing 180 pounds!" resounded from all sides. No one would believe the tale, but Routt persisted, and, after vainly trying to shake their incredulity, explained: "Pickrell is my wife's name." He says he never spent a cent for cigars or other luxuries during the rest of his visit. One of the hearers gave him a share in the mine that started him on the high road to great wealth.—*Chicago America.*

TUSCALOOSA, Ala., Sept. 15, 1888.—*United States Cartridge Co., Lowell, Mass.:* Gentlemen—The two hundred Climax shells sent me have been tried with Schultze and Black powder. I am very much pleased with same. Could not get good results with Schultze in any other shell. Will use no other shell so long as you keep this at its present standard. You are at liberty to use this or any other recommendation I can give you. Most respectfully, (Signed) W. C. CROSS.—*Adv.*

FIXTURES.

DOG SHOWS.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

OLD WORLD KENNEL TOPICS.

[*By our Special Correspondent.*]

LONDON, Jan. 5.—This being the first week of the year, we are apt to look back on the sports and pastimes of the old year now passed into history. On the whole, that term has been a good one, and some of the richest stakes ever offered have been competed for by the best of horses, and so far as regards the kennel world things look better than ever they have, if we take high prices as a criterion. I think that such will be generally accepted as a guiding star and a finger post to the advancement made in the year that has just drawn to—here in London—a foggy, sloppy close.

The year commenced well with the sale of the rough collie Caractacus, which will be remembered as the excitement of the Liverpool show. Then some others made good prices, as did several in the fox-terrier line. But all these great figures were eclipsed with the sale of the St. Bernard champion Plinlimmon at $5,000. Every one was sorry over that magnificent dog leaving the country, and as much regretted when they learned that he was not to be exhibited again or the public given the service of him. That such a splendid example of his breed should be allowed to exist in a country where the art of breeding high class stock is making such vast strides, without being getatable to those with means, is regretable, and must be keenly felt by yourselves. Greyhounds have also fetched great prices, in fact, more than ever before.

The shooting season has been an open one, but at first opened badly, because of the backwardness of the harvest. The very wet summer which we had gone through half drowned the partridges, and many nests were deserted or the eggs addled or washed away by the continual down pour. Again, the advance made in farming implements is making sad havoc among game which build their nests upon the ground, or shelter their young in the standing hay or corn. The modern mowing machine and reaper account for myriads of birds annually, and it must be recorded that partridges are becoming in numbers here smaller and lamentably less.

Really the only open places now where the rattle of the mower is not to be heard in June and July is the wilds of Scotland, Wales and Ireland. These moors are extensively patronized, and the shooting in many cases realizes more money than if the land were under grass or cereals. Fabulous prices are given for these moors, and on some of them the game is so scarce that the lessee has to purchase game even to make presents to his friends, to prevent them thinking him mean. Still they have their short holiday, and it wears off a lot of the cobwebs that gather around a man's system whose time is taken up in a busy city or parliamentary life.

Many people here make a handsome income out of teams of setters which they let out to persons taking the moors. Every one more or less benefits by this system, for a sportsman would be greatly out of pocket in keeping a large team of dogs over the year simply for a week or two's shooting. To qualify this I must state that a brace of setters or pointers are generally knocked up in an hour or less over the moors, for they are so rough, and very often a team of ten or twelve brace have to be used in one day.

The Christmas holidays having been on, kennel affairs have been quiet here, and only a few small shows have taken place since Birmingham, where public judging took place for the first time since the National show was started. Some now prefer the private adjudications, but I think the majority are in favor of the new course taken by the executive. Unfortunately the space is so limited at Birmingham that the rings are necessarily exceedingly small, and the consequence was that very many mistakes were made, and many of the awards were severely criticised by those calculated to know, viz., the representatives of the different journals.

What is known as "type" in animals is fast becoming universally known here, and it is astonishing how the average Britisher can at once tell a good horse or a dog from a bad one. One hears lads nowadays talk about the points of this or that animal with the eloquence or rather the confidence of an octogenarian, so numerous are the exhibitions which tend to improve the different breeds of animals and birds. All this is a good sign of the times, for so long as there are all these young folks springing up in the way they should go, so long will prices remain high, and breeders of really good stock be in pocket.

Fox hunting here so far this season has been successful, and there have been very many good runs, the season being an open one. Day after day we have had more or less "a southerly wind and a cloudy sky," which all know "proclaims it a hunting morn." Foxes are fairly plentiful, but the fields are hardly so large as they were some years ago, when Melton Mowbray, Market Harborough and other hunting centers actually reeked in the fashion and wealth of the country. Such is not the case now; the depression among agriculturists has told its tale, for many of our greatest and hardest riders draw their incomes from the sons of the soil, and when the sinews of war become slack the same is bound to be felt, and by no one greater than our large landed proprietors, nearly all of whom worship the glorious institution of the chase.

Collies still retain their high standard of excellence, and vie with St. Bernards in popularity. A dog that has been steadily coming forward to the front rank is Maney Trefoil, a son of The Squire and Scotch Pearl. This dog is not far from being the best collie in England, and is an exceedingly handsome dark sable with a huge white frill and other markings. He is undoubtedly a wonderful dog, and without being disrespectful—in fact, I mean to be complimentary—to his owner, Mr. H. C. White, he is a most perfect "flat-catcher." His way, manners and exceeding good looks make him now at shows what poor old Charlemagne used to be, and all the caresses of the crowd fall on the grandson of the illustrious old champion. Maney Trefoil, therefore, may some day upset previous decisions.

John B. Evans, whose name appears in our obituary notices this week, was a man to whom I must pay a passing tribute as a sound judge of an animal, and a sensible critic of a dog. His end was painfully sudden, for a fortnight or so ago we were having a long chat on live stock in general. He was thoroughly practical and had had great experience as an ostrich farmer in South Africa. Not long ago—a few weeks—he wrote over his initials a most amusing article on the absurd notions of the London populace on the qualification of our show bloodhounds to track criminals in this great metropolis. He po-pooched the idea, and gave experiences of his own hounds, which he kept to frighten the Kaffirs away from his kraals. He said that the bloodhound as he now is was a complete failure even on Kaffirs, naturally stronger in scent than the usual run of mankind. Some gentlemen interested in the bloodhound boom then sought out the deceased and a trial was arranged by Mr. W. K. Taunton and a prominent breeder of goats, Mr. Holmes Pegler, and the laughable way that Mr. Evans related the farce that followed was humorous in the extreme, and hardly demonstrated that his opinion had been altered.

A prominent member of our kennel circle is seriously ill, and but faint hopes are entertained for his recovery. The Earl of Warwick, a somewhat peculiar nobleman in his way, has of late years been breeding black field spaniels extensively. He also exhibits at many of the leading shows, and has got on fairly well, though not by any means to the top of the tree. He is a great patron of the popular Warwick show, when a large proportion of the persons visiting that exhibition make it a point of going over one of the finest old castles in the country. Considerable anxiety is felt for this nobleman, whose retiring manner has almost amounted to foolishness.

I have seen it reported that short backs in field spaniels were discarded at the late Birmingham show. This is incorrect; but such was really the case in cocker spaniels, which the true admirer of the cocker must be glad to see. This long-backed cocker spaniel business had unfortunately been too long a foolish and insensible fashion; indeed for the matter of that the long-backed field spaniel is an anomaly, for as he is at present built, as a working dog he is next to useless. Those who breed the long and low field spaniel know fully well how difficult it is to get them to the useless fashion. It is much easier to breed them higher on the leg and shorter in the body, but "Fancy" says otherwise. I wonder what we should think of breeders of hackney cobs if they showed us animals that required six legs instead of four. The move, therefore, in Birmingham was a common sense one and in the right direction, and what is sauce for the goose should be sauce for the gander, and if, as it is acknowledged, that cocker or working spaniels should be short in back, then why should the field spaniel not follow suit? Are our sportsmen deteriorating in walking and staying powers that we have to breed slow dogs for them to keep up with?

I am afraid that we are going to have the whole of the well-worn Laverack setter question over again. We often hear that this, that and the other dog is denounced as not a Laverack by Mr. Robinson, who says he acts in accordance with an expressed wish of the late Mr. Laverack. Among other dogs that have been "snubbed" by Mr. Robinson is the Monk of Furness, without a doubt the best-looking setter in the world to-day, and probably one that could swamp anything of Mr. Laverack's production. At last breeders of setters have had their ire aroused at Mr. Robinson's strictures on their dogs as "cross-breds," and have plainly thrown down the gauntlet to the champion of the so-called Lavericks.

Public coursing is, I think, on the increase here in the same ratio that the old private meetings are deteriorating. The public coursing is all a gambling game with very little sport in it. Of course I must except that excellent meeting at Altcar, where the great stakes, the Waterloo cup, are run for. The hares there on the low-lying land are stout and robust, while the big jumps that they give the greyhounds over the dykes try the dogs' loins and stamina. But a lot of these now fashionable inclosed meetings are utterly devoid of the healthy, original sport of coursing, where a man stretched his limbs and opened his lungs walking up the swift, free puss. Through these inclosed meetings in the neighborhood of large towns many have taken up with the pastime who are as ignorant of the real sport as it is possible to imagine.

You will at New York show see some very good black and tan terriers, which have been just shipped to Dr. Foote, of New York city. These are some of the very best strain in England, and consist of Meersbrook Maiden, Meersbrook Girl and Meersbrook Billy. The first-named bitch is a very good one, a light-weight of most excellent quality, in fact she has beaten everything of note in the country. The others are also sterling ones, and should make their way. Messrs. Hill and Ashton, from whom the trio were purchased, own a well-known winning kennel at Sheffield. They are, however, giving up and selling out, to effect a dissolution of partnership, and therefore Mr. Foote's purchase happened just at the right moment.

Mr. David Baillie of Meadowthorpe Kennels, Lexington, Kentucky, has also been over buying some fresh stock. A couple of St. Bernard bitches are among the lot now on their way. Lily is an eleven and a half months puppy by St. Gothard—Saffron, and Lady Abbotts, a granddaughter of old champion Monk, should do some good. In four weeks from now she is due to whelp to a very nice young dog, Glencairn, the winner at Hamburg, the Peoples Palace, (London) and Woodstock. This bitch came from Mr. Cunningham of Kensington, an enthusiast in St. Bernards, but not a regular exhibitor. He prefers to study his dogs in his own kennel rather than send them to shows where he is unable to attend personally. His kennel is a good one, and his only drawback has been a singular misfortune with kennelmen; more or less not up to the work, and thereby he has had very many severe losses with valuable litters.

Two collie bitches from Mr. Robert Chapman's Glenborg kennel will join Mr. Terry's Hempstead kennel team. These bitches are good strong ones with plenty of substance, and thought to be suitable for Bendigo crossing. Both are in whelp to Napoleon and Young Squire, respectively. Napoleon has won several prizes here, and Young Squire, as his name denotes, is a son of The Squire, and therefore a grandson to that beautiful collie, champion Charlemagne. There is a chance of getting some good stock out of these bitches before they are bred to Bendigo. Another dog, a Skye terrier, will join the Meadowthorpe lot. He is a good young dark blue dog, by Dunbar, and Baillie thinks him up to form. I have not seen him, hence cannot pass an opinion. The Meadowthorpe manager was also in search of a basset hound and a wire-hair fox-terrier, but whether he was suited or not I am unable to inform readers in this issue.

WAYFARE.

THE ST. BERNARD CLUB.—The annual meeting of this club will be held Tuesday evening, Feb. 19, 1889, at 6 P. M., at the Westminster Kennel Club show, Madison Square Garden, New York city. The election of officers for the ensuing year and other important business will come before the meeting. A full attendance is desired. A special meeting of the Board of Governors of the St. Bernard Club is called for 10 A. M., Feb. 19, to pass on the large number of applications for membership now coming in.—LORENZO DANIELS, Cor. Sec.

SALISBURY'S PEDIGREE.

Editor Forest and Stream:

The *Stock-Keeper* of Dec. 28, 1888, gives this further evidence to convince the rascals who concocted and circulated the report that Carr sold Salisbury to me without a pedigree and always said the dog had no pedigree:

"Last week we commented upon the reckless charge that has been launched against Mr. C. H. Mason, who is accused of having concocted a pedigree for the mastiff Salisbury, after purchasing that dog from a man named Carr, who is reported to have said that it had no pedigree. We exposed the hollowness of the charge by showing that Carr himself entered the dog for the Birmingham show with the very pedigree Mr. Mason is said to have invented. Thanks to a correspondent, who is anxious to see right done in this matter, we can add to our proof of Mr. Mason's innocence.

"It appears that Salisbury, at the time called Leo, was exhibited at the Darlington show, held in Woodside Park on July 24 and 25, 1879, nearly five months before the Birmingham exhibition. These are the particulars of the entry:

Class 70. Mastiffs—Dogs or bitches.—Champion class.—Best, £3. No. 576. Carr, Thomas. Leo, fawn, 20 months. By Monarch—Duchess. 150gs.

"Mr. Mark Beaufoy's Nero (6,373) competed in the same class and won the prize. The judge was Mr. Edward Nichols, who probably remembers the occasion."

Editor Forest and Stream:

Mr. Huscroft, the Chicago paper's agent and "Special Commissioner," at 19 Fleet street, London, England, prints the following lukewarm apology for having stated as a fact that "Mr." Carr refused to give a pedigree with Salisbury when he sold the dog to me:

"I find that I was in error in stating recently, with reference to the mastiff Salisbury, that when the breeder sold the dog he declined to supply a pedigree. The Birmingham catalogue of 1879, which records the sale, actually gives a pedigree containing some of the names mentioned in my note, as being the basis of the more extended pedigree given in the Stud Book. I much regret this inaccuracy in my note."

The trap that Mr. Huscroft has been caught in ought to be a means of teaching him that one cannot always do with impunity the dirty work of an unprincipled employer, and that it is dangerous and unwise for a comparative novice in dog matters to write of things which were not in his day.

CHAS. H. MASON.

NEW YORK, Jan. 21.

THE LONG ISLAND RABBIT BAITING.

THE following note has been sent to us by Mr. August Belmont, Jr.:

Editor Forest and Stream:

I have followed your various comments upon the Hempstead Coursing Club's sport. I recognize your indisputable right to your opinions, but I cannot refrain from protesting against your description of what you call the Hempstead mode of rabbit killing in your last issue. You evidently have been misinformed, and are unwittingly neither fair nor just.

In the first place you leave it to be inferred that the rabbit has a start of but 25 to 30yds., whereas he usually has from 40 to 75yds., as circumstances permit. You say the purpose is to determine the relative speed of the terriers, measured by the time it takes to catch the rabbit, the first dog to reach the rabbit wins. You cannot, as a sporting journal, be ignorant of the English National rules of coursing, and as the Hempstead Coursing Club's meetings are governed in every particular by these rules, the above is an erroneous presentation of the intent of the course. The contest is between the terriers and measured by their dexterity in chasing, turning, and only perhaps killing the rabbit. It may and does happen that the terrier killing does not always win the course, and a course, according to the rules, may be and is sometimes decided where no kill takes place at all, the rabbit either escaping through superiority of speed or by the terriers being unsighted. I quote the H. C. C. rule respecting the kill:

(*c.*) *The Kill.*—Two points, or in a descending scale, in proportion to the degree of merit displayed in the kill, which may be of no value.

(*c.*) *The Merits of a Kill* must be estimated according to whether a fox-terrier by his own superior dash and skill bears the rabbit, whether he picks her up through any little accidental circumstances favoring him, or whether she is turned into his mouth, as it were, by the other fox-terrier.

As a terrier may during the course score more than two points over his adversary, it follows that if the adversary kills, as may and is often the case, by having the rabbit turned into him, he cannot win even though he obtain the full score of two points for the kill.

In other words, you describe the sport as a simple race between two terriers after a fleeing rabbit, the one running the fastest and killing being the winner, and that no rabbits ever escape. The kill is really only an incident and not an indispensable feature. I have seen quite a number escape, and the chances of escape will be greatly increased next season by various improvements in the conduct of the sport, which I understand the club is contemplating. I have seen all the H. C. C.'s meetings and think the sport very interesting and capable of creditable development. It should be given the same chance and fair play which other kindred sports receive by permitting it to be judged on its merits, and I know the FOREST AND STREAM will always be the first to do this.

C. G. J. FINN, M. D.

HEMPSTEAD, L. I., Jan. 15.

THE NATIONAL DOG CLUB.

Editor Forest and Stream:

Will you kindly note the following: At the executive committee meeting of the National Dog Club, held Oct. 15, 1888, it was voted: "That hereafter at all bench shows there shall be appointees of the executive committee of the National Dog Club to take charge of the dogs of those of the club's members who are unable to attend; to see that such dogs are properly benched, fed, watered, groomed, brought before the judges, etc., and at the end of the show to superintend their reshipment. The expense of such service to be borne by the National Dog Club."

Members of the N. D. C. desirous of having their dogs attended to as above noted will kindly advise me, so that an ample provision may be made for their requirements.

H. W. HUNTINGNTON, Sec.

148 SOUTH EIGHTH Street, Brooklyn, N. Y.

ST. BERNARD PUPPY MEASUREMENTS.—Glens Falls, N. Y., Jan. 21.—*Editor Forest and Stream:* In your issue of Jan. 3, a subscriber desires the measurements of our St. Bernard puppy Princelimmon. While we consider that the measurements of a puppy are very hard to ascertain at all accurately, yet will give them as nearly as possible, taken the 19th, when the puppy was four months old: Height at shoulder, 22½in. Nose to stop, 4in. Stop to occiput, 5in. Occiput to set on of tail, 31in. Length of tail, 20in. Chest, 31in. Loin, 27in. Arm, 9½in. Muzzle, 14in. Skull, 18in. Weight, 70lbs. This puppy is in good growing condition and takes a great amount of exercise every day. Taking his gain of 20lbs. during last month as a fair estimate for this month, he would weigh 90lbs. at five months old, beating the weight of the Mt. Sion III. puppy by 6lbs. at same age. —HALFWAY BROOK KENNELS.

COURSING.

Editor Forest and Stream:

Having been a constant and careful reader of FOREST AND STREAM for many years, I have never seen any article which pleased me more than the one under the above heading by Mr. H. W. Huntington, in the issue of Jan. 17. Such reading will no doubt help many a novice in selecting a good young greyhound, or show him how to properly mate his dog or bitch to produce a world beater and come to Great Bend, Kansas, in the near future and capture a good stake.

The American Coursing Club is now one of the great successes in the American sporting world. A few of us had a hard struggle to place it on a good foundation. At the last meet we had seven of the very best bred dogs from England, and visitors from nearly every State in the Union, which goes to show that the sport is attracting the attention of sportsmen throughout the entire land. I wish here to make a prediction and wish coursers to remember the prediction, that inside of ten years many of our larger cities east and west will have coursing parks similar to Haydock, Plumpton, etc., in England. San Francisco has had an inclosed park for years and they find no trouble in breeding the jack rabbits in a breeding park. These jacks can be obtained in any number throughout the West. In many parts of Colorado and California they are killed by the thousand to keep them from eating too much of the pastures. They are remarkably thrifty, living even on the dry sandy desert in Utah, hundreds of miles away from water, and where there is nothing for them to eat but here and there a blade of bunch grass. So sparse is this grass that no other animal can live on the desert, still you can often see out of the car windows of passing trains jack rabbits too numerous to count. They live entirely on the wild grass of the West. It is a notorious fact among Western coursers that all jacks found near fields of tame grasses such as clover, alfalfa or millet, are too fat to give a brace of fast greyhounds a good pipe opener.

I must take issue with Mr. Huntington on the question of high priced dogs from England. He says that $300 will not buy a really good dog in England. I know it will not buy a dog that has won or has a good chance of winning the great Waterloo Cup, but I do know it will buy untried dogs of breeding as good as any Waterloo winner that ever lived. In his account of a recent importation which cost but $360, I think, unless very much mistaken, he has reference to myself as describing to him the very excellent bitch belonging to my friend H. C. Lowe, and known as Whitelips. Now this bitch was secured by Mr. Lowe's brother, who is also a noted dog man in England and editor of the English *Kennel Gazette*. She is by Hotspur out of Kiss, by Misterton, who won the Waterloo cup in 1879. She has certainly some of the rarest blood in all England coursing through her veins. Now, I have been a courser for twenty years, and this is the fastest and best working greyhound I have ever seen. We had at the Great Bend meet a young bitch, by Jester out of Lady Glendyne. Jester is the best stud dog in all England to-day, and Lady Glendyne is the dam of Miss Glendyne, winner of the Waterloo cup. The latter is by Paris, and Paris is full brother to Jester; so this young bitch is of exactly the same blood as Miss Glendyne. She was obtained direct from Mr. Dent, who owns all of her relatives, so there is no question about her identity. She was a sapling, and did not cost near $300.

Only last week there arrived in this country Lord Neversettle, by Jester out of Squirrel, one of the very best dogs in all England. I say one of the best, because during the past season he was Mr. Dent's trial dog, and this takes a dog not only very fast, but one who is exceedingly clever at all his work, so that the courser can judge of the speed and working qualities of the young things he tries with him. By this your readers will see that our Western coursers are getting the very best blood in all England to mix with our own native stock, and it will be but a few years when you will hear of some American-bred dog going to England and winning some of their big stakes there, the same as our horses have done.

Now, while I am importing some of England's dogs for my own kennel, I have yet to see the imported dog that can hold his own in a hard found contest of say three strong jack rabbits on our Western plains. The reason of this is that the English hare is not so fast as our jack rabbit, and the dogs make short races of them. I have seen very many imported dogs that were very fast to the hare, but if they missed picking him up they soon became exhausted and fell behind a much slower dog, who would either get to the hare and work and drive the hare to death or loose him in a long covert. In other words, all the imported dogs, and I have seen many, did not have the staying qualities. This great bitch Whitelips only lost the cup this year because she could not stay up for a third course during the same day. While she can play with Bessie Lee, the winner, for two courses, Bessie can beat her any day the three best out of five courses, all to be run on the same day. I am breeding for that grand combination of not only a fast but a dead game dog. I now have the dead game, but I must say my dogs are not quite as fast as I would like. I say this notwithstanding that my dogs won first, second, third and fourth prizes in the Great Bend Derby last October, considering the breeder who knows the faults of his own dogs and tries to breed them out as on the right road.

If the Eastern greyhound men think the Western dogs are not high bred nor fast, let them send to England, if their own dogs don't suit them, and get dogs and then come to our coursing meets and try conclusions with us. I will admit that many of our best coursing dogs have not extended pedigrees, not because they are not pure bred greyhounds, but because dogs were brought from England to the New West and the pedigrees not kept or any attention paid to them whatever. But the notion that our dogs are not pure is fallacious because they all came from England originally.

As to bench show qualities, we have many that could win on the bench, but out West, as in England, it is seldom a courser cares to exhibit his dogs because during the time that shows are held is the time that coursing goes on, and a dog to be fit for coursing can't be kept on the bench for a week at a time. It is only when a dog gets to running cunning in England that he passes from the courser's hands to those of the exhibitor. That bench show form is necessary in the greyhound for a successful courser I deny. They, like the race horse, win in all forms and shapes. Of course all coursers prefer to rear a good looking puppy, but they are never cast aside until tried in the field.

On a recent visit to New York I was closely questioned by many dog men about the question of cruelty entering into coursing. I hold that no death of any animal, domestic or wild, is so sudden as that of the rabbit in the mouth of a pair of dogs. I have hunted all kinds of wild animals with gun and dogs, and I say that a pair of good deerhounds can kill a deer much quicker than a bullet can, even when it strikes the heart. I have seen a buck run 150yds, with a bullet through his heart, and on approach get up and go 20yds. further and fall dead. I have never seen a deer struggle over thirty seconds when a pair of dogs had it by the throat, and never have I seen one get away maimed or crippled for life, as they often do from a gun. A jack rabbit's life is very frail, and they are killed almost instantly by one bite of a dog. I have never been guilty of shooting at one with a shotgun, but have frequently seen them run off with one leg broken by a shot striking. That I call cruelty to animals. I have seen them kill cattle at the large slaughtering houses, where it is done in the most humane manner possible, still that is not nearly so sudden as in coursing the rabbit. One of these inquirers had four horses in his barn with all their tails docked. Now you can't find a man in the West cruel enough to do such a thing as that. I was very much astonished to see that nearly all the driving horses in New York have had to submit to this barbarous piece of inhumanity, and right under the very eyes of that great and good old man, whom I knew and assisted twenty years ago in much of his work—the late Henry Bergh.

Q. VAN HUMMELL, M.D.

OMAHA, Neb.

Editor Forest and Stream:

The Santa Clara Coursing Club, of Santa Clara county, California, will hold a meet on Jan. 20. It is a limited meet, and open only to nominations in the one county. There are some good dogs in that county, it is said. I regret to see that the meet will be held upon a Sunday. There surely should be time enough during the week for another day. This meet will come off at Newark, Cal. On Feb. 3 a meet open for all comers will be held at the same place, under the management of Messrs. Shay and Wren. E. H.

CHICAGO, Jan. 17.

DALTON DOG SHOW.

DALTON, Mass., Jan. 19.—*Editor Forest and Stream:* The Western Massachusetts Poultry, Pet Stock and Kennel Association held their annual exhibition this week on the 15th, 16th and 17th, at Dalton, and it was voted a success, unanimously, the town hall being filled to its capacity with exhibits. The management was good, and the exhibitors seemed well pleased with the attention shown them, and expressed a desire to come again when they gave their next show. The judging of the dogs was by E. K. Sperry, of New Haven, Conn., who as before gave excellent satisfaction. Below is the list of

AWARDS.

ST. BERNARDS.—*Dogs:* 1st, F. K. Chaffee's Larry; 2d, T. A. Brown's Leo. *Bitches:* 1st, F. K. Chaffee's Sallie; 2d, A. Nardael's Mag.

ENGLISH SETTERS.—*Dogs:* 1st, J. T. Gage's Don; 2d, S. H. Emory's Pomp. *Bitches:* 1st, N. F. Buell's Jep; 2d, B. C. Wells's Bess.

IRISH SETTERS.—*Dogs:* 1st, Henry Jacobs's Doc; 2d, C. H. French's Sport. *Bitches:* 1st, Henry Jacobs's Floss; 2d, B. A. Todd's Jennie.

GREAT DANES.—1st, Adolph Naeher's Maggie.

BULLDOGS.—*Dogs:* 1st, W. C. Brague's Lion; 2d, H. J. Rodman's Tige. *Bitches:* 1st, F. K. Chaffee's Rose.

BULL-TERRIERS.—*Dogs:* 1st, Frank Wesson's Philadelphia Prince; 2d, R. J. Hamilton's Ben. *Bitches:* 1st, James Jandro's Fannie; 2d, F. K. Chaffee's Tatters.

COLLIES.—*Dogs:* 1st, Geo. Pike's Leon; 2d, Geo. Daley's Shep. *Bitches:* 1st, A. K. Cleveland's Princess; 2d, Thos. Gorman's Topsey.

COCKER SPANIELS.—*Dogs:* Ernest Sluter's Pet; 2d, Thomas Dailey's Shorty. *Bitches:* 1st, H. J. Dailey's Bess.

WATER SPANIELS.—1st, D. O'Laughlin's Sport.

SCOTCH TERRIERS.—*Dogs:* 1st, B. F. Newell's Dandy. *Bitches:* B. F. Newell's Sandy.

FOX-TERRIERS.—*Dogs:* 1st, F. K. Chaffee's Dick; 2d, C. H. Allen's Spot. *Bitches:* 1st, F. K. Chaffee's Flirt.

PUGS.—*Dogs:* 1st and 2d, R. J. Hamilton's Toodle and unnamed. *Bitches:* 1st and 2d, R. J. Hamilton's Rosa and Skip.

BEAGLES.—1st and 2d, R. J. Hamilton's Alto and Bass.

SKYE TERRIERS.—1st, R. J. Hamilton's Cute. B. F.

NEW BEDFORD DOG SHOW.

NEW BEDFORD, Mass., Jan. 19.—*Editor Forest and Stream:* The twelfth annual exhibition of the Southern Massachusetts Poultry Association, held here this week, was fully equal in point of merit to any of its predecessors. The dog department was much the best, so far as quality goes, that we have yet had. There were 114 entries, and I am confident that this number would have been at least doubled had the show been for two or three days only, but, unfortunately, the poultry portion of the management, in spite of the protest of the dog men, ruled that what was sauce for the gander was sauce for the dog, and decided that in regard to time all should fare alike, and consequently many dog owners that would have entered their dogs for a three day show would not consent to keep them on the benches for five. The show, nevertheless, was the best that we have yet had, and many of the best dogs in the country were present. Mr. C. T. Brownell, the superintendent, took good care of the dogs, and the judging was ably and acceptably done by Mr. Chas. H. Mason. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, E. B. Sears's Sears' Monarch. *Bitches:* 1st, E. B. Sears's Countess of Dinsmore; 2d and very high com., S. W. Crook's Beatrice and Empress. *Puppies:* Absent.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, E. B. Sears's Plinlimmon, Jr.—SMOOTH-COATED—*Dogs:* 1st, Elmwood Kennels' Beauchamp.

NEWFOUNDLANDS.—*Dogs:* 1st, withheld; 2d, F. B. Nesbitt's Blucher.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Bran. *Bitch:* J. E. Thayer's Wauda.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Robber Chieftain and Duncan. *Bitches:* 1st and 2d, J. E. Thayer's Pride of the Heather and Theodora.

GREYHOUNDS.—CHAMPION—*Dog:* H. W. Huntington's Balkis. *Bitch:* H. W. Huntington's Cassandra.—OPEN—*Dogs:* 1st, H. W. Huntington's Highland Chief.

POINTERS.—*Dogs:* 1st, Fleet View Pointer Kennels' Spot Dash; 2d and high com., G. W. Lovell's Beaufort II. and Mikado. High com., Mrs. Geo. A. Kirby's Dan. Com., Dr. E. J. Weeks's Punch. *Bitches:* 1st, Fleet View Pointer Kennels' Belle Randolph; 2d and very high com., G. W. Lovell's Portland Lilly and Belle of Maine. —PUPPIES—*Dogs:* 1st, G. W. Lovell's Brake C.; 2d, Fleet View Pointer Kennels' Fleet View Randolph. *Bitches:* 1st, G. W. Lovell's May B.; 2d, W. T. Alty's Maud. High com., H. L. Rice's Belle of Naso.

ENGLISH SETTERS.—*Dogs:* 1st, F. S. Kelley's Gyp; 2d, withheld. High com., G. W. Parker's Don. *Bitches:* 1st, G. W. Lovell's Snowflake. *Puppies:* 1st and 2d, F. S. Kelley's Gyp, Jr., and Fred S.

IRISH SETTERS.—*Dogs:* 1st, St. Cloud Kennels' St. Cloud; 2d, Dr. B. C. Howland's Dandy. Very high com., J. T. A. Bolton's Rex. *Bitches:* 1st, St. Cloud Kennels' Bessie Glencho; 2d, R. N. Allen's Nell.—PUPPIES—*Dogs:* 1st, St. Cloud Kennels' Young Elcho.

GORDON SETTERS.—*Dogs:* 1st, F. B. Queen's Cyrus; 2d, E. H. Eldridge's Duke. *Bitches:* 1st, 2d and high com., C. T. Brownell's Beulah, Norah and Judy II. High com., St. Cloud Kennels' Joan. —PUPPIES—*Dogs:* 1st, C. T. Brownell's Murkland. *Bitches:* 1st, C. T. Brownell's Gordon Chloe.

FIELD SPANIELS.—*Dogs:* 1st, F. Bowers's Gip; 2d, W. H. Mosely's Jerry. *Bitches:* 1st, F. Bowers's Flirt.

COCKER SPANIELS.—*Dogs:* 1st, O. B. Gilman's Sancho. *Bitches:* 1st, W. H. Mosely's Riette.

BEAGLES.—*Dogs:* 1st, withheld; 2d, B. F. Dexter's Bugler. *Bitches:* 1st, withheld; 2d and very high com., B. F. Dexter's Fannie and Cute.—PUPPIES—*Dogs:* 1st, withheld; 2d, B. F. Dexter's Bumble.

FOXHOUNDS —*Dogs:* 1st, withheld; 2d, J. G. Whalon's Jack. —PUPPIES—*Dogs:* 1st, J. G. Whalon's Hunter.

COLLIES.—Withheld.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, E. S. Porter's Lion. *Bitches:* 1st, E. S. Porter's Thespian.

BULL-TERRIERS.—OVER 25LBS.—*Dogs:* 1st, H. F. Church's Royal Tyrant. *Bitches:* Withheld.—UNDER 25LBS.—*Dogs:* 1st, H. G. Vinal's Banjo; 2d, E. R. Lewis's Whiskers. *Bitches:* 1st, F. F. Dole's Nell Bright; 2d, H. G. Vinal's Nanno. High com., C. Green's Nellie.—PUPPIES—*Dogs:* 1st, F. G. Tripp's Brian. *Bitches:* 1st, H. S. Vinal's Maud; 2d, Rockdale Kennels' Rockdale Belle.

FOX-TERRIERS.—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitches:* J. E. Thayer's Richmond Olive. OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Reckoner and Luke. *Bitches:* 1st and 2d, J. E. Thayer's Richmond Dazzle and Princess. PUPPIES—*Dogs:* 1st, J. E. Thayer's Hillside Dandy. *Bitches.* 1st, J. E. Thayer's Hillside Jaunty.

BLACK AND TAN TERRIERS.—*Bitches:* 1st, withheld; 2d, E. Ennis's Tillie.

YORKSHIRE TERRIERS.—*Dogs:* 1st, P. H. Coombs's Bradford Harry; 2d, C. N. Symonds's Tom's Royal.

PUGS.—*Dogs:* 1st, C. F. Mackenzie's Cully. *Bitches:* 1st, G. L. Brownell's Blossom; 2d, P. Boswell's Pinkie. Very high com., J. H. Bannister's Dot.

KING CHARLES SPANIELS.—CHAMPION—*Dog:* W. Phillips's Roscius.—OPEN—*Bitches:* 1st, W. Phillips's Norma.

BLENHEIM SPANIELS.—*Dogs:* 1st, W. Phillips's King Pippin. *Bitches:* 1st, W. Phillips's Grand Duchess.

WHITE ENGLISH TERRIERS.—*Dogs:* 1st, W. Routley's White Prince; 2d, Dr. J. H. Sweet's Dandy. *Bitches:* 1st, F. F. Tripp's Minnie.

SPECIAL PRIZES.

Best mastiff, open class, Sears' Monarch; bitch, Countess of Dinsmore; St. Bernard, Plinlimmon, Jr.; Newfoundland, Blucher; kennel deerhounds, J. E. Thayer; dog in open class, Robber Chieftain; bitch, Pride of the Heather; greyhound dog, Balkis; bitch, Cassandra; kennel pointers, G. W. Lovell; dog, Spot Dash; bitch, May B.; puppy, the same; English setter dog, Gyp; in New Bedford, the same; bitch, Snowflake; kennel Irish setters, St. Cloud Kennels; dog, St. Cloud; bitch, Bessie Glencho; kennel of Gordon setters, C. T. Brownell; dog, Cyrus; bitch (2), Beulah; field spaniel dog, Gip; bitch, Flirt; cocker spaniel dog, Sancho; bitch, Riette; foxhound (2), Hunter; bulldog, Robinson Crusoe; bitch, Britomartis; kennel of bull-terriers, H. G. Vinal; dog, Banjo; bitch, Nell Bright; puppy, Brian; kennel of fox-terriers, J. E. Thayer; dog in open class, Reckoner; bitch, Richmond Dazzle; rough-coated terrier, Bradford Harry; smooth-coated, Minnie; pug dog, Cully; bitch, Blossom; King Charles spaniel dog, Roscius; bitch (2), Norma; Blenheim spaniel dog, King Pippin; bitch, Grand Duchess; white English terrier, Minnie; largest number of entries, St. Cloud Kennel; kennel setters, same owner; litter puppies, same owner; largest number of prizes won by New Bedford exhibitor, C. T. Brownell; setter owned in New Bedford, the same; setter puppy, Gyp.

PHILLIP.

DOG SENSE.

Editor Forest and Stream:

I notice in recent numbers of FOREST AND STREAM several communications, giving remarkable instances of dogs tracking their masters. They remind me of an incident which occurred last summer. Mr. Henry Drittler, of Hancock, is the possessor of a little black and tan terrier, Wallie, which is much attached to its master. One day last August Mr. Drittler attended a picnic at Marquette, distant some ninety-five miles from Hancock, leaving by a special excursion train in the morning. Wallie was locked in the house, but on being released some time after the departure of the train, he went direct to the railroad depot and boarded the regular passenger train, getting off at Marquette, where he soon found his master. Although the dog had accompanied Mr. D. as far as L'Anse, some twenty-five miles, on former occasions, he had never been taken further, and how he knew where his master had gone, or what impelled him to pass all intervening stations and choose Marquette, is more than I can comprehend.

LAUBE.

DOG TALK.

AT a recent meeting of the Black and Tan Terrier Club of England, the rule of the club prohibiting dogs that have been cropped from competing for a club prize, was strongly approved and the hope was expressed that the committee of the Kennel Club will shortly see their way to issue their edict against the practice of cropping. The American Kennel Club should at once take this matter in hand. We can assure them of the hearty support of the public in any action they may take to suppress the barbarous practice.

The Canadian Government has recently instructed its custom officers that dogs imported into the Dominion are subject to tax according to their value. Heretofore they have been exempt when imported for breeding purposes.

Mr. H. L. Goodman, who judged mastiffs at Pittsburgh in 1887 and gave The Lady Clare an hc. card in a poor class, has been trying to teach the well-known authority in England, Mr. Richard Cook, something about the breed.

The managers of the Columbus dog show are receiving a large number of valuable special prizes for the different breeds. Entries close Jan. 25. The address of the secretary is T. R. Sparrow, Box 833, Columbus, O.

Mr. A. C. Wilmerding has added a team of Clumbers to his kennel of spaniels and intends to capture all the prizes in classes for this breed at the coming shows.

It is reported that Mr. F. B. Fay, of Boston, will dispose of his King Charles spaniels and take up one of the short-haired breeds.

The well-known English judge, Mr. Fred Gresham, has accepted the invitation of the New England Kennel Club to judge at their coming show.

Mr. J. Campbell, of Montreal, Canada, has sent an order to England for a number of Yorkshire terriers.

Can any of our readers send us the pedigree of the Irish setters Glendale and Springman's Purdy?

Mr. Jean Grosvenor, of Boston, is going in for a team of fox-terriers.

MR. GOODMAN "COOKED."—Hulton, Pa., Jan. 19.—*Editor Forest and Stream:* Richard Cook, Esq., honorable secretary of the English Mastiff Club, lately exposed some preposterous criticisms of mastiffs that Mr. Goodman enlightened the pages of a Western paper with. Mr. Goodman has made a reply to this, and a more presumptuous piece of business I never saw. Mr. Cook stands at the top of English mastiff men, has bred and owned very many of the best that England ever saw, has judged them and reversed the decisions of such eminent authorities as Dr. Turner and Mr. Allen, and his decisions aroused no protesting. Mr. Goodman has conclusively shown, beyond a shadow of doubt, that he is the most utterly incompetent judge of mastiffs that ever stepped into an American judging ring, incapable of comprehending one single primary principle as to mastiffs. He actually argued with me that Wacouta Nap, 30½ inches high, a bright, almost silver fawn, was Corsair, about 27 inches high, and red fawn! In addition to extreme presumptuousness in disputing Mr. Cook, apparently even in veracity, he commits the inexcusable impertinence of offering a wager on the matter. As it is certain that Mr. Cook himself will be stopped from reply by this offer, I feel that somebody should point out the character of the article, and as nobody else is likely to do it, I venture into the breach.—W. WADE.

ROCKINGHAM—DONNA WHELPS.—New York, Jan. 21.—*Editor Forest and Stream:* On March 5 last the Rosecroft Kennels' bitch Donna (Yale Belton—Forest Dora) was bred to champion Rockingham. On the 7th she was served again by him and then returned to our kennels. On the 8th by a blunder on the part of an attendant, our Prince Foreman (champion Foreman—Jolly Nell) was turned into the yard in which she was exercising, and before the mistake

was discovered, served her. On May 3, fifty-nine days after the first service, Donna whelped eleven puppies, of which one was dead, one died at whelping and one we destroyed, leaving eight, five dogs and three bitches, all of which Donna raised. Of these we have kept for breeding purposes the dog Don Quixote, blue belton, and the bitch Donna Juanita, black, white and tan. Don Carlos, black, white and tan, was sold to Mr. Edwin Parker, of Philadelphia; Donna Dolores, blue belton, was sold to Mr. G. E. Whipple, of Westfield, Mass.; Donna Inez, black and white, to Mr. J. H. Wilson, of East Bridgeport, Conn.; Don Antonio, black and white, to Mr. A. A. Bogen, of New Ulm, Minn., who changed his name to Rockingdale; Don Phillip, black and white, to Mr. John Pederson, of Des Moines, Ia., in whose possession he died Dec. 12 from pneumonia, and Mr. Pederson has replaced him by buying the last of the litter, Don Alfonso, black and white, shipped to him the 4th inst. We think this litter a remarkably good one, and should be glad to claim it for our own dog; but it is my conviction that they were sired by Rockingham beyond a reasonable doubt, from the circumstances attending the services, the fact that they were whelped fifty-nine days after the first service, and that they strongly favor Rockingham in appearance. I am confirmed herein by Mr. Osborn and by every one else familiar with the litter and the circumstances. Of course we have registered them as by Rockingham or Prince Foreman, according to rule. The litter was whelped and raised on my place, and I give these facts as their breeder to avoid any possible confusion hereafter.—WILSON FISKE.

NEW YORK DOG SHOW.—New York, Jan. 22.—*Editor Forest and Stream:* Miss A. H. Whitney has kindly consented to judge Great Danes and Mr. Geo. C. Clark will judge Chesapeake Bay dogs at our coming show. In judging the former breed the standard recently adopted by the breeders and exhibitors of Germany will be adhered to. Entries are already more numerous than at corresponding dates in former years, and in order to provide for the large number of pet dogs the management have secured the large and well ventilated room over the Madison avenue entrance, which will be used if found necessary. I would respectfully draw the attention of intending exhibitors to the fact that from the number of applications received for entry forms we confidently expect that all former records in point of numbers will be surpassed, and therefore urge the expediency of forwarding their entries as early as possible, and also remind them that our entries close on Feb. 4.—JAMES MORTIMER, Supt.

ROCHESTER DOG SHOW.—Rochester, N. Y., Jan. 20.—*Editor Forest and Stream:* Owing to withdrawal of Baltimore, change dates claimed by the Rochester Kennel Club for first annual bench show from April 2 to 5, to March 19 to 22, 1889, and oblige HARRY YATES, Sec'y Rochester Kennel Club.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Irene. By D. Macpherson, Duluth, Minn., for light fawn mastiff bitch, whelped November, 1885, by Mars (A.K.R. 4372) out of Chispa (A.K.R. 4361).

Bang Bang Bang and Bang Bang, Jr. By F. G. Taylor, Philadelphia, Pa., for lemon and white pointer dogs, whelped Aug. 10, 1888, by champion Bang Bang (Price's champion Bang—Princess Kate) out of Telie Doe (champion Fritz—Virginia).

Gath Star. By F. G. Taylor, Philadelphia, Pa., for black, white and tan English setter dog, whelped Nov. 20, 1888, by Gath's Joy (Gath—Gem) out of Star (Prince Bergunthal—Flora M.).

Bob Ross. By W. H. Wild, Jersey City, N. J., for black and white English setter dog, whelped June 11, 1888, by Gun (A.K.R. 1530) out of Victoria Laverack (A.K.R. 4677).

Mount Sion's Othello. By Mrs. J. M. Nicholson, Albany, N. Y., for orange brindle and white rough St. Bernard dog, whelped July 29, 1888, by Mount Sion III. (A.K.R. 6060) out of Lorna (Jumbo I.—Stella).

Jim Dandy, Can and Shane na Lawn. By Boyd P. Rothrock, Williamsport, Pa., for red Irish setters, two dogs and one bitch, whelped July 22, 1888, by Mark (Rose—Queen) out of Nellie Grouse (A.K.R. 4804).

Mount Sion Kennels. By Mrs. J. M. Nicholson, Albany, N. Y., for her kennels of St. Bernards.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie McGregor—Clipper. E. C. Parnell's (Ghent, N. Y.) collie bitch Nellie McGregor (champion Rex, A.K.R. 149—Juno) to Oak Shade Kennels' Clipper (A.K.R. 2529), Jan. 15.

Dido II.—Tantallon. Mrs. J. M. Nicholson's (Albany, N. Y.) rough St. Bernard bitch Dido II. (A.K.R. 3011) to John Marshall's Tantallon (Merchant Prince—Chloris). Dec. 17.

Lorna—Mount Sion III. Mrs. J. M. Nicholson's (Albany, N. Y.) rough St. Bernard bitch Lorna (Jumbo I.—Stella) to her Mount Sion III. (A.K.R. 6060), Dec. 6.

Lakma—Ben Lomond. F. Kimball's (Worcester, Mass.) St. Bernard bitch Lakma (Merchant Prince—Bernie V.) to E. H. Moore's Ben Lomond (champion Barry—Thetis), Jan. 6.

Recluse II.—Ben Lomond. S. C. Heald's (Boston, Mass.) St. Bernard bitch Recluse II. (Rip Van Winkle—Recluse) to E. H. Moore's Ben Lomond (champion Barry—Thetis), Dec. 31.

Nerina—Ben Lomond. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Nerina (Nero III.—Idalia) to his Ben Lomond (champion Barry—Thetis), Dec. 29.

Rosa—Gath's Joy. W. C. Kennerly's (White Post, Va.) English setter bitch Rosa (Dashing Monarch—Leila) to F. G. Taylor's Gath's Joy (Gath—Gem), Jan. 18.

Rodreka—Gath's Joy. F. G. Taylor's (Philadelphia, Pa.) English setter bitch Rodreka (Roderigo—Gem) to his Gath's Joy (Gath—Gem), Nov. 15.

Star—Gath's Joy. W. R. Furness's (Wallingford, Pa.) English setter bitch Star (Prince Bergunthal—Flora M.) to F. G. Taylor's Gath's Joy (champion Gath—Gem), Sept. 20.

Kate IX.—Patsy. E. O. Damon's (Northampton, Mass.) Irish setter bitch Kate IX. (Dick III.—Jane) to his Patsy (Frisco—Nellie IX.), Jan. 13.

Bronze—Patsy. E. O. Damon's (Northampton, Mass.) Irish setter bitch Bronze (Sir Roger—Quail) to his Patsy (Frisco—Nellie IX.), Jan. 11.

Fly—Suil-a-Mor. A. O. Zendam's (Manchester, N. H.) Irish setter bitch Fly to J. Hayes's Suil-a-Mor (Claremont—Dido).

Flossie—Kiddlewink. D. B. Smith's (Cortland, N. Y.) cocker spaniel bitch Flossie (Oberon, A.K.R. 3315—Mignon, A.K.R. 1002) to Mignon Kennels' Kiddlewink, A.K.R. 997), Jan. 18.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Conette. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Conette (champion Save—champion Queen Jura), Dec. 29, nine (four dogs), by his Ben Lomond (champion Barry—Thetis).

Recluse. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Recluse (Hector—Cloister), Dec. 30, eight (three dogs), by his Ben Lomond (champion Barry—Thetis).

Star. W. R. Furness's (Wallingford, Pa.) English setter bitch Star (Prince Bergunthal—Flora M.), Nov. 20, six (four dogs), by F. G. Taylor's Gath's Joy (Gath—Gem).

Rodreka. F. G. Taylor's (Philadelphia, Pa.) English setter bitch Rodreka (Roderigo—Gem), Jan. 17, eight (five dogs), by his Gath's Joy (Gath—Gem).

Dora Gladstone. Chas. York's (Bangor, Me.) English setter bitch Dora Gladstone (Boss Gladstone—Vell), Jan. 7, three (one dog), by his Gun (champion Gladstone—May B.).

Nino. F. H. Perry's (Des Moines, Ia.) Irish setter bitch Nino (A. K.R. 5286), Dec. 24, eight (five dogs), by W. W. Sweeney's Sarsfield (Garryowen—Currer Bell II.).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Chispa. Light fawn mastiff bitch, whelped Aug. 12, 1882 (A.K.R. 4361), by P. Leclair, Superior, Wis., to D. Macpherson, Duluth, Minn.

Irene. Light fawn mastiff bitch, whelped November, 1885, by Mars (A.K.R. 4372) out of Chispa (A.K.R. 4361), by Leclair, Superior, Wis., to D. Macpherson, Duluth, Minn.

Minting Minor. Fawn mastiff dog, whelped Sept. 19, 1888, by Minting out of Minna, by E. H. Moore, Melrose, Mass., to W. S. Jackson, Toronto, Can.

Ilford Caution—Princess whelp. Fawn mastiff bitch, whelped Aug. 27, 1888, by E. H. Moore, Melrose, Mass., to Geo. M. Diven, 2d, Elmira, N. Y.

Rustic King. Fawn pug dog, whelped Sept. 26, 1887, by Rustic out of What's That, by G. Bell, Toronto, Can., to G. W. Fisher, Catawissa, Pa.

San Bernardine. Orange and white St. Bernard dog, whelped Oct. 26, 1888, by Hector out of Bella, by E. H. Moore, Melrose, Mass., to Bancroft C. Davis, Boston, Mass.

Hera. Orange and white St. Bernard bitch, whelped Dec. 7, 1888, by Ben Lomond out of Bernie VI., by E. H. Moore, Melrose, Mass., to Bancroft C. Davis, Boston, Mass.

Frankie. Orange and white St. Bernard bitch, whelped May 25, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to Halfway Brook Kennels, Glens Falls, N. Y.

Madge. Orange and white St. Bernard bitch, whelped May 25, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to Halfway Brook Kennels, Glens Falls, N. Y.

Hector—Lakma whelp. Orange and white St. Bernard dog, whelped Sept. 19, 1888, by E. H. Moore, Melrose, Mass., to J. H. Perry, Southport, Conn.

Young Gath—Jolly Flirt whelps. Black, white and tan English setter dogs, whelped July 4, 1888, by Chas. York, Bangor, Me., to Elmer A. Hight, Lynn, Mass.

Gath Star. Black, white and tan English setter dog, whelped Nov. 20, 1888, by Gath's Joy out of Star, by W. R. Furness, Wallingford, Pa., to F. G. Taylor, Philadelphia, Pa.

Foote's Tum. Red Irish setter bitch, whelped March 13, 1886 (A. K.R. 6492), by E. O. Damon, Northampton, Mass., to Boyd P. Rothrock, Williamsport, Pa.

Elcho, Jr.—Sally whelps. Two red Irish setter dogs, whelped Oct. 14, 1888, by Geo. Langran, Yonkers, N. Y., to J. H. Feiden, same place.

Zeno. Black, white star, cocker spaniel dog, whelped May 24, 1888, by Oberon (A.K.R. 3315) out of Mignon (A.K.R. 1002), by Mignon Kennels, Cortland, N. Y., to C. Kinney, same place.

Jockey. Black cocker spaniel dog, whelped May 24, 1888, by Oberon (A.K.R. 3315) out of Mignon (A.K.R. 1002), by Mignon Kennels, Cortland, N. Y., to Frank Daus, Ithaca, N. Y.

Oberon (A.K.R. 3315)—Mignon (A.K.R. 1002) whelps. Cocker spaniels, whelped May 24, 1888, by Mignon Kennels, Cortland, N. Y., a black, white frill, dog to H. L. Strobridge, Trumansburg, N. Y., and a black dog each to C. E. Helm, Groton, N. Y., and L. Hazen, Newark, N. J.

Sandycroft Vesta. Wheaten Irish terrier bitch, whelped Aug. 23, 1888, by Dennis out of Sandycroft Vim, by Y. M. Haldeman, Milford, Del., to J. J. Campbell, Philadelphia, Pa.

Sandycroft Vestal. Wheaten Irish terrier bitch, whelped Aug. 23, 1888, by Dennis out of Sandycroft Vim, by Y. M. Haldeman, Milford, Del., to J. W. Pistor, Binghamton, N. Y.

Bluebell. Blue Skye terrier bitch, whelped May 28, 1888, by Donald out of Romach, by J. Timpson, Maizeland, Red Hook, N. Y., to Mrs. Ensworth, Meridian Hill, Washington, D. C.

DEATHS.

Oberon. Black field spaniel dog, whelped Sept. 8, 1885 (A.K.R. 3215), owned by Eugene Powers, Cortland, N. Y., Jan. 19, from accidental poisoning.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. B. H., Pittsfield, Mass.—My dogs are troubled with some kind of lice or ticks which are about the size of a pinhead when full grown, and they bed their head right in the skin at the roots of the hair and stay there. What can I put on to kill them and also kill the nits or eggs, something to get right down into the skin so as to get to their head? Ans. Wash carefully with carbolic soap and warm water, using a stroug, stiff brush afterward, perhaps a currycomb. After dry use Persian insect powder, combing this in also. If this is not effective communicate with us again.

F. C. W., Brunswick, Me.—I have a mastiff dog thirteen months old. A few days ago one of his ears was covered with little bunches, which he scratched a great deal and made sore. It seems to pain him somewhat, and he shakes his head, and there is a dark colored stuff that gathers in his ears, and it smells very bad. What shall I do for it? Ans. Use an ointment made of one drachm of balsam of Peru to the ounce of vaseline. Apply this morning and evening after washing and drying the part. Also use the following:

℞ Boromo-chloral.... ℥ ii
Tr. opii.... ℥ ii
Aq.... ℥ i
Mix. Sig. Drop a little in the ear night and morning.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ARMY RIFLE PRACTICE.

THE first general orders, issued by Gen. Schofield at the opening of this year, has reference to the new scheme of rifle practice, which he will, on the suggestion of Col. Blunt, introduce for use in the regular army. The first order reads:

I. The third edition of the work on rifle and carbine firing, prepared by Captain Stanhope E. Blunt, Ordnance Department, inspector of small-arms practice at the headquarters of the army, having been approved by the Secretary of War for the use of the army and the militia of the different States, under the title of "Firing Regulations for Small Arms," it will be distributed to the army, and the methods therein prescribed will hereafter be the authorized guide in all matters pertaining to the subject which it covers.

II. For the target year of 1889 the officers and enlisted men (except those "present not firing"), who in the past year were classified below the grade of marksmen, or in that class with a total of less than 340 for those firing with the rifle, or less than 310 for those firing with the carbine, will follow the course prescribed for the second season's practice; those classified as marksmen with these totals, or as sharpshooters, will follow the course prescribed for subsequent seasons; other enlisted men will follow the recruit course, and other officers the second season's course.

III. The officers at the headquarters of the army, the divisions, and departments charged with the supervision, under their commanding generals, of the course of instruction in rifle, carbine and revolver firing, will be known hereafter as inspectors of small-arms practice.

Order No. 2 amends certain sections of the regulations which will now read:

481. The Army will be annually allowed for the instruction of the soldier in target practice, small arm ammunition as follows:

a. For each officer or enlisted man firing with the rifle, to the value of $4.

b. For each officer or enlisted man firing with the carbine, to the value of $3.50.

c. For each enlisted man of the cavalry arm and for each officer and sergeant of any arm, for revolver practice, to the value of $1.

d. For the further instruction of the soldier (more especially the recruit) and for firing at drills, funerals, etc., such an amount of rifle and carbine blank cartridges as the company commander deems requisite, not exceeding 2,000 rounds for each company of infantry or battery of artillery and 4,000 rounds for each troop of cavalry will also be allowed.

e. In addition each troop of cavalry will be allowed 5,000 rounds of blank revolver ammunition.

f. In addition to the above allowances each regimental staff and band, each battery of artillery and company of infantry will be allowed for gallery practice 6,000 round balls, 15,000 cartridge primers, 15lbs. powder, 15lbs. lubricant, and each troop of cavalry 8,000 round balls and 20,000 cartridge primers, 20lbs. powder and 20lbs. lubricant. But when the rifle or carbine bullets fired in range practice can be recovered they will be recast for gallery practice and the round balls will not be supplied.

482. The values of small-arm ammunition and of the component parts thereof are determined by the Chief of Ordnance and will be published from time to time in general orders for the government of the Army.

485. In selecting competitors for the authorized annual rifle or carbine contests, no additional ammunition will be allowed. After the competitors (officers and men) are assembled at the place of competition the firing will be limited to that prescribed by paragraph 884 of the "Firing Regulations for Small Arms," and the expenditures of ammunition as there directed, will be governed accordingly.

487. Practice will be conducted in accordance with the "Firing Regulations for Small Arms." The period selected for practice on the range will be annually announced by department commanders; they will also publish from time to time the results of the firing and the names of the qualified sharpshooters, but for the sake of uniformity all orders containing instructions to govern either the preliminary methods or practice with the rifle, carbine or revolver, will be issued only from the Headquarters of the Army.

488. Reports as to the amount of instruction imparted and degree of proficiency attained will be rendered only as required by the "Firing Regulations for Small Arms," or by such further orders as may be issued from the Headquarters of the Army. The necessary books and blanks for this purpose will be supplied by the Ordnance Department.

WILMINGTON, Del., Jan. 14.—There was a fair attendance at Healdmoor Rifle Range this afternoon, and as the weather was favorable the shooting was generally good. The revolver shooting especially was unusually good, and promises to develop some surprising amateur marksmanship. Harry Darlington started a 100-shot revolver record, with the intention of beating his brother's record of Christmas Day, and not only succeeded in doing so by a good lead of 20 points, but also beat his brother's highest single score record of 80 points by running up a fine score of 82. This is considered the more remarkable, as he has had no revolver practice for four years, and even then in a very irregular way. Geo. Doyle, late sergeant of Company A, Battalion of Engineers, U.S. Army, who has located at Wilmington permanently, was at the range and participated in the rifle matches, using a sporting rifle.

BOSTON, Jan. 19.—All the regular matches were open to-day at the range, but owing to the high wind from 11 o'clock only a few entries were made, and most of the shooting was done in the practice matches. Mr. Wilder won the gold medal in the 20-shot match, and C. W. Hinman the medal in the champion match. Following are the scores as finished:

Twenty-shot Rest Match.

TOPEKA RIFLE CLUB.—Topeka, Kas., Jan. 10.—Four members faced a strong and disagreeable wind for 2½ miles to have the pleasure of firing a few scores over their 200yds. range. The boys are in good spirits over the fact that they will soon be riding to the range on the rapid transit line, which will be completed by the first of February. It will take them within a quarter mile of the shooting house. This will no doubt increase the number of shooters each week, for in the past it has been very unpleasant on a great many occasions in getting to and from the range.

ST. LOUIS, Mo., Jan. 18.—The St. Louis Pistol Club was favored with a good attendance at its last shoot, and the scores were also much of an improvement over those made at the previous week's shoot; 88, made by Mr. Perrett, proved the high score for the night, and the medal will be found in his keeping for the coming week. Some little changing took place as at the previous week, some of those who were up last week this week are down, and some of the low ones quite close to the top. The club uses a .22-caliber gallery pistol for all shooting, and a standard American target. The scores are as follows:

L V D Perret	7	9	10	10	10	10	9	9	8	6—88
O Neuhaus	8	7	10	8	10	8	10	7	10	8—86

	10	7	8	7	7	7	5	9	7	9—76—154

SAN FRANCISCO, Jan. 13.—There was a large attendance at the shooting matches at Shell Mound Park to-day. The matches were unusually interesting, some of the scores made being excellent. The weather was all that could be desired. Among the other events of the day was the quarterly shooting of the Independent Rifles. The score made by the marksmen was as follows:

Lieut F Staude	4454344444—40	P Eckhoff	4344443353—37
Henry Staude	3344434444—37	T C Harman	2034443433—30
H Goetzan	2534444444—38	J Schlichtman	3204434444—31
H Moening	2340434443—31		

The scores made by the Nationals were, 10 shots per man, Creedmoor target, 200yds., military rifle: Champion class—Capt. J. E. Klein 46, T. C. Carson 44, C. L. Lods 43, C. Meyer 43, A. Johnson 42, E. E. Fennel 21, F. P. Prouter 40, A. H. Brod 40. First class—O. F. Peterson 43, O. Volte 43, H. Koch 39, G. Hult 41, A. J. J. Ruddick 37. Second class—C. Klein 37, J. A. Dodd 29. Third class—S. Alexander 37, T. E. Bullevans 35, P. E. Vanner 35, T. S. Gundley 29, G. Cunningham 26, H. Harper 23. Fourth class—C. Warner 30, S. Kimble 28, E. S. Mesten 24. The same company at 500yds., championship class—Capt. Klein 49, T. E. Carson 44, G. Fennel 39. First class—G. Hult 41, O. Nolte 40, O. F. Peterson 37.

The pool shoot between Capt. R. J. Loughrey and Corporal H. L. Pendleton, of Co. F, 1st Regiment, was the most interesting match of the day, owing to the rivalry existing between the men. The scores were:

H L Pendleton	5444545385—42	R J Loughrey	4435444544—41
	4554445443—42		3353345454—41
	5355445552—44		4354444545—42
	5554443551—44		4444444444—40
	4444544444—41		3435544445—41
	213		205

PHILADELPHIA, Jan. 17.—The Hartranft Rifle Club was performating the targets to-day at their range at Frankford, in spite of the rainy day "Old Prob" favored the shooters with. Taking the state of the weather into consideration, the scores were extremely gratifying to the members present. Official scores, 10 shots, 200yds., American standard target, off-hand:

Emil Kolb, Jr	7	1	6	6	9	10	10	7	8	6—76
E Travis	6	7	10	5	8	9	7	9	10	5—76
L E Toboldt (mil)	6	7	7	6	9	7	5	8	8	4+4—71
E Stees, Jr	8	5	7	8	5	7	8	9	3	10—70
J M Buehler	10	7	6	7	0	8	5	5	8	8—64
William Wurflein	7	8	5	6	2	4	5	8	8	9—61

E. A. PERRY, the author of the "Green Book," so well known to riflemen as an admirably arranged score register, died at Los Angeles, Cal., on the 20th inst. He was for many years employed in the Custom-house in this city. He lost one arm in the Union service at the Wilderness, and suffered severely from heart failure at times up to the day of his death from the effects of his wound. Mr. Perry, who in the war was sergeant-major of the Fourteenth Regiment, United States Infantry, was an old member of the Grand Army of the Republic, and was one of the charter members of Rankin Post No. 10, of which he was a past commander. He went to Los Angeles about a month ago for the benefit of his health. At Creedmoor his noisy, cheery presence was enjoyed as all the long-range shoots, and the fact of his having but one arm did not prevent him being an enthusiastic rifleman and a good shot.

CHICAGO, Ill., Jan. 21.—The following are the scores of the Chicago Rifle and Revolver Club, made at their range Friday evening. Conditions, open sights, off-hand at Massachusetts target, range 50ft., possible 72, count shots: C. Kroell. 62, 59; F. Parker, 51, 58; C. Sherman, 53, 59; T. Wingate, 62, 56; C. Magehan, 60, 47; W. C. Siller, 57, 42; M. Bolan, 63, 69; A. Sorensen, 65, 61; H. Kramp, 54, 47; C. McConnell, 57, 46. Mr. M. Bolan's score of 69 on count shots is a remarkably good one, as only three seconds are allowed in which to raise the rifle from below the hip and fire.—E. H.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

MAK-SAW-BA CLUB.—Chicago, Ill., Jan. 14.—Following are the scores of a trap shoot held by the Mak-saw-bas at their club grounds at Davis, Ind., Jan. 12, which was a very pleasant affair all around. Mr. J. Benton Leiter carried off the honors of the scores. Mr. Leiter was shooting a little 6¾lbs. 12-gauge, of Edinburgh make, a beautiful gun, lately purchased from an Australian stockman by Mr. Organ, and sold by him to its present owner.

Organ diamond medal shoot, at 20 blackbirds:

Leiter, 15yds	11111111111111101111—19
Haskell, 18yds	11011011001101011010—12
Organ, 20yds	11111110011111111011—17
Watson, 18yds	11102101101110111110—15
Randall, 17yds	11010—10
Sharp, 15yds	11010000010101101001—10
Dix, 17yds	11111101110110101110—15
Mussy, 18yds	10011100010110010011—10
Smith, 13yds	10000001001001001001— 9
Waldron, 14yds	10011110000010011101—10

Leiter won the medal.

Wilcox diamond medal shoot, at 15 live pigeons:

Leiter, 27yds	11101111011111—13	B Dix (28)	11000111110110— 9
Haskell (30)	11110111101111—13	Waldron (28)	11111011110100—11
Organ (30)	11111111101111—14	Taylor (30)	111010
Watson (30)	11101101011111—12	Sloan (30)	11111101011001—11
Randall (30)	11111111110001—12	Smith (25)	10011100001
Sharp (28)	10110111111111—13	Mussy (30)	11101111111110—13
Kinney (25)	11110101111101—12		

Organ won the medal.—E. HOUGH.

OTTAWA, Jan. 19.—The St. Hubert's Gun Club this afternoon shot the third competition for the Thompson cup. A change was made in the conditions and the Ligowskys were dispensed with, Peorias being used instead. Great things are expected from the change, but the results did not justify the expectations, as the shooting was poor, and several of the good shots failed to come off. J. Deslauriers shot the best, but Dalton fell off badly. Thompson cup, at 20 birds each, 18yds rise:

J Deslauriers	11111111111001111011—17
Dr A Martin	11111111100111011101—16
W J Johnstone	11110101101110111—15

CAMDEN, N. J., Jan. 17.—Appended is the score of the shoot of the members of the Mt. Vernon Gun Club, of Camden, N. J., at clay-pigeons, to-day:

Pearson	01011010110110100000—10	Duett	00000000000000000000— 0
Cowan	10001100000110111111—11	Stone	11110001001111100110—12
Howell	01100000001010011000— 6	Rich'dson	00000000010000000000— 1

PATERSON, N. J.—The Paterson City Rod and Gun Club was re-organized last week, and the first annual shoot will be held on Washington's birthday.

TORONTO.—There will be two grand sweepstakes on Stark's grounds Saturday, Feb. 2, commencing at 11 o'clock, with Stark's matchless blackbirds. One hundred dollars is guaranteed for first. The sweepstakes will be divided into six prizes as follows: 1st, $25; 2d, $15; 3d, $10; 4th, $25; 5th, $15; 6th, $10; ties to divide; entrance fee, $10. Fifty dollars will be guaranteed for the second sweepstake, to be divided into six prizes as follows: 1st, $12.50; 2d, $7.50; 3d, $5; 4th, $12.50; 5th, $7.50; 6th, $5; ties to divide; entrance fee, $2. Entries may be made at Charles Stark's, 52 Church street, on or before Jan. 30.

NORWICH, Conn., Jan. 16.—The Norwich Shooting Club had an impromptu shoot Jan. 15 for four silver prizes—nut bowl, pickle dish, spoon holder, silver cup; for members only. Another of those beautiful April days—such as we have had quite a number of this winter—graced the occasion, and we had a large number of spectators and several out-of-town visitors to witness the shooting, which was spirited and resulted in good scores being made.

Match at 10 Ligowskys, 5 traps, 18yds. rise, National rules:

Stoddard	1110111110—8	Yerrington	1111110111—9
Harney	1011111111—9	Barnes	0100011100—4

Ties shot off at 5 birds:

Short	01111—4	Link	11001—3

SNAP SHOT.

PHILADELPHIA, Jan. 18.—Magistrate John W. Schall, at Norristown, to-day considered the charge of cruelty to animals, growing out of the pigeon-shooting match at the Belmont Driving Park on Jan. 1, which terminated suddenly in something of a riot. The defendants were Frank Jackson and John McNabb. The officers present from the Society for the Prevention of Cruelty to Animals were James McDonald, John T. Fox and Philip A. Voorhees. The society was represented by District Attorney I. P. Wanger, and H. B. Dickinson, Esq., appeared for the defendants. Officer McDonald made an affidavit charging McNabb with setting up and abetting a lottery, in form of a pigeon-shooting match, for the distribution of prizes, consisting of a horse and wagon, with cruelty to animals. The information against Frank Jackson was sworn to by Officer Fox, who charged him with cruelty to animals. The lottery scheme was not proved, and it was viewed that there had been cruelty, inasmuch as was claimed the pigeons shot at were killed instantly. The hearing was attended with no little levity and cross-firing by the opposing sides, and resulted in the imposition of a fine of $20 against NcNabb and $10 against Jackson, which sums both paid promptly.

WORCESTER, Mass., Jan. 18.—The winter series of prize shoots under the auspices of the Worcester Sportsmen's Club was continued this week. In the classification score each man shot four strings with a possible 24 birds; in the prize score each man had a possible 10 birds. In Class A, Smith and Bowdish div. the first prize: Rugg, Dean and Holden the second; for the third Bowers and Webber after beating Sampson div. In Class B, Gilmon was first; Crompton second, while Knowles and Russell div. third. The work of each man in detail follows:

Class A.	Classif'n.	Prize.		Classif'n.	Prize.
E T Smith	4566—21	9	Dr Bowers	4445—17	7
A R Bowdish	5554—20	9	Geo Sampson	4556—20	7
W R Dean	5665—22	8	W L Davis	5565—22	6
C B Holden	5565—22	8	A G Larkin	4556—20	6
G J Rugg	5535—18	8	M A Linfield	5454—18	6
H W Webber	4445—17	7	E F Swan	3654—18	5
Class B.	Classif'n.	Prize.		Classif'n.	Prize.

WELLINGTON, Mass., Jan. 19.—A bracing wind blew across the traps to-day, materially assisting the clay-pigeons and the bluerocks in their flight from the traps, and making it quite difficult to record good scores. In the merchandise match, at 9 bluerocks and 3 pairs clay-pigeons, the following scores were made: Perry 12, Melcher 6, Shumway 8, Baxter 11, Allerton 11, Sanborn 10, Stanton 12, Chase 7, Choate 11, Swift 8, Bowker 7, Schaefer 11, Grimes 10, Stone 6, West 11, Conant 5, Bond 7, Field 9, Savage 8, Snow 7, Webster 8, Short 4, Bradstreet 9. In the match for the silver pitcher, Stanton, Baxter and Perry tied with 13 birds each out of 15, and in the shoot-off Perry won by breaking 12 straight. Following are the winners in the sweepstake matches: six bluerocks, Perry; six clay-pigeons, Shumway; six bluerocks, Swift; six macombers, Choate, Perry and Stanton; six bluerocks, Schaefer, Perry and Melcher; six macombers, Perry; three pairs clay-pigeons, West; six bluerocks, Swift and Sanborn; six macombers, Choate, Perry and Conant; nine bluerocks, Perry, Baxter and Stanton; six keystones, Choate, Swift and Stanton; six bluerocks, West and Swift; six keystones, Choate, Swift and Stanton; eight clay-pigeons, Snow and Bowker; seven bluerocks, Perry, Stanton, Schaefer and Swift. A team from the Jamaica Plain Club has challenged the Wellington team to a contest for the team badge of the Massachusetts State Shooting Association, and G. B. Sanborn has challenged R. F. Schaefer for the amateur individual badge. Both contests will take place at the Wellington grounds, Thursday, Jan. 31, shooting to begin at 10 A. M. A new and agreeable feature will soon be introduced at the club house, which will be continued while the cold weather lasts. Those attending the shoots are to be furnished hot coffee and sandwiches, and the novelty of the thing is the "drop a nickel in the slot," and you get checks for a lunch. Mr. Grimes, one of the members, has invented a machine, which, when you drop a nickel in it, will present you with a check for a cup of coffee or a sandwich. The mechanism is so finely arranged that it won't pay the gunners to try to fool it by dropping in a gun wad or even a stuffed nickel.

KANSAS CITY.—It is said that a movement has been started out in Kansas City to arrange a championship shoot on a large scale. It is expected that the meeting will eclipse anything of the kind in years, and will establish in a great measure the championship honors of American trap shooting. The proposition is to make an open sweepstakes, $100 entrance, at 100 birds, Hurlingham rules, to which anybody in the United States, professional or amateur, will be eligible. It is proposed to have this shoot take place about the 10th of February.

MONTREAL, Jan. 19.—The fifth open competition for the Greener gun, under the auspices of the Montreal Gun Club, was held to-day at Cote St. Antoine, and this time M. Henrichon, of the Cote St. Paul Gun Club, got a lien on the handsome weapon with the good score of 18. The strings were:

W Ferguson	16	R Thompson	13
W Lumsden	17	J Paton	11
C Aubin	15	M Henrichon	18
E A Cowley	15	A Alexander	8

The conditions were 20 Peoria blackbirds, 18yds rise. There was a sweep at 5 birds afterward, and after four ties Cowley and Lumsden were left in with 4 each, which was finally won by the latter, making 5 straight, while Cowley missed two.

NEW YORK SUBURBAN SHOOTING GROUNDS, New York, Jan. 21.—The New York Suburban Shooting Grounds Association will give a tournament at their grounds, Claremont, Jersey City, on Feb. 22 and 23, when they will offer a very attractive programme for shooters, and much that will amuse and entertain any one who admires exhibitions of skill. We have grand stand accommodation for 500 people. Will send you names of committees shortly with other information.—N. Y. SUBURBAN SHOOTING GROUNDS ASSOCIATION, Chas. Richards, President.

On Jan. 19 quite a number of shooters attended, notwithstanding the blustery day, which affected the flight of both keystones and bluerocks. Practice and sweeps were both going at same time. All ties divided.

Sweep No. 1, 10 singles, 2 moneys:

Miller	1111111110—9	Mort	0111100010—5
Lindsley	1111101111—9	Smith	0111010000—4

Miller	1111011001— 8		

TORONTO, Jan. 19.—The big 50-bird sweepstake that was to have been shot at McDowall & Co.'s grounds to-day did not come off, but several very interesting matches took its place. The first two were at 25 blackbirds each, with eight and ten entries respectively, W. Paul winning the first with 20 and W. McDowall the second with 22. Several smaller matches were shot, and although the weather was cold a good day's sport was enjoyed.

At 25 Blackbirds, 4 prizes.

W Paul	1111011111101011101011111—20
Ross	1110111001011111101101111—19

Simpson	0100000101001020001101111—11

At 10 Blackbirds, 3 prizes.

W Paul	1111011101—8	Morley	0010111010—6
W McDowall	1011101010—6	Heatherington	1001000000—2
Mitchell	1101011100—6		

Paul first, McDowall second, Mitchell and Morley divided third.

EATON, N. Y., Jan. 19.—Although the thermometer registered nearly zero, six of our club to-day faced the trap and fried titles for the club badge. Morse, the invincible, carried it off with a low score, despite the practice of Dr. and Esq. the week before, at which time the Esq. made his 10 straight. Following is the score:

Morse	1101111001001101011001—12	Bell	0001011011010111011000—10
Hamlin	0100100000001111101101— 8	Short	1010000000000010111— 6
Briggs	1001110000011010110000— 9	Curtis	0101000100310100010— 6

Match at 4: Briggs 1, Short 2, Curtis 4, Bell 4. Miss and out: Curtis 2, Bell 3.

CHICAGO, Jan 12.—The annual meeting of the Audubon Club was held at Charles Kern's on Jan. 8. The report of the treasurer showed a very satisfactory balance for the club, and its affairs were reported in a flourishing condition. Two new members were admitted, and the secretary's report showed the loss of two members, one by death and one by expulsion. A set of resolutions on the death of the late Harry F. Orvis were read by the secretary and ordered spread upon the minutes of the club. The next shoot of the club for its supremacy medal was called for Thursday, Jan. 17, and the board was instructed to call shoots frequently during the ensuing year. The officers were unanimously elected as follows: President, Charles Morris; Second Vice-President, J. J. Kleinman; Secretary and Treasurer, W. W. Foss: Manager of the kennel department, C. S. Wilcox; Board of Directors, N. Rowe, W. L. Shepard, C. E. Felton, F. A. Howe, and C. S. Wilcox. The office of kennel manager is no longer an arduous one, and Mr. Wilcox, who had been elected to the office, was only making a solemn joke when he said he deemed himself incapable of filling the duties, and threatened to resign from the club if compelled to serve. Messrs. W. L. Shepard and W. P. Mussey were then placed in nomination, and Mr. Mussey elected in Mr. Wilcox's place. Mr. Mussey is known by pretty nearly all the shooters of Chicago as the original good-natured man, and took his election as he does everything else.—E. H.

BROOKLYN, Jan. 17.—The regular monthly shoot of the Coney Island Rod and Gun Club took place at Woodlawn, L. I., to-day. F. Quimby, who won first prize and the Blattmacher medal, leads in the great contest for the ultimate possession of this fine and beautiful marksman's badge. He killed 7 birds straight at 30yds., and defeated P. Ward, 25yds., and A. G. Nason, 25yds., on the shoot off, with a score of 3 out of 4. A. Schwartz, 29yds., won second prize in the shoot off from five competitors, all six having killed 6 out of 7 birds. Four members divided third prize on 5 birds. Referee, H. Goodwin. Scorer, Post Van Pelt.

PINE BROOK, N. J., Jan. 17.—While a pigeon match was progressing at Frank Class's Hotel to-day, Calvin Smith, a blacksmith, was crossing the Passaic River Bridge. A low-flying pigeon passed in his direction, and in spite of his shouts of warning, two young men, named Van Ness and Van Duyne, shot at he bird at the same instant. Smith fell with the small shot from both guns in his abdomen. He was carried into the hotel apparently dead. A doctor living at Singac was sent for, and under his care Smith recovered slightly, but it is thought he will die.

HARRISBURG C. C.—The Harrisburg C. C. men are still canoeing on the Susquehanna, the latest cruise being made on Nov. 24, from the headwaters of the Clark's Ferry dam to Harrisburg, 26 miles, against cold head winds. Com. Snyder, in his sailing canoe Voe (Rushton model) sailed five miles and return over the swollen and choppy waters as late as Jan. 10.—TRU-DE.

LOWERING RIGS IN THE W. C. A.—*Editor Forest and Stream:* It may interest the readers of the FOREST AND STREAM to learn that the question of "standing rigs," referred to in McKendrick's communication of Jan. 10, was definitely settled at the meeting of the executive and regatta committees of the Western Canoe Association, held at Cleveland, Jan. 5. It was unanimously resolved that the "sails of canoes of all classes competing in the races of the W. C. A., shall be capable of being effectively hoisted, lowered and reefed by the crew when afloat."—KELPIE.

THE SLIDING DECK SEAT.

Editor Forest and Stream:

I have been much interested in the discussion now going on in your paper in regard to standing rigs and sliding deck seats and it seems proper that Lowell should have something to say in regard to the same. I fail to see why such exception should be taken to the sliding deck seat as it certainly is a great help in carrying sail. It seems to me that the comparison of the old skimming dishes of a few years ago with their bags of sand is rather far-fetched, for the limit of the seat has now been reached in the length of a man's legs, and certainly if a man has been blessed with longer extremities than his follows he ought at least to have the benefit of the same. You might just as well take exception to one man being heavier than another and compel each skipper to weight himself like a jockey, for certainly the heavy man on the side of his canoe will hold up more sail than can a man of lighter build. Another thing, how much better a canoe looks sailing upright on its bottom than on its side, as one of the crack Canadian canoe sailers invariably sailed his craft, and also how much more can be learned of the proper lines of a craft by having her sail on those lines. The sliding seat enables a canoe modeled as a cruiser to shove pretty well to the front in the races, and in the last noteworthy incident in the Barney Cup race to win the prize and thus be the means of tickling the pride of this "City of Spindles."

The deck seat enables the canoeist to discard all forms of ballast, and thus makes less weight to carry, and hence not only less strain on the canoe, but as in some canoes where the ballast is made fast, more buoyancy in case of capsize. To hear the criticisms against the poor seat one would suppose that there were no advantages, but I assure you that did a man have four arms he would find use for them at the critical period of tacking or rounding a buoy. The writer well remembers getting his feet wet on account of the seat sticking when trying to beat around the lower buoy in the trophy race, and the wind blowing one of those all-around-the-compass sort of puffs, and then having to sail to shore with everything afloat and both peaks lowered. All this cultivates agility, an indispensable virtue in a canoeist. If those who condemn the outrigging deck seat would only try them, then they could talk a little more intelligently upon the subject.

There were a number of capsizes at the meet that would have been avoided by the use of a seat. The writer carried sail in a bad squall when some of the so-called cruisers were compelled to lower and put for shore.

In regard to the rig of sails, as you say there is much to be learned. Without claiming to be an artist on sails, I can safely recommend the Butler rig as used by Mr. Paul Butler at the meet at Lake George. It is not perfect, but it has all the elements of perfection. I use the name to designate the style of rig. If some one will invent a method for a hoist or rather improve on the way of raising the pole so that the friction will be reduced to a small quantity, then the rig will be almost perfect. Cords will swell when wet and so run stiffly. The Lowells will use their heads this summer and will come to the meet with something of an improvement in the way of hoisting and lowering sails, but I trust the fraternity will pardon me if I still think that the rig of the Lowells stands to-day at the head in the matter of hoisting or lowering.

Egotism must again assert that the model of the Fly is a cruiser *par excellence*, and a man can rig her inside as he chooses, but the hull is roomy, staunch and handsome. We have a little verse:

Oh, where was Barney and Brokaw,
And where the great Jabberwock's fame,
When Butler went out with a Fly on his boat,
And got there just the same.

Let canoeists try the sliding deck seat, and if it must go, let it go because more defects have been found that at present are known.

LOWELL.

[The sliding deck seat may properly be compared to the old hikers, in which the crew hung outside the gunwale, each man fast to a rope that is spliced to an eyebolt in the keel, as is still the practice on the Delaware. Mr. Faux, Mr. Brokaw, and many other good sailors habitually sail their canoes on an even keel, or, at least, as nearly so as can be done with a deck seat. It is only a matter of adapting the dimensions and model of the canoe to suit the weight of her crew, and then canvassing her properly. The Canadian canoe mentioned was a large boat, capable of carrying over 100lbs. of ballast, but of very light build, and sailed with no ballast. The consequence was that she laid on top of the water, and had no fulcrum for the weight of her crew to act on. The great point is to make the canoe fit the man; if this is done the light weight should be able to sail his class A canoe as nearly upright as the heavy man a class B craft; but too often we see a man of 180lbs. weight trying to carry 150ft. of sail on a Vesper model, with no ballast. Our correspondent cannot mean to claim that the deck seat enables a cruiser to go faster in proportion than a racer; it is only when the former has the seat and the latter has not the difference is noticeable; and this state of affairs would soon be ended by the racer shipping a sliding seat also. It has been fully proved that canoes can be sailed without either ballast or deck seat, as Vesper, Notus, Eclipse, Pecowsic, Lacowsic and many older boats; while a canoeist is apt in any case to have all the chance he wants for cultivating his agility. Our objection to the deck seat is based on the fact that it induces the canoeist to carry an unsafe and excessive amount of sail, and to try to drive his boat through a big sailplan, rather than through virtue of a good model. If persevered in it must result in the production of a special type of racing canoe, designed to carry enormous sails, held up by the crew perched outside on a plank. We have always understood that the main object of racing was to improve the general purpose canoe, at the same time furnishing a healthy and exciting sport; but no such end can result from a fleet of outrigged hikers with men perched outside of them.]

THE NEW ROYAL C. C. RULES.

THE letter from Mr. W. Baden-Powell, which we published last week, is worthy of serious study in view of its direct bearing on the questions which are now vexing American canoeists. There is probably no canoeist on either side of the water to-day who is better qualified to speak at one and the same time for both racing and cruising than Mr. Powell, as he has been foremost in both branches of the sport from their birth. From the time when his first little Rob Roy was launched, twenty years ago, down to the present season, he has probably built more canoes than any other canoeist. Many of these have been designed solely for racing under the old R. C. C. rules, but there is not one of the lot that has not been noted for the possession of cruising and seagoing qualities above everything else. Whatever their shortcomings may have been, each has been roomy, stiff and able; powerful boats for their length and beam. Though less speedy than the American craft, the canoe brought out here in 1886 was a fine specimen of the open water cruiser type, a better boat than most American canoes of the same type. Though going at times to an extreme in order to obtain speed under the old rules, as in the deep Nautilus of 1879, his voice and pen have always been ready in the defense of the cruising canoe from the encroachments of racing. His present letter, in favor of racing, but with some strict limitations, is a direct answer to the point raised lately by "Reitar" in the FOREST AND STREAM. What Mr. Powell says in regard to racing appliances concerns American canoeists as directly as it does the Royal C. C.

The new rules themselves are in the same spirit as the proposed changes in the rules of the A. C. A., covering about the same points. The division of classes is not of interest here, as that question is pretty well settled, but it is an improvement on the old division of the R. C. C. The new classes are practically Class B decked, and Class A decked and open. From the standpoint of a canoe builder we have never been able to see the reason for the retention of a class distinction based on the mode of building, which has been a part of the R. C. C. rules for years and is still retained. It had its origin long ago in boat racing, where there was a vast difference between the lapstreak barge or gig and the smooth-built shell; and at one time the same distinction prevailed to a certain extent between paddling racers. For a long time, however, it has disappeared, and in the present condition of canoe building there is no reason for a distinction between smooth and lapstreak canoes. While there is a wide difference between the latest racing smooth-skins and the efforts of the amateur builder or the cheap professional in the way of lapstreak work, at the same time the best specimens of the latter really merge into the smooth-skin so closely that it is impossible to draw any such clear line as should separate two classes. The Pecowsic is actually a lapstreak boat, though no one would say so from a close inspection, while there are other methods of construction in which the laps practically disappear. A classification based on dimensions only would be more in accordance with modern conditions.

We fear that the expectation that the three classes can race together on anything like equal terms will not be realized. In paddling the 26in. boat can be so nearly a smooth skin that the 28in. boat will be hopelessly handicapped, while again the open canoe can be such a shell that even with a single blade she will outstrip the average decked canoe of the corresponding class, to say nothing of the class above. The limit of sail has often been proposed here, but the leading canoists care opposed to it, and while there may be two sides to the question, as long as the crew is obliged to confine his gymnastics to the legitimate hull of the boat, and to forego special feats on extension ladders and parallel bars, and as long as all such excrescences as boards twice as broad as the canoe's depth are prohibited, there seems to be little danger that a man will be able to carry to advantage a dangerous amount of sail. As regards the standing rig, while it is not directly prohibited the regatta committee is empowered at will to require that any or all sails shall be kept on deck for a certain time prior to the start, which would effectually dispose of such rigs as those of If and Ramona.

The depth limits have been made more stringent, a minimum limit of 12in. being added to the old maximum limit of 16in. under deck at fore end of well. A new limit of not less than 12in. from top of center of deck to lower edge of garboard, except for 2ft. at each end, has been added, a limit that is little likely to be approached in sailing practice though it may serve to keep out some paddling machines that would enter in the races, to the detriment of the sailing and paddling craft. The other new limit, of 12in. depth from deck to garboard at a distance of 12in. out from centerline of canoe at fore end of well, is by no means definite, nor essential to the cruising qualities of a canoe. It might or might not shut out such a canoe as Dimple, but it would bar such an able cruising craft as Notus. The intention evidently is to establish a limit of depth somewhere near the bilge, to bar out the machines of marked V section, but if such is the case it has entirely failed. In the first place such a measurement should be taken nearly at the mid length, but in many canoes the well is only about 5ft. from the stem, instead of 8ft., the midlength. A 30in. canoe may have sufficient crown to her deck to come within the limit of 12in., and yet at the same time she may have literally no bilge at all. The limitations as to the placing of the board, the distance between bulkheads, the dimensions of the well and the deckseat are directly in line with those we suggested a year ago in the FOREST AND STREAM. The size of well opening allowed is small from a cruising standpoint. Provision is made for bilge boards, which promise to be seen in both American and English canoes this season and may become a permanent institution.

One very important feature of the new rules is the provision that they shall not be altered for at least three years, thus securing the rights of owners who shall build under them. Not only is such a provision a matter of justice to the racing men who put time and money into their boats, but it makes any sudden and ill-considered changes on the part of any particular set of officers impossible, and will tend to greater stability in the rules and to a very thorough consideration of all proposed changes. We have been rather severely criticised of late because, after pointing out the many bad features of the present A. C. A. rules and the necessity for some change, we have deprecated any hasty action before it is settled how far beyond about just what changes are possible and what are expedient. It is now technically within the power of the new regatta committee to recommend certain changes, and it might be possible to secure sufficient votes of the Executive Committee to pass them; but such a course would be without precedent, and could hardly fail to do harm, however beneficial to canoeing at large the changes might be. That changes are needed is generally recognized, but there is a great diversity of opinion as to just what these changes should be. We doubt very much whether it would be possible now to secure the adoption of rules which would make the canoe what the founders of the American Canoe Association intended it to be—a strong, staunch and seaworthy model, with the best qualities of a lifeboat, and fitted for cruising and living on board. So long as canoe racing tends to encourage the use and improvement of this class of boat by the great majority of canoeists, a moderate departure from the letter and spirit of the rules on the part of the racing craft may perhaps be tolerated; but when the whole influence of canoe racing tends to build up a special class of machines that are utterly useless for cruising themselves, and in addition serve to discourage the use and improvement of cruising canoes, it is time that active measures of some kind for the encouragement of legitimate canoes be taken by the Association.

PEQUOT C. A.—New Haven, Jan. 18.—*Editor Forest and Stream:* The first camp-fire of the association for this winter was held at Bridgeport, on Jan. 16. The attendance was very good, and much business disposed of during the evening. Music was provided by the club quartette, and at 9:30 the supper was served. The 1889 meet will probably be in the latter part of July, at some point near Thimble Islands, fifteen miles east of New Haven.—F. P. LEWIS, Secretary-Treasurer.

A. C. A.—EASTERN DIVISION REGATTA COMMITTEE.—*Editor Forest and Stream:* The members of the regatta committee of the Eastern Division for 1889 will be Mr. Charles P. Nichols, Vesper C. C., Lowell, Mass.; Mr. R. Elmer Townsend, Harvard C. C., Cambridge, Mass.; and Mr. John F. Sevin, Jr., Norwich C. C., Norwich, Conn.—H. E. RICE, M. D., Vice-Com., Eastern Division.

CUTTERS ON THE LAKES.

COLLINGWOOD FISHING BOATS.

Editor Forest and Stream:

The recent article in your paper entitled "The Collingwood Fishing Boat," was read with interest, as I saw one of this type from Georgian Bay, at the Mackinac regatta last summer. As I placed the first cutter on Lake Michigan—the Iolanthe, now of Toledo, I take much interest in the matter of types best fitted for lake use. The Collingwood boat does not differ very much from the Mackinac boat, except in size, being built larger. The Mackinacs are very stiff, but will capsize like any boat without depth. This reminds me of an incident which happened in August, 1885. I was crossing Lake Michigan from Sturgeon Bay, Wis., to Frankfort, Mich., in my 28ft. cutter Iolanthe; when about half way over we were struck with a violent S.E. squall, which lasted for two hours. Everything was shut up, mainsail with three reefs, foresail single reef, small jib set and topmast housed. We went along finely with lee rail awash, and reached port safely. Next day, as we made Charlevoix Harbor, distant 65 miles, we saw a Mackinac fish boat which had been capsized the day before in the same squall, about 40 miles north from where we were. The occupants, two old fishermen, were tied to the seats, both dead. They had evidently taken in sail, but were capsized purely from the force of the gale on the spars and hull. This boat was about 25ft. over all, 24ft. l.w.l., 8ft. beam and 12in. draft, and carried about 1,000lbs. of stone ballast.

I have had considerable experience on the lakes, mostly on Michigan, and unhesitatingly say the cutter of about 6ft. draft is the only boat adapted for use where perfect safety is desired. My reason is that the ordinary amateur yachtsman does not care to be so constantly on the watch when his lee rail is awash, as is necessary with a yacht not inherently uncapsizable; and furthermore, a fellow can turn in on a midnight run and leave an amateur at the stick with much better assurance of coming out all right, if he is in a cutter, relieved from anxiety of a capsize. Last summer the Margaret made her first appearance on Lake Michigan, built by Campbell Bros., of Charlevoix, for Geo. Stockbridge, of Kalamazoo, Mich. She is a decided success in every way, very fast and commodious and a credit to her builders. She is almost a counterpart of the Surf, illustrated in "Small Yachts," by C. P. Kunhardt, from whose lines she was built, though larger, being 47ft. over all, 9ft. 3in. beam, 36ft. waterline, 7ft. draft, 5 tons iron on keel, balance inside. She would be improved by the addition of all her ballast outside, but is stiff as a church now. She has the distinction of being the first yawl rig on Lake Michigan; the rig is very handy and adapted to the lake. Below she has 6ft. 2in. under deck beams, after cabin, main cabin, w.c. and wash room. Large clothes lockers, very roomy forecastle, and that great and successful invention, a swing table, from which we ate hot soup in half a gale.

I am contenting myself with a 30ft. keel sloop, 6.6 beam, 3ft. draft, iron keel; which has shown herself in every port in northern Lake Michigan the past season. She is a veritable singlehander and a good little ship, obedient to my wishes, and we think a good deal of each other; though I do sometimes long for head room in the cabin, and I shall have it soon. The Lulu, my little ship, made a fine run to Mackinac last summer in a gale, or rather to the Straits, from Charlevoix, as we did not get there the first day. It may interest some lake yachtsmen to know of a fine lee on Lake Michigan which can be made when bound for the Straits and when inside of Waugashance Light. It lies six miles north of Cross Village, and can be made by any draft by keeping about two miles off shore and holding your course north until the line of small islands, extending from the mainland to Waugashance Light, are about half a mile distant, then stand directly in for shore and you will find yourself behind a long reef of rocks, which completely breaks the sea from southwest or west; the island protecting you from northwest. You can also pass inside the Waugashance Island to the straits with 3ft. draft, but the wind must be very light to make it advisable. Small yacht sailing, in my opinion the acme of yachting, does not seem to flourish on the lakes. The Mackinac Interlake regatta of last summer had no small yachts, and my little ship was the only one in the group of big schooners and sloops, and the brass guns and uniforms made me feel awfully small, but I am sure my yachting gave me just as much pleasure if I was my own cook and bottlewasher.

KALAMAZOO, Mich., Jan. 14. G. H. WINANS.

Editor Forest and Stream:

In the last number of the FOREST AND STREAM I notice an interesting account of the Collingwood fishing boat, and being anxious to ascertain the best kind of fastening to use in building such a boat, intended for use in salt water, I write to you for advice.

I had supposed copper to be decidedly the best, but the Collingwood builders assure me that, while copper might be used to advantage for her planking, galvanized iron would make a stronger and, of course, a cheaper fastening for the timbers and heavier work, and would withstand the action of the salt water equally as well as copper. Others again say that the galvanized iron made on this side of the Atlantic is very uneven and sometimes worthless, and that it would be safer to fasten with ordinary iron, even for salt water.

I take it that in clinker-built boats, such as these, this is a matter of some importance, and would therefore be obliged if you would kindly inform me as to what is generally used for small craft of this description in New York and Boston, and what you would recommend under the circumstances. HUME BLAKE.

TORONTO, Ont., Jan. 15.

[For long bolts of an inch diameter or over, in large vessels, iron is better than copper in that it can be driven more easily and solidly, but for small craft, especially the one in question, copper bolts can be driven properly and will outlast iron. At the same time galvanized iron bolts, rivets or boat nails will last a very long time, probably as long as the ordinary life of such a boat, and are cheaper than copper. Large forgings or castings and the smallest sizes of cut nails are sometimes injured by over-heating in galvanizing, but wrought bolts and nails are, or should be, of a good quality of iron, and are not affected by galvanizing to any extent. Our correspondent had best use copper nails for laps, timbers and all places where the ends can be riveted; brass screws for other parts about the inside and upper works, and if not too costly, for ends of planking, and for keel and deadwoods ordinary galvanized bolt iron, ¼, 5/16 or ⅜in. Galvanized iron screws are cheaper than brass, but the slots in the head are often imperfect, making it difficult to withdraw the screw.]

THE CRUISE OF THE LEONA.

WE are now in the Albemarle Sound. Left Norfolk Dec. 19, at 3 P. M.; ran up the Elizabeth River about three miles. The mate can tell where a bar is without sounding; he found one on this occasion, putting the ship hard on. Our friend Work found the same one last fall. Made sail next morning at 9 o'clock for the notorious Dismal Swamp canal; went on shore to ascertain if possible what the charges would be to get through. Found the canal was 27 miles long with 5 locks, and the fee for all this was one dollar. It is a go-as-you-please canal; the company have no mules, which being the case we concluded to take the towpath ourselves, which we did when the wind was not favorable. Spent the first night at a farmhouse. Reached South Mills, at the end of the canal, at 3 P. M. next day. Did not lock out until next morning, as we preferred stopping in the canal to down in the swamp, which we have to pass through for 22 miles to reach Elizabeth City. There is no tide, and you have to get through the best way you can. The wind was favorable, but the creek is very crooked, as is also the Pasquotank River, which it empties into; it is very narrow, but deep. Anchored below the lower ferry; there are three of these ferries on the river, and all are run by a man and a flatboat, with a line across the river. Sunday afternoon ran down to Elizabeth City, where we stopped over Christmas. The weather is very fine; we are in our shirt sleeves all the time, and take the shady side of the streets. The people are not very active; their only ambition is to get a mule and cart. They come to town with 50 cents' worth of shucks and spend 75 cents for rum before they get home; it costs $1.10 a gallon. Fell in with Capt. Simmons, and a fine old gentleman he is. He runs a yacht and carries supplies to the life-saving stations along the coast. He gave us all the requisite instruction how to navigate the sounds. Our friend, Charles L. Work, says in his trip of last winter that there is nothing of much importance down here. The trouble with him is, his yacht sails too fast, and he didn't have time to see the country. But we are taking it all in as we go. We found the people very hospitable in Elizabeth City and made many friends there; promised to stop there a few days on our way home. Left there Dec. 27, wind very light from S. W., and ran to Powell's Point, 30 miles distant, where we arrived at 4:30 P. M. Met with friends there also. Our P. O. address will be Manteo, Roanoke Island, N. C., where we will have all our mail sent us after this. I don't suppose we will go further than Newbern, as the mate has not heard from his friends in Jacksonville since we left Annapolis, and then they were sick with yellow fever, and are probably dead. We may put in the next two months in Pamlico Sound and then return home. The little ship is all right and the crew well. Captain Lutes has had many good offers for the Leona, but he prefers to come home in her. She has now been thoroughly tested and proven a very excellent little seaboat as well as speedy.

R. G. W.

CORINTHIAN Y. C.—The new rule adopted at the annual meeting is a modification of the length and sail area rule devised last year by Mr. Burgess for the Beverly Y. C., and adopted by it and the Dorchester Y. C. It reads:

$$\text{Sailing Length} = \text{W.L.} + \frac{\text{B} + \text{H} + \text{G}}{3}$$

B is the length from point of contact of outer stay on bowsprit to end of main boom; H is the height from saddle of boom to highest point of support of peak halliards, plus one-half of distance from highest point of support of peak halliards to highest block or sheave on topmast; G is the length of gaff. These three are added together and divided by 3, and the result is added to the waterline and divided by 2. The rule differs from the original in measuring the base line from the outer stay on bowsprit instead of from the bee hole, and also in measuring the height as given, rather than from saddle to topmast block. The motive of the latter change was to encourage a shorter lower mast and longer topmast, thus making a better cruising rig. The club has also adopted the following new classification by l.w.l. instead of sailing length:

Keels.	Centerboards.
25 to 30ft. l.w.l.	25 to 30ft. l.w.l.
21 to 25ft. l.w.l.	21 to 25ft. l.w.l.
16 to 21ft. l.w.l.	19 to 21ft. l.w.l.
	16 to 19ft. l.w.l.

DAUNTLESS Y. C.—Officers, 1889: Com., John Flaherty; Vice-Com., H. Lawson; Treas., W. H. Boynton; Sec., E. R. Perrine; Financial Sec., E. Lawson; Meas., E. L. Jones; Sergt.-at-Arms, C. Reynolds; Regatta Com., John W. Bolen, John T. Wathers, A. Hoffman, J. F. Campbell and F. Burk. Trustees, John Duffy, John Driscoll, George Morris and H. Keneher.

NAUTILUS.—A bill was introduced in Congress last week permitting an American register to the small steam yacht Nautilus, purchased in Canada last summer by Isaac McCabe, of New York. The owner has thus far been unable to use the boat, as the inspectors refuse to grant a license.

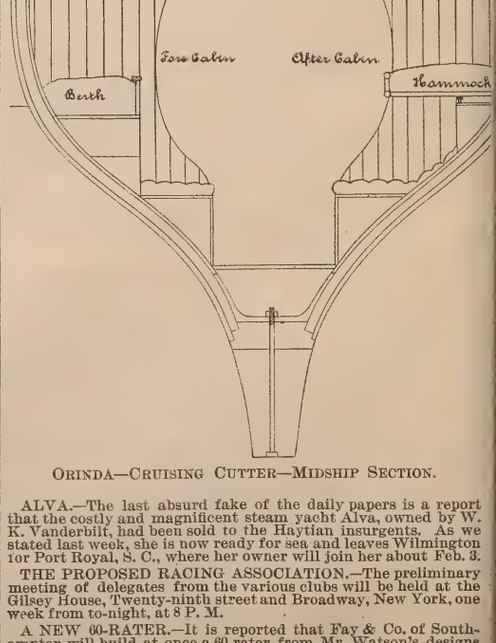
ORINDA—CRUISING CUTTER—SAIL PLAN.

CYTHERA.

A THOROUGH investigation of the story published lately in the New York *Sun* concerning the finding of a letter from the Cythera in a bottle on Rockaway Beach, has proved that it is false in every particular, and that the fraudulent letter was prepared and placed where it was found by a reporter of the Brooklyn *Eagle*. According to the New York *World*, which has taken up the matter, this man, Ernest V. Pardessus, prepared the letter and bottle, hiding the latter under an old orange box on the beach; arranging with an accomplice that the latter should discover the bottle and bring it to a saloon where his principal was in waiting. The vile scheme was promptly carried out by the confederate, Ross O. Sidney, a plumber, of Canarsie, who got the bottle, carried it to the saloon, and it was opened by Pardessus in the presence of witnesses. Pardessus took the letter to the office of the *Sun*, where he sold it, receiving according to the statement of Sidney, $70. He also sold a report to the Brooklyn *Eagle*. The story in the *Sun*, accompanied by a fac-simile of the alleged letter, created a sensation among yachtsmen, and the whole matter was carefully sifted, the result being a full confession from Sidney. Both Mrs. Stewart and Mrs. Lee were greatly excited over the affair, the latter in particular being seriously ill in consequence. The man Sidney has been summoned to appear before the Probate Court and to tell his story in connection with the probate of Mr. Stewart's will.

We do not know whether the law can reach the reporter who planned and carried out such a despicable trick for the sake of a few dollars, but no punishment is too severe for the perpetrator of such a scoundrelly act.

THE CORINTHIAN MOSQUITO FLEET.—The second meeting of the new Corinthian Mosquito Fleet was held on Jan. 21 at the Gilsey House, New York, with the treasurer, Mr. F. B. Jones, in the chair. The officers were elected for the ensuing year as follows: Com., Thornton H. Smith; Vice-Com., Thos. Clapham; Sec., Dr. Theodore Ledyard; Treas., F. B. Jones; Executive Com., Harold Forwood, F. P. Sherwood and W. P. Stephens. A constitution and by-laws were adopted, and a committee consisting of Com. Smith, Mr. Arthur Wallack and Mr. W. P. Stephens was appointed to prepare sailing rules, to report at the next regular meeting, in May. The club burgee is rectangular, a white field with a blue diagonal bar. The association is open to all single-hand craft not over 20ft. l.w.l. The initiation fee is $2 and the annual dues $1. The secretary's address is New Rochelle, N. Y.



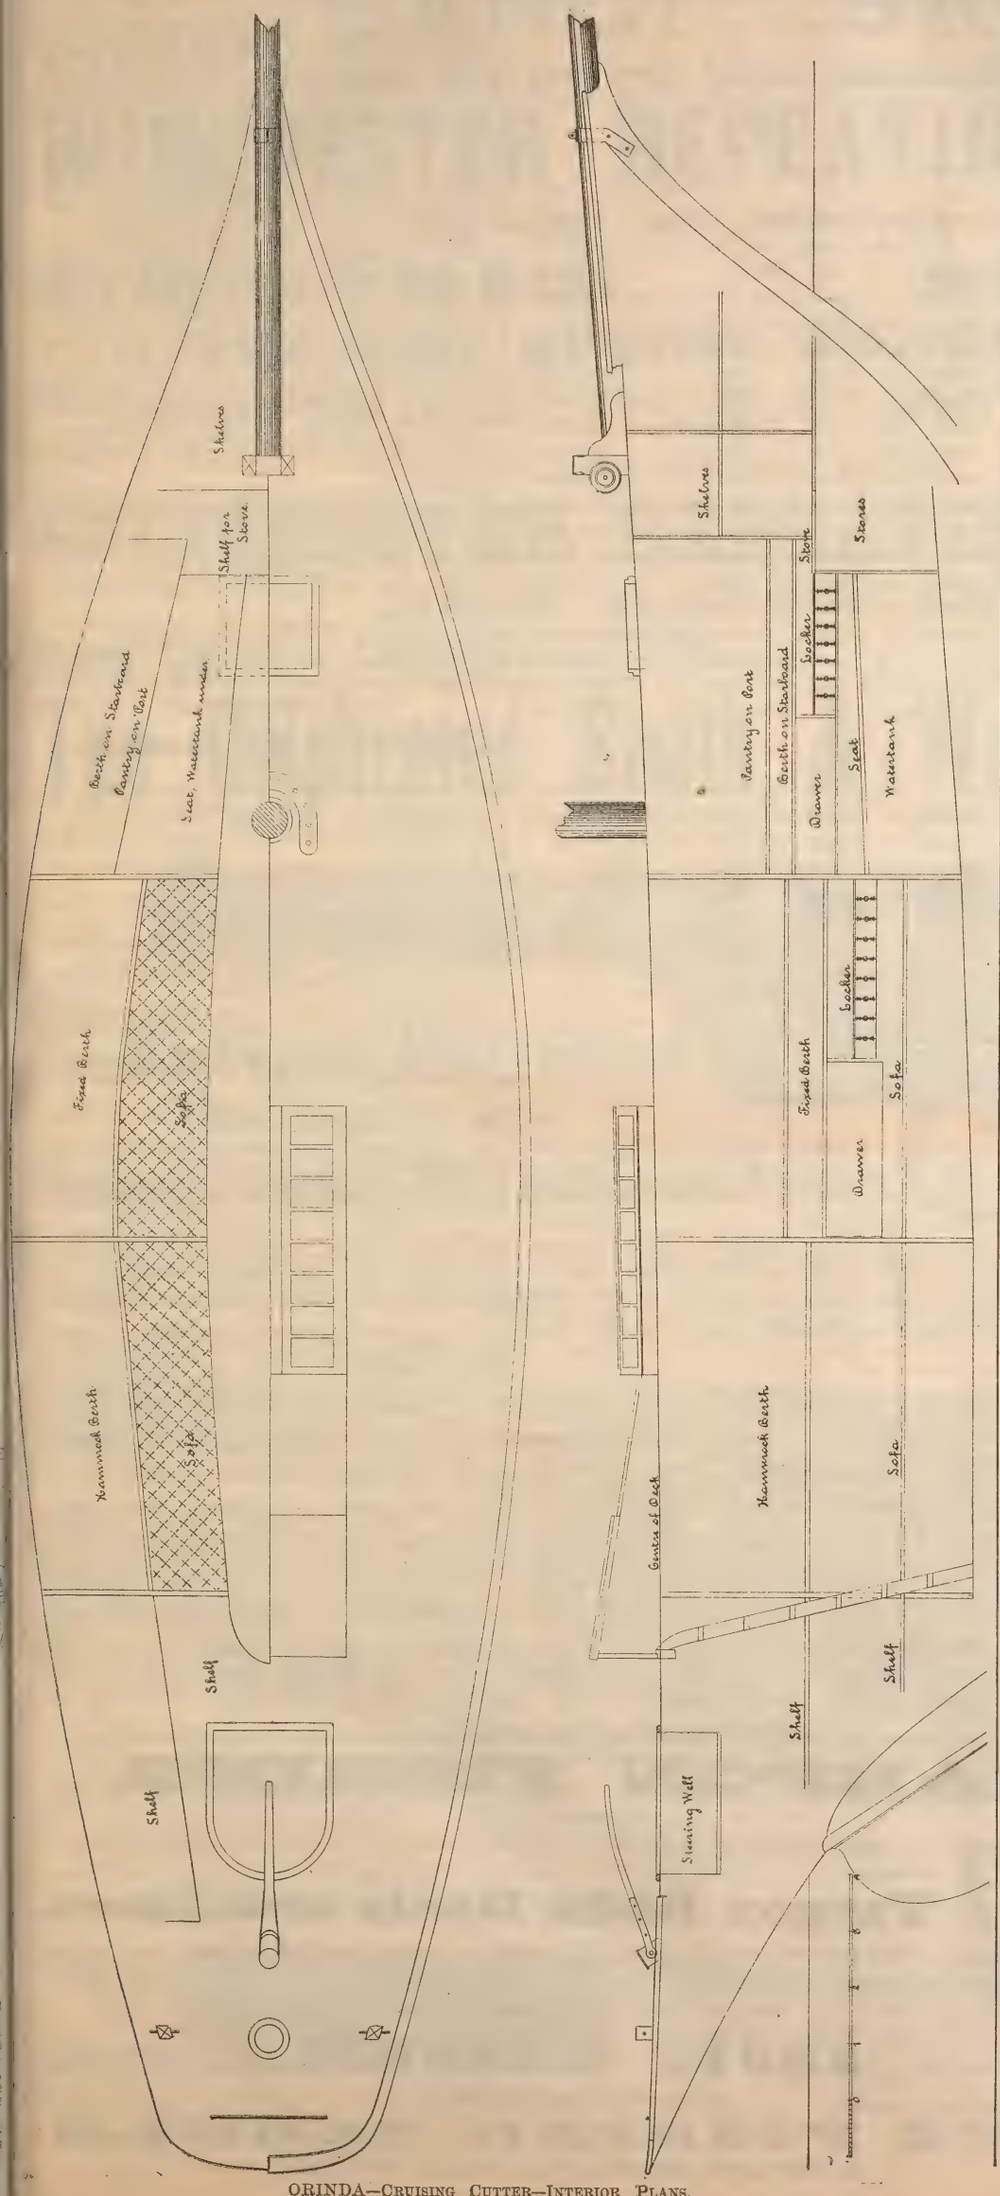
A CHALLENGE FROM THE THELGA.—Mr. H. L. Johnson, owner of the keel sloop Thelga, has issued the following challenge: "As there is a diversity of opinion regarding the speed of keel yachts with which the Thelga is classed, and to insure a satisfactory trial of their respective merits, I should be pleased to arrange a match with any keel yacht in New England, 24ft. or under, sailing length, for a cup of nominal value, say $50. The race to be governed by the rules of the New England Yacht Racing Association, and the Corinthian rule of the Hull Y. C., which applies strictly to amateurs. The race to be sailed in June, July or August, on days which will not conflict with dates selected by various clubs for their own regattas. Judges, courses, time limit etc., to be mutually agreed upon. The Thelga's sailing length is 22ft. 11in."

ORINDA.

THE accompanying drawings show the rig and interior arrangements of the cruising cutter Orinda, whose lines were given last week. The cutter rig was adopted, with the exception of the housing bowsprit. The deck fittings are very simple, a square hatch forward, a combination skylight and companion, and a small steering well aft. The deck is thus free from obstructions and there is plenty of room, a great desideratum in a small craft where long trips between ports are the order. The boat is used by her owner for only about two months in the year, during which time she is constantly cruising, a party of four or five living on board with little dependence on the shore. As such a number makes a large crew for a yacht of this size, it was necessary to economize space as much as possible, and the result has been a very compact and convenient arrangement below. The steering well is only deep enough for the legs, as the helmsman sits on deck, thus taking little room from the internal space. Beneath and around it is a large space fitted with shelves and lighted by a deadlight aft, in which sails, lines, anchor, etc., are stowed. The companion is well aft, leading into the after end of the after or main cabin. The forward end may be called the owner's stateroom, having two fixed berths with a locker in front of each, as shown in the cross section. The dining table is set up here, being convenient to the galley. The after cabin is the principal room for day use, and so is fitted with an iron hammock cot on each side; which can be folded up against the side during the day with bedding and pillows inside, leaving a large and comfortable locker with a shelf behind it. At night the hammocks are dropped, making two good berths. There are no full bulkheads between the two, the open bulkhead shown being used with curtains. Beneath the fixed berths are drawers and shelves, while the sofas are also utilized for stowage. Above the berths are also wire racks for clothing and other articles. The forecastle is fitted with a seat on each side, beneath which are two watertanks. Over the seat on the port side is the pantry, with shelves for china, and opposite on the starboard side is a berth. The stove, a Volunteer No. 2, burning gasoline, is placed on a shelf almost below the hatch, while on each side in the fore peak are other shelves. The icebox is forward, beneath the stove shelf. The gasoline stove is pronounced very satisfactory after a month's steady use, cooking all the meals for five persons. The water tanks were somewhat in the way and have been shifted for next season. We give the following elements in addition to those published last week. Dr. Winslow informs us that the yacht was sailed at a draft of about 7ft., making 29ft. l.w.l., nearly.

Displacement, designed, L.W.L., tons	9.33
Area midship section, sq. ft	22.05
L.W.L. plane	157.40
vertical long. section	131.28
Centerboard below L.W.L., feet	1.65
aft, middle of L.W.L.	.83
Midship section aft, middle of L.W.L.	1.52

THAT AUSTRALIAN CHALLENGE.—Mr. Walter Reeks sailed from England for Australia just before New Year's Day. He has not decided what the future challenge will be, but the whole scheme thus far is too indefinite to offer any immediate hope of a resumption of international racing through the medium of the America's Cup.



ORINDA—CRUISING CUTTER—MIDSHIP SECTION.

ALVA.—The last absurd fake of the daily papers is a report that the costly and magnificent steam yacht Alva, owned by W. K. Vanderbilt, had been sold to the Haytian insurgents. As we stated last week, she is now ready for sea and leaves Wilmington for Port Royal, S. C., where her owner will join her about Feb. 3.

THE PROPOSED RACING ASSOCIATION.—The preliminary meeting of delegates from the various clubs will be held at the Gilsey House, Twenty-ninth street and Broadway, New York, one week from to-night, at 8 P. M.

A NEW 60-RATER.—It is reported that Fay & Co. of Southampton will build at once a 60-rater from Mr. Watson's designs for a British yachtsman.

ORINDA—CRUISING CUTTER—INTERIOR PLANS.

NEW YACHTS OF THE YEAR.

THE amount of building now under way is very encouraging as showing an increased interest in both racing and cruising, and a material improvement of the fleet, both in numbers and quality. Of the yachts in the following list, over two-thirds are of the best of their kind, fitted for racing or cruising without regard to expense, while even the smaller and less important craft which we have included are far ahead of the similar boats built half a dozen years since. While our list is not as complete as we could wish, it has been carefully compiled from the best available sources, and we can only ask that those who detect any errors or can give any further information, will advise us thereof.

There is certainly nothing to be ashamed of in the fact that a man is building a yacht, but unfortunately it is the fashion just now to a greater extent than ever before, to affect extreme secrecy as to all particulars. Like the two thieves in "Erminie," the estimable Ravennes and Cadeau, the owner of a new yacht not only desires to "remain incog." himself, but his "little surprise" must be incog. also; and his movements are clouded with as much mystery as though he were about to "crack a crib," instead of being engaged in a lawful and highly laudable enterprise. This being the case, our list is by no means perfect, and we hope to be able to publish it again in a few weeks in a more accurate form.

The largest yacht on the list, the new Morgan schooner, has been commenced at City Island, her leading elements being:

Length over all	131ft.
L.W.L.	106ft.
Beam	24ft. 9in.
Hold	15ft. 5in.
Draft	12ft. 3in.
Ballast in tons	80
Ballast in keel (in tons)	40
Least freeboard	4ft. 6in.

She will be of mild steel, the scantling being as follows: Trough keel supported at corners with longitudinal steel angles, 3×3×$^{4}/_{16}$in., stem to side 1¼in., and mould 6in. Sternpost to side 4 in. at head and 1½in. at heel, and mould 4½in. at head and 5½in. at heel. Stem and post to be wrought of best bar forgings, and to be rabbeted below waterline to receive bottom plating. Frames to be of angle bars, 3×2½×$^{6}/_{16}$in., reduced at bow and stern to 2½×2½×¼in., spaced 22in. Frames to be reinforced abreast of masts with reverse angle bars, 2½×2½×¼in., extending to the deck stringer. Reverse bars of same size. Floors of $^{9}/_{16}$in. plate 12in. deep in the throat. These 16 reverse bars to stiffen the bottom will extead up only to the cabin floor. On top of the floor plates or transverse girders the keelsons will be wrought, to be of channel bars, worked back to back, 8in. deep, and as they extend longitudinally, will lap by and break joints with the centerboard trunk. The deck beams—one to every frame—will be of angle bars 4×3×$^{5}/_{16}$in., secured at ends with vertical gussets 10in. deep. At the side, over the ends of the beams, a longitudinal flat deck stringer will be worked of plate 18in. wide amidships and 13in. wide at the extreme ends, and $^{5}/_{16}$ and $^{4}/_{16}$in., respectively, in thickness. Breast hooks will tie the ends of these flat plates together at the bow and stern, and their outside edge will be connected with the outside plating of the vessel by an angle bar 2½×2½×$^{5}/_{16}$in., wrought on its upper side out against the sheer strake along the whole inside length of the gunwale. There will be bilge stringers—two on each side—3×2½×$^{5}/_{16}$in. wrought on the backs of the reverse frames. These stringers or bilge keelsons will also finish with breast hooks on the extreme ends, or at the stem and sternpost. The centerboard trunk, or casing, will be of plate, ½in. thick, stiffened with vertical angle bars, 2½×2½×$^{6}/_{16}$in. The centerboard well will be 5½in. in the clear, and the trunk will be connected at the corners with the keel by longitudinal angle bars, 5×3×½in. The cabin floor will be supported by angle bars for beams, 2½×2½×¼in. The bulwark stanchions will be of locust, 3½×3½in., and the planksheer of Southern pine, ⅜in. thick, and moulding 18in. The deck plank will be of clear white pine 3×3in.

The arrangements below will be specially convenient and elegant. The main companion, between the masts, will open on a spiral stairway leading to a steerage to port, abreast of which on the starboard side is a large stateroom. Forward of this will be the main saloon, 15×23ft., with floor 20ft. wide. The owner's apartments and other staterooms will open on the saloon, the officers' quarters being aft, entered by an after companion. The forecastle will berth sixteen men.

Col. Forbes's new schooner will be a racer, in the 90ft. class, where she will meet Grayling, Sea Fox and Sachem. She will be of wood with a centerboard below the floor, as in Mr. Morgan's schooner. Lawley has the keel cast, and the frame partly up.

The third Burgess schooner is to be built by Piepgrass, for Mr. Frederick Grinnell of Providence, R. I. She will also be of steel, with 10ft. of hold. She will have 12ft. overhang aft, and 7ft. forward, with little sheer. The garboards show a strong hollow. The scantling is as follows: Plating No. 4 and 5 Birmingham gauge, frames 2½×2½×¼ angles; trough keel 2ft. wide abreast of centerboard, which is about 17½ft. long; sternpost sides at head, 2½in., and 1½in. at heel; stem sides are 1½in., and both stem and post mould 8½in; frame space 22in.; trunk cabin that will project above the deck 14in., and about 32ft. fore and aft, leaving at its sides a gangway of about 8ft.

Mr. Thomas's steel yawl, designed by Mr. A. Cary Smith, is now well under way at Piepgrass's and will make a very fine cruiser, with an unusual amount of space inside. Mr. Smith has also an order for a schooner 65ft. l.w.l. and a racing 40 for Rear-Com. Ellis, Seawanhaka C. Y. C. Of the other new forties it is too early to speak yet, work being just begun on most of them, but Mr. Lawton's craft is now well advanced as Mumm's yard. Her dimensions are:

Length over all	55ft.
L.W.L.	39ft. 9in.
Beam extreme	13ft. 6in.
Least freeboard	3ft.
Draft	9ft. 3in.
Boom	50ft.
Gaff	29ft.
Bowsprit	30ft.
Hoist of mainsail	30ft.

She has probably the deepest keel of any yacht in American waters. The lead itself is 2ft. 6in. deep, 1ft. wide on bottom and 18in. on top, but in addition the midship section shows a high and easy bilge, the floor being sharp. In a model like this it is impossible to say just where the body of the boat proper ends and the keel begins, but for a draft of nearly 10ft. the body is comparatively shoal, the keel being deep in proportion. In a former description of this yacht we inadvertently wrote down 60 degrees as the angle of the sternpost instead of 30. The hull is very lightly built, the scantling being as follows: Stem sided 5in., sternpost sided 5½ in trunk, 2½ at heel. Keel sided 18in., moulded 12in. Frames, half double sawn, sided 2½in. and moulded 2½ to 4; half steamed, sided 2½, moulded 2in. Spacing 14in. Knees of iron, 3½×5⅝in. on each sawn frame, with 4 half-inch bolts through heels on each side. Arms 30in. long. Oak shelf 4×4½in., clamp 7×1½in. and 4 bilge clamps 6×1½in. on each side, all of yellow pine in single lengths. Deck beams 2¼×2¼, spaced 12in. Planksheer 1½×7in. white pine. Planking 1½in. yellow pine, wales 3in. wide. Only two of the deck beams are cut. We cannot vouch for the draft as given above and in the table, but it is likely that the boat will draw 10ft. before she is ready for her first race. To the length of bowsprit must be added 5ft. for the overhang at bow, making the bowspric 25ft. beyond fore end of l.w.l. The displacement is 24 tons, ballast 13 tons.

A large number of orders have been placed quite lately or are just now being negotiated, and particulars of the other 40-footers have not yet been made public, but it is certain that there will be considerably over a dozen additions to the class this spring. Most of them will be deep keel craft or else what would have been called deep a few years ago, but with a centerboard added, as in Chiquita.

Among the small craft building is a cutter at Rochester for service on Lake Ontario, being owned by Messrs. Fraley, Young and Brayer. She was designed by G. W. Fraley, Jr., and will be built by his father, her dimensions being 28ft. over all, 25ft. l.w.l., 8ft. beam, 5ft. 6in. draft, with 3,000lbs. on keel and the same weight inside. At Buffalo another small cutter is building for Messrs. Caulkins, Boughton and Kellogg, from designs by C. P. Kunhardt, the work being done by Wm. Hingston & Son, Sawyer making the sails. She will have a flush deck, with 5,000lbs. on keel and 5,000 inside, and her owners intend to make her the most completely fitted cutter on the Lakes. Her dimensions are given in the table. At Syracuse the firm of Henley & Son is at work on a small cutter designed by B. J. Henley. At Cleveland two cutters and a centerboard sloop are building, the details being given in the table.

A brief summary of the above list cannot fail to be interesting and instructive as showing the present tendencies of American yachting. Of the entire list of nearly forty sailing yachts, large and small, only five are shoal centerboard craft, and all of these are for special use in Florida waters. Not a representative of the national type is being built to-day. Fifteen on the list are keel craft, without centerboards, while no less than eleven that are listed as centerboard boats have deep metal keels, using the board more or less as an auxiliary to the keel, as in the Morgan schooner and Mr. Forbes's new racer. Besides these latter are

YACHTS BUILT OR BUILDING SINCE OCTOBER, 1888.

SAIL.

Yachts marked with an asterisk (*) have metal keels with centerboards.

two or three centerboard boats without deep keels, but still with outside lead ballast.

As to rig, there are two or three sloops on the list, but practically all the singlestickers are cutter-rigged. Of the schooners Mr. Morgan's craft is rather large for racing as it is done nowadays, and should practically have a walkover in all of the summer regattas. Some speculation has already been indulged in as to what she will do in the Goelet cup race, but if she is as good as she should be, the only result of the entry of such a large craft must be to kill the interest in the race entirely, as boats 20ft. shorter can never hope to make an exciting race with one of her size. The other schooner will be more properly a racing craft, going into the class that now has the cream of all the races in the larger sizes, where she will meet Grayling, Sea Fox, and perhaps Sachem, though we do not know whether the new owner of the latter proposes to race her. The greatest novelty on the list is the new steel yawl, the first of the rig built in America. Several yachts of moderate size have been converted into yawls, and several imported craft are well known here, but this will be the first yacht built for the yawl rig. The deep and impenetrable veil of mystery that surrounded her ownership has at last been pierced, and it is known that she is building for Mr. Ronald Thomas, of Newport, who will use her for cruising. The two small schooners, one of 61ft. l.w.l. for Mr. Frederick Grinnell, and the other 65ft. l.w.l. for an unknown owner, are of a size not very common here, but nevertheless very handy; they will both be cruisers. It is now known that the anonymous owner of the steel Burgess steamer is Mr. Daniel Ford, of Boston and Marblehead, for whom Mr. Burgess designed the Hanniel. The latter yacht has lately been sold, and Mr. Ford will replace her with the larger boat.

Nowhere in the list is there any indication of life or vitality in the larger classes of singlestickers; the Volunteer class is very quiet, with no prospects of any racing this season; the 70ft. class is apt to be lively enough with so many matches arranged between existing boats, but no one seems anxious to add to the class. One yacht for the new 61ft. class is already talked of, but if built it will not be until next winter. Nothing is doing in the 53ft. class, one or two boats have been projected, but they are not likely to be built. In the 46ft. class also there is little prospect of new racers for New York or the East, the two on the list going one to New Orleans and the other to Philadelphia. The bulk of the building is in the 40ft. class, and it promises to be the main feature of the coming racing season. The dimensions, and also the ownership of many of the boats are as yet in the dark, but there will be enough of them to make good racing from Sandy Hook to Cape Ann. The speedy growth of this class is a most encouraging evidence of a general interest in racing among yachtsmen at large, not merely the few who can own the largest sizes of racing cracks. Just now the tide seems to be setting in the direction of the smaller sizes for racing, which means more races, more boats, more interest in yacht racing, and more recruits for the sport.

THISTLE.—From late advices we can deny positively the reports that Thistle has been sold to Mr. Coats, that she has been or will be altered, or that there is any prospect of a second challenge from her. She is still owned by the syndicate that built her, and she is laid up for the winter with no definite plans for next year. There is every reason to believe that all the reports of Thistle's alterations and second challenge originated in New York among sensational reporters of the same type as that one who perpetrated the bottle hoax in connection with the lost Cythera. It is from similar sources that the rumors of a 90-footer for Mr. Jameson, and a challenge from her have emanated. We have had letters lately from several racing yachtsmen in England and Scotland, all expressing the same opinion of the new deed of gift, and agreeing that there is little prospect of a challenge so long as it is retained. From a private letter received this week we learn that Thistle was at her moorings in Gourock Bay on Jan. 6.

AMERICAN Y. C.—The annual meeting of the American Y. C. was held at Delmonico's on Jan. 15, with Com. Starbuck in the chair. The reports showed that the new club house at Milton Point has been paid for except $35,000 in bonds at 4 per cent. The following officers were elected: Com., Wm. H. Starbuck; Vice-Com., Chas. H. Osgood; Rear-Com., F. R. Lawrence; Sec'y, R. A. Taylor; Treas., Wm. B. Dowd; Fleet Surg., Chas. I. Pardee, M.D.; Meas., Chas. H. Haswell. Trustees—J. P. Kennedy, H. A. Taylor, F. R. Lawrence, Jos. Stickney, Wash. E. Connor, Maturin Ballou, Wm. B. Dowd. Regatta Committee—Geo. W. Hall, Thos. L. Scovill, Ed. S. Innet, Ezra S. Connor, Wm. Weeber. Arrangements will be made to run a steamer between New York and Milton Point during the season. The club has a membership of 250 and a fleet of 68 vessels. Nothing has yet been heard of a challenge for the new $10,000 cup.

VOLUNTEER.—Capt. Henry Haff, the skipper of Volunteer, has not been engaged by Gen. Paine this season, but will go with Mr. Iselin in Titania; and it is probable that Volunteer will not be in commission.

ALERT.—The missionary yacht Alert, Capt. Lane, which does noble work in summer among the islands of the New England coast, will soon start on a similar cruise in Southern waters.

ANOTHER VISIT FROM GALATEA.—Lieut. Henn proposes to visit America again, and will sail with Mrs. Henn in season to join the New York cruise in August.

GITANA.—Com. Weld's schr. has completed her fitting out and will be docked this week at Simpson's, in Boston. She will sail on Jan. 28.

CLARA.—Mr. Chas. Sweet has sold his cutter Clara to Dr. J. C. Barron, formerly owner of Blanche, Wave and Athlon.

WENDUR, yawl, Mr. T. B. C. West, sailed from Southampton for the Mediterranean on Dec. 25.

IROQUOIS, schr., Mr. T. J. Coolidge, Jr., is fitting out at Boston for a cruise in the West Indies.

Answers to Correspondents.

H. W. D., Mansfield, Mass.—We cannot furnish the book.

McK., Sioux City, Ia.—Write to T. Donaghue, La Salle, Ill.

T. B., Utica, M. T.—We will supply the data in an early issue.

F. G. N., Chicago.—Batty's "Practical Taxidermy," price $1.50, can be supplied by us.

J. W. P.—You can with advantage take 6in. off your 36in. 12lb. 10-gauge gun. The make is all right for the price.

C. G., Cattaraugus.—"Wing and Glass Ball Shooting" will perhaps answer your purpose better than any other book.

C. W. G., New York.—Send your address to A. M., care this office, for advice respecting New Jersey rifle shooting accommodations.

G. J. F., Seymour, Conn.—We know of no well-bred harriers. A lightweight foxhound will make an excellent rabbit dog when properly trained.

C. M. W., Providence, R. I.—For Newfoundland game seasons see our gun columns. Messrs. A. B. Shipley & Sons of Philadelphia will supply the feathers.

M., Hartford.—Deers' heads are scarce in New York this winter, according to reports of taxidermists. Try John Wallace, No. 16 North William street, New York.

C. E. F., Onconta, N. Y.—Can you inform me where we can obtain some live quail for breeding purposes. Ans. E. B. Woodward, No. 174 Chambers street, New York.

A. S. S., Ellisburg.—The cartridges cost $15 per thousand. They may be loaded with lighter powder charge, filling the space with fine sawdust. Reloading tools will cost $2.50.

C. J. H., Lawrence, Mass.—For game laws of Massachusetts write to Mr. Arthur W. Robinson, Sec. Mass. Fish and Game Protective Association, No. 33 Winter street, Boston, Mass.

W. F. D.—1. The two guns, generally speaking, would be about equal, but it would be impossible to determine their actual merits without a test. 2. The 10-gauge would be a good all-round arm.

C. E. B., Wilkesbarre, Pa.—The Maine commissioners are E. M. Stilwell, Bangor, Me., and Henry O. Starley, Dixfield, Me. The publication you name contains the full set, but not always correct.

S. T. H.—If "S. T. H." Alabama, who makes inquiry in FOREST AND STREAM of Jan. 17 in regard to tents, canvas boats, guns and camp outfit, will give me his address, I can be of service, having had much experience.—E. S. W.

T., Glen Cove.—Can you tell me the best way to clarify or refine seal oil that has been tried out and passed through flannel to remove impurities? Should it be heated to a high temperature, or is it merely necessary to heat the fat sufficiently to liberate the oil? Ans. After the oil has been rendered out, it is further purified by the addition of a small quantity of sulphuric acid (oil of vitriol) which carries all impurities to the bottom with it. The oil must be maintained at a temperature high enough to keep it fluid the while.

H. C., Hyannis, Mass.—We can supply the new book "Modern Shotguns." Hammond's "Training vs. Breaking" is confined to pointers and setters among field dogs. The cockers and field spaniels are used in the same way in the field. At bench shows (while field and cocker spaniels properly differ in head) the two are interchangeable, the distinction being that of weight; spaniels under 28lbs. are shown as cockers, over 28lbs. as field spaniels, and certain specimens which have been shown as cockers have, after attaining increased weight, been shown as field spaniels. Many give tongue unless otherwise trained. Some are black, red, liver and other colors. Most red spaniels are of lighter shade than the Irish setter red. Flat-coated are those whose hair lies close to the body without wave or curl. Some 26in. barrel guns shoot as well practically as those of longer barrels; choose a 12-bore; the larger bore would give an increased killing circle; the longer barrel will give the greater recoil; the choke will give more than the cylinder.

HUMPHREYS'

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 31, 1889.

VOL. XXXII.—No. 2. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

PROTECT THE FUR SEALS.

ON Tuesday last, Jan. 29, Representative Dunn from the Committee on the Merchant Marine and Fisheries presented to Congress the results of the investigation by the committee into the fur seal fisheries of Alaska, with special reference as to whether the contract giving the Alaska Commercial Company the right to take fur seals had been violated. The conclusions of the committee are as follows:

In conclusion your committee finds the following facts: First, that, if the law protecting seal life is enforced, the preservation of the seal rookeries will be assured, the revenue continued and increased, and the native inhabitants of the Seal Islands maintained without cost to the Government. Second, that the Alaska Commercial Company has fully performed its contract with the Government, and has contributed liberally to the support, maintenance, comfort and civilization of the inhabitants of not only the Seal Islands, but to those of the Aleutian Islands, Kodiac and the mainland. Third, that the fur-seal industry will have paid into the Treasury over $8,000,000 during the period of the present lease. Fourth, that the chief object of the purchase of Alaska was the acquisition of the valuable products of Behring Sea. Fifth, that, at the date of the cession of Alaska to the United States, the Russian title to the Behring Sea was perfect and undisputed. Sixth, that by virtue of the treaty of cession the United States acquired complete title of all that portion of Behring Sea situate within the limits prescribed by treaty.

This is one of the most vital topics now under consideration at Washington, and it is high time that the question received the attention its importance demands.

The fur seal "fishery" has always been, and still is, Alaska's most important industry, and, up to within a year or two, has been absolutely the only thing that gave that distant Territory any value whatsoever. For nearly twenty years the lease of the Pribyloff Islands has paid the United States Government more than four per cent. annually on the purchase money paid the Russian Government for Alaska. Now at last the Territory is being developed. It is becoming a resort for tourists; it is known to contain rich deposits of gold; marine fisheries are being explored. Its fur seals, however, are still its richest resource. As a matter of self interest the seals, while they are upon the islands to which they resort for six months of the year to breed, have been rigidly protected by the Alaska Commercial Company, which leases these islands. For fifty years the habits of these animals have been studied, in order that the most economical and profitable method of taking them might be discovered, the object being to keep up the supply of breeding animals to the highest point possible. The present lessees continued the studies inaugurated in old Russian days, and have the benefit of all these investigations. They have handled the seals so wisely that there are probably now on the islands in summer as many as there have ever been since the early days of occupation.

Within the past few years, however, a new method of taking the fur seals has come into practice on the northwest coast, which, if pursued for many years, threatens to actually exterminate the fur seals on the Alaskan coast. This is water sealing as pursued by American and Canadian vessels in the Behring Sea.

It is not our purpose at present to discuss the rights of the United States nor of any other government in the Behring Sea. The subject is an intricate one, and statesmen of eminence have expressed diametrically opposite views on the claims advanced by the United States as to its powers in those waters. Whatever these rights or whatever these powers, the fact that water sealing, if permitted to go on unchecked, will ultimately destroy the fur seal "fisheries" of the North Pacific Ocean, cannot be disputed.

The fur seals, after remaining six months or more on their breeding grounds, leave these islands in October and November, and disappear in the North Pacific Ocean. Where they go, or what they do during the period of their absence is unknown, but it seems probable that they spend all this time at sea, where they are quite as much at home as the fishes on which they prey. One thing is certain: they are found off the coast of California late in December, and from that time until the first of April are scattered in greater or less abundance all along the northwest coast of America. In these waters at this time they are taken in great numbers by the sealers, who, in small boats, sent out from the sealing schooners, approach them when asleep, and shoot them. Early in April the vessels leave the sealing ground and return to port, where they refit, and soon after set sail for the Behring Sea. There they cruise about, often far out of sight of land, and, keeping as nearly as possible on the feeding grounds of the seals, which may be from 60 to 125 miles from their breeding grounds, they kill what they can. The Canadian vessels seized by the United States Government in 1887 were occupied in this way when captured. When the fall storms set in the sealing vessels return with their catch to port. In this way the British Columbian sealing fleet took in 1887 no less than 33,800 seals, and the American fleet probably as many more, so that in all not less than 68,000 or 70,000 seals were killed on the water.

This seems a large number, but on the other hand the seals breeding on the islands of St. Paul and St. George are estimated to number not far from 5,000,000, and it might be inferred that the stock could easily stand this drain, in addition to that caused by the annual slaughter of the lessees, which amounts to about 100,000.

There is a difference, however. The Alaska Commercial Company kills only the young non-breeding males of two, three and four years, and under no circumstances are the female seals ever killed or even disturbed. Experience shows that in water sealing, on the other hand, a great majority of the seals killed are females, and sealing captains of large experience have assured us that on an average cow seals constituted 75 per cent. of their catch. On this basis, if 68,000 seals were taken in the season of 1887, over 50,000 of them would have been females, which would be a serious drain on the breeding stock.

But this is not all. The females killed in winter and spring are pregnant, and each one would produce a pup on reaching the islands in the following June. Each female which is killed near the seal islands during the summer is the mother of a pup, which depends on her for nourishment, and which must starve if she is destroyed. The killing of these 50,000 females therefore really represents a destruction of 100,000 seals, of which 75,000 are females. Such a slaughter of breeding stock cannot but be viewed with alarm by every one who realizes the value to the United States of the seals of Alaska, and who has studied the history of the fur seal enough to comprehend how readily this animal may be exterminated.

Some efficient means should certainly be taken to protect these seals, at all times if possible; but if this cannot be done, at least to protect them while they are in the neighborhood of their breeding grounds in the Behring Sea. The arrest and confiscation of sealers in these waters seems to have had a good effect in reducing the destruction of these animals at a time when they especially need protection, but it is by no means certain that the Government can establish the rights in these waters which it has claimed. If it cannot, some agreement should be entered into with other nations by which all water sealing in the Behring Sea shall be held to be illegal.

The matter is one of great importance.

THE NATION'S FORESTS.

IN an editorial in *Garden and Forest* of Jan. 30 it is proposed to withdraw from sale all forest lands belonging to the nation, and to hold them intact pending a thorough investigation of their condition and importance to the agricultural interests of the country, and the determination of the area which it may be held necessary or desirable to conserve permanently.

It is further proposed to commit the care and guardianship of all the forests belonging to the nation to the United States army; to establish a Forest Commission, appointed by the President, to appraise the forests, select the areas to be held as permanent State reservations, and to report a comprehensive plan for their preservation and management. Finally, it is proposed to establish a National School of Forestry at a suitable place in one of the great mountain forests on the public lands.

We have for many years been advocating the withdrawal of all United States timber lands from the market; the appointment of a qualified staff for their proper conservation and administration, and the establishment of schools of forestry, but the suggestion that pending the organization of a suitable administration and executive forest staff the forests shall be placed in charge of the Army, has a certain air of originality about it.

It is true that the Yellowstone National Park is being looked after by the military; laying all due stress upon the contention of our contemporary, that the Army is not wanted for any other purpose, that the Indians being reduced to order, the timber thieves are the most for midable enemies of the State remaining, and that the Army is the only force capable of imposing an efficient check upon them, it must be admitted that quite a strong case has been made out in favor of the scheme, but it must be remembered that the United States forests cover a wide range of territory, not only on the slopes and crests of the Rocky Mountains, but also in the Pacific and Southern States, and in Michigan, Wisconsin and other Western States, many of which locations may prove very inconvenient for military headquarters; and while we think it would be in many respects desirable to find useful and suitable employment for our troops, we cannot regard the Government as justified in locking up its forests, excepting as a temporary measure, pending the inauguration of a scheme of forest administration.

There is no hope of such a measure ever being initiated by United States legislators, until urged thereto by the national outcry which will follow the utter exhaustion of our forests, and in so far as the only issue at stake is the exhaustion of our timber supply, the sooner that little calamity overtakes us the sooner it is likely to be remedied; but as regards the forests about the headwaters of the streams rising in the Rocky Mountains, their conservation involves wide-spreading interests of such vast importance that we should be glad if it could be arranged to place them under efficient military control.

FEW outsiders have any notion of how multitudinous and importunate are the appeals to manufacturers by tournament managers. Applications for guns, for traps, for targets, for shooting coats, loaders, powder, shot, and everything else, pour in by the dozens, sent by enterprising managers bent on securing a generous tournament prize list at little cost. It is not always easy for the firm to give, but nevertheless guns cost something even to the makers, and the drain in the course of a year amounts to something considerable. Perhaps the manufacturers would find it a satisfactory expedient to appropriate a given amount out and out for the proposed Association.

The Sportsman Tourist.

A FIRST HUNT IN MEXICO.

THIS report is of a hunt of no special interest *per se*, but supposing that readers of the FOREST AND STREAM are interested in learning something of the game resources and conditions of sport in all parts of the world I venture to send an account of a late novel experience of mine. Landing at San Luis Potosi, Mexico, to be for some time my home, I made diligent inquiry as to hunters and hunting. Strange to state, among a hundred or more Americans, here either permanently or temporarily, I cannot find a single hunter. Some Germans I am told go out often on Sunday, but as my "Dutch" has not been brushed up since school-boy days and I do not approve of Sunday as a time for hunting, I made no attempt to fraternize with these gun-loving Teutons. Having some days spare time I resolved to try my fortune alone. "Everybody goes to Bocas," said the friendly conductor on the Mexican National. To Bocas therefore I went, armed with a hundred assorted cartridges and my light No. 12, the destroyer of many a duck and quail in other fields. I carried a letter of introduction to the treasurer and timekeeper of the railway rock quarry camp, and never did solitary hunter light upon heartier welcome than did I at the hands of the Americans in this camp.

Bocas is a village which has grown up around the immense hacienda and mescal distillery of Señor Don Juan Ferrias. Don Juan, as he is familiarly called, in addition to being wealthy, is friendly to Americans—not a universal trait here by any means—and withal intelligent and "clever" in the Southern sense of the word. The hacienda is an immense one, one of the largest in the Republic, and once belonged to the ill-fated Maximilian. A finely built stone dam has collected the waters of a little mountain stream into a lake containing perhaps two square miles of surface. This waters a fertile valley—there is but little cultivation here without irrigation—runs a flouring mill and furnishes a favorite haunt for ducks and geese. Don Juan was away, but Mr. Malone, the gentlemanly superintendent of the railway camp, has standing permission for his friends to shoot over the lake, so I was given the liberty of the place. Mexicans do not hunt much. It is not in the blood. To be frank, the poor are too poor and the rich are too indolent. The game I found was not wild. A large number of ducks were on the lake, and in spite of the bad conditions, no cover in or near the water, no boats, no companion to help me hide and drive, everything in fact against me, I managed in a day's shooting to knock over five, two teal, two widgeons and a sprigtail, mostly it might be said by the stupidity of the ducks and the fortune of long shots.

Around the lake, invaded by it, so to speak, and coming down to its very margin, are hills which are the very essence of roughness. Thrown up by volcanic action, filled and overrun with granite of various kinds and in thousands of shapes, all angular and rough, and supporting as their only vegetable products six or more varieties of cactus and two or three varieties of shrubs, they made about the worst variety of country for creeping over. Two varieties of the cactus grow to the dignity of trees, and I tried several times to approach behind them, the ducks lazily sunning themselves on shore in the hazy light of a tropical winter's day, but usually failed. If I walked the stones ground beneath my shoes, and if I crept I filled my hands and knees with an infinite and exasperating variety of pricklers. I had cactus thorns, which have the provoking habit of leaving the stem to remain wherever they stick, in my clothes, my hands, my legs, and finally capped the climax of misery by plunging a maguey thorn sheer through my thin shoe sole and into my foot half an inch. This stopped my hunting and sent me hobbling back to the railway station.

These hills, however, furnished considerable sport. Two varieties of eagle, a handsome golden or bronze one and a bald one with white-tipped wings, measuring each something less than 4ft. spread, several hares, cotton-tail rabbits, hawks, etc., exposed themselves quite coolly to my gun, while doves were fairly abundant, and I bagged a brace of snipe along an irrigating ditch. So I was very well satisfied, and am going again.

Relics of Maximilian are seen in a handsome church built at the entrance to a fine drive at the lake, not opened since his time, and in a fine inclosed garden or park of many acres, kept up by the magic of irrigating water. A good instance of Mexican *sang froid* in reference to game is seen in the following: There are in the lake certain large creatures, either animals or fish, nobody knows what, nor how they came there. The owner of the place knows of their existence and yet has never investigated the mystery. There is no question of their reality. The railway people told me about them, and I doubted. But as I was about to leave the lake I saw three of them myself. They never come out of the water nor entirely to the top. When I saw them they were about two feet below the surface. I was on the hillside some forty feet above, I said to myself, "Why that's nothing but rocks!" But as I watched they seemed to slowly move. Taking out my Smith & Wesson I popped a bullet into the water over one of them and they at once disappeared. They made no stir in the water, simply sank out of sight. To say I was astonished is to put it mildly. I hesitate to risk my reputation as a correspondent with such a story, but the circumstance is exceedingly curious. Schools of small fish, of which there are a good many, called whitefish by the Mexicans, in the lake, have been suggested as a solution, but after what I saw I can hardly accept this. That which makes the mystery most mysterious is that this lake is situated in a dry section of country, having no connection with other bodies of water. If I learn anything definite later I shall certainly take pleasure in reporting. Why the owner of the lake, knowing for years of the existence of these creatures and understanding as little about them as others, has not investigated the matter, is the greatest wonder of all. But he is a Mexican.

If this were not already too long I could tell of many things which I saw strange, picturesque, interesting. Few of my readers can form any adequate conception of the scene of a Mexican landscape—the dry, cactus-covered hills, the goats and their herder clambering among the rocks, the peons riding meek donkeys, driving black cattle or hacking among the thorn bushes with their machetes, the women in bright red skirts tripping along the mountain paths with baskets or bundles of herbs balanced on their heads, and along the margin of the lake and ditches washer women, half naked, plying their vocation to the sound of merry chatter, barking dogs and braying donkeys. Mexicans are always polite, but I found the people of this hacienda unusually so. The superintendent of the mescal factory—mescal is a kind of mild brandy made from the juice of the maguey or century plant—insisted on my coming in, seeing his operations, tasting his products, etc.; and if I greeted a laborer on the road it was not a curt or half-muttered *adios* with which he replied, but, "*Adios, Señor, para servir a usted!*"

I am told that a day's ride east of here in the timbered mountains are bear, deer, turkey, grouse, etc.; while over on the gulf at Tampico, to which we are to have a railway sometime, are waterfowl by the million. All this I hope to prove some day. AZTEC.

SAN LUIS POTOSI, Mexico, Dec. 8.

Natural History.

SHORE BIRDS OF CENTRAL NEW YORK.

ONONDAGA LAKE, N. Y., to which these notes refer, unless otherwise stated, lies just outside the city of Syracuse, the upper end of the lake being surrounded by salt blocks, manufactories and railroad tracks. It is about six miles long by one mile wide, and furnishes a large area of beach and mud flats. These are, of course, attractive to shore birds, which seem uncommon in spring; yet the species, if not individuals, are so numerous during the fall months, that central New York may be said to lie well in the path pursued by these birds through New York State during the autumnal migration.

During the cool fall nights one may hear them in the darkness overhead, the whistle of the semipalmated plover being most easily recognized; apparently a very large proportion of the birds do not descend to rest and feed, but continue their journey to the coast without interruption. It must be said, however, that the writer has done little collecting about the lake during the spring. Attempts in this direction seldom brought many shore birds under my notice, and the warblers and other groups were much more seductive in consequence. Hence, species here recorded as fall migrants doubtless occur also in spring, but not so frequently, I believe. The list is based mainly on notes made by me in 1886, 1887 and the fall of 1888 at Onondaga Lake; those species not observed by me have been collated from the following lists, to which proper reference is always made when due: Annotated List of the Birds of Oneida County, N. Y., and its Immediate Vicinity. By Wm. L. Ralph, M.D., and Egbert Bagg. 1886. A Revised List of Birds of Central New York. By Frank R. Rathbun. 1879. List of Birds of Onondaga County. By Morgan K. Barnum. 1886.

The buff-breasted sandpiper is here recorded for the first time from central New York, not being enumerated in any of the faunal lists just mentioned. The red phalarope, and possibly one or two other species, may be expected as additions to this list.

1. *Phalaropus lobatus*, Northern Phalarope.—Rare fall migrant (see *Auk*, Vol. IV., p. 73, 1887).

2. *Phalaropus tricolor*, Wilson's Phalarope.—"One specimen secured by, and now in the collection of Mr. Gilbert, at Penn Yan, N. Y."—Rathbun. "Accidental visitant; rare; Oneida Lake, Oct. 6, 1883."—Barnum.

3. *Philohela minor*, American Woodcock.—Common summer resident in Onondaga county.

4. *Gallinago delicata*, Wilson's Snipe.—Common spring and fall migrant.

5. *Macrorhamphus griseus*, Dowitcher.—"Transient visitant; common."—Barnum.

6. *Micropalama himantopus*, Stilt Sandpiper.—"One taken in October 1875, Gilbert."—Rathbun. I suppose this individual was taken at Penn Yan, though it is not certain.

7. *Tringa canutus*, Knot.—Rare fall migrant.

8. *Tringa maritima*, Purple Sandpiper.—"One specimen taken on Seneca Lake, in the winter, (no date) by Mr. Flahive of Penn Yan, N. Y., and now in his collection."—Rathbun.

9. *Tringa maculata*, Pectoral Sandpiper.—Common fall migrant.

10. *Tringa fuscicollis*, White-rumped Sandpiper.—Tolerably common fall migrant.

11. *Tringa bairdii*, Baird's Sandpiper.—One taken by me Aug. 27, 1888. (See *Auk*, Vol. VI., p. 68, 1889). The record of a Lewis county specimen in the *Auk* (Vol. II., p. 384, 1885) should have admitted this species into Ralph and Bagg's list, but I believe it was overlooked.

12. *Tringa minutilla*, Least Sandpiper.—Abundant fall migrant in August, September and early October. Sometimes seen in spring. A small sandpiper with a confiding disposition, and the graceful, dignified carriage of its larger cousins.

13. *Tringa alpina pacifica*, Red-backed Sandpiper.—Abundant in October, and perhaps earlier, sometimes in large flocks.

14. *Ereunetes pusillus*, Semipalmated Sandpiper.—An abundant companion of the least sandpiper in the autumn, with apparently the same dates of arrival and departure.

15. *Calidris arenaria*, Sanderling.—To'erably common in the fall, usually, but not always, feeding by itself.

16. *Limosa fedoa*, Marbled Godwit.—"One taken by Mr. Fred A. Howlett, of Syracuse, Onondaga county, N. Y., the latter part of June, 1876, now in his collection. The same gentleman saw another specimen at the same time, but failed to secure it."—Rathbun.

17. *Limosa hæmastica*, Hudsonian Godwit.—"Accidental visitant; rare. Onondaga Lake, Oct. 13, 1883. (Bex.)."—Barnum.

18. *Totanus melanoleucus*, Greater Yellowlegs.—Common migrant in August, September and October. Like the spotted sandpiper, it may sometimes be seen perched on a fence rail.

19. *Totanus flavipes*, Lesser Yellowlegs.—Common in August and September, and sometimes seen in spring.

20. *Totanus solitarius*, Solitary Sandpiper.—Spring and fall migrant, not usually found near the lake, but common in small ponds and damp pastures.

21. *Symphemia semipalmata*, Willet.—"A regular migrant. Three secured in the fall of 1876."—Rathbun.

22. *Bartramia longicauda*, "Field Plover."—Rare fall migrant on the lake, but doubtless a summer resident in the county, especially the southern portion.

23. *Tryngites subruficollis*, Buff-breasted Sandpiper.—While walking across a grassy flat near the lake shore, August 24, 1888, with my friend, Mr. George Hughes, a sandpiper darted from the grass a few feet in advance of us and dashed by, to be soon sacrificed by a fine wing shot from my companion. The bird was an immature female of this species, in fine condition and plumage.

24. *Actitis macularia*, Spotted Sandpiper.—Common summer resident, nesting around the lake.

25. *Numenius longirostris*, Long-billed Curlew.—Ralph and Bagg, in their List of Birds of Oneida County and Vicinity (p. 115), report a flock of this species as seen by Mr. A. A. Howlett, at Oneida Lake, Oct. 5, 1880.

26. *Numenius hudsonicus*, Hudsonian Curlew.—"Transient visitant; common."—Barnum.

27. *Numenius borealis*, Eskimo Curlew.—"Saw two killed in Otisco, 1873."—Barnum.

28. *Charadrius squatarola*, Black-bellied Plover.—Rare fall migrant.

29. *Charadrius dominicus*, American Golden Plover.—Tolerably common migrant in fall, especially after cold storms.

30. *Ægialitis vocifera*, Killdeer.—Common around the lake in April and May, and August, September and October. Breeds commonly in the county.

31. *Ægialitis semipalmata*, Semipalmated Plover.—Common in August and September; has a beautiful whistling call-note, and is an expert pedestrian.

32. *Ægialitis meloda*, Piping Plover.—"Rare. A bag of five taken by Mr. Fred Wyer, of Auburn, N. Y., on Owasco Lake, in the autumn of 1876."—Rathbun.

33. *Ægialitis wilsonia*, Wilson's Plover.—"Rare. One taken in the spring of 1868, Gilbert."—Rathbun. "One shot near upper South Bay, Oneida Lake, in 1880, by Mr. A. A. Howlett, of Syracuse."—Ralph and Bagg. Here we have records of two erratic individuals that wandered away from the seashore and some distance north of their normal range in different years.

34. *Arenaria interpres*, Turnstone.—"Accidental visitant, Onondaga Lake, May 30, 1881."—Barnum. Like other species that Barnum considered accidental, the turnstone is probably a regular migrant, though not at all common. MORRIS M. GREEN.

DEPARTMENT OF AGRICULTURE, Washington, D. C.

BUFFALO TRANSPORTATION.

THE transfer of the Bedson herd of buffalo from Manitoba to Kansas has been reported in these columns. These added particulars of the transportation of the herd is an interesting addition to that report:

Editor Forest and Stream: It is well known that at Stony Mountain, the location of the Canadian Government's Penitentiary, Major Bedson, the warden of that institution, had a larger number of buffalo kept in semi-captivity than are at present known to exist on the American continent.

For many reasons a keen feeling of regret was felt that another of these old landmarks should depart from the midst of us. Old landmarks seems a paradoxical term, when applied to a country that was scarcely known forty years ago, and then only as the home of this once innumerable animal.

The rapid settlement of the surrounding country made it difficult to keep the herd. Their wandering tendencies was, perhaps, the reason Major Bedson concluded to dispose of them.

Rumors had been plentiful for some years past that the herd had been sold, and when it was announced a short time ago that Mr. Jones, of Garden City, Kansas, had purchased them, it was fondly hoped it was only another rumor. But when the new owner had cattle cars put ready for their shipment, it began to look like a stern reality.

On the 15th ultimo half of the herd was driven across the prairies, to be shipped to their new home; the balance, numbering about fifty, it is understood, will not leave before March next. The buffalo themselves had a strong aversion to leaving their old homestead; and considerable difficulty was experienced in getting them aboard the cars, two days being spent in the effort, hundreds of citizens witnessing the exciting scenes attending this dangerous job. Half a dozen expert horsemen, besides a number of cattle drivers who had loaded hundreds of wild Western cattle, found they had a more difficult task before them when endeavoring to load buffalo; however, by a strategic movement, they were eventually got into the pens of the cattle yards of the Canada Pacific Railway Company. How to get them to walk the gangway was a still more serious matter. The infuriated and maddened beasts, when they found themselves caged, commenced to have a little "circus" on their own account. Some terrible combats took place between them, and, when the enormous size and strength of these animals is considered, one can conjecture how high one of the younger ones would be thrown in the air when caught on the horns of one of these mighty bulls.

Every conceivable effort was made, but to no purpose, in endeavoring to get them in the cars, prods with sharp-pointed forks, lashes that would almost cut a sheep in two, seemed to be appreciated as a tickle in the ribs, or a gentle caress.

Eventually, a tremendous old bull undertook to be master of ceremonies, and succeeded, after every effort of man had failed. There was nothing new in the manner he did it, he only did what buffaloes have done from time immemorial, when working up a stampede. He got behind the herd, and began making it exceedingly lively for those ahead, prodding, bellowing at them, and driving the laggards forward with vigorous digs of his horns in their haunches. They had to travel, and having no other place to go, they passed over the gangway, and into the cars. When the "big pusher" (as the crowd dubbed him) had driven them all in, and reached the door himself, he seemed to be astonished! This was the most extraordinary stampede he had ever engineered. Tossing his head scornfully, he wheeled about and ran back into the pen; he next accomplished the feat of jumping a 10ft. fence, and seeming to like it, bounded from one pen to another, clearing or smashing everything in his way, until he reached the board fence which bounds the west side of the yards. This paling is 14ft. high, but he jumped at it, struck near the top, went through with a crash, and *steered* for home, a much agitated bull.

The two cars, loaded with such peculiar freight, departed for the South, but the buffalo, unlike their human companions of the prairies, do not pine and die in captivity, but rather imagine themselves to be on the warpath; at least such must have been the case on this occasion, for before reaching St. Paul they fought so desperately that six were killed outright, and most of them more or less injured. Manitobans entertain no ill will toward the purchaser of these animals, yet, when remembering the pleasures they have so often enjoyed, and the princely hospitality that Major Bedson always so courteously extends, when one drives out "just to see the buffaloes," are tempted to hope that the bad luck attending the first consignment, may lead to negotiations for the balance of the herd to remain here.

WINNIPEG, Manitoba. THOS. JOHNSON.

PENNSYLVANIA BIRDS.*

THE report on the birds of Pennsylvania by the State Ornithologist, Dr. B. H. Warren, is extremely interesting and valuable, and should strengthen the sentiment in favor of protection for the feathered friends of the farmer and the fruit grower. It is now generally conceded among scientific men and lovers of nature that most of the birds that are ruthlessly killed as enemies of the agriculturist should be fostered rather than destroyed; but there are still many people of intelligence who remain in ignorance of the benefits conferred by birds, and Dr. Warren's book will bring to them enlightenment, and enlist their sympathy in behalf of correct judgment and wise protection.

The introductory pages are devoted to brief explanations of the topography of a bird, and the descriptive terms used in the accounts of the species. The descriptions of the birds are clear and concise, limited to a few lines whenever a figure is given. The distinguishing characters are mentioned briefly, but plainly. Then follow notes on the habitat in the State, the time of arrival and departure, the nest and nesting habits, the size and coloration of the eggs, the feeding habits, and the food of 142 species, as determined by the records and the examination of several thousand stomachs. The writings of Allen, Audubon, Baird, Coues, Gentry, Henshaw, Merriam, Nuttall, Ridgway, Samuels, Stejneger, Turner, Wilson, Wood and others are quoted when available, and to these are added Dr. Warren's own extensive observations. The chromo-lithographic plates, copied for the most part from the small edition of "Audubon's Birds of North America," represent fifty-eight of the species common in the State. Notwithstanding the fact that the lithographer was evidently restricted in the use of colors, the work is well done, and the plates will aid greatly in identifying the species. The indigo bunting is poorly colored, but the cardinal, the purple finch, and the scarlet tanager are better than in the original.

The demand for the first edition of 6,000 copies has been so great that a resolution was offered and will doubtless pass both branches of the State Legislature providing for a revised and enlarged edition of 10,000 copies of Dr. Warren's report. The State and the State Ornithologist are to be congratulated on the successful issue of this work, and it is to be hoped that the same generous spirit may be applied to the illustration of other classes of animals within the Commonwealth, and particularly the fishes.

*Report on the Birds of Pennsylvania, with Special Reference to the Food Habits, Based on over Three Thousand Stomach Examinations. By B. H. Warren, M.D., Ornithologist of the State Board of Agriculture, etc., illustrated with fifty plates. Harrisburg: Edwin K. Meyers, State printer, 1888. Pp. xii+260.

HABITS OF THE BEAVER.

Editor Forest and Stream:

In the January number of *Harper's Magazine*, Mr. H. P. Wells says, "Beavers work only at night." This is, indeed, the time which they usually take to perform their labor in, but it is not an invariable rule. Several years since I was engaged in the exploration of timber land, between the heads of the Southwest Miramichi and Tobique rivers, in the Province of New Brunswick. It was late in the month of April, and the snow was becoming very soft and so hollow underneath that we concluded to reach the settlements on Tobique as speedily as possible. At the time this determination was made we were in low ground, through which there ran a small dead-water brook, which we concluded emptied into that river.

After a little traveling we came out to a heath or barren, on which there grew a few stunted spruces. The afternoon was drawing on, and we concluded that we would seek a spot on which to camp, where the land appeared to be higher, at the foot of the barren, and where we could see some hardwoods; which we could cut down for the night's fuel. The snow was so soft and wet that we moved noiselessly along over its surface. Just as we emerged from a bunch of spruce, which stood at the foot of the barren, I saw within three or four hundred feet of me a beaver dam, which one of these animals was engaged in repairing. He had a piece of alder in his mouth, from which he had eaten the bark, and was sticking the pealed stick down into the dam; so intent was he in his work that he did not notice our presence until I called out to him. The next moment he had disappeared beneath the waters of the pond. Beavers are yet to be found in many places in New Brunswick, though they have been more hunted of late than for some time past. EDWARD JACK.

FREDERICTON, Canada.

THE FOREST AND STREAM GRIZZLY.—Clarksdale, Miss., Jan. 18.—*Editor Forest and Stream:* I received with pleasure the admirable portrait drawn by your artist of Madame Grizzly, relict of the late Mr. Grizzly of Central Park, New York. I recognized at a glance the countenance of my quondam acquaintance, upon whom I made a pleasant call some months ago and was kindly received. There is an expression of kittenish mischief in her face, combined with self-possession and dignity, born, I presume, of conscious superiority over her fellow captives, which I have never observed in any other bear. Possibly the effect of civilization upon a nature noble, if savage. The black bear in the foreground makes a good foil to Mrs. Grizzly, the contrast being greatly in her favor. I shall hang her portrait over my mantel as a pleasant reminiscence of my visit to her bearship.—COAHOMA.

BIOLOGICAL SOCIETY OF WASHINGTON.—The 135th regular meeting was held Jan. 26, in the assembly hall of the Cosmos Club. The following communications were read: Dr. Cooper Curtice, Notes on Sheep Tick, *Melophagus ovinus*. This is a true parasite, beginning and ending its existence on the sheep and apparently not capable of living apart from its host. The curious modification of its mouth parts fits it for its present mode of life. The young allowed to feed by drawing blood from the human hand live about four days. Tobacco solution kills the parasite in all stages of development. Dr. Geo. Vasey, new species of North American *Graminea* of the last twelve years, announced the addition of 190 species to the lists since 1876, bringing the number up to 740. The new forms were collected principally in Mexico, California, Arizona, Oregon, Washington Territory, Canada, Texas and Florida. Mr. Th. Holm, in Contributions to the Morphology of the Genus *Carex*, made another valuable addition to his series of studies of the development of the sedges and related forms of plants. Dr. C. Hart Merriam exhibited and described a new species of pika, or Little Chief rabbit, from the higher Sierra Nevada Mountains in Placer Co., California. This pika is distinguished by the color of its head and by well-marked skull characters. It lives in rock clefts and is well protected by its coloration. It comes out on the snow only when the drifts are not deep. The pikas range from 30° to 60° north latitude; they are abundant in Colorado. The voice resembles that of some birds and its sound is hard to locate.

WANT OF FORESIGHT.—*Editor Forest and Stream:* It might have been supposed that the mild weather of the present winter would have increased the number of birds residing on the borders of their "migratory limit," but it has not been so at all, so far as my observations have gone. Almost every other winter, during the month of December and early part of January, I have been in the habit of seeing robins (*Merula migratoria*), winter wrens (*Anorthura troglodytes hyemalis*), occasionally a yellowhammer (*Colaptes auratus*), with numbers of bluebirds (*Sialia sialis*) and white-throated sparrows (*Zonotrichia albicollis*). This year I have missed them in my walks, and that on pleasant days. I have met but very few bluebirds so far, and none of the other varieties that are named. Even the song sparrows around here seem to be scarcer than usual, or else they have not happened to come in my way. But I should like to hear, through FOREST AND STREAM, what others have noticed in this respect. The birds could not have anticipated this mildness. We have had no severer weather yet than robins, fox sparrows, whitethroats and bluebirds often meet with in the month of March.—A. H. G. (Scarborough, N. Y., Jan. 12).

Game Bag and Gun.

THE GAME LAWS OF MAINE.

THE report of Messrs. Stilwell and Stanley, the efficient Commissioners of Fisheries and Game of the State of Maine, showing the operations for 1887 and 1888, has been issued and contains much matter of interest to the readers of FOREST AND STREAM. Among the recommendations which the worthy Commissioners make to the Legislature now in session is to amend the fishery laws so that the Commissioners may order the erection of suitable fishways on streams other than those which "are *naturally* frequented by salmon, shad, alewives and landlocked salmon." It seems incredible that the State should spend thousands of dollars to stock new waters with landlocked salmon and then be powerless to protect the plant by constructing fishways over dams that block the passage of the fish to their spawning beds. If such is the law the sooner it is corrected the better. But why confine the law to any particular species of fish? Why should not a fishway be constructed wherever necessary without reference to the species of fish that is to use it? Is the State of Maine willing to see the streams flowing into the lakes of the Rangeley, Moosehead and other waters dammed back in such a way as to prevent the ascent of the trout? This is a matter of very great importance, and it is to be hoped the Legislature will promptly remedy the defect.

The Commissioners recommend that "all fishing in the tributaries at Rangeley, Moosehead, etc. should cease from the last day of August." Good! But why not make the law general and prohibit fishing in all moving waters after that date? What is needed is to stop fishing on *all* spawning beds, not only certain spots.

The Commissioners are troubled over the use of dynamite for the taking of fish and suggest that it "should be made a *capital offense*." Possibly some may think hanging just a trifle severe for such a crime, but still maybe it isn't, and possibly the "punishment fits the crime" better than any other. If the Legislature accedes to this why not put "jigging" in the same category, it's meaner, if anything, than dynamiting.

On page 8 the Commissioners say "no manufactory of any kind whatever should be allowed to throw its waste into a river any more than into our highways." This is good law and it's good sense, and every legislator ought to cut that sentence out and paste it in his hat.

The Commissioners beg the Legislature to "give us a good square non-exportation law for venison, and give us the means of rigidly enforcing the hounding law." Let us trust that the solons at Augusta will do both these good things, and yet, if they *could* prevent gunning for the market and still let a sportsman carry home his bit of venison or the head of his big bull moose, how very pleasant it would be all around.

The Commissioners repeat their recommendation of 1886 and ask that September be added to the open season for deer, caribou and moose. That proposition is eminently wise, but it would be better yet if the law would also add August and take away December. Why not? Why does the State spend money to protect its deer and secure their increase? Simply that they may be killed in such a way as to return the greatest possible revenue to the citizens of the State, under such regulations as will not only prevent their extermination but secure their reasonable increase. Is not that a fair business proposition? Well then, the Commissioners say, on page 5, "A deer killed at the proper season, at any of our sporting centers, is worth at least one hundred dollars to the State, while if destroyed and sold by the poacher, its net return is almost valueless." The same thing may be stated a little broader, as "a deer killed by a sportsman is worth at least one hundred dollars to the State, while if killed by the market hunter its net return is almost valueless." Now, during what months will the State get the largest number of profitable deer killers? August, without peradventure. May is still chilly from the melting snows. June and July are too prolific of flies and mosquitoes to make camping thoroughly enjoyable. Cold breezes begin to sweep down on one in September, and by October all the romance of the woods is gone. November means cold and wet, snow and sleet; while December is attractive only to the crust hunter, the snow-shoed assassin of the woods. August, on the other hand, is *the* vacation month of the year. The woods and mountains then are perfection, the air is balmy, the leaves and mosses of brilliant green, no flies, and mosquitoes scarce. August now has two visitors to any other month's one, if we except the brief feverish weeks just as the ice goes out and the season closes. To-day the sportsmen attracted to Maine in the present open months of October, November and December are few and far between. The mountains of North Carolina offer superior attractions in the way of climate at that season. Give us August, September and October instead and you will have a large increase in summer travel, and the season will show no more deer killed than at present.

This may seem at first sight an illogical conclusion, but wait a bit. Let us look into this matter a little deeper. Around the fire in a hotel in the Rangeley region were gathered one evening a dozen or more guides and sportsmen, when the talk turned to big game. One of the visitors turning to mine host asked, "Phin, suppose a party should come through here in January or February and you knew they were going crust-hunting, what would you do?"

Phin did not answer at once, but deliberately lighting his pipe, leaned his elbows on the counter, and giving a preparatory puff, drawled out, "Why! I reckon I'd try to persuade 'em not."

"But suppose they were not to be persuaded," persisted the questioner, "what would you do then?"

Phin scratched his head, smiled pleasantly and answered, "Why! I wouldn't do nothing."

"Wouldn't dare to," sententiously interjected a guide.

"'E gory! No! That's so," assented Phin.

Now, what does all this mean? Simply that there are two classes of law breakers. One, the sportsman who with his guide penetrates the woods for trout with a Winchester on his shoulder. This man it is who furnishes a large part of the livelihood of the guide who is with him, the hotel man who receives and harbors him, the stage driver who carries him in and out, and a host of others, supplying the needs of summer travel. This man pays his money and kills his deer, and the men who live off his fondness for so-called sport are not going to let him be driven off with fines and penalties. Indeed, in one case in this region not so very long ago a moose was killed, and the matter was reported to the Commissioners by a guide. The warden demanded the fine, and though the man who did the killing had left the State, the hotel proprietor and guides made up the amount among themselves and paid the fine, without even permitting the visitor to know that a fine had been levied for his offense.

The other class of law breakers kill during the heavy snows of winter, from January to March, when the deer, floundering through the crusted snow, cannot escape, and a herd is massacred with a club. The choice parts of the meat only are saved and sent to market or supplied to the lumber camps, the rest is left to rot. In January, 1885, over one hundred deer were slaughtered on the shores of North West Pond, and the hindquarters carried to Kingfield, where they were shipped to market. If anything was ever done to those men it was certainly after a considerable time had elapsed, for no attempt had been made to punish them as late as August following.

A trout fisherman floating one day on the waters of Kennebago, asked his guide, "Were any moose killed in the open season last year?"

"Very few," he answered, "I know of but two."

"Weren't they hunted?"

"Oh! nobody hunts them there, except one or two down to the village. I knew where five had yarded over in the big sag, but I kept it quiet, for I didn't want them fellers to kill 'em."

"Why, what difference would it make to you?"

"Well, if they'd been killed they'd been no use to me, but if livin' I might show one of 'em to some one I was a guidin' the next summer."

Another man, the proprietor of a mountain hotel, held forth as follows: "What good are those deer to us the way the law is? Nobody hunts 'em in October. You'd starve to death if you had to live on venison then. In November you can track them in a light snow, but look what you'd have to go through. You might track a moose for two days over the mountains and then never see him. Sportsmen won't do that, so these deer don't give me a single customer. One man says to me: 'I wouldn't give anything to catch trout after the first day or two, but I'd rather kill one deer than catch all the fish in your lake.' Now, suppose I would say to sportsmen: 'The law will permit you to kill a moose in August and September and take him home with you, and moose *have* been killed in August within a mile from this house.' Why, it would bring a hundred men here, and every one of 'em would spend a hundred dollars before they left the State, and, may be, they'd kill two or three moose and a couple of dozen deer, but what is that toward the money they'd leave here, or compared to the number killed crust-hunting? For if we could lawfully kill in August and September we'd mighty soon put a stop to crust-hunting and hounding, too. They've talked of doing this before, but the lumber men opposed it. Said they'd be more danger of fire. But isn't there less danger of fire when the woods are green than when the leaves are dead and dry? And won't better and more careful men be in the woods when they can go there lawfully than now?

Doubtless no one will deny that this is all wrong. No fair man will attempt to justify violations of the law, but every wise one will recognize the evil effects of a law which cannot be enforced. The killing of a deer at any season of the year is not by any natural law a wrong, it is only the statute that makes it so, and every one knows that in an Anglo-Saxon community no laws have ever been enforced unless public opinion sustains them. This

brings us to the simple business proposition of how much protection can be enforced, and the answer is you can stop hounding and crust-hunting if you extend the open season to August and September. If five months is too long lop off December, and if you wish, November also. The protection of deer will then become a matter of personal interest to the vast majority of men who frequent the woods. But why not make the sportsmen who wish to kill deer pay directly to the State a portion of the expenses of protection? Charge every man who wants to hunt deer a license fee of ten dollars for the season, and prohibit any man from carrying a gun into the woods who has not first secured a license. Your game wardens can issue these licenses, and the amounts collected will doubtless more than defray their salaries. Then every sportsman who has paid his fee will have a personal interest in seeing that the laws are strictly enforced.

There are doubtless some who will not agree with these suggestions, but in filing your objections, brethren, please bear in mind that the protection of fish and game in Maine has no more ardent supporter than

ANTHONY MORCE.

THE SHOOTING CLUBS OF CHICAGO.

IV.—ODD CORNERS ABOUT FOX LAKE.—THE FOX RIVER ASSOCIATION.

THERE are certain landmarks about Fox Lake, without which the sportsman of that district is left at sea. I am not sure that is the correct way of mixing a metaphor, but what I want to say is that, if no mention should be made of certain of the old-time places about the lake, the best of descriptions could only be found wanting.

Now there's Col. Lippincott's place, over on the timbered point. Everybody knows "Lippincott's," and everybody knows Col. Lippincott. Nobody knows how old he is. He is a fixture of the lake district. He discovered Fox Lake. He was, if you may believe Col. Lippincott, upon this spot before Fox Lake was dreamed of. In the dim days of the glacial epoch, when the vasty North hung in a dim haze of nothingness and cold, and ere the grind of the Laurentian niggerhead was heard upon the greensward of what was once a wide and pleasant plain, Col. Lippincott, slightly gray and even at that data a man of wide experience, was on hand, spectacles on nose, to see that Fox Lake was properly constructed. It was he who watched the primordial germ as it slowly and gently floated in out of the circumambient chaos, and who guarded it tenderly as it in the course of ages centralized, functionized, grew, expanded, took on stature, length and fins, and at length burst forth with the merry, rippling smile of the muscallonge. The first black bass ever known was—contrary, perhaps, to general belief—the invention of Col. Lippincott himself, and he has, since he first conceived the idea, made many improvements upon the place covered by his first patents. It is due to Col. Lippincott that the black bass has attained his present high standing in polite society. It is due to this long familiarity with Fox Lake and its inhabitants that Col. Lippincott has claimed without dispute the position of ultimate authority and champion liar of the lakes. There is no use trying to trot in harness with him when it comes to a good square fish lie, illuminated with the light of other days. And so strongly does this light still illuminate, over on the timbered point, that the Colonel will persuade any new comer that all he needs to do is to cast out into the lake, anywhere, just off the pier, and he will catch a muscallonge twelve feet long. One time the Colonel came down to Chicago and bought a big muscallonge and took him up to the lake, and off the next morning sneaked him out in his boat. When he came in that night, didn't he have a muscallonge? Of course he did; and it wasn't anybody's business about the color of his eyes, either. As if a fellow didn't know anything about a muscallonge, when he had seen the first muscallonge developed from a primordial germ. Col. Lippincott admits that it was a leetle cold in the old glacial days, but says it was blame good fishin' when the ice cleared out. And he insists that the fishing is just as good now as it was then. There are some reasons why the boys like to go over to the timbered point, where they are always sure of a jolly time.

Ed Howard's place is near the top of the bluff on the west side of the lake, and is reached by a balloon from the boat landing. It commands a grand view of the lake. Ed Howard has been there a long time, and should know a plenty about the country. When I was there he was too busy to talk, being engaged in an all-night game of poker with some men from the Columbia Club across the lake. The next morning he thought the country was all going to the dogs. He was tired. His place is one of the best known on the lake.

On a pretty wooded flat below the bluff is the Lakeside, an old stand-by resort known to all the shooters and fishers who go up to the lake. It is run by Messrs. Clarke & Neltnor, and in the season there is a whole lot of fun and comfort there.

Just around the corner of the point is the home of Capt. Hill, who runs the lake steamers. The best thing about this man and his steamers is that he does not allow any shooting from them. It is, however, chiefly a fiction of Col. P. Donan, of the Wisconsin Central, which would lead a visitor to believe that these steamers can placidly puff along through serried ranks of docile canvasbacks without disturbing the happy birds, which cluster about the bow with tears of gratitude in their eyes. That is where Col. P. Donan puts his fine Italian foot in it. The fact is, the steamers do disturb the ducks, and that badly.

Around the point a little further is Harry Dunnill's place and also the cottage of Rob Stanley. I know I voice the sentiment of every sportsman on the lake, and even of every reputable pusher, when I say that Mr. Stanley, and his children, and his wife's relations, and his hired man, and his hired man's relations, and all the friends of their relations, and all the relatives of their friends, should get lost, strayed or stolen, or if the place that once knew them should know them no more forever, even if raked with a fine-toothed comb, it would be altogether better for the sport of duck shooting on Fox Lake. On one morning the Stanley outfit went across the middle of the lake ten boats strong and scared every feather off it. They drive the ducks off the open water and then begin to "coast" them all out of the bays. One of them picked up two ducks below my blind; birds that I had killed when ducks were ducks, and made me so mad I broke out in blue spots. These men don't know how to hunt ducks, they won't learn how to hunt ducks, and they don't let anybody else hunt ducks that does know how. They ought to be taught to fall in with the general sentiment of the lake, which is emphatic and rapidly growing more emphatic and more needful; that no boats shall be allowed to disturb the wildfowl on their beds in the open water, and that none shall coast out the birds while they are on the feed. The Stanleys can't learn this it seems. They can't learn that they are losing money for themselves in thus spoiling the fun of the men who have put money into their sport and who want to keep a bit of nature alive for to-day and to-morrow. They can't learn anything. They have been remonstrated with by other pushers, by other market hunters and by gentlemen of the clubs, but it doesn't do any good. They want a house to fall on them. If they got many ducks it would be different, but the fact is their method is unsuccessful, as well as disastrous to the proper methods of others. But they want a house to fall on them. Old man Wood, down at Swan Lake, told me that in the early days old man Stanley conceived the brilliant idea of inclosing a few acres of marsh for a muskrat farm. He thought he could raise them like sheep, and never could understand why or how they dug out, climbed out and left his rat farm all alone.

At the foot of Pistaqua Lake there are a number of summer cottages owned by well-to-do people in the city. They lie out of sight from the western edge of Fox Lake bluff. City Coroner Hertz has a pleasant little villa here, and swears by Pistaqua Lake, as do a great many of the frequenters. The Lotus Club, a small body of a dozen or fifteen members, without formal organization, also have over on Eagle Point an acre or so of ground, stretching from side to side of the point, on which they have a cosy little club house and boat house, for the accommodation of their members on their occasional trips. Mr. G. E. Rickcords is a prominent member of this club, which finds most of its membership in the business firm of which he is a member.

Swinging back, around the point, one sees quite a little collection of houses, among which are different cottages, and the commodious building of the Waltonian Club, of Elgin.

This latter club is rather more a fishing than a shooting club—though most of its members also shoot. It is a strong and progressive body of good sportsmen, who are all active in any measures to preserve or increase the natural supply of fish and game. This club actively co-operates with the Fox River Fish and Game Association, of which mention is presently made.

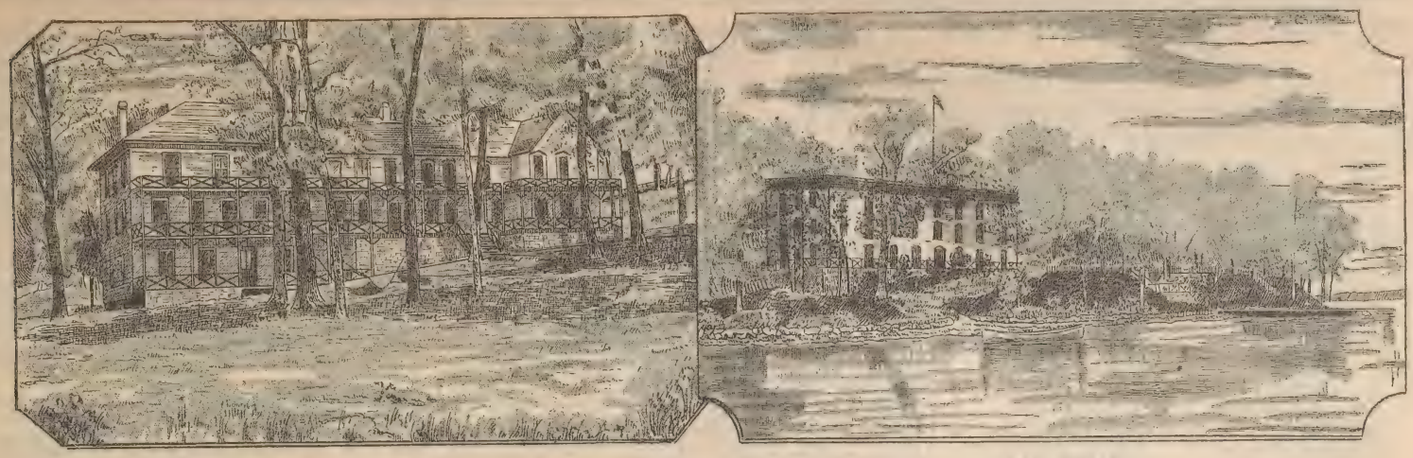
The Sycamore Club, of the town of Sycamore, Ill., has a big and homelike home up on top of the hill, near the Howard House, and in the summer time the families of the members take turns in living there. The turn of each is determined by lot, as I understand it, and each family supplies its own food and furniture. This does not seem so purely jolly an arrangement as the commoner club organization, and I do not think is so commendable. But there is a lot of fun there, all the same.

Across the lake from the big bluff, and about three-quarters of a mile from Lippincott's, is a little club for a cent, the Eagleside Club, with only four members, namely, Messrs. John W. Lyke, Squire T. Harvey, D. S. Daly and H. T. Murray. These gentlemen own about an acre of ground, and have a cottage 20×50ft. in size, and a large old time, a good deal bigger than 20×50ft. Mr. Lyke is one of the directors of the Fox River Fish and Game Association, and a man prominent in good work of that kind. Near this pleasant little house are the cottages of Mr. J. C. Burket and Mr. Geo. A. Lornax. Not very far from that is the Oak Glen Hotel, run by Hodges & Morrison, and near that is the cottage of Col. Geo. R. Davis. Along in here the woods are full of cottages and hotels, and we may as well let a few get away. Mrs. Kine's hotel, however, is a familiar word, and so is "Ramaker's" place, up on the head of the lake, not far from the Petite Lake channel.

Between the two points last named, and situated at the edge of the wood on the east side of Fox Lake, is the not very pretty building of the Columbia Club, a pretty heavy organization of Scandinavians. These men are most of them wealthy, and I suppose have among them some fine fellows. They are not, however, entitled to the name of a genuine sportsman's club. It seems that to them the acme of human bliss is to lie out in a boat in the open lake, and blaze away at everything that comes within half a mile of them, and to drink four gallons of beer each *per diem*. That sort of thing, it always makes me tired to see, think of or write about.

Lying as if to block the way into Grass Lake is Crabapple Island, looking so near that one might almost cast a frog on to it from the top of the big bluff. Here, among some good old trees, are the summer cottages of Mr. John Wilkinson, John P. Reynolds, Mr. John Walker and Mr. J. J. De Carteret. The other Johns got away. Mr. De Carteret has a cottage or so for lease. He lives on the island, and is called the "Hermit of the Island." Mr. N. W. Brooks and Mr. F. I. Pearce also have private summer cottages on the island. Mr. Wilkinson's cottage is called Bittersweet Lodge. I don't see anything very bitter about it, nor about his tidy little steamer—the oldest on the lakes, I believe—which also bears the name of the Bittersweet. Mr. Wilkinson is known in the commercial world as one of the big iron firm of Parkhurst & Wilkinson, and as the head of the John Wilkinson Co., dealers in fine sporting gear. Mr. Wilkinson's hobby is amateur photography, and I must say he is a rattler at it. FOREST AND STREAM is indebted to him for several views used in illustrating these articles. Crabapple Island is closely surrounded by reeds and wild rice, and in the summer, when the rail season is on, very good rail shooting can be had right from the edge of the island, these birds often rising out of the rice when disturbed by a stone thrown among them from the shore. Not very much has been said about the sport of rail shooting, since it is not so very much thought of about Fox Lake; yet if one cares for a sport where endless, easy repetition is possible, he can kill a hundred or a hundred and fifty rail in a few hours on almost any ordinary day in August or September when a good flight of these little marsh birds is in.

Now, then, I am done talking about houses and lots. Doubtless enough has been said to impress the fact that the shores of this lake are pretty well occupied by the properties of sportsmen or parties interested in sportsmen. Is a locality like this of genuine interest to the sportsman who, once in a while, gets into the unsettled wilderness? I think it is, and believe it to have legitimate interest. In the first place, the Fox Lake waters are not to be held as merely the location ground for a lot of summer resorts, for which a little wetness and three or four sunfish are ordinarily thought sufficient. There is fishing and there is shooting at Fox Lake, and that in a degree which is nothing less than wonderful when one comes to consider the environments. This is the main fact, and the interest for the modern sportsman which centers in this fact lies in the further fact that all this has been accomplished by game and fish protection, set on foot and carried through by the large-minded men whom it has been a pleasure to note as forming the little communities of sportsmen mentioned. These two facts make a sermon, and the only kind of a sermon which will do the sportsman of to-day any good to listen to. If we are to have any game we must protect it, feed it, guard and care for it wisely and providently. It is a battle of the intelligent mind against the unthinking, brutal and destructive mind. This battle has been carried on, and will be carried on more thoroughly in the Fox Lake region, by the large and grand organization known as



THE FOX RIVER FISH AND GAME ASSOCIATION.

This Association, not a club of itself, and not made up of members merely of Chicago clubs, but a membership which practically binds together all the sportsmen's clubs of the entire northwestern part of the State, has at present a roll of 250 members, and is growing. It has done more than any one club toward game preservation, and although it does not work outside of the Fox River region, has probably more results to show by way of accomplished legislation, constructed fishways and unkilled game, than any State association.

Convinced by their eyes that thousands of fish did ascend Fox River, until stopped by this law, the Association began the work of enforcing the law in regard to fishways. It has secured six fishways on the river already, and has instituted six suits against parties failing to comply with the law. It has stopped the spearing of fish (and will soon turn its attention to the persistent "jigging" which is carried on at McHenry), has stopped night shooting at wildfowl, and inaugurated a number of measures which have tended to remedy the old ruinous state of affairs which existed in the region where it works. It has put down 20,000 young bass in Fox Lake, and also numbers of carp, catfish, etc. It instigated the recent important suits at Elgin. It won the prominent Carpenter suit, in the matter of a fishway, and when Carpenter appealed, it slapped another suit on to him, and will continue to do this until he gets sick of life without a fishway. It has opened the way through half the dams on Fox River, and even through the big State dam, hardest of all. It will not rest until every dam owner and every dam has given the fish their chance. It will now turn its attention to the ruinous practice of fishing through the ice, which is so murderously carried on at Fox Lake by the natives. It will look also to the abolishment of all shooting from steamers and sailboats, and do what it can, outside the province of legal action, to put an end to coasting and routing out the birds from the open water. Altogether, composed as it is of the club men, themselves the most honorable and enthusiastic sportsmen, the Fox River Association presents the refreshing spectacle of a game-preservation society which isn't afraid of anything on earth, which means dead business every time, and which keeps on coming when it starts. It is the biggest and livest organization of its sort in the West, and it is doubtful if there is anywhere in the country a more energetic, intelligent and plucky body of the kind.

It would be a pleasure to write more of the lake district and more of the Association, but there must be a limit. Readers of FOREST AND STREAM may be sure that the game and fish of the district are left in good hands when left with the clubs and with this union of the clubs.

CHICAGO, Ill., Jan. 13.—In last week's mention of sporting appliances invented by Western men, it seems I didn't quite get around to all of them. I was down on the Hennepin and Swan Lake marshes this week, and learned a point or two further about duck shooting. Some of the best duck shots of the country visit or live on those marshes, and it is a high recommendation that nearly all of these use what is called the "Illinois River duck call." I had heard and seen a great deal of this call before I visited that country, and, being upon its native heath, I investigated its origin and place of production. In a little, crowded cottage, in the town of Henry, I found the inventor and sole manufacturer of what, in my own opinion, is the best duck call made, an inventive carpenter by the name of Sam Horner, whose only capital in life would seem to be a wife, several children, a turning lathe, a tamed wild mallard, and a genius for tinkering. They brought me out a whole boxful of the calls, some tuned and some untuned; and among these I hunted for one which should seem to me more seductive, so to speak, than the others. There were hardly two of the calls alike in outward appearance, but each in general was simply a round cedar stick about five or six inches long, with more or less simple ornamental lines cut in with the lathe. The hole through the call is large. The reed is made of thin German silver, and is fastened in by a perforated plug at the greatest possible distance from the mouth-piece. That is all there is to it; yet it is, as before remarked, the most perfect duck call I have ever happened to see. This is simply the result of constant experiment by the maker. I don't suppose anybody else could copy one of these calls any more than he could copy the Stradivarius violin. The tone of a duck call is all there is to it, and the tone is what the individual master spirit, art, genius, faculty or what you like, must impart to violin or humble duck call. Mr. Horner told me that he tuned his call to a wild mallard which he had in his yard. The call was new to me, and I could not get very good results at first, but Horner could take one and produce a note not distinguishable from that of the wild mallard, and could also give the redhead and bluebill call very perfectly. He said he made a few calls of black walnut, but that such a call always made the lips sore. He also stated that the length of the tube seemed to make no difference. The tone is quite free from all reediness and metallic quality. There is no other call used in that locality, but the article is not on the market. Horner could have sold six hundred dozen at one time, but declined the order. He is rather an odd genius. He doesn't have any regular price for a call, but just charges what

LAKESIDE HOTEL. LIPPINCOTT'S.

he takes a notion to. He wanted $3 for the big call I wanted. I told him there was sickness in my family and I thought he ought to sell it to me for less 'n that; but he couldn't see it that way. He said there was liable to be sickness in his family.

The Wood brothers, old market hunters of the Illinois River, are well-known characters in that locality. Tim Wood has reformed and is now steward of the big Swan Lake club house. He was showing me one of these duck calls, such as just described, which he always uses, and which is so natural that it has green feathers on its neck. Then we got to talking, and he told me that his brother, Frank Wood, invented the first duck call ever seen in that locality, when he was a boy only eighteen years old. That was in 1870 or thereabout. This primitive call was made of a piece of cane fishing pole and the reed was cut out of an old "tin type" picture.

DEC. 21.—At different times before now I have had occasion to comment upon the wisdom of Indiana legislation, and the kindliness of Indiana citizens toward Chicago duck clubs. There isn't anything too much for an Indiana man to do for a Chicago man, provided the same be toward inducing the aforesaid Chicago man to keep on his own side of the State line. The following is the latest Indiana effort, and if it were not just a little ridiculous, it might be noticeable as matter of detriment to Chicago clubs owning Indiana marshes. The quotation is from the Chicago *Tribune* of Jan. 19:

"One hundred gentlemen interested in the drainage of the overflowed and wet lands situated in the Kankakee Valley met in the club room of the Palmer House. Clem Studebaker, of South Bend, Ind., was elected chairman, and J. W. Wounche, of Crown Point, Ind., secretary. The following resolution was offered and adopted:

"*Resolved*, That it is the sense of this meeting that the first and most important step to enable the land owners to drain and reclaim the 1,700 quare miles of swamp and overflow lands of the Kankakee Valley, in the State of Indiana, is the cutting of a channel of sufficient width and depth through the ledge of rocks which extends across the Kankakee River at Momence, Ill., so as to afford an outlet for the marshes; and to accomplish this we request an appropriation be made by the State of Indiana from the State treasury of such a sum as will bring about these improved conditions.

"This whole matter was presented to the Legislature two years ago, but nothing was done. It is claimed that a large ledge of rock in the Kankakee River at Momence, Ill., is the cause of the overflow which submerges 1,000,000 acres of fertile soil in the Kankakee Valley. When this obstruction is removed the gentlemen interested in the movement claim the land will be drained and can be put under cultivation."

I am not posted on that big ledge of rocks, and should like to hear more of it. I am inclined to think, however, that it must be a daisy if its removal will drain the main swamps of the Kankakee, and I do not think that the duck shooters need worry much about it.

CHICAGO, Jan. 25.—Abe Kleinman says that day before yesterday quite a heavy flight of redheads struck Calumet Lake, coming from the south. They circled over the lake, dropped in, stayed for a short time, and at length made back south again. They are the first birds up for this year. If this remarkably mild and open weather continues, the next three weeks will see a good flight up. If the spring opens gradually, and not with any sudden breaking up of the waters, the flight is, however, more apt to be scattering, and the shooting, therefore, poorer than when the ice all goes out at once, and the flight all comes with a rush.

The show windows of one of the big restaurants of this city to-day presented a novel and wonderful sight. In each window was constructed a huge wire screen, in which, in full view, and indeed right against the glass of the show windows, there clustered,

ran or meditated a whole flock of genuine live quail, fat, sleek and saucy as ever burst from cover. There were two bunches of them—thirty-three in the first and thirty-two in the second. There was another quail in the second bunch, too, but it was one of these nervous, restless fellows, and ran around behind the other quail, so I couldn't count it. The sight was a strange one, thrust as it was right against the humming life of one of the busiest streets of America. It was so unual that a crowd blocked the walk by the window nearly all day long. The quail were bought on South Water street. I do not know how they came to be shipped in alive. Neither do I know how they could be taken alive unless trapped. And if trapped, I do not know by what law they were trapped and shipped in here at this season of the year. The sight of the poor little beauties was at first a pleasing and cheering one, and it made one's eyes sparkle to see his old friends; but when you stop to think about it, it's a good deal more pitiful than it is anything else.

The Mack-saw-bas have postponed their shoot from to-morrow to a week from to-morrow, as several of the most prominent members could not attend this week.

Mr. J. J. Roddy, one of the best known characters and oldest duck shooters of Fox Lake, lately died of consumption, which had afflicted him for years. E. HOUGH.

HENRIETTA, Texas, Jan. 21.—We are having delightful weather here now. This climate seems about perfect, what we would in New York call our best October weather. Nights a little frosty now and then, and days warm with bright sunshine. Just such weather as I like for shooting, and as the quail are fairly plentiful I am keeping the table well supplied. We get also some chickens here, but all larger game is further away from civilization.—BOB WHITE.

THE MEGANTIC CLUB DINNER.

THE gathering of the Megantic Fish and Game Club at the annual dinner at Young's Hotel, in Boston last week, was in size and enthusiasm significant of the rapid growth and substantial character of this organization. The club's preserves are in the Spider and Megantic lakes region of Maine and New Brunswick, and the membership is likewise international in scope, comprising representatives from the Canadian Provinces and from a number of States. The annual meetings are highly appreciated as reunions of old friends and occasions for the members of the club to become acquainted with one another. President Wemyss of Boston presided, and members and guests prssent were: W. H. H. Murray, Rev. A. F. Lee, J. C. Woodruff, Heber Bishop, Col. S. Harrington, Walter M. Brackett, E. P. Brown, E. N. Fenno, E. S. Sparrow, Seth Perkins, A. C. Gould, S. F. Johnson, E. A. Knight, Galen Woodruff, J. F. Hutchinson, H. J. Thayer, A. T. Sisson, George F. Hall, Bradlee Whidden, A. J. Morris, Waldron B. Hastings, D. W. Clapp, J. C. Donnell, U. K. Pettengill, E. D Ward, F. H. Ruggles, William V. Alexander, B. V. Howe, A. P. Holbrook, George B. Appleton, J. N. Taylor, F. A. Foster, James Brown, Geo. B. Harriman, Webster E. Pierce, Homer Albers, William R. Scott, Geo. F. Ellsworth, Ithamar Howe, H. W. Robinson, G. A. Macomber, H. W. Sanborn, Benjamin F. Hall, N. J. Hall, M. A. Morris, G. W. Nichols, W. P. Clark, W. L. Hall, James Bean, Oliver White, J. H. Rockwell, W. Maniard, E. E. Partridge, A. P. Preston, C. A. Kilham, E. A. Shaw, J. R. Reed, William Howe Mills, L. K. Billings, Eliot B. Mayo, A. N. Cheney, L. W. Sweet, J. W. Ball, S. G. Stevens, C. A. Powell, A. H. Ellis, W. B. Everets, W. H. Edmands, Henry F. Guild, A. L. Plimpton, A. H. Breed, Charles J. Bassett, Arthur Lowell, Charles W. Shepard, William Lumb, Arthur F. Means, W. F. Stevens, Edward Sharp, James E. Woodruff, Theodore P. Brown, Edward P. Barry, W. A. Richardson, A. W. Robinson.

In his address of welcome and congratulation the president announced that the club's possessions of 80,000 acres of territory were to be increased by an addition of 30,000 more. He highly commended the plan of annual excursions, begun last season, when a large number of the members and their friends visited the club grounds together. Prof. Putnam of Harvard College reported that the Boston Society of Natural History, of which he is president, had made arrangements with the park commissioners for a large lot of land in Franklin Park, also a part of Jamaica Pond. The former they would use for a game preserve, and they hoped also to get a part of Castle Island for the same purpose, and a great salt water basin between the island and City Point, of which they intended to make a great aquarium. The preserve at Franklin Park, he said, would be a great zoölogical garden, and it would be stocked with deer, moose, bears, and other animals of the forest now being killed off rapidly. He called attention to the fact that one year hence the angler could cast his fly for salmon on the Merrimac, for the reason that the river had been well stocked. Addresses were made by Messrs. W. H. H. Murray, A. N. Cheney, Kennedy Smith, Walter Brackett, Rev. A. F. Lee, Vice President Woodruff, and others. The dinner was a most happy affair throughout, and reflects great credit on Dr. Heber Bishop, the originator of the club and its controlling spirit.

RAIL SHOOTING AT CRABAPPLE ISLAND.

I believe I am fonder of your FOREST AND STREAM in winter even than in summer. Then I can do my own fishing; now I live it all over again in the clear type of your pages.—J. M. SCOVEL.

Dr. C. D. S., Portland, Maine.—It has become indispensable to those of us who have to find in it comfort for the days and weeks when we can't get away, and have to derive a little enjoyment from "the other fellow's" good time.

THE MASSACHUSETTS ASSOCIATION DINNER.

THE annual reunion and dinner of the Massachusetts Fish and Game Protective Association at Young's Hotel, Boston, last Thursday evening, was in many ways one of the most pleasant in the society's record. Those present, members and their guests, were:

Wm. H. H. Murray,	A. Williams,
Hon. C. S. Randall,	Thos. J. Holmes,
Chas. Whittier,	R. M. Read, M.D.,
Arthur W. Robinson,	C. Z. Bassett,
Eliot B. Mayo,	Geo. B. Appleton,
Dr. Heber Bishop,	Richard O. Harding,
Dr. M. A. Morris,	Jas. R. Hooper,
Jas. H. Hall,	Edward F. Hardy,
Myron W. Whitney,	Chas. G. Gibson,
E. L. Barry,	Frank K. Stoddard,
Daniel O'Hara,	James G. Wildman.
S. P. Brown,	Walter R. Davis,
S. Clarence Ellis,	John F. Nickerson,
W. A. Garbell,	J. Walter Sanborn,
Henry H. Kimball,	J. P. Woodbury,
George W. Wiggin,	E. R. Hunnewell,
J. L. Stetson,	Hiram Whittington,
J. N. Roberts,	C. Z. Howell,
William Hutchinson,	George E. Richardson,
George Loring,	George A. Moore,
Rollin Jones,	Lyman Stickney,
G. W. Gardner,	C. M. Blake,
Herbert Seavey,	Charles B. Barnes,
J. W. C. Seavey,	George H. Morey,
H. T. Rockwell,	Arthur L. Brackett,
William B. Smart,	A. N. Cheney,
E. S. Tobey, Jr.,	Walter M. Brackett,
Joseph Warren,	George W. Riddle,
William E. Doyle,	Herbert H. Brainard,
Charles B. Reynolds,	George F. Crafts,
F. R. Shattuck,	B. F. Nichol,
Henry J. Thayer,	Edward A. Samuels,
J. McDonald,	John Fottler, Jr.,
B. C. Clark,	E. B. Hodge,
W. Hapgood,	J. H. Kimball,
Frank W. Andrews,	E. A. Brackett,
G. E Pollard,	William D. Hawley,
Edward T. Barker,	Henry H. Carter,
F. H. Atherton,	Aug. B. Bradstreet,
E. H. Lathrop,	Herbert Merriam,
Henry M. Phillips,	Richard Wood,
Daniel T. Curtis,	W. F. Almy,
Cephas Muggins,	George O. Sears,
Samuel Hanson,	P. W. Scudder,
C. H. Rockwell,	Dr. David Thayer,
Walton C. Taft,	Henry L. Roberts.
Samuel Bradstreet.	

One noteworthy feature of the Boston annual dinners, as shown in this list of names, is the bringing together, from different sections, of men actively interested in game and fish protection, for interchange of views, experience and encouragement. There were "Adirondack" Murray, than whom no one is gifted with more eloquent speech of the woods and wild life; Congressman-elect Charles S. Randall, of New Bedford, a member of the Cuttyhunk Club; E. B. Hodge and G. W. Riddle, Fish Commissioners of New Hampshire; Herbert H. Brainard, of Vermont, conservator of fish, game and fish-stories; Commissioners Brackett and Lathrop of Massachusetts; Edward Small, an authority on sea fisheries; representatives of the sportsman's press; and animating, guiding and controlling all, as skillfully and triumphantly as ever he played a salmon in a Canadian stream, President Samuels, who after the courses, read his

ANNUAL ADDRESS.

Another year has passed away, and once more it is my most pleasant duty to extend a hearty welcome to our friends and guests who are with us this evening, and also to congratulate the Association on a most brilliant gathering in commemoration of the beginning of another year—the sixteenth of its existence.

Those of us who have watched the rise and fall of societies appreciate in its full value the significance of my words, when I say that although we are now well along in years, counting the lives of societies as they average, we were never in more vigorous health, were never better equipped financially, were never possessed with a membership that showed a greater interest in our chosen work than we are at the present time; and I must here congratulate the Association on this auspicious condition of things, and express the hope that it will continue.

That the Association has been of very great benefit to the people of this Commonwealth during these many years of existence is unquestionable. Cavillers and doubters always will be found, but the good we have done cannot be obliterated.

When it is remembered that every good law upon our statutes for the better preservation of our fish, game, and our native song and insectivorous birds, is there almost entirely in consequence of our earnest and patiently repeated efforts, when it is remembered that we have for many years alone and unaided secured the enforcement by the expenditure of a great amount of labor and money, paying out from our own funds hundreds upon hundreds of dollars, our legal and other expenses for prosecutions in a single year amounting to over $400, doing this work and expending this money for the benefit of the whole community; doing the work that the State should have done, and paying out our money that the State should in equity refund to us; when these things are remembered, I repeat that the value of our labors has been great, the importance of our existence almost immeasurable.

It is true that the State Fish and Game Commissioners were by the last Legislature given the power and means to see that the laws are enforced, and I must here heartily commend them for the very handsome manner in which they have during the past year responded to the action of the Legislature; the record they have since made is one that we must congratulate them upon, and one of which they must be proud; but if our association had not existed and accomplished all it has, what need would there now be of a commission, for what would the Commission now have to conserve and protect? Who would have endeavored to preserve our fast diminishing supply of game birds in all these years if we had not? Apparently no one, for no one but us has shown any inclination whatever in that direction. Almost no one but us, so far as court records indicate, has taken enough interest in them to see to it that our quail and our ruffed grouse, and our woodcock and other valuable game birds, our native song and insectivorous birds, the farmer's best friends as they are often called, have not been exterminated.

If we had not enforced the laws for the protection of the lobster, enforced them at one time at an almost total expenditure of our surplus funds, how much nearer extermination would one of our most valuable food supplies be in this State than it is to-day?

The answer is easy to all these questions, and I again repeat that the good our association has done is almost inestimable. It is not alone by the prosecutions we have made and the convictions we have obtained that the estimate of our influence may be measured. The more fact that we are in existence, that the association has been anxious to receive complaints; and to act upon them at all times; that we have been ready always to prosecute any infringement of the game laws if evidence of such is furnished us, has had a moral weight, the value of which cannot be estimated. It has most unquestionably served as a check upon evil doers, and has in a very large degree undoubtedly prevented the devastation of our birds, the killing and selling of game out of proper season.

Let those, therefore, who perhaps thoughtlessly, perhaps ignorantly, possibly maliciously, decry the beneficence of our work, cease their ungrateful and ungracious comments, and give us the credit that is our proper due.

I have said that every good law for the protection of our fish and game is upon our statutes, chiefly because of our most earnest efforts; it is also true that every bad law we have, and I regret to say we have some that should be remedied without delay, is still in existence, notwithstanding our most urgent remonstrances and appeals.

We have for years endeavored to secure statutory protection for the lobster, by the establishment of an absolute close period of two months in the height of the breeding season. I have shown in former addresses how important and valuable such a law would be, and will not dwell upon it here.

The Governor in his last message has recommended legislation in this direction, and that is an encouraging point gained; let us hope that at the present session of the Legislature a wise measure for the better protection of the lobster may be enacted.

Although we made the most strenuous efforts for the repeal of the law which permits the snaring of our ruffed grouse or partridge, it still is a living disgrace to the State. It is a law harmless and plausible enough on its face, but which is pernicious to a grave degree.

It not only offers a bounty to all sorts of poaching and rascality, but seriously menaces the extermination of not only our partridges, but our quail also, which are now snared in what are called for the purpose of evading the law, "partridge snares."

Our association has done its whole duty in endeavoring to obtain the repeal of this baneful law, and further effort on our part is in the minds of some of questionable advisability. A number of complaints have lately come to me from farmers and others in different portions of the State, from land owners who do not wish the game birds which frequent their estates destroyed in any way, yet who are now powerless to prevent the devastation; for the snarer with his line of traps is able to capture in course of time every partridge in a given locality, and adjoining land owners are helpless.

From these complaints I judge that the farmers are at last becoming alarmed, and I hope that the time is not far distant when they may move to secure the repeal of this unwise law. We might under the consciousness of having done our whole duty repose upon the arduous efforts we have made, and wait patiently for the land owners to take action in the matter. Whether such a course is the wiser or not is a question.

If action by all who are interested in the preservation of our most valuable game bird is long delayed it may come too late. The partridge once depleted from our woods cannot be replaced by importations from abroad.

Even the pinnated grouse could be restored to us, but the ruffed grouse could not be. The laws of almost every other State absolutely prohibit the snaring of these birds, and why should Massachusetts thus shamefully pass behind her sisters and allow this baneful practice to go on, even giving the snarers the month of December, which she denies to sportsmen. Unscrupulous schemers to further their own selfish ends have endeavored to prejudice the agriculturists against our efforts to secure the repeal of the law which legalizes snaring and have so poisoned the minds of some unthinking men that their hostility is in a measure aroused; to all such let me sound this warning: Unless snaring is made unlawful the partridge is as surely doomed to extermination in our woods as was the prairie chicken or pinnated grouse which was formerly a Massachusetts game bird but which is now practically extirpated here. If the partridge is destroyed it will be, in the opinion of many, a great calamity, and to no one a greater calamity than to the farmer himself.

It is always with me a matter of anxiety that our association, great as it is, composed as it is of men prominent in all walks of life, an association whose objects are and entirely for the public welfare—shall do the best possible work of which it is capable, and it is therefore my constant study to devise means and ways through which our usefulness and efficacy may be increased.

Of course, methods often present themselves, which if they could be availed of would be productive of grand results; but they have been discarded almost always for the reason that our treasury was not strong enough to warrant their employment. if we were fortunate in the possession of a large fund; if we were like many other associations frequent recipients of legacies and handsome gifts, donations which would enable us to carry out our beneficent work to the fullest possible extent, we might now be able to point to a record that any society might be proud of. But with the exception of a few donations that have been given us, and those almost entirely by some of our own members, we have been obliged to pay all the expenses of our work which has been entirely for the public good, out of our own purses, and consequently have not accomplished as much as we might.

It is true that our membership comprises many wealthy men, who have ever expressed a willingness to subscribe for any undertaking that we projected, looking to the welfare of the community. But their generosity has not been taxed, for the reason that we have felt a delicacy in undertaking movements for which the funds must be solicited to pay the expenses incurred.

However, our record is one of which we may not be ashamed, and there are still many ways in which the scope of our usefulness may be enlarged.

It has seemed to me that we might enlist the interest and assistance of other somewhat kindred societies in our work by inviting them to a participation in it. The objects of our association are not only "to procure and enforce suitable laws for the protection and preservation of food fishes, bivalves, lobsters, game, song and insectivorous birds," but they also include "the promotion of fish-culture, the introduction of new species and varieties of fish, game and useful birds, and to disseminate information relating thereto." Surely such objects are grand and glorious enough to engage the attention and arouse the enthusiasm of all men, but particularly those whose interests lie in the direction which these objects may effect.

Those who come more especially in this category are the farmer, the sportsman and the fisherman. How best to secure the co-operation of these in our work has been a problem to which I have given much thought. A method presents itself which is worthy of consideration, and that is to invite the various agricultural societies and farmers' clubs and the fish and game clubs throughout the State to unite with us in occasional conventions for the purpose of discussing public measures in relation to our fish and game and unite in one phalanx for perfecting them. If, for a single example, we could secure the co-operation of the farmers and sportsmen, in perfecting plans by which our woods might be restocked with quail, or even pinnated grouse, I have no hesitation in asserting that our public-spirited citizens would liberally subscribe the funds needed for such an undertaking.

Without the hearty co-operation of both the farmers and sportsmen any such measures would result in failure, with such co-operation it would be an instant success.

We cannot, in reason, expect them to lend their hearty assistance unless we invite them; possibly they would not participate in such work; but we cannot know until we ask them. At all events, even if they did not avail themselves of their opportunity our action will show them that instead of being hostile to their interests, we are not only friendly to them but anxious to protect and advance them.

It was largely due to the efforts of our Association with a member of which the measure originated, that Congress established by statute a national close season in the mackerel fishery. This fish which once was one of our most valuable food fishes had, year by year, grown more and more scarce, and the extermination of the species seemed inevitable. Hand-line fishing, no matter how extensively it might be pushed, could never exhaust the supply, but the devastation caused by the enormous hauls of the mammoth nets used by the seiners was and is destructive in the highest degree.

It was hoped and believed that if the mackerel were allowed a brief season of protection during the spawning time the supply of fish would show less signs of exhaustion, but the hope has thus far failed of realization, and the mackerel fishery, which was formerly most profitable, is now unremunerative in the same degree. The destruction of mackerel by one of the tremendous hauls of the seiners is something terrible, and along with those fish which are marketable, myriads of smaller fish are destroyed, which, if allowed to escape, would increase in size and perpetuate the species. In my belief the time has arrived for State and national legislation which shall increase the size of mesh of nets used in mackerel seining, and our Association should lose no time in taking the initiave to obtain it.

A writer in the Boston *Globe* says, in referring to the decline of the mackerel fishery: "The mackerel season for the two preceding years was a complete failure, barely one-fourth of the fleet, if indeed that, number, paying expenses. It was equally as much of a failure in the Provincial waters as on the American shore. High prices for the catch have prevailed from the first, and but a few thousand barrels of this fish are on the market, and those at very high prices. On account of the continued ill luck of the mackerel fleet many vessels were put into the bank fisheries."

The Maine Commissioners' report just published says of the mackerel: "This fish has been very scarce on our coast this season, and, therefore, the law has not been violated as much as usual. The catch of mackerel all along the shore has been very limited, and the seiners have seemed determined to catch every mackerel as soon as it might be discovered to be in the sea.

"The total catch up to as late date as I have is only 25,511 barrels for 1888, against 56,919 barrels in 1887, 58,557 barrels in 1886, 258,900 barrels in 1885, and 319,698 barrels in 1884. It will be seen that this season's catch so far is not half as large as the two preceding years, and a mere trifle compared with catches of 1884 and 1885. In fact, the present catch is the smallest known for fifty years, and many vessels will suffer great loss. What the cause of this falling off is no one seems to know. To supply the demand many mackerel have been shipped to the States from England, a thing never known before."

An amendment to the present laws regulating seining which shall provide for a wider mesh, one that will permit the smaller fish to escape, will, it is probable, check the further dimunution of the mackerel at least to some extent; and any measure which will do this is worthy of our advocacy.

This is the fourth time at which it has been my duty and honor to preside at the annual dinner of this Association, and it will doubtless be the last; but let me assure you, gentlemen, that in the coming years which I hope may be vouchsafed me, among the most pleasant of all the recollections stored up in my memory there will be none sweeter, none more delightful to recall, than the remembrance of these occasions, enwreathed and surrounded as it will be by the recollection of all the courtesies and the considerations you have shown me during the entire period of my official duty.

Hon. Chas. S. Randall gave some significant figures, showing the effect of the menhaden fishing steamers on the bass supply in the waters controlled by the Cuttyhunk Club. The club records show that, for a period of fifteen years previous to 1885, the average annual catch of striped bass by the club members had been 700 fish, weight 8,000lbs., the largest fish recorded being of 64lbs. In 1885 the menhaden steamers broke up the fishing, and again in 1886. In the next year the menhaden steamers were not in operation, and the catch of bass rose into the hundreds, but only to be destroyed in the following year when the menhaden factories were at work. Thus:

	No. per year.	Weight.	Largest.
15 years	700	8,000lbs.	64
1885	46	419	29¼
1886	3	65¾	27½
1887	235	2,809	42
1888	29	479	56

Mr. Randall made a strong plea for more efficient laws and enforcement; he proposed a convention of representatives from the several Atlantic Coast States to adopt a suitable law for all, and he pledged his warm coöperation and active support of such a wise measure if it were presented to Congress.

Mr. Murray followed with a tribute to the charms and value of woods life, and eulogized the work of the Association in cherishing the taste for shooting and fishing and healthful recreation in the forest and on the stream. Mr. Edward Small urged the importance of protecting the mackerel; Commissioner Brainard, of Vermont, reported the growth of a strong public sentiment favoring protection in his State; Commissioner Brackett reviewed the work accomplished in Massachusetts; Commissioner Hodge reported that the black bass had destroyed the yellow perch in Sunapee Lake, the result being a grand supply of bass and trout in those waters; Chas. B. Reynolds suggested that the Association could accomplish much good by giving assistance to the special officer of the State police assigned to enforce the fish and game laws; and A. N. Cheney paid a beautiful tribute to the memory of the late Judge Ranger. There was singing by an impromptu quartette and by Myron W. Whitney, who is a member of the Association.

THE DIMINUTION OF GAME.

Editor Forest and Stream:

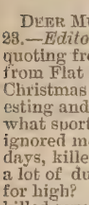
Having read with much interest the different articles in your valuable paper in regard to game extermination, I want to express my views on the important subject. I have long felt that an active interest must be taken in the matter and laws made and enforced to prohibit the wholesale slaughter of game for the market. It is shutting out of the field many a true sportsman. What little time he gets from his general business to devote to a day or a week in enjoyment of the sport, to which he has long looked forward in anticipation, he finds is wasted, and to his disgust and discouragement the market hunters have been ahead of him and have robbed the coveys and left to him only the long tramp over hill and dale. His game bag hangs empty at his side, and his gun on his shoulder is a useless appendage. I know of parties in this vicinity who have kept themselves busy for the last two seasons in bagging and sending to Buffalo markets the ruffed grouse, that beautiful game bird, which with us is not at all plentiful. Something, very evidently, must be done with push and energy, as Mr. Gilbert of Indiana is attempting to do for his State. I hope every one interested in the matter will at least lend a helping voice for the advancement of bills in every State to prevent the sale of any kind of game for five years. I am not in favor of abolishing spring shooting, because in this locality all the duck shooting we have is in the spring, and does not exceed a week or ten days.

LEON CENTRE, N. Y. G. B. W.

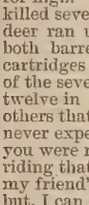
Editor Forest and Stream:

I made one of a party to Spring Lake this fall for the second time, and had a good time, but only a small flight of ducks passed down the Illinois River this year, and the flight seems to be growing smaller each year. We can judge the cause by watching the express offices near some of our best shooting grounds. To see 6 or 7bbls. of game shipped daily is no uncommon thing, and this answers the questions, where are all the ducks, or where have they gone? W. N. J.

ANCHOR, Illinois.



MARKETS AND GROUSE.—*Editor Forest and Stream:* I see in your issue of the 10th a correspondent from Ellisburg, N. Y., speaks a word of protest against market hunters of the ruffed grouse. I add my voice to that very emphatically. There are market hunters of the ruffed grouse in the vicinity of Jamestown, N. Y., who commence with the opening day and hunt the season through, shipping to the larger cities. Unless the birds are protected they will soon exterminate all the ruffed grouse for miles in radius of that point. Killing ruffed grouse for market in the State of New York should in my opinion be prohibited.—BOB WHITE.



"HOW BEARS ARE SHOT."—In "G. A. S.'s" article, which appeared in last issue, the word "Ganley" should have been "Gauley."—P. C. O.

DEER'S VITALITY.—Chicago, Ill.—*Editor Forest and Stream:* The article in your issue of Jan. 17 on this topic reminds me that I once shot a fawn (about eight months old), cutting its belly open in such a way that its paunch dropped out. It was running when I shot, and going to the place where I last saw it I found blood on the snow and took up the trail. Within a short distance of the first blood stains I saw where something belonging to the deer had been swinging back and forth at intervals, leaving irregular marks on the snow, and, not knowing the nature of the wound, I thought I had broken a leg. But on further investigation I found that all its feet were being firmly planted in the snow at each jump. I was puzzled until I reached a place where the deer had lain down. Then I saw that a portion of its entrails were hanging, and had left their imprint in its bed. It was in a river bottom, thickly grown with underbrush, and, though from this time on it lay down at the end of every hundred yards or so, it invariably jumped before I could get sight of it, and I followed it for, I think, fully a mile before it gave me a chance for a second shot, and when I killed it I found its paunch hanging out so that it touched the ground every time the deer did. The wound itself had bled but little, yet I was astonished that such an animal could run so far with its hay basket flopping hither and thither. Another mystery is that he did not catch on some of the brush he was constantly dodging through, and pull the whole business out of him.—G. O. SHIELDS.

DEER MUST BE PLENTY THERE.—Charleston, S. C., Jan. 28.—*Editor Forest and Stream:* I take the liberty of quoting from a letter received this morning from a friend from Flat Rock, N. C., who was here about ten days in a Christmas and New Year's hunt. It is certainly interesting and will give some idea to my northern friends of what sport can be had here. "You will be sorry to have ignored me when I tell you my luck. We hunted eight days, killed fourteen deer, caught four foxes, and killed a lot of ducks, woodcock and partridges. How is that for high? The best of it is, out of the fourteen deer I killed seven myself; stood on an old causeway, and seven deer ran up to within 35yds. and stopped; I tore loose both barrels with my old No. 10, rammed in two more cartridges and blazed away again, at which time four out of the seven bit the dust then and there. We jumped twelve in that small drive and killed six, besides three others that I killed at different times previous to this. I never expect to have such luck again. Only regret that you were not there to help me do some of the tall old riding that I had to do." The above is the quotation from my friend's letter. The sport he had certainly is good, but, I can assure you, I consider him the best all-round sportsman I have ever met. We want some of your pilgrims, who are seeking a genial clime and are lovers of the dog and gun to wend their way to our "City by the Sea," where a warm welcome and a good time awaits them.—MILBANK.

BULLETS.—St. Louis, Mo.—*Editor Forest and Stream:* In reply to Mr. Theodore Roosevelt's query in a recent issue of your valuable journal regarding the Keene bullet, I use with great success in my .45-90 Winchester a bullet similar to that described by your correspondent R. H. W., in FOREST AND STREAM, Dec. 13, the only difference being that I fill the cross-cut with tallow, which I think increases the accuracy of the projectile, but does not interfere in the least with its action. I also make the cut slightly wider at the point than at the base, thereby insuring the splitting of the bullet. I have brought a grizzly bear to friendly terms with a single bullet of this kind, and a grizzly is never friendly unless he is stone dead. I inclose a rough sketch of the bullet as used by me, which you are at liberty to make use of if suitable.—EX-COWBOY.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers gave me the best of satisfaction. I have averaged nearly 80 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

256.

THERE were out hunting rabbits a few days ago, Jim Shipman and George. They came to a pile of brush and Geo. ascended the brush heap while Mr. Shipman stood guard with his six-shot Winchester in hand; and soon the rabbits commenced coming out about as fast as Shipman could work the pump-gun; and when the smoke cleared away there lay on the ground five rabbits out of six shots. The hunters passed on down the road and soon saw a rabbit sitting in the hedge; and Shipman says, "Here, George, take the gun and see if you can kill it." "But," exclaims George, "what will I do after I hit it with the first load? I do not wan' to tear it all to pieces, and the gun will keep right on shooting." "Well," says Shipman, "Just hold her up in the air and let her go." "No," says he, "Take it; I won't shoot it, or I will throw the gun down," and so he did and walked off. W. N. J.

ANCHOR, Ill.

Hurrah! shrieked the cyclone, as it raged through the Dakota town and killed or destroyed everybody and everything—all but one man who escaped in time by getting down a well. But the cyclone whirled off to one side and back again with the church steeple which it most effectually rammed down after him. Moral: Where there's a will there's a way. E. E. T.

Sea and River Fishing.

FISH AND FISHING IN ALASKA.—I.

THE writer has been occupied for several years in the preparation of a report upon the fishes and fishing grounds of Alaska, as a continuation and conclusion of various preliminary papers published in the Proceedings U. S. National Museum, Volume IV.; Bulletin 27, National Museum, and The Fishery Industries of the U. S., Sections III. and V.

The illustrations of all the species known in the Territory have cost a large outlay of time and money, but this work of the U. S. Fish Commission is now almost completed.

One cause of delay has been the entire lack, until last summer, of deep-water exploration in Alaska. So far as we are informed, the beam trawl was never used in those waters until the Albatross begun her investigation of the fishing grounds, and the only deep-sea species recorded in the Alaskan catalogues are the two lancet-mouths, or wolf fish, *Alepidosaurus æsculapius* and *borealis*. It has been admitted that a report based upon the shore fishes, which are the only ones we know at present, would need extensive revision as soon as proper apparatus should be employed in the search for new forms of deep-sea animals. Now that the Gulf of Alaska has been explored to some extent and the collections will soon be available for study, we will be able to add materially to our list of fishes, and determine the elements of a fauna hitherto inaccessible to the student.

At the present time we are acquainted with 195 species of Alaskan fishes, 108 of which live in the sea and 27 permanently or temporarily in the fresh waters. Although this may seem a small number when we consider that a greater list of species can be obtained at various points on our east coast during the period of migration in a single year, it should be noted that the proportion of large and valuable food species is very great, and the individuals of a species in most cases are excessively numerous. The number of kinds of food and bait fishes, omitting several that form an important part of the native supply but are not usually classed with the edible fishes, is 62. Of these 15 are permanent residents of the fresh waters, 8 ascend from the sea to their spawning grounds in streams and lakes, and the rest are marine.

Among the fresh-water fishes Alaska has, in common with the temperate regions of the United States, the burbot, the pike, the lake trout and the long-nosed sucker. These are all abundant and grow to a luxuriant size. The burbot is said by reliable observers to reach a length of 5ft. and a weight of 60lbs. The pike develops great size and fine colors, and has a wide range. Dr. Dawson had one measuring 39in. The lake trout is darker and more shapely than the same species from the Great Lakes, its coloration not being exactly matched in the eastern region. The long-nosed sucker is larger in Alaska than in the United States, and is a well marked race distinguished by the length of its snout and some other characters.

In the sea we recognize old acquaintances in the halibut, the cod and polar cod, the capelin, the spined dogfish and the sleeper shark. Unlike the fishing grounds of the Atlantic, which have receded further and further away from the shore and into depths at which the fishery has become extremely laborious and hazardous, the haunts of the cod and halibut are close to the land in moderate depths, and their young swarm about the shores. Eleven additional sea fishes are common to Alaska and the Atlantic coast.

The fishery resources of Alaska are undeveloped and under-estimated. The salmon canneries, driven to seek new supplies by the depletion of the great rivers of California and Washington Territory, have pushed their way around the Gulf of Alaska, into Cook's Inlet and northward, until they will soon occupy the outposts of salmon migration; but the treasures of the sea are as little appreciated as were the resources of George's Bank a half century ago. The writer has frequently attempted by personal interviews and printed statements to convey a truthful idea of the liberality of nature in providing for the fisherman in Alaska, affording him a superabundance of fish, conveniently located with reference to good harbors, where ample supplies of fuel, water and game may be obtained; spreading out for his occupation tens of thousands of square miles of soundings, inhabited by valuable fish and the food that attracts them. Only recently, when the continued scarcity of halibut and mackerel threatened to ruin the fortunes and starve the families of many of our New England fishermen, did it become possible to draw attention to the fish wealth of Alaska and precipitate a movement of vessels, whose reluctant lead will soon be followed by fleet upon fleet until the Shumagins and Marmot Island, Seminovsky and Unalashka will be as familiar names as LeHave, George's and Grand Banks. Then we will begin to realize the value of our outlying province and the possibilities of its future.

For the sake of students who may wish to know the present constituents of the Alaskan fish fauna, it will perhaps be sufficient to state that the Preliminary Catalogue, published in Proceedings National Museum, 1881, page 239, is to be amended by removing numbers 7, 24, 29, 110 and 114, and adding the species discovered since the date of the catalogue, which are as follows:

Psettichthys melanostictus.
Parophrys ischyrus.
Hippoglossoides exilis.
Deloleps virgatus.
Lumpenus fabricii.
Murænoides ruberrimus.
Xiphister mucosus.
Chirolophus polyactocephalus
Aspidophoroides Olrikii.
Brachyopsis dodecaëdrus.
Cottus decastrensis.
Cottus axillaris.
Cottus quadrifilis.
Cottus quadricornis.
Potamocottus gulosus.
Sebastichthys nigrocinctus.
Sebastichthys nebulosus.
Micrometrus aggregatus.
Coregonus nelsoni.
Stenodus mackenzii.
Salvelinus namaycush.
Raia stellulata.
Somniosus microcephalus.
Galeorhinus zyopterus.

The red rockbass, No. 67, is to be replaced by *Sebastichthys brevispinis*. The sticklebacks are represented by three species, and, notwithstanding their pigmy size and stout spines, form a considerable addition to the food supply of the natives and their dogs. All parts of the coast are inhabited by one or more species, and the ten-spined form occurs in streams and fresh-water lakes.

The flounder family is distributed around the entire coast and includes eleven species, or about as many as occur in corresponding latitudes on the Atlantic shores. All of the flounders and flat fishes of Alaska are suitable for food, most of them being really excellent, and some reaching a great size. There is one, the starry or stellate flounder, which deserves special mention, because it ranges from the southern portion of California to Mackenzie River, and is, consequently, in latitude at least, the most widely distributed member of the family. The species diminish in size and number north of Unalashka, but the proportion of individuals is rather increased. In the high north the stellate flounder and the little polar flat fish are the prevailing species, and they add materially to the resources of the larder. The latter is universally found in the skin boats of traveling parties on the sea coast, and makes up in abundance what it lacks in size. The halibut is one of the commonest fishes of the Gulf of Alaska and Behring Sea; it is not different from ours specifically, but is a plumper fish, and dwells in shallow water about the wharves as well as in moderate depths. The species reaches a weight of 300lbs., and is abundant "in spots," according to recent testimony of Gloucester fishermen who have transferred their industry to the Pacific coast. Our own investigations convinced us that the fish is common except in localities in which the fur seal and other destructive enemies destroy the young and drive the adults from the spawning grounds. One very singular deep-water flounder, occurring in the Gulf of Alaska and southward to San Francisco Bay, has been called the arrow-toothed flounder, on account of the barbed teeth in its jaws.

The cod family has five species in the sea and one in fresh waters. The Gulf of Alaska and Behring Sea have the largest species and the most important commercially, but the Arctic forms are quite as valuable where they occur as any other kinds of fish food. Besides the true cod, which is just like ours, there are pollock, polar cod, tomcod, wachna and burbot. The cod grows as large as in the Atlantic and extends all around the territory almost to the northern extremity of Behring Sea; it is destined to become the object of a very important industry at no distant day. The pollock is a very different fish from ours, smaller in size, slenderer in shape, and with streaks or bands on the sides; it is one of the best baits for cod, and occurs in large numbers on the fishing banks. The polar cod is said to be a delicious fish, and, although of small size, it is taken in excessive numbers and with the greatest ease; this is a species of the far north and a prime favorite for winter fishing. The wachna is scarcely less important to the natives than the polar cod, and it is taken in large quantities. In Cook's Inlet we obtained our largest specimens, about twelve inches long. The burbot is the species sometimes styled eelpout in Eastern waters; in Alaska it luxuriates and grows to the enormous length of five feet, and is said to weigh as much as sixty pounds.

The marine eelpouts (*Gymnelis* and *Lycodes*) include three species which have no economic value; one of them occurs rarely at the Shumagin Islands.

The blenny-like fishes are somewhat numerous, comprising a wry mouth, which is banded and has scales, a crested blenny, a tufted blenny, three kinds of rock eels, three sword-bearers, two eel-blennies, and a spotted blenny, which is an inhabitant also of Greenland seas and the north Atlantic coast. None of these have any present value as food or bait, but they are eaten by larger and more important fishes.

There is one wolf fish, or sea catfish, in Alaska, limited apparently to Norton Sound, and not abundant.

The so-called cusk of Alaskan waters is not at all like the New England cusk, and it is not eaten except by fishes, notably by the cod, for which it is one of the most attractive baits. The species is *Bathymaster signatus*, and occurs abundantly where the cod is found.

The hair tooth is a singular little species which buries itself in the sand near the edge of the tide, leaving only its mouth free, ready for business, and its eyes on the alert for unsuspecting sand fleas, which seek friendly shelter within the fringes surrounding the lips of the concealed angler, whose food comes to him with no further exertion than that of closing his mouth when it becomes agreeably full.

The little spiny lumpfish is common in Behring Sea and northward; it forms a favorite food of the lancet mouth. At Unalashka we secured about twenty lumpfish from one stomach of this formidable species. The spiny lumpfish occurs on our own northern coast, coming south to the deep portions of Massachusetts Bay.

The sea snails or sucking fishes include four species, none of them very large, and all of them unimportant commercially.

The alligator fishes are represented by five species, one of which is known also from Atlantic waters. The species are all marine. One of them is considered a great curiosity because of its resemblance to a little sturgeon.

The sculpins constitute nearly one-fifth of the entire known fish fauna of the Territory, and Alaska probably deserves the palm for sculpins of enormous size. I have seen specimens over 2ft. long—it would not be safe to say how much over—but they were a revelation to me. Two of the species inhabit fresh waters; the rest are marine, but the four-horned sculpin sometimes ascends streams. Some of the species wear bony coats of mail and two have well developed scales and are savory food fishes. One of the forms is so aberrant that a new family is suggested for it, and still another rivals the sea raven for grotesqueness of shape. Some of the species in the breeding season have the belly fins greatly elongated and the rays armed with stiff, spiny bristles.

TARLETON H. BEAN.

[TO BE CONTINUED.]

ENGLISH AND WELSH FISHERY STATISTICS.—R. Giffen, of the Commercial Department, Board of Trade, reports the quantity and value of the fish returned as landed on the English and Welsh coasts during the month of December, 1888, compared with the corresponding month of 1887 as follows: All fish except shell fish, 1888, 48,275,000lbs., valued at £287,146; 1887, 54,566,200lbs., valued at £323,718. Shell fish, 1888, £19,404; 1887, £30,475. Total value of fish December, 1888, £306,550; 1887, £354,193.

SEA FISHING IN ENGLAND.—H. S. Harland communicates to *Land and Water* information about cod fishing in the vicinity of Scarborough. Good fishing has recently been enjoyed off the Promenade Pier, on the north shore, and very good sport with cod off the "White Nab" rocks, about two miles south of Scarborough. The fish ran up to more than 20lbs. and were in exceptionally fine condition.

MY FIRST TARPON.

DAY was just breaking when Will and I pushed our boat from the wharf of Pine Island. The whole eastern sky was one mass of crimson clouds, shading softly into the pale blue higher up where the cloud banks suddenly ceased. Gradually the changing colors paled and paled, fading into dull gray and white as the sun rose higher and showed his fiery edge over the tops of the low mangroves on the key opposite. It was beautifully calm and still, so calm that as we rowed along hardly a ripple could be seen on the surface of the water. From the shore the chatter and whistling of a flock of Florida grackles came faintly to us, while now and then a mullet threw itself out of the water, falling back with a startling splash. Far off across the bay, in the mouth of a small creek, a flock of pelicans were fishing noisily, diving and splashing the water as they fished or chased one another about in play. As the sun rose higher the heat increased, and Will, who was rowing, laid down his oars, and wiping the perspiration from his forehead, turned to me and said, "It is going to be a hot day Mr. Nox, and a fine one for the tarpon."

Passing several low oyster bars, which are covered at high water, we rowed directly toward a large bar, of perhaps an acre in extent. As we neared it Will stopped rowing, and nodding his head toward the reef, said:

"Do you see the deep water just to the south of that bar? That is where I saw the tarpon yesterday, and—look yonder—there goes one now!"

I looked quickly in the direction he was pointing and was just in time to see a swirl in the water where some large fish had evidently come to the surface. As I looked, a dark object suddenly broke the mirror-like surface of the water; a dull gleam, a momentary glimpse of a large dark fin, and then the gradually widening ripples alone remained to mark the spot where the huge fish had shown itself.

"Quick," cried Will, as with a skillful turn of the oars, he faced the boat in the right direction, "throw well out ahead of that ripple, and if he takes it, give him plenty of time before you strike."

Swinging the heavy rod backward, I made a strong cast, and the silk line, weighted with nearly half a mullet, sung from the reel as I threw it forward. Far out it flew, and struck with a splash not 30ft. from the spot where the tarpon had risen. Loosening the line, and seeing that it ran freely under the leather thumb check, I prepared for the struggle. Will cut off small pieces of mullet, and threw them over the water in different directions, while we waited. Five minutes passed, ten minutes, suddenly my line began to run from the reel, with a strong steady movement. "Steady," cried Will, "give him time, don't strike too quick! Now give it to him! Now! Now!!"

Holding the rod firmly with both hands, I checked the reel, and struck so hard that the strong rod bent with the strain. Instantly, with a tremendous rush, a huge silver-gleaming monster, fully 5ft. long, flung itself completely out of water, shaking savagely as it hung for an instant in midair. Down, down it came in a splash of white foam, and it required no warning cry from Will to make me brace myself for the rush which we knew would come. Another moment, and the stout rod bent like a reed and the carefully tested line sung from the reel, in spite of the strong friction of the leather check pressed firmly against it. But the strain was too great to last, the wild rush ceased, and presently the resisting reel ceased to turn, and with a steady pull the great fish moved on, towing our boat rapidly behind him.

Gradually the strain relaxed, and the boat moved slower and slower.

"Look out," cried Will, "he's ugly."

Suddenly the overtaxed rod straightened with a spring. It needed no warning cry from Will to tell me that the fish had doubled and was rushing toward us. I heard Will grunt as he threw his weight on the oars, and then holding my rod forward, with the butt well braced, I awaited the coming strain. Almost instantly it came, the rod bent nearly double, the reel sung loudly, and shaking savagely, the tarpon threw itself fully two feet above the water. Never can I forget the scene which followed; never, if I catch a thousand of his kind, do I expect to see a more magnificent fight for liberty than that grand fish made in his frantic efforts to rid himself of the cruel barb within his jaws. Once, twice, six times, did he cast his whole length completely out of water in his mad struggles. The water foamed and boiled as he fell and sunk almost immediately, to reappear again and again, hurling himself into the air. As he sunk the sixth time the strain on the line suddenly ceased. Turning the reel, there was no resistance. I heard a sigh from Will: "He's got away, sir, and it can't be helped; but he was a game one."

I said nothing, but was sadly disappointed. To have had a fine tarpon hooked for twenty minutes and then to lose him was too bad; but as Will said, there was no help for it, and the only thing to do was to tie on a new hook and try for another.

Slowly and sadly we rowed back to our original position, and Will selected a fresh and enticing bait, attached it properly to the hook, then making a long cast, I settled down quietly to await events.

Perhaps twenty minutes had passed, when again something took the bait and moved slowly away with it. There was no need to "strike" this time, for hardly had I lifted the rod, when with a rush a huge tarpon, larger than the first, threw himself out of the water not 20yds. from the boat and started off, towing us behind him. Holding the rod high up I gave it all the strain I dared, but despite the weight he had to drag, the splendid fish towed us for nearly a mile before evincing signs of fatigue.

Slowly and gently I reeled him in, as the strain relaxed, until we could plainly see him, towing us slowly along, not more than ten feet from the bow of the boat. Will cried to me to give him the rod, and gradually I drew him nearer and nearer; he was not towing us now, but was swimming in circles about the boat. Will leaned over the side of the boat, a huge gaff gripped in his hand. Suddenly I saw him make a quick movement backward, and the great fish, now thoroughly tired out, was pulled alongside and dragged into the boat. There he lay, the most magnificent game fish in the world, glittering in the sunlight, one sparkle of silver, blue and gold. As I was anxious to preserve the skin for mounting, Will advised returning home at once; so we turned about and rowed back, having done fishing enough for one day. Although larger fish are sometimes caught, my first tarpon proved a fine one, measuring 6ft. in length, and weighing 120lbs.

OWEN NOX.

PINE ISLAND, Florida.

BLACK BASS SEASONS.

Editor Forest and Stream:

In the letter of George E. Cole published under the heading of "Fox River Association," in FOREST AND STREAM of Jan. 17, I notice these words: "The killing of fish from Nov. 15 to April 15 should be prohibited." If he had added "and of black bass from Nov. 15 to June 1, this letter would not have been written; but with black bass standing in the very front rank of our game fish, it seems to me that a knowledge of its habits should have caused him to recommend a greater length of the close season than the middle of April. During the months of March, April and May the black bass are nesting. For four weeks the mother bass guards her spawn, and for six weeks after the spawn hatches she protects them as faithfully as does a hen her chickens. While guarding her spawn she will not bite at a bait, but will fly at anything drawn over her nest, and in this way is taken by the pot fishermen; and for every bass thus killed thousands of spawn eggs are left to the mercy of countless enemies. Spearing and fishing through the ice should certainly be prohibited, but they only destroy thousands where killing on the nests destroy tens of thousands.

INDIANA. W. E. R.

STEEL ROD EXPERIENCE.

Editor Forest and Stream:

"Splasher," in a late issue of FOREST AND STREAM, refers to steel rods and general merits. I used one of the fly-rods, about 10½oz., as a bait-rod for trolling and still-fishing, and gave it the severest tests possible under fair handling. I had it doubled up under the boat by large fish, and held hard to anything I struck. The rod showed no wear and remained true. I did not use the line running through the rod, but wound guides on the outside, and used as an ordinary three-piece rod. I know nothing of rust—mine did not show any from dampness on the outside.

It was suggested (and by the makers adopted) that they make the usual three-piece rod, joints parallel to correspond with ferrules, guides outside. They now make some so. I have just handled a three-piece, 8oz. rod, German silver mounting, with outside ring guides, that seemed as well balanced as any fly-rod of wood, as they run.

If "Splasher" would send to them (the makers) for their new catalogue he can learn the latest in that direction. I am pleased to be able to say that the rod I used was very satisfactory, and I intend using the 8oz. for bait-casting the coming season, believing it will prove just the thing, and strong enough to sling a frog from the Windermere Dock at Greenwood Lake and land it on Fuller's doorstep, some six miles away.

BLACK BASS.

MASSACHUSETTS CARP AND TROUT.

IN their annual report the Massachusetts Commissioners say of these species:

There was an abundant supply of carp for a large number of ponds, but very few applied for them. It is evident that the value and importance of this fish is not understood by the people of this State. There are so many places, worthless for any other purpose, where they could be grown with very little expense, that it seems singular that they are not more sought for. There is no way in which so much wholesome food can be produced at so little expense. True, they are not trout or salmon; but taken from the pond and put into spring water a few days before they are wanted for the table, they are quite as good as most of the fish sold in the Boston market.

The artificial hatching and distribution of trout into streams which have been depleted largely by overfishing, has in a majority of cases proved successful. The disappointments, which have been few in number, have arisen mainly from not understanding the habits and haunts of these fish and depositing them in unfavorable parts of the stream. Any one familiar with a trout stream can, in the latter part of October, easily find where the trout are spawning in it. In depositing the young fish they should never be put in below that point. It is always safe to put them in at the headwaters, where they are comparatively free from their enemies, and the temperature of the water, which usually flows from springs, remains about the same throughout the year. Such places are generally supplied with an abundance of good food, upon which the trout can feed at all seasons.

Do you suppose, because you put five or six thousand fry into the stream, that in two or three years you will have anything like that number of grown-up fish? Nature everywhere makes a thousand failures to one success. But this you can depend upon: if there are already enough trout in the stream to produce, in one year, 5,000 eggs, and you plant, properly, in the spring, 5,000 young fry, artificially hatched, and protect them, you will have, at the end of three years, twenty times as many large fish as the result of your planting.

All statements and assertions that artificially bred fish are not as strong and healthy and as likely to mature as those hatched from eggs naturally deposited in the water, are without foundation, and are the result of ignorance and lack of scientific observation. In ninety-nine cases out of a hundred the young fry produced under culture are healthier and stronger than those produced naturally in their waters, and left to the various chances they are more or less subjected to. Twenty years of close observation on the part of those who have been practically engaged in hatching and raising fish, has settled this point beyond a question of doubt.

It is easier to restock a stream having a few large trout in it, than one that has none. The large fish are an important factor in destroying many of the enemies of the young trout, and they never feed upon the smaller ones unless deprived of their natural food or demoralized by disease. We have caught thousands of trout in their native streams, and never yet found one that had been feeding upon its own species. It is always an excellent practice to open fish and game, and find out what they have been feeding on. In game it often determines their haunts, and in fish it indicates what bait to use. If trout have been feeding upon one kind of food for any considerable length of time, they are not likely to change until that supply is exhausted.

So far as our own experience and observation extends, in all instances where failures have occurred in restocking rivers and streams, they have been due either to mismanagement, or to a condition of the water that would have rendered the introduction of either naturally or artificially bred fish equally abortive. This is true of all streams of which we have any knowledge. It has been clearly demonstrated in all the smaller streams under our care, and in the larger and more important experiment of restocking the Merrimac River with salmon. All our early efforts on this river failed, and it was not until a knowledge of the necessary conditions was obtained that success became certain.

There will be about 400,000 trout fry for distribution next spring. They will be delivered free at the hatching house, Winchester, Mass., and cans will be furnished for transportation, to be returned to the hatchery at applicant's expense. All applications should be made before the first of April, indorsed by either senator or representative of the district. Trout fry cannot be intrusted to the express, and a responsible person should be sent to take charge of them. Such a person can take charge of 25,000 or 30,000 fry, and, when several applicants reside on the same line of road, expense may be saved by arranging with one competent man to care for several cans to be distributed along the route.

Fishculture.

PREPARING SALMON EGGS FOR SHIPMENT.

Editor Forest and Stream:

Possibly the practice of systematically and carefully picking out the unfertilized from eggs of the Salmonidæ, before packing them up for shipment, may have been more generally adopted by American fishculturists than I suppose, but it is but a few years since the Maine stations acquired an exceptional reputation for excellence of packing, by the exceedingly small loss appearing on opening their packages of eggs, in consequence, almost solely, of the removal of the unfertilized in advance of shipment; and I fancy that there may be still some readers of FOREST AND STREAM engaged in the handling of salmon and trout eggs who will thank me for showing them the ease with which that operation can be performed.

During the early stages of the development of the salmon embryo it is exceedingly delicate, and rough handling must be carefully avoided. Indeed, my own observations lead me to the conclusion that the unfecund eggs will at that time survive much severer shocks than the fecund. About the time of the coloration of the eyes, however, the embryos acquire a great degree of hardihood, and at the stage when they are usually transported the tables are completely turned, and the fecund eggs are entirely uninjured by a shock that ruptures the membranes of the unimpregnated eggs, and sends them on the path of swift decay. Advantage is taken of this state of affairs at the Maine stations to separate the good from the bad. The eggs, which are developed on wire-cloth trays in frames readily removable from the troughs, are turned out into tin milk-pans, poured back and forth repeatedly, with very little water, and then returned to the troughs. If the contents of a single tray are placed in a pan, they may be poured back and forth six or eight times, letting them drop six inches and strike hard on the bottom of the pan. If they are in large masses hold them a foot high, or pour a great number of times. The object is to assure the shock of a sharp concussion to each egg. Take these eggs out again the next day and you will find the unimpregnated eggs all turned white, and easily picked out with your forceps or pipette. The time required for the operation of concussion, including the removal of the eggs from the trough and their return thereto, is, with our apparatus, about one minute per thousand eggs. An active man will therefore treat half a million of eggs in a day. The picking out of the white eggs of course requires time, according to the number. Our picker at the Penobscot station the other day picked 10,843 out of 475,000 eggs; besides doing considerable other work. That was a very small loss, but I am confident that the work was very thoroughly done.

It is necessary to observe some caution in the application of this process at an early date, as it is not certain that embryos whose eyes are just beginning to color will stand severe concussion without injury. But any one can make a preliminary trial on a small scale.

I have never applied the process to any but the eggs of river and landlocked salmon, but I have no doubt that it will be equally practicable with any other kind of salmon or trout, and would recommend those handling eggs of whitefish to consider whether it cannot be made useful to them.

CHAS. G. ATKINS.

CRAIG'S BROOK STATION, U. S. F. C., East Orland, Me., Jan. 17.

SAWDUST AND TROUT.

Editor Forest and Stream:

I notice in your journal a few articles on trout vs. sawdust, and I do not altogether agree with "Piscator," who states that sawdust has no deleterious effect on the fish. In trying to prove his statements he refers us to some figures on Nova Scotia fishing streams. The fact of taking those streams as reference shows to me quite clearly that "Piscator" cannot understand the fish we call trout. I can see why sawdust can't possibly have the slightest effect upon the trout found in Nova Scotia. I have yet to see a trout caught in that Province of sufficient magnitude to take into the gills or mouth a sawdust of pine or otherwise. So one can easily see, although lots of dust may be in Nova Scotia streams, no harm can be done to the fishlets. But it is quite different with our New Brunswick beauties. I am sure if "Piscator" would spend a season with us in New Brunswick and study matters as thoroughly as he did in Nova Scotia, he would then side with us that our trout will succumb to the effects of pine sawdust.

There is another statement that "sawdust will not decay under water." We again disagree. I find from observation that it will, to a certain extent, decompose even if it be constantly covered with water; but if exposed to the air at times, which is the case during dry spells, it can't escape becoming putrescent in time. We all know that the poisonous gases, which are always being given off, will be against rather than encourage fish or any animal to frequent such a place. In this Province I notice that trout are largest and most numerous in streams having a clear, stony bottom, where there are no sawmills and consequently no dust to interfere. Would like to know from Mr. Hallock or Mr. "Piscator" why this should be the case in our particular part of the globe?

FISHER.

KINGSTON, N. B.

HATCHING COD IN NORWAY.—From Mr. Adolph Nielsen we have the following interesting information about the operations at the marine station of Arendal, under the charge of G. M. Dannevig. The height of the spawning season is in March and April. Last year's collection of eggs amounted to 64,000,000, of which about 36,000,000 were developed as fry. Mr. Dannevig is about to try a new method of gathering cod eggs. He proposes to make artificial sea-water basins, into which he will pump water and confine therein cod approaching the spawning condition. The eggs, naturally fertilized, will be hatched in the usual way, and he expects to gets a larger percentage of healthy fry. The fry cost about one cent a thousand. In the summer the Arendal establishment will be occupied in hatching lobsters and oysters; with the latter it is said the results are very good. Mr. Nielsen is now on his way to Newfoundland, to take charge of the department of fishculture in that Province.

OYSTERS KILLED BY STARFISH.

THE depredations of the starfish on oyster beds have been a matter of observation and record for many years. Only recently, however, has the Government been appealed to for assistance in devising remedies for the evil, and, although the impression prevails in some quarters that the Congress appropriated a sum of money for investigation and report upon this scourge of the oystermen, no funds have yet been voted for this specific object. The preliminary work done last summer in Providence River, Narragansett Bay, and Long Island Sound by the U. S. Fish Commission was paid for out of the general appropriation of the Commission. The steamer Fish Hawk, it is expected, will continue the investigation next summer after the close of the shad hatching season.

It has been stated that starfish destroy several hundred thousand dollars' worth of oysters annually. They make their appearance suddenly in countless numbers, and complete their work of devastation very quickly; a day or two may suffice for the destruction of an entire bed. Mussels and soft shell clams are greatly liked by the starfish also. We have seen a starfish devour seven medium-sized clams in a half day, and apparently in preference to oysters contained in the same aquarium, because of the greater ease in penetrating the shell of the clam. It is doubtless known to most persons that the starfish envelopes its prey with its flexible arms, suffocating it and causing the shell to open; when its stomach is projected around the animal and absorbs it at leisure.

It has been suggested that small beds of oysters might be protected by surrounding them with a shoal of mussels. In some waters, it is asserted, however, that starfish will not atack mussels. The studies of the Fish Commission staff were limited chiefly to the temperatures, densities and salinity of the water on the oyster beds affected by this enemy, and to the animals associated with the oyster, with particular reference to the conditions of their existence and thrift. The starfish cannot live in fresh water, and it is liable to destruction from the reduction of the salinity of the water by the action of heavy freshets. The only practical method of exterminating the starfish known at present is the expensive one of dredging them as now practiced by oystermen of Connecticut.

THE GRAMPUS AT KEY WEST.—The U. S. Fish Commission's schooner Grampus arrived at Key West Jan. 27, with the loss of seaman Brown. The particulars of his death are not yet known, but it is supposed that he was washed overboard. The Grampus will be engaged in the investigation of the fishing grounds in the Gulf of Mexico and the movement of food fishes. Dr. James A. Henshall will join her as naturalist in a few days. Among other things he will take especial pains to collect any of the fresh water fishes that may be accessible. Capt. D. E. Collins is now at Key West and will collect statistics of the fisheries there and elsewhere in Florida.

MR. ADOLPH NIELSEN, of Norway, is now on his way to assume charge of the fishculture work of the Province of Newfoundland. He will stop over at Gloucester, Mass., for a day or two to examine the cod hatching station on Ten Pound Island, then go at once to St. Johns. Mr. Nielsen has a very high reputation in Norway as an accomplished fishculturist.

DR. JAMES A. HENSHALL is now in Washington receiving final instructions for his natural history work on the Grampus. He will go to Key West in a day or two. Correspondents should address him either at his Cincinnati home or care U. S. Fish Commission, Washington, D. C.

The Kennel.

FIXTURES.

DOG SHOWS.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Eu lson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6923.**

PACIFIC COAST FIELD TRIALS.

SACRAMENTO, Jan. 19.—The sixth annual field trials of the Pacific Coast Field Trial Club commenced on Monday, the 14th inst., on the grounds of Messrs. Haggin & Carr, near Bakersfield, Kern county, Cal. These gentlemen, who own a little patch of some 400,000 acres in Kern county, kindly allowed the club the privilege of running its trials on any portion of three full sections lying close to the town, and on which no shooting had been permitted during the season. The local gun club (Knights of the Trigger) had looked after all preliminary arrangements for the meeting, and everything passed off harmoniously and to the delight and pleasure of all, unless, perhaps, the few whose canine pets disappointed them. The grounds are in the center of the level San Joaquin Valley, covered with grass, light weeds and some patches of low sage brush. Birds were found without much trouble, except on Wednesday, when some poor ground was struck. All of the work was witnessed by the spectators, who followed the handlers and judges in carriages, buggies and on horseback.

The attendance was quite large, considering that most of the visitors had to travel from 300 to 400 miles. Prominent among the visiting sportsmen were the following named: J. G. Edwards, of Oakland, president of the club; G. T. Allender, Watsonville; I. N. Aldrich, Marysville; H. H. Briggs, of the *Breeder and Sportsman*; J. M. Barney, Dutch Flat; J. M. Bassford and G. W. Bassford, Vacaville; H. Boyd, San Francisco; E. W. Briggs, Santa Clara; H. C. Chipman, Sacramento; J. S. Dunham, Stockton; Hon. W. W. Foote, San Francisco; H. Gerber and J. Gerber, Sacramento; J. G. Gates, Vacaville; Alva Green, Galesburg, Ill.; W. H. Harris, Oakland; H. A. Hubbard, Oakland; S. D. Meriweather, Ventura; W. DeMott, Stockton; Judge C. N. Post, Sacramento; Senator J. T. Pindar, San Francisco; L. J. Rose, Jr., Ventura; William Schreiber, San Francisco; Judge P. J. Shafter, Point Reyes; P. M. Scott, Oakland; W. Thomas, Chico; F. A. Taft, Truckee; R. T. Vandevort, Pasadena; F. A. Watson, Colusa; M. D. Walter, Galt; N. E. White, of the Sacramento *Record-Union*.

Besides those coming from distant portions of the State, many of the citizens of Bakersfield turned out each day to witness the trials. The judges were: R. T. Vandevort, P. J. Shafter and I. N. Aldrich, and their decisions seemed to meet with general approval.

At the annual business meeting of the club the following new members were elected: J. S. Dunham, of Stockton; R. E. Auerbach, of Oakland; H. L. Borgwardt and I. L. Miller, of Bakerfield; R. Seymour, of Sumner; S. D. Meriweather, of Ventura, and Wm. Thomas, of Butte. Propositions to increase the amounts of the initiation fee and annual dues, and to retain 20 per cent. of the purses for club expenses, were voted down. Officers for the ensuing year were elected as follows: President (third term), J. C. Edwards; First Vice-President, J. M. Barney; Second Vice-President, L. J. Rose, Jr.; Secretary and Treasurer, H. H. Briggs; Executive Committee, J. S. Dunham, Wm. Schreiber, Hon. D. M. Pyle, J. M. Bassford, Jr., and Judge C. N. Post. A vote of thanks was tendered the Knights of the Trigger and other citizens of Bakersfield for their unremitting attentions and efforts to make the occasion one of enjoyment to their guests. It was decided to hold the next annual trials on the same ground, to commence on the third Monday in January, 1890.

The Derby nominations numbered twenty-four, but some of the puppies failed to come up to their owner's fond expectations, many others fell victims to the destroyer, distemper, and others were sold to parties who had not yet learned of the advantage to be gained by field trial competition. So the number of starters dwindled to five. The trials developed at least one phenomenal piece of dog flesh in J. E. Watson's pointer puppy Black Joe. He was a veritable "dark horse," and literally walked over the rest of the menagerie. There was considerable talk about his alleged obscurity of breeding and age. Some said he was picked up on the streets of San Francisco; others declared that he would never pass his sixth year again, and one story was that he came as an unknown on some ship from England. His handler declared that the owner of the dog had written him that he was whelped in February, 1887. At all events he is a wonder. He is of medium size, and jet black. His body is light, but his running is strong and speedy and his movements lithe and graceful. His head is not of classic mould by any means, but its thickness seems to indicate an extra quantity of brains. On point he is a perfect picture of the typical, high-strung pointer. He won the Derby from Bassford's true-nosed, industrious little pointer bitch Lottie B., and in the All-Aged Stake he was an easy winner. Whatever his age or breeding may be, he is a grand dog, and if a "mongrel," as some declare, it would not be to the disadvantage of some of the blue-blooded stock of the country if a little of his quality of mongrel blood could be infused into it. But there is every evidence that the dog is of excellent breeding and purity of lineage, even though his present owner knows nothing of his history, which, however, is not a very likely supposition.

On nearly every day of the trials Mr. C. A. Nelson, a local photographer, followed the dogs in the field, and secured a number of excellent pictures of the dogs, handlers and spectators. Later Mr. Boyd, whose animal pictures in the *Breeder and Sportsman* and other publications have attracted much attention, came from San Francisco (nearly 400 miles), and with his field camera caught a large number of pictures of the dogs when pointing and backing. Some copies are promised for the FOREST AND STREAM.

The drawing of the Derby entries took place on Sunday night, and resulted as follows:

THE DERBY.

BLACK JOE (Jas. E. Watson), black pointer dog (said to have been bred by Pape),

against

PRIDE (Albert Peri), black white and tan English setter dog (Nixie—Pearl Laverack).

LADDIE (William Schreiber), lemon and white pointer dog (Tom Pinch—Lassie),

against

LOTTIE B. (George W. Bassford), liver and white pointer bitch (Professor—Gracie Bow).

NESTOR (William Schreiber), lemon and white pointer dog (Gladsome—Forest Queen), a bye.

The rain which commenced falling on Sunday afternoon continued during the night, but ceased shortly after daylight. The ground, however, was quite wet, and the starting of the Derby was deferred until afternoon. The party left town about half past one o'clock P. M., and reached the grounds a little after two o'clock.

First Series.

BLACK JOE AND PRIDE.

The first brace was started at 2:30. Joe was handled by George T. Allender, and Pride by M. D. Walter. Within a few hundred yards of where they were started the dogs found birds. Joe displayed excellent ranging qualities and speed, carried his head well up, and altogether showed excellent style. Pride did not range so wide, and ran with a low head as if seeking foot scent. He was fast enough, but lacked the dash and style of his competitor. Soon after coming upon the birds Pride dropped to a point in a low swale covered with grass and a sparse growth of sage brush. Walter flushed and killed; both dogs steady to wing and shot. Pride retrieved to order in good fashion. The dogs were sent on through the sage weeds, and going over a little ridge both passed some close-lying birds in the thick, low grass. Joe soon pointed handsomely, and Pride being brought up flushed a cottontail. Joe pointed again soon after, but no bird was found, the quail being evidently on the run. Going up a low swale some birds got up ahead of Joe, who soon afterward made a very good point in the edge of the grass, the bird flushing as the party moved up. Joe made several points in the next few minutes, Pride doing comparatively little work. At 3:10 the judges ordered the dogs up, and awarded the heat to Joe.

LADDIE AND LOTTIE B.

This brace was put down on the same ground at 3:35, the former handled by Allender and the latter by her owner. The heat can be briefly described. Laddie is a high, upstanding dog, of great dash, speed and style, and from the way he started off looked for all the world like a winner. Lottie, a high-strung little bitch, did not at first range widely, although she was speedy and covered her ground closely. It was some minutes before the birds were found, when a covey of perhaps a hundred were seen skulking off over some smooth ground toward a patch of light brush. The dogs were halted, and a couple of horsemen dashed in among the birds and scattered them. Then the dogs were sent on, and some very handsome work was done by Lottie. Time and again she pointed in grand style, and birds were invariably found in front of her, and Laddie continued to range in his magnificent style, but seemed to have little idea of hunting quails. On one occasion Lottie had a bird pinned in the grass. Laddie ran up and put up a hare within a few feet of the bitch, but the latter held her point, and her handler put up and killed the quail. Both dogs broke shot, Lottie retrieving the bird. Lottie made eight points, and toward the close of the heat was increasing her speed and range. At 4 o'clock the dogs were ordered up and Lottie was declared the winner. All who saw the work done in this heat were loud in their expressions of admiration of the winner, and the owner of the beaten dog declared that he was well repaid for his journey of 300 miles by witnessing the work done by her. She had had but a few weeks' real work on birds, and is inclined to be unsteady to shot, but another season's experience will doubtless cure this defect, and then her owner need not fear to run her in any company. This ended the first series, Nestor having a bye.

Second Series.

Tuesday morning opened cloudy and cool, but by the time the cavalcade reached the grounds the sun had come out and the remainder of the day was warm and comfortable.

LOTTIE B. AND NESTOR.

The first brace put down was Lottie B. and Nestor, pointers. Lottie was handled by her owner, Mr. Geo. Bassford, and Nestor by his breaker, Mr. Allender. The dogs were put down at 10:25. Nestor showed great speed and wide ranging qualities, and his stylish manner of carrying himself elicited general admiration. He is a lemon and white dog imported from Scotland by Wm. Schreiber, his present owner. Lottie showed more speed than on the preceding day, and ranged out somewhat better. As usual, she worked her ground more thoroughly than the dogs that had been pitted against her, and while Nestor was far away seeking coveys she was getting in her work on scattered and hard-lying birds. A few minutes after being turned loose the dogs found birds, but the ground was still wet, and the quails at first evinced little disposition to lie well. Lottie got in among them and made several points, but they did not wait long for her. Nestor put up several and generally dropped to wing. The birds seemed be to everywhere. Several points were made by each in rapid succession in the low sage-weed and grass, and to the spectators it looked like a pretty close heat, but Nestor soon broke after a hare, refused to obey the whistle, and indulged in a good long chase. As he came up Lottie had pinned some birds and Nestor dropped to back. Bassford flushed, shot and missed; both dogs steady to wing and shot. Going up a low ridge Nestor pointed and Lottie backed some 50yds. away. The bird ran and the dogs soon moved on. Several birds got up before Nestor, who soon pointed again. Lottie backed handsomely as before, and again the birds got tired waiting and ran away in the high weeds. Considerable ground was then covered without finding birds, when Lottie pointed one in a bunch of scrub willow. Nestor had the best of the business so far as range, speed and style were concerned, but Lottie outranked him in nose, staunchness, obedience and backing qualities, and these won her the heat. At 11:30 the dogs were ordered up.

Final for First Place.

BLACK JOE AND LOTTIE B.

At 11:50 Black Joe, handled by Mr. Allender, and Lottie B., handled by Mr. Bassford, were started off to decide first place. The style of both dogs has already been described. Joe had the advantage in range and speed, and although Lottie did some very nice work on scattered birds, her sable competitor proved too much for her, although according to many private score cards she had a little the best of it. The dogs were worked twenty minutes, Lottie scoring one point, when a halt was made for lunch. At the expiration of an hour they were turned loose again, and Joe soon pointed, but moved on to the left. Lottie came up and pointed a bird a few yards from where Joe broke his point, and her handler put up the bird. After covering much ground without finding birds a covey was flushed in a swale, and the birds scattered out through the grass. Joe soon swung to a magnificent point near some bunch grass, from which three birds were put up. It was a pretty piece of work, and being in open ground was witnessed and admired by the large party of spectators. Joe afterward roaded up some birds, but later on both he and Lottie made several creditable points. At 1:35 the dogs were ordered up and the heat and first money awarded to Joe.

Final for Second Place.

LOTTIE AND PRIDE.

At 2:15 Lottie was put down against the English setter Pride to contest for second place. The former was handled by her owner and the latter by Walter. This was Lottie's third successive heat, and her speed and range increased the longer she ran. Pride was about her equal in range, but had less style and did not quarter his ground as thoroughly as she did. Each made several points, which the other honored. Birds were not found as readily as in former heats, and many acres were drawn blank. Toward the close of the heat, however, a couple of coveys were found, and Lottie doing some nice work settled the business. At 3:30 the dogs were ordered up, and the heat and second place awarded to Lottie.

Final for Third Place.

NESTOR AND PRIDE.

These dogs were put down at 3:45, handled respectively by Allender and Walter. Nestor had the best of it in every way, outranging and outpointing Pride, and at 4:20 the work was ended by the judges declaring in his favor.

Following is the summary:

First Series.

Black Joe beat Pride.
Lottie B. beat Laddie.
Nestor a bye.

Second Series.

Lottie B. beat Nestor.
Black Joe a bye.

Final for First Place.

Black Joe beat Lottie B. and won first prize.

Final for Second Place.

Lottie B. beat Pride and won second prize.

Final for Third Place.

Nestor beat Pride and won third prize.

ALL-AGED STAKE.

On Tuesday evening the dogs in the All-Aged Stake were drawn. The number of starters was about half of what was expected, and although there were upward of fifteen dogs on hand but ten were entered. The drawing resulted as follows:

ROYAL DUKE II. (J. G. Edwards), black, white and tan English setter dog (Regent—Dolly),

against

SIROCCO (California Kennels), orange belton English setter dog (Sportsman—Sweetheart).

DICK (W. W. Foote), black, white and tan English setter dog (Royal Duke II.—Bess),

against

SUNLIT (California Kennels), orange belton English setter bitch (Sportsman—Sweetheart).

SCOUT CROXTETH (J. T. Pindar), liver and white pointer dog (Croxteth—Patti M.),

against

SIRIUS (Thomas Bennett), orange belton English setter dog (Sportsman—Sweetheart).

BLACK JOE (J. E. Watson), black pointer dog (said to have been bred by Pape),

against

GALATEA (J. M. Barney), liver and white pointer bitch (Nick of Naso—Temptation).

POINT (L. J. Rose, Jr.), lemon and white pointer dog (Don—Drab),

against

SOLANO B. (H. A. Bassford, Jr.), liver and white pointer dog (Glen R.—Josie Bow).

On Wednesday morning it was concluded to try some new grounds a couple of miles away, and it proved to be a great mistake, as birds were scarce there, and when the former grounds were reached the handlers seemed bent on determining which could get furthest away in each heat from where it would be possible to strike a covey of birds. As a result the day's work was tedious, laborious and unsatisfactory.

First Series.

DUKE AND SIROCCO.

At 9:35 o'clock Royal Duke and Sirocco were cast off where some birds had been marked down, the former handled by Edwards and the latter by Walter. Both showed good speed and unusual range; but their speed and range seemed to carry them into the most unlikely parts of the field for birds. After covering a large area of ground the crowd got among a lot of quails in some heavy grass and weeds, and the dogs were called in to work it. In doing so they put up bird after bird, and passed by many that they should have pointed. There seemed to be something wrong, as both dogs were known to have done good work in private. After being down an hour without making a point, the judges ordered them up, to be tried again later on.

SUNLIT AND DICK.

This brace was put down at 10:45 on the same ground, handled respectively by Post and DeMott. They seemed to be about equal in range and speed. Dick showed a great deal of dash, but Sunlit seemed to have her mind more closely on the business of finding birds. After a long run over barren ground the dogs were swung off into a broad swale, and soon a point was claimed for Sunlit, but the bird could not be found. Dick also soon pointed in a bush, but moved on without result. The birds were evidently running through the weeds, as Sunlit soon made another stylish point to which nothing was found. In a light thicket of willows Sunlit held a bird staunchly, which Post put up and missed. Just then Dick pointed, and Sunlit backed him gracefully. The bird turned out to be a little cottontail. In some long grass at the edge of the willows Dick made a handsome point, and Sunlit being brought up facing him honored the point in fine style. The dogs were allowed to hold their positions until the photographer could come up, and he caught a very beautiful picture; but in the meantime the bird had run. At 11:30 a move to another section of land was made, and at 12 M. the dogs were put down in some light sage weeds. A covey was scattered by the spectators, and the dogs worked on them. Sunlit roaded up into the grass on the side of a swale, and was fast squaring herself for a point when the bird flushed. Soon after Dick pointed a bird on the ridge, and was prettily backed by Sunlit. At 12:30 the dogs were ordered up for lunch, and were put down again at 1:10. A covey of running birds rose wild and scattered, and Sunlit got among them, and pinned one in the grass. Dick did not feel inclined to back. DeMott put up the bird, shot and missed. At 1:15 the heat was given to Sunlit.

SIRIUS AND SCOUT CROXTETH.

This brace was cast off at 1:30, the former handled by Post and the latter by DeMott. Sirius is a rather large dog, but has a fair rate of speed, with sufficient range for these grounds. Scout had the better style, and also good range, but his forelegs were stiff, as if suffering from a rheumatic affection. He has a remarkably fine head, and altogether is a handsome pointer. Neither dog seemed to be on his good behavior, so far as obedience was concerned. Sirius displayed the better nose, and was so cautious that he frequently pointed where the birds had been. Scout, on the other hand, put up a great many birds that he should have pointed. After quite a run Scout pointed a bird in some high weeds. Sirius was too far away to be brought up for a back, and DeMott put up the bird, shot and missed. Scout was steady to shot. The party then went to the grounds used the day before, and after a long search birds were found in the sparse sage weed. Sirius came to a point, and Scout was brought up but refused to back. Sirius still held his point, and Scout was again brought up behind him and backed to order. Here the photographer again got in his work; and when all was over no bird was found. It was claimed, however, that when Sirius first pointed there was a small covey in the weeds, and that the birds were seen to run. This the handlers and judges may have seen, but others slightly in the rear saw no birds after the first covey had risen wild from the same spot. The judges, however, must have had good reason for their action, for they immediately (2:35) ordered up the dogs and gave the heat to Sirius.

BLACK JOE AND GALATEA.

At 2:45 this brace was cast off on the same ground, the former handled by Allender and the latter by her owner, J. M. Barney. Joe has already been described. Galatea is a very speedy and stylish little bitch by Nick of Naso out of Temptation, and showed excellent natural qualities, but her handling and breaking had been of a very superficial character. Being very fast, she lacked caution, and too frequently dashed into cover recklessly and put up birds that should have been pointed. She made the first point, however, but the bird did not hold. Indeed birds rose wild before both dogs, during the first few minutes. Soon Joe established a very stylish point and Galatea backed in handsome style. Allender put up the bird, but failed to shoot. Joe was steady to wing, but Galatea made a break and stopped to order. Both soon pointed the same bird in sage, and it rose wild. Moving on Joe dropped to a bird on high ground in the grass, but it would not lie. Galatea then roaded a bird in the grass, but failed to locate it before it rose. Both were now quartering their ground very nicely, but they had worked off to less promising ground and birds were getting scarce. A few were driven out of a dry bottom upon a grassy bank, and Joe was following them up, but before they were allowed to find a hiding place Joe's handler shot at them and they left for other parts. Galatea meantime roaded up three running birds. Then followed a long and weary tramp over barren ground, and at 4:30 the dogs were ordered up to be put down again in the morning.

Thursday was a day of the finest sport imaginable. A slight frost in the morning gave a delightful crispness to the atmosphere, and by 9 o'clock the day was warm and pleasant. The same grounds were selected where the work of the day before was commenced, and a large covey of birds was found in an open flat covered with bunch grass and low willow shrubs. Joe and Galatea were put down at 9:45, and after a fifteen minutes' run the heat was given to Joe, he having made two points and Galatea scoring a flush.

ROYAL DUKE AND SIROCCO.

At 10:15 Royal Duke, handled by DeMott, and Sirocco, handled by Walter, were cast off. (This was the first brace put down in the All-Aged Stake in which no decision was given). Sirocco soon put up a couple of birds in the high weeds, and his handler flushed and killed another, which Duke found and retrieved. In the low willows Duke pointed and was backed by Sirocco. Duke was out of his handler's sight, and also of the judges', but Sirocco's handler, Walter, called the judges' attention to the point (a bit of courtesy to an opponent that does not often intrude itself upon field trial customs). Duke soon again pointed, but the bird rose at once. Sirocco pointed a lark, and Duke nailed a quail at the same time, but the latter ran and Duke broke in and flushed it. The dogs were down but ten minutes, when they were ordered up and the heat given to Duke.

POINT AND SOLANO B.

Both of these dogs ran last year. Point won second in the Derby and first in the All-Aged Stake. Both are large pointers. Point did not do quite as well this year as last, while Solano B. showed improvement in range and speed. The former was handled by Allender and the latter by DeMott. Before they had gone 50yds. Point roaded and three birds rose wild, and Solano soon did a similar thing. He soon nailed a bird in the grass close by the wagons, and DeMott shot and missed. He then drew on a bunch of quails, but they rose wild. Point soon located a bird in the grass, but was not allowed to hold it long. At 11:45 the dogs were held up, while a trip was made across the field to a broad, wood-covered flat, where a large covey had been seen. They were put down at 11:30, and in a quarter of a minute were right in among the birds. Then followed point after point in quick succession and birds flushing right and left. The dogs got considerably rattled, as did also their handlers and the spectators. When the confusion and excitement had subsided ten minutes afterward, the judges consulted and decided that Point had the best of the struggle.

Second Series.

ROYAL DUKE AND SUNLIT.

At 11:50 this brace was started, Duke handled by DeMott and Sunlit by Post. Before running many yards Sunlit made a staunch point on the edge of the swale, but Duke failed to honor it. Post put up the bird, shot and missed, both dogs steady. Coming to a small ditch Sunlit again pointed and her handler again put up the bird and failed to grass it. Sunlit covered her ground more closely than in previous heats, and her superiority was so manifest that the judges in 20m. ordered the dogs up and awarded her the heat. Although Duke had not secured a point while the heat was in progress, he established one in grand style while being called in. Sunlit was by request sent up to back, which she did, and the ever-present photographer came up and secured a splendid picture.

BLACK JOE AND SIRIUS.

This brace was cast off at 12:50, the former was handled by Allender, and the latter by Walter. The dogs were about equal in range, but the pointer had higher speed and the more stylish way of going. Sirius soon stopped on three birds in the grass, but they rose wild. Joe was pointing some distance away, and Sirius being brought up did not back. Allender raised, shot at and crippled the bird, and both dogs were steady. Joe soon roaded and a bird rose before him. Sirius meantime had come to a point in a low bottom, and Joe refused to back. No birds were found. Soon after Sirius pointed a hot rabbit nest, and Joe backed. Going down the swale Joe struck scent and roaded a bird to a point, but it flushed as the handler came up. Out in some weeds Sirius soon pointed in fine style, and the pointer backed him grandly. Walter put up a large covey, and both handlers turned loose on the birds, the dogs being steady to wing and shot. Sirius soon again pointed in the sage weeds, and Joe backed, but no bird was found. Moving out upon some rising ground with heavy grass cover, the setter pointed another covey, which rose quickly. Walter shot twice, Sirius remaining steadily on point. Going on, Joe roaded and came to a point on some rising ground, and was backed by Sirius. Allender flushed, shot and killed; the dogs steady. The work throughout this heat was very fine. At 1:50 Joe was declared the winner.

Third Series.

POINT AND SUNLIT.

At 2 P.M. Point and Sunlit were put down, the former handled by Allender and the latter by Post. A covey of birds had been marked down in a broad, weed-covered swale, and immediately on entering it Sunlit came to a point, which the pointer backed. Post shot and killed and both dogs broke in, Sunlit retrieving the bird. The birds were skulking away, and three rose before Sunlit as she moved on, and she chased for a bit. In the weeds Point soon pinned a bird, and was nicely backed by the setter, but the bird had run. Sunlit, going on, pointed a bird in the weeds, and Point coming up with a dash of speed jumped clear over her. Post put up the bird, shot and missed, the dogs steady. The bitch moved on, and soon again pointed, and this time was well backed by Point. At 3:10 the heat was given to Sunlit.

Final for First Place.

BLACK JOE AND SUNLIT.

At 2:30 this brace was cast off on the same ground. They were of about equal range and speed, but very different in their style of going. In a few minutes Joe established a point in the swale, and Sunlit being brought up backed him staunchly. Two birds were put up, but were not shot at. Joe afterward pointed a hare's nest, but soon moved on. The setter next swung into a point on a bird, which flushed as the handlers came up, and before Joe could be brought in. Moving down the swale Joe nailed a bird, which did not wait for a back. Up on a grassy mound Sunlit made game and roaded on, and Joe coming up found and pointed the bird, which his handler shot at and missed. Sunlit next pointed in the bottom, and Joe backed; but no bird was found. The bitch tried to locate several times, but the birds were constantly moving. Joe handsomely pinned one in the grass, which his handler killed, and Sunlit retrieved it. After some more work, in which Joe made a couple of fine points, and was backed in each case by Sunlit, the judges, at 3:20, declared the pointer winner of the heat and first money.

Ties for Second Place.

SIRIUS AND GALATEA.

Bennett's setter Sirius and Barney's pointer Galatea were run to determine which should compete with Sunlit for second place. They were cast off at 3:30, and after a ten minutes' run both made several points and some very fine backing was done by Galatea, the heat was given to Sirius, he having a few more points to his credit.

SUNLIT AND SIRIUS

This brace (litter brother and sister) was cast off at 4 o'clock, the former handled by Post and the latter by Walter. Fifty yards from the start Sunlit pointed, and almost at the same instant Sirius did likewise. They held their positions steadily until the photographer secured a good picture, when three birds were put up. Walter shot and missed, the dogs steady. After a short cast through a swale both again pointed seventy yards apart, and Post put up and killed Lit's bird, she being steady. The dog's bird proved to be a crippled one, which ran and he retrieved it. He soon pointed again in the edge of the grass, and his handler shot and missed. Another of his points Sunlit backed some eighty yards away. Walter shot and killed, both dogs breaking, but they stopped to order. Sunlit retrieved the bird nicely. At 4:15 the dogs were ordered up and the heat given to Sirius.

Final for Third Place.

A later start was made from town on Friday, there being but one more heat to run—for third place. The morning was a little bit raw owing to a sharp wind from the north, and dull clouds obscured the sun. The grounds were reached about ten o'clock.

SUNLIT AND SCOUT CROXTETH.

This brace was put down at 10:25, the former handled by Post and the latter by DeMott. Both ranged off at good speed, but Scout still exhibited a stiffness in his limbs. For all that, he showed himself to be a stylish fellow and a careful worker. Post soon walked up a bird in a low bottom, which he grassed and Sunlit retrieved. In an open place both pointed the same bird, which DeMott killed, and Scout retrieved it in good shape. Both dogs were steady. Sunlit next roaded some birds to a point, but they did not hold. She soon after pointed in a bush, and the bird flew from above her head. Considerable ground was drawn blank, when the bitch got a bird in the grass and was staunchly backed by the pointer. The bird on being put up (the dogs steady) flew back among the spectators and was not shot at. After being down an hour and a quarter the heat was given to Sunlit.

This ended a week of unalloyed sport in the field. Good dogs, plenty of birds, fine open fields to work them over, gentlemen judges, gentlemen visitors, gentlemanly handlers and springlike weather—what more could the most ardent sportsman desire? These annual meetings of the Pacific Coast Club are growing in interest. Every year finds a better class of dogs in competition, and none but the better class of sportsmen have been present at any of the meetings. Next year the list of starters will no doubt be very large, as many puppies have been whelped the past year, and the majority of them will be entered in the Derby, while the All-Aged list is yearly increasing.

Following is the summary:

First Series.

Royal Duke beat Sirocco.
Sunlit beat Dick.
Sirius beat Count Croxteth.
Black Joe beat Galatea.
Point beat Solano B.

Second Series.

Sunlit beat Royal Duke.
Black Joe beat Sirius.
Point a bye.

Third Series.

Sunlit beat Point.
Black Joe a bye.

Final for First Place.

Black Joe beat Sunlit and won first prize.

Ties for Second Place.

Sirius beat Galatea.

Final for Second Place.

Sirius beat Sunlit and won second prize.

Final for Third Place.

Sunlit beat Count Croxteth and won third prize.

N. E. WHITE.

AN ILLINOIS FOX DRIVE.

I WONDER if after last week's broadside, there is anything left of "Tallyho." The "brethren" seem to have formed a compact to annihilate him. While reading their peppery lines Mr. Savage, of this place, passed my study window, carrying a big red fox which he captured in a fox drive last Friday. I hurried out to ask him about the hunt, a species of sport in which I have never joined, and yet one which must be exciting in some ways. In this country all the roads run at right angles with each other and with the cardinal points of the compass. A week before the day for the hunt, hand bills were distributed through the country, indicating a certain tract of land three miles square which was to be beaten over, and the round up was to take place in the center. There was a captain for each of the four sides of the inclosed space. The start was made at ten o'clock exactly. No guns or pistols were allowed. About seven hundred men joined in the sport, and several women, with a taste for adventure, appeared on the scene.

No one could tell in advance what the result of the drive would be, but the hopes of many were high. As the lines drew toward each other it became evident that there was something alive in the ring. This was certain when the women, with clubs in their hands, went toward the center of the five acres or so of ground which was girdled by a closely standing line of eager men. Beating about through the weeds in the low, swampy ground in the middle of the inclosed space, they soon started the foxes, five in number. Two of them got too near the outside of the ring, and were killed by the men. After chasing the others for a while the ladies were ready to abandon their pursuit, and the men closed in and made short work with the three.

This is the method of catching foxes in this part of Illinois. It is not the New England way, and perhaps gives the fox less chance for his life, unless he is sharp enough to dodge out of the ring before the hunters get close together, but men are not likely to consider all the fine points of hunting ethics when they are after a lot of chicken thieves and pig stealers which have, at sundry times, invaded their coops and styes.

Next Wednesday, Jan. 23, there is to be a similar drive, 15 miles from here, near Homer. There are a number of wolves in the neighborhood and it is hoped they can be captured.

RICHARD GEAR HOBBS.

URBANA, Ill.

NEW YORK DOG SHOW.

Editor Forest and Stream:

In addition to the special prizes already announced the proprietors of the Murray Hill Hotel, New York, offer $25 for the best field spaniel puppy.

Mr. K. E. Hopf, proprietor of the Hospice Kennels, Arlington, N. J., offers two special prizes of $50 each, one for the best smooth-coated, the other for the best rough-coated St. Bernard puppy, whelped after May 1, 1888, the get of his champion Hector, one-half the amount of each special to go to the breeder of the winner.

The Westminster Kennel Club offers a silver medal for the best rough-coated St. Bernard bitch shown with two of her produce, and a similar medal for the best smooth-coated bitch on the same conditions. Kindly state that we have decided to make a class for dachshund puppies, also that the weights in the spaniel classes which were by an oversight omitted in our premium list will be as heretofore, viz.: Field spaniels, 28lbs. and over; cocker spaniels, under 28lbs.

JAS. MORTIMER, Supt.

TROY DOG SHOW.—Troy, N. Y., Jan. 28.—*Editor Forest and Stream:* Please announce that we have made two new classes, a challenge class for English setter bitches and one for Irish setter bitches, with prizes of $10 and medal for each class.—ALBA M. IDE, Secretary.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream:

"Awahsoose" does not need indorsement on the subject of fox hunting, but I would like to be counted in, as agreeing with him, and also your correspondent "R. S. F.," of Laconia in this State, who has the whole matter in a nutshell. "Tallyho" "put his foot in it" decidedly, instead of in the stirrup, when he mounted his hobby, which is the only horse he could ever ride over the fox-haunted hillsides of Vermont and New Hampshire.

He says he has lived in Massachusetts and knows all about it, and perhaps he does, but his subsequent remarks do not show much evidence to that effect. He is joined by another Colorado man, "Weymouth," who says "there is lots of country in the Connecticut Valley where a fox could be hunted in the usual way." Meaning, presumably the English way. Now I happen to know something about the valley, and although there are a good many thousand acres of it, over which horses might be ridden, it would puzzle the hounds to find any scent of foxes on them, unless some chicken-stealing marauder had come down for the night from the rocky steeps of Mt. Tom, or Mt. Holyoke, over which an Englishman would as soon think of trying to take a pack of hounds as he would over the top of Snowdon or Helvellyn! I have seen many a foxhound in Old England, and I know the country where they are used, and that the grass fields of Melton Mowbray bear about as much resemblance to the hills of Vermont and New Hampshire, as an Illinois prairie does to a Colorado gulch! Does "Tallyho" ride to hounds up them?

If he and "Weymouth" would like the sport of riding to hounds over the Connecticut meadows, I think I could promise them plenty of "essence peddlers," but very few foxes!

VON W.

Editor Forest and Stream:

The recent discussion in your columns concerning the ethics of fox hunting, seems to be of an unusually profitless nature.

The men of Leicestershire, who may be regarded as authority in these matters, ride to hog on the plains of India, but think it no shame to shoot them in the hills.

A sportsman may be true to the traditions of the craft, yet not necessarily a lunatic. I have ridden all my life, and enjoy a spin across country. I may also claim some knowledge of the New England States, and of their adaptability to the English style of fox hunting. As I write, the snowy summits of Wachusett, Kearsarge, Monadnock, Ascutney, Chocorua, with many other old familiar peaks, are proudly passing in review before my mental gaze.

Since the above was written, I see that "Awahsoose" and others have pretty well disposed of this matter, and it would scarce be worth while to send these notes, but that I desire to be enlightened on a certain point.

It is just possible that "Tallyho" is the very ancient "party" whom Scott had probably in mind when he penned the following lines:

> "Sounds, too, have come on midnight blast,
> Of charging steeds, careering fast
> Along Benharrow's shingly side,
> Where mortal horseman ne'er might ride."

Permit me "in the most delicate manner in the world," to ask: Was there any smell of sulphur about "Tallyho's" communication? KELPIE.

CENTRAL LAKE, Mich.

Editor Forest and Stream:

I have hunted foxes in both Virginia and Maryland, and have a notion of what hunting in New England must be like from knowledge gained of the country on several visits to the woods of Maine, which I suppose may be taken as a sample. There is a saying that there are two sides to every question, and I think the fox question no exception. The physical difference between Virginia and Maryland and Maryland and Maine is very great, but the difference between Virginia and Maine is very slight. Be it understood that when Virginia is spoken of it means Albemarle county, which is in the Blue Ridge Mountains. In Maryland and Virginia the hounds are almost invariably ridden to, and as a result very few foxes are killed in a season, a record of fourteen brushes being a large score for the season, from about the first of November to the middle of April. Now "Tallyho" speaks of seven foxes being killed in one day by the Western Massachusetts Fox Club. I think I may say that such a score as that is never made in Maryland or Virginia in one day. Certainly not in the memory of the present generation, and such legends as game scores last a long time in the memory of Virginians.

Sport is considered the most fair and generous when the game has the most chance to escape. Well, if that is so, does it not seem that riding to the hounds is the most sportsmanlike? Now, brother sportsmen, do not think that I am "English, you know," for I am not a bit so, as any one can testify who knows me. Why could not riding to the hounds be tried in New England? The lay of the land is very much the same as that of western Virginia, and if it could be done in one place why not in another? Maryland does not come into the consideration at all, as there the ground is much more even and there is not so much timber.

When I was studying at Annapolis under an old sea captain (may his shadow never grow less) we used to hunt almost every day. As our pocket money was not a fortune we could not afford to hire horses, so that nine times out of ten we went "footback," as the old darky says, but never with guns.

Now, if some New England clubs would try riding to the hounds a few times, I think (if they were good horsemen and good animals) that they would have just as much fun as if they shot their foxes.

If they do not get their fox the first time they will know where he is, so let them try again; for what is more pleasant than to come home tired and draggled but with a light heart, sparkling eyes, and about four quarts of new blood? Well, whichever is right let it predominate, and hurrah for sport and the hounds! ROBESON LEA LOW.

THE AMERICAN GORDON SETTER STANDARD.

THE following standard was adopted by the American Gordon Setter Club, on Jan. 12, 1889:

VALUE OF POINTS.	
Head, including muzzle and nose	15
Eyes, ears and lips	5
Neck	5
Shoulders and chest	15
Back, loins, thighs and stifles	15
Legs, feet, elbows and hocks	15
Stern and flag	8
Color and markings	8
Texture of coat and feather	6
Symmetry and quality	8
	100

Skull.—The skull should be lighter than in the old type of Gordon setters, as was usually seen at bench shows; must be clean cut, with occiput well defined, and a decided stop below the eyes, and from eye to occiput should be from 5 to 5½in. in length.

Muzzle.—The muzzle must be straight from eyes to end of nose, without any inclination to what is termed "Roman nose" and without coarseness; it should be from corner of eye to end of nose 4in. in length. Nostrils must be full and wide, and nose black in color. Jaws should be exactly even in length; a "snipe-nose" or "pig-jaw" is a decided blemish.

Eyes, ears and lips.—Eyes must be of medium size, and a deep brown in color, mild and intellectual in expression. Ears should be set low on the head and lie flat to the cheeks, without any tendency to prick; should be longer than in other breeds of setters. They must be thin in leather and must be well coated with fine silky hair with as little wave as possible; the hair should extend an inch or two below the leather. The lips should be slightly pendulous; a trifle more so than in other breeds of setters.

Neck.—The neck should be of good length, clean and racy, with gradual rise from shoulders to head, and slightly inclined to arch; should be almost free of leather, but is not expected to be as clean on under side as a pointer's.

Shoulders and chest.—The shoulders should be deep, with moderately sloping blades, should be strong and positively free of lumber and showing great liberty. The chest must be flat between the forelegs, moderately deep and narrow, giving the animal a racy appearance in front. The ribs must be well sprung behind the shoulders, but not sufficient to give the animal the appearance of being too round in barrel and should extend well back toward the hip.

Back, loins, thighs and stifles.—The back should be short and straight, with loins strong and slightly arched, any tendency to swayback being decidedly objectionable. Thighs must be strong with the muscle extending well down toward the hocks. The stifles should be moderately well bent and set somewhat wide apart; they should be long from point of hip to hock joint.

Legs, feet, elbows and hocks.—The forelegs must be straight and sufficiently strong in bone, with elbows standing close to the chest, but not under it. Hindlegs to conform in bone with the forelegs; they should be moderately bent. Hocks must be straight. The feet must be round, hard, arched and well padded, with hair between the toes. The "cat foot" should have the preference.

Stern and flag.—The stern should be set on slightly below the line of back and carried in very nearly a straight line from the body, the straighter the better, a "teapot," tail is a decided blemish. When carried down with the hand it should not reach below the hock joint, should taper gradually from the body to a "stinglike" end. The flag must be fine and straight, any inclination to curl or ropiness being objectionable, it should taper to nothing at the end.

Color and markings.—The color should be a rich, glossy, plumb black, with deep sienna or dark mahogany tan markings, clearly defined and without admixture of black, though a little penciling of black on the toes is admissible. The tan should show on lips, cheeks, throat, spot over eyes, under side of each ear, on front of chest, on feet and legs, also at vent, but must not extend into flag more than three inches. The tan should show nearly to elbows on inside of forelegs and to the hocks or above them on inside of hindlegs. An American Gordon setter with a white frill must not be cast aside, but aim to breed them with as little white as possible. A good dog must not be disqualified for having white as above described. Any white on feet or tail is a blemish.

Texture of coat and feather.—The coat should be fine and flat, any inclination to curl being objectionable, though a slight wave is admissible. The feather should be about the same in quantity as in the English setter, running down to feet on forelegs, and to hocks on hindlegs, but only slightly feathered below the hocks.

Symmetry and quality.—The American Gordon setter should display much character, the general outline must look the thorough workman all over, and must absolutely be without lumber. He should be very blood-like in appearance, combining great quality with symmetry.

I. T. NORRIS,
FRED M. BENNETT, } Committee.
H. MALCOLM.

COURSING.

Editor Forest and Stream:

In Dr. Van Hummel's reply to my article under the above heading, he gives us an account of the severe struggle he and his co-workers had to bring coursing in the West to its present state of existence, and tells me how that very few either understood or appreciated its beauties and exhilarating effects; how at their first meet there was scarce a corporal's guard and a very few dogs, yet how from time to time they have educated, as it were, their brothers to a full appreciation of the glories of coursing and instilled into them a determination to try conclusions with whoever might care to compete. The result of the combined efforts of the Doctor and his friends is now plainly visible in the grand exhibition they had at Great Bend last October, and illustrates most beautifully what can be achieved by dint of hard work and perseverance. My only regret is that the genial Doctor could not be induced to remain here in the East a little longer, and through the medium of his enthusiasm instil into some of our greyhound owners a bit of the push, backbone and "get-thereness" which he imparted to his Western friends, resulting finally in the formation of the American Coursing Club. To the great discredit of our greyhound men of the East I must say they are very lethargic. There seems to be nothing that will rouse them to the understanding that greyhounds are not intended to be blanketed in winter and follow "my lady" and be fed on sponge cake and bon-bons. We have some royally bred dogs here, and it is a thousand pities to see them made utterly useless by the life to which they are consigned.

Dr. Van Hummel predicts that before many years we will have coursing meets in the East and near West as frequent and of as great value and interest as anywhere in the world. I sincerely hope the prediction will be fully realized, but in order that it may be, it is necessary for our Western coursers to give to the East a helping hand, and the question now is, will they do it? Will they aid us wherein we most need it, namely, the procurement of the jacks? I have from time to time advertised in the Western papers, have written to a dozen different gentlemen on the subject, and yet in all cases I have received negative replies. This is especially discouraging, since I know that jacks are very plentiful, and that those who decline to aid us can procure for themselves all they want without any apparent trouble. The East now asks the West to aid it in its effort to secure the wary jacks, so that it too may enjoy what has been the West's privilege for years past. Could we procure a moderate number, say 50, a dozen friends stand ready to buy them, and thus form the nucleus of a club, which has for so many years been my cherished hope. If they can supply to us the deficiency that now bothers us, there will soon be such a federation of clubs twixt the East and the near West that England will no longer be able to hold her best and fastest dogs against the influences of the Yankee dollars. We are a progressive nation, and come honestly by it. The one absorbing thought and desire is always to be "on top," always at the front, regardless of what it costs to "get there," and so it is I will predict that ere five years have rolled by the dogs that now are considered fast by us will be laid aside as paling before the veritable flyers that will grace our meetings.

I am sorry that the Doctor takes issue with me at my having stated my doubts as to the speed of Whitelips. The standard of excellence and beauty is arrived at solely by comparison, and while I do not for a single moment wish to be thought as belittling that beautiful bitch, I still adhere to my former statement as to her speed and cleverness when the price paid for her is considered. That she is bred most fashionably, that she has some of the very best running blood in her veins, goes without saying; and my only regret is that I do not own her, for I consider her to be fully worth all that was paid for her for breeding purposes alone. My Western friends must not think me either presumptuous or disposed in the slightest degree to belittle their dogs or their performances, as such thoughts are furthest from my intention. My remarks in the former article on coursing, though referring to Whitelips, were not intended to prove her to be other than what she really is, viz., the fastest and probably the best greyhound bitch in the West, but rather that she is not what is considered by coursers of the world "fast and clever." I cannot recede from my position, which holds good now, and is tacitly acknowledged by the Doctor, though not intentionally. He says Lord Neversettle, Mr. Dent's trial dog, has just arrived in America, and I believe he told me Whitelips is from the same kennel. Now, a trial dog bears the same relation to a kennel that a running mate does to a stable, viz., to be slipped with a sapling in order to arrive at a knowledge of his speed when pushed to the utmost.

Dr. Van Hummel says $300 will buy an untried dog of the very best blood to be found in England. This I do not deny in the least, though the cases are very, very rare where an owner or breeder of high class stock will sell any of his dogs until they have been tried. In case they should make a habit of doing so, they would probably by mistake sell the very best and have the worst left on their hands. This is very often the breeders' luck, and I am not the only one that has experienced it. From the Doctor's remarks one would infer that Whitelips was an untried dog when bought, yet I am told that she was 21 months old before she left England. Mr. Dent is an old courser and kept Lord Neversettle, we are told, for trial purposes. The chances therefore are greatly against the supposition that Mr. Dent kept Whitelips for 21 months, and yet never ran her with Lord Neversettle in order to see what she could do. The probability is that he did it on more than one occasion and was satisfied that she was neither fast nor clever according to the English acceptation of the term; that is, fast and clever enough to win a stake of even ordinary value, such as are constantly being run there. Had she borne to the English dogs the same relation that she does to ours in point of speed, etc., £1,000 would not have bought her.

We are told she can beat Bessie Lee, the winner of the Great Bend meeting, completely off her legs in two courses, but continue it to five courses in one day and the case will be reversed. This simply proves that Whitelips is an out and out greyhound and that Bessie Lee is simply a very slow dog but a stayer and depends upon that quality to win. It seems to me a great want of consideration for a dog, when a courser will submit to its being run in five courses in one day. Treating a dog in such a manner will soon break it down, as not one in ten thousand is able to stand the strain of mind and body that such treatment entails. Instead of such coursing being regarded as cruelty to the jacks I certainly should say it is cruelty to the dogs, and it seems to me any man who truly values his dog would never put him to such a test. If our Western dogs have to be submitted to such sort of work, in one season at most they will be run "stale," and every year see a new set of dogs in the field.

The statement that English flyers cannot stand a long and punishing course is not substantiated by facts. We are constantly hearing of the hare being run till it drops dead, while it is no uncommon thing for a dog to run both itself and its quarry to a standstill. Take, for instance, Dr. Brown's old Sport, which ran into the last six of 178 dogs. Then, again, Mr. Reed's Sultan, that won the stake (Southport). Is there want of staying powers in such dogs? Then there was Lord Sefton's Senabe, which ran a hare for 16 minutes by the watch, at Lytham, at top speed, and the very next week turned about and won the Waterloo cup. How about Riot, who won seventy-four out of eighty-six courses, all large stakes, and against crack dogs. Such dogs must have marvelous bottom to perform such deeds, yet we are told by the Doctor that English flyers can't stay. Again, we have Trip the Daisy, who ran her hare such a terrible course that her quarry dropped dead in its tracks, while she had to be carried on Mr. Cortwright's rug to the carriage. I could cite a hundred cases in refutation of the Doctor's assertion.

The fact that none of the imported dogs have proved to be fast simply substantiates my statement that we did not buy what was called "fast" in England. Our cousins on the other side have been coursing with greyhounds for over 100 years, and have spent for the sport £1,000 where we have spent as many cents. It seems to me rather presumptuous to tell those coursers of half a century that they do not know what a fast dog is, and that £50 dogs become fast and clever as soon as they reach our shores. Whitelips was never given a fair show, it seems to me. To have run her at her best, she should have been kept here a year at least before working her, in order to acclimate her, build her up and enable her to be put in good shape so as to do credit to both her owner and breeder. I have imported probably as many greyhoundss as any man in this country, yet I have never been able to get any of them into real good health and spirits under one year. The ocean trip is very debilitating, and our climate is so variable that even the dogs' coats cannot be gotten right in much less than a year, hence I feel that Whitelips would have rendered a better account of herself had she been kept quiet for a year.

Though I am not quite positive that she came from Mr. Dent's kennels and so had been slipped with Lord Neversettle, still the fact that she was twenty-one months old ere she left England leads to the belief that she had been tried and was not considered fast nor clever as their understanding of the words goes. A dog is quite in his prime at eighteen months, and it is hardly probable that any courser would keep a dog beyond that age still untried. Englishmen are ever on the *qui vive* for "good things," and they are not letting them slip through their fingers at the rate of £40 each. Mr. Dent might have presented her to Mr. Lowe, but had he considered her to be what is claimed of her, £60 would not have bought her, any more than $50 would buy Balkis.

I believe in giving all due credit to both breeder and owner as well as to the dog, but I hold it is unfair to the brotherhood to pronounce encomiums upon a dog which is not deserving of them, as evidenced in calling Lord Neversettle one of the best in England (where there are over 30,000 of this one breed) simply because he is nearly related to a very fast one which recently brought $3,000 at auction. Possessing two such wonderful dogs we ought no doubt to be satisfied, but I hope we are not.

I believe within the next five years there will be the same evolution in greyhounds that the past five years have shown in our other dogs. We were satisfied with a Croxteth and a Thunder, to-day we crave such as Revel III., Graphic and Count Howard. I believe the time is not far distant when some of our enthusiastic and wealthy sportsmen will go over to England, and witnessing some grand coursing such as is seen at Haydock and Gosforth Parks, or on the plains of Altcar, buy some grand youngsters, veritable flyers of rarest blood and staying qualities, and bring them over for us to witness their performances. A hundred years of practical knowledge and vast experience has produced to the English their present superior dogs, and I shall not rest content till I see a Herschel, Greater Scot, Barnaby or Misterton galloping after our jacks, whether he be bred here or in England, whether he belongs to me or our genial Doctor who has done so much to advance the sport that is nearest our hearts. H. W. HUNTINGTON.

DOG TALK.

WE have received the first number of the *Illustrated Kennel Magazine*, published at Leeds, Eng. It is issued quarterly, and with it is incorporated the *Pet Dog Journal*. With its change of name its sphere of usefulness is greatly enlarged, and in addition to its care for the interests of pet dogs, the *Magazine* will henceforth open its columns to all breeds. If the number of the *Magazine* before us is a sample of those to follow, we congratulate its readers and extend to its publishers our hearty wishes for its success.

From all accounts the coming dog show season will bring out an array of winners that will astonish even the most sanguine believers in the improvement of the different breeds. We have been told, in strict confidence—which of course in no case shall we violate—of an unprecedented number of dark dogs that are sure to win the coveted blue. These little confidential notes will be of very great assistance to us in making up the reports of the different shows, as with all the good qualities of the winners so plainly set before us our only task will be to jot down the few slight imperfections that have escaped the eye of the owner.

Our Chicago correspondent writes, "We are all right. We are going to have a drag-hunt. The following is the announcement as made public in the daily papers: 'A fox hunt, in which the fox will be an aniseed bag, is to take place over a ten-mile course in South and Jackson parks on Washington's Birthday. Ladies and gentlemen who want to ride to hounds must send in their names to J. L. Day, 91 Clark street, or J. P. Johnston, 243 State street, before Feb. 12. The only requirements are that the applicants must be good riders and have good horses.'"

Our old correspondent "Quester" writes: "Happening to glance over the black field spaniel standard as adopted by the English Spaniel Club, my eyes rest on the closing sentence, descriptive of 'general appearance.' It reads, 'A grand combination of beauty and utility.' From this my gaze wanders to the portrait of Moonstone and—I smile."

It is reported that the Philadelphia Kennel Club has changed the dates for its show to March 19 to 22. We have heard nothing from them regarding such change, and hope that it has not been made. These dates were claimed last week by the Rochester Kennel Club, and both shows would certainly suffer if held at the same time.

A lady who resides in Vineland, N. J., was presented with a St. Bernard puppy about Dec. 1, 1888, and she wishes the pedigree. The puppy was purchased from some one then living on Eighty-seventh street, New York. Should any of our readers know anything of this they will confer a favor by sending particulars to this office.

We learn that Mr. F. H. F. Mercer, of Ottawa, Canada, will shortly import two or three Clumber spaniel bitches from a well known kennel in England. Owing to want of condition and an accident to one of his team Mr. Mercer will not exhibit his dogs this season, at least at the earlier shows.

We understand that a new departure will be made by the managers of the New York dog show in the arrangement of the benches and judges' rings. We suggest that they also make an improvement in the catalogue by placing the list of special prizes at the head of the class for each breed.

Intending exhibitors should not forget that entries for the New York dog show close next Monday, Feb. 4. The address of the superintendent is Jas. Mortimer, 44 Broadway, New York.

The Beagle Club is all right. The president informs us that the report of a split in the club has no foundation in fact, and that the club was never in better condition than at the present time.

Mr. Wade decidedly objects to "honorable" in lieu of honorary in his article last week.

There are 280 entries for the Pittsburgh dog show to be held next week,

The next meet of the Occidental Coursing Club, of California, will take place Feb. 22.

DAYTON KENNEL CLUB.—Dayton, O., Jan. 29.—*Editor Forest and Stream:* The new kennel club completed their organization by electing A. A. Winters, President; Chas. Wheeler, Vice-President; Chas. G. Stoddard, Secretary and Treasurer; they with the following named gentlemen, Ed D. Grimes, Dr. W. R. Howe, Gustav Sander, R. C. Anderson and Chas. Hanitch, of this city, and Grif T. Miller, of Cincinnati, compose the board of directors for the year. The kennel and yards are two acres in extent on one of the knolls at Oakwood, one mile south of this city. Frank Wilcox is superintendent. The kennel building is a model structure for the purpose, of snug cottage style, 60x30ft., with cross hallways 21ft. wide through the building; roomy stalls for sixty dogs, well lighted and ventilated, convenient kitchen arrangements, abundance of pure water, separate quarters for bitches and puppies, comfortable hospital for convalescents away from the kennel. Most of the dogs owned by members are for practical field work, while others are well known winners on the bench, or field trial dogs.—DAYTON.

SPANIEL FIELD TRIALS.—*Editor Forest and Stream:* I have watched and waited for several weeks in the vain hope that the spaniel men would be heard from on the subject of spaniel field trials; but, with the single exception of Mr. Mercer, they are as silent as the Sphinx. This is strange, for the Clumbers are said to be inferior to the fields and cockers at work; yet the Clumber man is in favor of a test of merit, and the advocates of the latter—where are they? For heaven's sake, gentlemen, remember that your pets are intended by nature for work, not to be coddled up at home and taken around to shows and win prizes. Is no one in favor of field trials save Mr. Mercer and—QUESTER?

MASTIFF PUPPY WEIGHTS.—South Paris, Me., Jan. 23.—*Editor Forest and Stream:* In your issue of Jan. 10 I see a communication from W. J. McMullen asking if any one can beat his mastiff puppy in weight. I have a puppy whelped July 17, by Don Quixote out of Nell, which weighed Jan. 10, 125lbs. This, I think, is ahead of McMullen.—W. M. SHAW.

PHILADELPHIA KENNEL CLUB.—Philadelphia, Jan. 24.—*Editor Forest and Stream:* At the annual meeting of the Philadelphia Kennel Club, Ezra Comfort, 15 N. 7th street, was elected President, Francis S. Brown, 608 Chestnut street, Secretary, and Chas S. Thompson, 2247 Richmond street, was elected Treasurer.—FRANCIS S. BROWN, Sec.

SETTERS LOST.—The Rosecroft Kennels have lost two of their English setter bitches, one blue belton and one white with black and tan head. They strayed or were stolen from Plainfield, N. J., Jan. 23. Any information concerning them will be thankfully received by Wilson Fiske, 102 Chambers street, New York.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

Nettle III. White, black and tan head, fox-terrier bitch, whelped May, 1887, by Foxie out of Lilly IV., by Rockdale Kennels, New Bedford, Mass., to Geo. W. Parker, same place.

WEANING.—This is always an important time in the puppy's life, and often the fat, plump puppy suddenly—having the maternal aliment withdrawn from him—sinks in flesh and pines away almost to a skeleton. That will not be the case if the pups have been accustomed to our Puppy Food before weaning, and gradually to our Puppy Biscuits. The puppies should be fed in the absence of the mother, and so long as she sleeps with them at night they should be fed before she is let into them, and as soon as they sleep apart from her, make a practice of feeding them late, and after that put fresh food down so that they may get it early in the morning, and not be kept waiting. Of all dealers, or of Spratts Patent, 235-245 East 56th street, New York.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

A PISTOL SCORE.—Pittsburgh, Pa., Jan. 19.—*Editor Forest and Stream:* I inclose you, at Mr. Jos. Slapnick's request, target and score of Mr. Louis Staib of this city, Jan. 19. For an elderly

man (56 years) I consider it remarkable, and he can do it over and over again. There are six shots, with .22 caliber 10in. barrel pistol, at 50ft., counting 58 out of a possible 60.—W. G. SCHIRMER.

BOSTON, Jan. 26.—The range was alive to-day with rifle and pistol shooters. The weather conditions were very fine for this season of the year, and all the matches received attention. Salem Wilder won the gold medal in the 20-shot match, and C. E. Berry the champion medal. Following are the best scores made to-day:

20-Shot Rest Match.

S Wilder	10 10 12 12 10 10 10 10 9 11	
	11 9 12 11 11 12 10 9 12 10	211

C Nichols	7 8 6 8 9 7 9 8 9 8	78

ZETTLER RIFLE CLUB.—This famous off-hand club met the team of Our Own Rifle Club, of Newark, at the Bowery range of the Zettlers last evening, but too late for our issue this week. The Zettlers have shot 111 gallery matches since their organization, and the only club that ever succeeded in defeating them was the Frelinghuysen Rifle Club, of Newark, which beat them once at Newark and once in New York. Notwithstanding this fine record the Our Owns intend to make a big fight to win. The second match will be shot on the Our Own's range, in Newark, on Feb. 6.

WILMINGTON, Del., Jan. 27.—The revolver match—or as it turned out the pistol-revolver match—between E. J. Darlington, of Wilmington, Del., and N. A. Hughes, of Williamsport, Pa., has been concluded at the Healdmoor Range. Mr. Hughes, it will be remembered, ranks among the best amateur shots in the country, and it was expected that he would win the match, but his lead was greatly increased by using a Stevens .22-cal., 10in. barrel pistol, which is a great advantage over a target revolver of even .32-cal. Mr. Hughes has heretofore shot with a Smith & Wesson .32-44 target revolver, and it was supposed that he would use it in this match, which would have placed the competitors upon an equal footing. Mr. Darlington was not in good form for shooting and his scores not near up to his mark, which also accounts for the wide margin between the scores. Following are the scores in detail at 50yds., standard American target:

N A Hughes	8	4	6	5	9	9	9	7	6	8—71
	9	9	8	8	7	7	10	10	7	10—85
	8	8	8	8	8	6	8	9	9	6—79
	10	5	9	9	9	7	8	10	8	8—83
	10	7	9	10	7	7	9	5	8	10—82
	8	7	9	9	6	10	7	10	10	5—81
	8	8	10	10	9	9	10	5	8	10—87
	9	8	8	9	10	7	7	8	9	9—84
	7	10	9	10	10	10	7	7	8	8—86
	9	8	9	8	9	9	8	8	9	9—93—821
E J Darlington	7	5	9	9	9	7	6	5	4	3—64
	8	10	8	9	6	7	8	5	6	8—75
	8	6	10	6	7	8	7	6	7	7—72
	7	9	3	7	5	9	10	4	7	8—69
	7	9	6	7	7	5	5	7	6	5—64
	7	8	10	5	8	9	6	5	5	5—68
	9	5	6	6	7	10	3	7	9	5—67
	5	4	5	6	6	8	5	8	4	7—58
	8	6	3	8	5	9	9	7	7	7—73
	7	7	7	6	6	10	8	6	9	7—75—683

ST. JOSEPH, Mo., Jan. 25.—The rifle club held a very enjoyable practice shoot to-day at their range. Several new members were present and took part in the contest. Following are the scores at 200yds. off-hand, Hinman standard target:

J E Eberly	8	7	10	8	7	8	8	8	9	7—80
	8	5	8	9	6	8	10	6	9	5—74
	10	6	6	4	10	4	7	9	10	6—75—229
W T Whiteford	8	5	6	6	10	6	9	7	5	9—71
	7	7	9	6	9	7	9	7	6	5—72
	5	5	10	9	9	9	5	5	3	8—63—206
J W Batcheller	6	4	8	5	6	6	7	5	3	4—54
	4	5	7	6	5	5	7	7	5	8—59
	7	5	7	7	10	8	4	4	4	3—55—168

UNSER FRITZ.

SAN FRANCISCO, Jan. 20.—The inclement weather to-day caused a light attendance at Shell Mound and Harbor View. At the former place some good scores were made at 200yds. F. O. Young and Anthony Johnson shot 50 shots with a .44 caliber Smith & Wesson revolver to decide who was the champion of the State. When shooting the two gentlemen had frequently to stop on account of the heavy rain and changes of light. Mr. Young won by a good score. Mr. Johnson having dropped out in the early part of the contest. The range was 150ft. Following is Mr. Young's record:

Standard Ring Target.

Young	7	10	7	9	10	8	10	9	9	8—87
	8	7	9	10	6	9	7	7	9	10—82
	9	10	10	7	8	8	9	8	8	8—85
	10	8	9	10	10	10	9	10	9	9—97
	7	6	6	10	9	10	6	8	7	9—78—423

Corporal Lew Townsend, despite his "old age, failing right eye and general decrepitness," made 82 out of a possible 100 points with a Springfield rifle at 200yds., off-hand. F of the First Infantry was represented by Pendleton and Captain Loughery, who made the following, under the same conditions as the Corporal:

H L Pendleton	4554445445—44	R J Loughery	4455354444—42
	4444554444—42		5435545444—43
	5554445544—44		4545444554—42
	4444545444—42		4435544443—40
	5454454444—43—217		4443455441—41—208

The following was made in a pool shoot at 200yds. off-hand, each man using his pet gun. Mr. Poulter used a 6lb. pull of trigger, Sharps, which somewhat handicapped him:

A Johnson	6	9	10	8	10	10	9	9	7	9—87
	4	5	5	5	5	5	5	5	4	5—48
McCutchan	9	8	9	9	10	9	5	10	6	6—81
	5	5	5	5	5	5	4	5	4	4—47
F Poulter	7	6	7	6	7	9	10	10	9	9—79
	4	5	4	4	4	5	5	5	5	4—45

Bullseye shoots are the fashion among the Germans at present, and two were held to-day at Harbor View. An 8in. bullseye is placed over the original target at 200yds., and each member of the club is entitled to take ten shots at it. If he strikes the center more than once his best center is taken, and it is measured by a machine invented by Mr. Dornbler, a member, which measures 1-2000th of an inch., in the California Schuetzen Club Mr. Waller carried off the bounty with very near a dead center shot. The following gentlemen won in the Germania Club: Dr. Reihl, F. Attinger, H. Brockenhagin, P. Faller, H. Heeth, G. Helm, Val Schmidt, J. Utschig, C. Nobmann, N. Roeppke, A. Utschig and John Staub. R. F. Brown carried off the honors in the Turner Club by a score of 58 rings.

AMHERST, Mass., Jan. 24.—The following scores were made at Mountain View Range Wednesday afternoon:

Henry Adams	10	9	10	7	7	7	7	9	10	9—85
	9	9	6	7	9	10	8	7	9	8—82
J S Thomas	9	9	10	10	5	4	10	6	8	10—81

CHICAGO, Ill., Jan. 26.—In the Deficiency Appropriation bill sent to Congress, Secretary Fairchild asks for $5,000 for the construction of a rifle range at Fort Sheridan. When passed, work on the range will begin as soon as the weather will permit. At Fort Sheridan great care has to be exercised, and entails the building of an earthen bullet stop about 40ft. above the ground and having a length of about 500ft. Twelve revolving targets will be placed on the range, and then to shelter the markers a rivetted trench must be built, in which will be a telephone house. In short, everything will be done to make it a first-class target practice ground. The ranges will all be 600yds. in length and four of them will be available for 1,000yds. When completed it will be known as the Division Rifle Range, and the division contests will be held there. The post will also use it. The question of rifle practice is one of great importance in the army. "Rifle practice began in 1880," said Lieut. Green at headquarters here, "until which time nothing had been done about it since the war. And when it began a poorer lot of marksmen you never saw. Now, however, the army can, as a whole, shoot very well. Some, of course, are poor, as others are particularly fine, but the average is excellent. At first a standard was fixed, and when attained the ones attaining it were classed as 'marksmen' and given a badge. But the average raised rapidly and compelled the raising of the standard, the attaining of which secures the badge of a 'sharpshooter.'

"The regular shoots are at 200, 300, 500 and 600yds. The first is shot off-hand, the second either kneeling or standing, and the last two lying down. The keenest test of marksmanship is in the skirmish practice. The contestants are started at the 600yds. point. They advance until the bugle sounds, when they fall on their backs, adjust the sights for the distance gauged at a glance, take into consideration the wind, all in six seconds, when the bugle sounds again and firing begins and is kept up for fifteen seconds, when again the bugle sounds, at which the firing ceases and the contestants proceed toward the target until the 200yds. point is reached, and then they return. From the time they start until they get back they are stopped ten times and must fire forty shots each, an average of four shots in fifteen seconds. Of course, the nearer the target they get the better their scores. They therefore shoot as often as they can during each stop near the target. I have seen them sometimes shoot seven times in fifteen seconds and score 60 per cent. The targets in a skirmish fire are wrought-iron silhouettes the size of a man and covered with black cloth. These are standing, kneeling and lying down. Rifle practice used to be held four months of the year. Then it was cut down to three, and will, I believe, be cut down this year to two. Each post will select by contest its best men, who will contest with other posts in that department. The twelve best men in the four departments, also selected by contests, will then form the division team, which will come to Fort Sheridan, if the range be built, sometime in August or September."

POSSIBLY A PENCIL SCORE.—A New York paper prints as a cablegram from London the following bit of queer news about the doughty knight of the pistol: LONDON, Jan. 21.—Chevalier Paine, the pistol shot, modestly announces that he has gained the result sought after by alchemists for centuries, and that he is prepared, when backed by a sufficient amount of capital of course, to transmute metals to any amount. Copper, with a little silver added, will be turned into pure gold, thus realizing the dreams of the less fortunate enthusiasts of the middle ages, who generally died in despair at being unable to solve the secret. To be sure the chevalier has a rival in the person of M. Tiffereau, of Paris, who after 40 years of chemical labors has also discovered the valuable process, and will enter at once upon the manufacture of gold from the baser ores.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE SHOOTING AT PINE BROOK.

Editor Forest and Stream:

I had hoped to find, through some of the sporting papers, a truthful account of the "accident" at Pine Brook, referred to in your last issue, with some comments thereon, but as none have appeared I am led to believe the accounts as published have been furnished either through ignorance or design, as no one at all conversant with the facts could possibly connect the Passaic River bridge with the grounds where the shooting took place. The sad event, instead of being classified among those mysterious accidents for which no one can be held accountable, was in reality a most outrageous piece of carelessness, and the whole matter should receive a most searching investigation, including the purpose for which such shoots are gotten up.

A pigeon shoot in the country at this season of the year means a "gang," and when run in connection with a "hotel" it simply means a "red hot gang." The grounds are situated along the public highway or turnpike and within 100yds. of the hotel. On account of the low nature of the grounds, the turnpike is some feet above the level, where the traps are set, and is less than 80yds. from the traps, hence all left quartering birds are in direct line of the turnpike and all traveling is exposed to the firing, not only of the man at the trap, but from the army of skirmishers who have posted themselves along the highway and brush fences surrounding the grounds.

The "accident" occurred here, and not on the river bridge, which is over a quarter mile from the grounds. A low left quartering bird was trapped and missed by the shooter, and as it skimmed the turnpike it passed between three skirmishers, two standing together and one twenty-five yards away, and the two firing together killed the bird and came very near killing the third man also. Both charges struck him, as the different sizes of shot proved, one using No. 5 and the other No. 7. The wounded man is Calvin Decker, not Smith, and some hopes are entertained for recovery. Comment is unnecessary when the whole event is taken into consideration. Why should such gatherings be allowed and country boys and men duped into sweepstakes where their dollars are sure to be gobbled up by a few stools of the hotel man, and their dimes go into the bar-room drawer? A hollow iron tube filled with powder and shot is dangerous enough even when handled by the most careful, but when re-inforced with "Jersey lightning," it and the owner should be banished beyond the township limits. ANTI-GANG.

NEWARK, N. J.

CANADIAN TRAP NOTES.

WEST TORONTO JUNCTION, Jan. 22.—The first shoot for the two gold medals took place to-day. the fine weather bringing out a large number of shooters and spectators. The handicapping proved very satisfactory. Following is the score, 20 blackbirds each, 3 traps; 18yds. rise, handicap rules:

W Blea, 5 start	01111010010111101010—17
D C Walton, 3 start	11001000111111010110—16
T Charlton, 3 start	00110110111110101110—16
H George, scratch	01111101011101111011—15
P Wakefield, scratch	01100111100111111111—15
C Hinton, 2 start	11011111010001111001—15
W Davidge, 3 start	10100111001011110000—14
W A Clarke, scratch	10011010010111111111—14
W McDowall, scratch	10001111110010101110—12

S Watt, 5 start	00000011000000001100— 9

OWEN SOUND, Jan. 22.—At a meeting of the Owen Sound Gun Club held last night it was unanimously decided that the club would hold a grand live-pigeon and blackbird tournament on the 26th and 27th of February next, and offer such prizes that, added to the sweepstakes, would tempt some of the good ones to come out and try their luck over the traps. This is a live sporting town, and the committee will do anything in their power to make this their first tournament a grand success.

TORONTO, Jan. 24.—At McDowall & Co.'s grounds this afternoon a few enjoyable hours were spent by the following shots, who took part in several blackbird sweeps. The following are the scores:

First sweep, at 9 birds, 3 traps, 18yds. rise, two prizes:

Paul	111111111—9	Stevens	010100111—5
Heatherington	111110111—8	Moffett	010101101—5
Winchell	111111110—8	Bowden	100101101—5

Second sweep; same conditions:

Winchell	111100111—7	Moffett	111100100—5
Mitchell	110001111—6	Paul	0101100w—3
Heatherington	001110110—5		

Third sweep; same conditions:

Rice	101111111—8	Winchell	111011001—6
Heatherington	100011111—6	Moffett	010101101—5
Paul	011011001—6	Mitchell	011010 w.—3

Fourth sweep; same conditions:

Paul	111101111101—10	Mitchell	101010011110— 7
McDowall	111101111100— 9	Winchell	010101001101— 6
Heatherington	111101101101— 9		

McDowall won second on shoot-off.

Fifth sweep; same conditions:

Paul	111101—5	Mitchell	001101—3
Heatherington	100111—4	Winchell	101010—3
McDowall	110101—4		

Second won by Heatherington on shoot-off.

TORONTO, Jan. 25.—The Stanley Gun Club, a new club, was organized this evening, and is composed principally of sportsmen living in the eastern section of this city. The main object of the club is to encourage artificial bird shooting. The membership will be limited, and only those who take a lively interest in the sport will be admitted. The following officers were elected: Pres., C. H. Riggs; Sec-Treas., R. A. McCready; Committee, J. R. Wells, T. Sawden, G. Morley. Two handsome gold medals have been presented to the club for competition, one by W. McDowell & Co., for first class, and the other by W. Felstead, for second class marksmen. Shoots will be held weekly at 20 birds each day, and the medals will go to those making the highest aggregate score in five shoots.

MONTREAL, Jan. 26.—The seventh competition for the Montreal Club Greener took place to-day. It was the worst kind of a day for shooting, and, considering the weather, the scores are creditable. The shoot was won by R. James (2) with a score of 18, E. A. Crowley following close up with (4) 17. The match is a handicap, designated by the figures in parenthesis:

R James (2)	18	W Lumsden (scratch)	15
E A Cowley (4)	17	J Paton (2)	14
N Parker (2)	16	A Alexander (3)	12

OTTAWA, Jan. 26.—The fourth competition for the Thompson Cup was shot by the St. Huberts to-day, and the shooting was fair. The day was all in favor of good shooting, and some respectable runs were made. Sweep at 10 Peorias each: Geo. White 10, E. White 8, A. Throop 8, R. Dalton 7, Dr. Martin 6, P. Trudeau 6, J. Watchcorn 5, J. Deslauriers 5. Thompson Cup, at 20 Peorias each: Geo. White 17, R. Dalton 17, A. Throop 15, P. Trudeau 15, A. Lett 14, Dr. Martin 13, W. J. Johnston 12, E. King 12, S. White 11, J. Deslauriers 9, Dr. Equis 9, Ed White 8, W. Scott 7. After a trial on the Toronto Peorias the Ottawa men expressed themselves as much satisfied with the birds.

TORONTO, Jan. 26.—This afternoon the following blackbird shoots took place at McDowall's. There were some five sweeps in all, and some fairly good shooting was done. Sweep No. 1, at 9 birds: T. Bennett 9, W. McDowall 8, G. Morley 7. Sweep No. 2, at 15 birds: Morley 12, W. Heatherington 11, Bennett 10. Sweep No. 3, at 15 birds: Bennett 14, McDowall 14, W. Heatherington 11, F. Morley 10, Paul 6, G Morley 6, Bennett won. Sweep No. 4, at 9 birds: Paul 7, W. Heatherington 6, Bennett 6, T. Heatherington McClure 6, F. Morley 5, G. Morley 5; W. Heatherington won second. Sweep No. 5, at 6 birds: F. Morley 6, W. Heatherington 4, Paul 4, McClure 3, T. Heatherington 3, Bennett 3, G. Heatherington 2.

Next Saturday, Feb. 2, will be held the most interesting shoot of the season on Stark's grounds, Eastern avenue. Mr. Stark has guaranteed $100 in prizes and has decided to make the entrance fee $5 instead of $10, as heretofore stated. The shoot will start at 11 o'clock A. M. The score will be 25 blackbirds, thrown from 5 traps. There will be six prizes divided as follows: First prize, $25; second, $15; third, $10; fourth, $25, ties to divide; fifth, $15, ties to divide; sixth, $10, ties to divide. The fourth, fifth and sixth prizes only are to be divided among ties. A sweepstake match will be held in the afternoon of the same day, commencing at 2 o'clock, entrance fee $20, score 20 blackbirds, from 5 traps. The money will be divided into six prizes as follows: First prize, 25 per cent.; second, 15 per cent.; third, 10 per cent.; fourth, 25 per cent., ties to divide; fifth, 15 per cent., ties to divide; sixth, 10 per cent., ties to divide.

CLAREMONT, Jersey City, Jan. 26.—The usual weekly shoot was held on the Suburban Shooting Grounds to-day, and although the weather was threatening a large number were present. Practice shooting and private matches from bluerock traps; sweeps from keystone traps. The following are the principal sweeps; 10 birds, 50 cents entry:

Brientnall	1111101100—7	Hathaway	0111100011—6
Hunt	1011111101—8	Bishop	1110001011—6
Albee	1101001111—7	Richards	1110011011—7
Lindsey	1000110110—5	Morton	1110110101—7

Albee second.

Same conditions:

Albee	0111111110—8	Hathaway	1010111111—8
Hunt	1131111111—9	Richards	1011001110—6
Brientnall	1111111101—9	Mort	1110010110 - 6
Lindsey	0111111111—9	All divided.	

Same conditions:

Hunt	0111110100—6	Brientnall	1111110 00—6
Albee	0111111011—8	Bishop	0000110000—2
Lindsey	1101111111—8	Hathaway	0010010011—4

Divided first and second.

Same conditions:

Brientnall	1111111111—10	Hathaway	0011110111—7
Albee	0111111101— 8	Mort	1110110101—7
Hunt	1111111111—10	Richards	1111101111—9
Lindsey	1111111111—10	Divided first.	

Same conditions:

Brientnall	1111111111—10	Hathaway	1110010111— 7
Mort	1110101010— 6	Hurt	1111101000— 7
Lindsey	1111111101— 9	Richards	0101011110— 6

Third divided.

Same conditions:

Lindsey	0111111110— 8	Hathaway	1110101110— 7
Hunt	1011011101— 7	Sheriff	1111110110— 8
Brientnall	1111111111—10	Albee	1110111101— 8

Lindsey second.

Same conditions:

Brientnall	1111111111—10	Seeley	1011100101— 6
Lindsey	1111111010— 8	Hathaway	0011010011— 5
Hunt	1111011011— 8	Second divided.	

CINCINNATI, Jan. 24.—A drizzling rain, combined with a murky atmosphere and fog, is what the club members present today at the old Avenue Ball Park had to contend against. The shooting in the rain was good, everything considered. Messrs. Bandle, Shott, Taylor and Miller, considered experts in trap shooting, found worthy running material, and were kept, as it were, warm throughout. The scores in detail resulted:

Match No. 1, 10 single clay birds from 5 traps, 18yds. rise, national rules, sweepstake:

P Schaller	1111001110—7	Dowald	0001101011—5
Eckenroth	1100110110—6	Bandle	1111011101—8
False	1100100011—5	Shott	1111011111—9
Miller	0010101111—6	Wick	1111110010—8
Taylor	1111101011—8		

Shott first, Bandle, Taylor and Wick second, Schaller third.

Match No. 2, same conditions:

Schaller	1101101111—8	Dewald	1110010010—5
Eckenroth	1110100111—7	Bandle	1111101111—9
False	0111010101—6	Shott	1111111101—9
Miller	1110111011—8	Wick	1101111110—8
Taylor	1111101111—9	Mustin	1111001111—8

Bandle and Shott first; Shaller, Miller, Wick and Mustin divided second; Eckenroth third.

Match No. 3, same conditions:

Schaller	1111001110—7	Kath	1101111110—8
Eckenroth	1100100111—6	Bandle	1111101111—9
False	1101110100—6	Shott	1011111111—8
Taylor	1111101111—9	Wick	1111101111—9
Dewald	1000110110—5		

Taylor, Bandle and Wick first, Kahn and Shott second, Schaller third.

Team match, same conditions as previous matches, 15 single birds per man:

First Team.		Second Team.	
Bandle	111111111111011—14	Taylor	111111101111111—14
Wick	111101111111110—13—27	Shott	111111111110110—13—27

Match No. 4, sweepstake, 5 birds:

False	10011—3	Kath	11111—5
Miller	10101—3	Bandle	11111—5
Taylor	10010—2	Shott	10111—4
Dewald	01100—2	Wick	11111—5

Kath, Bandle and Wick first, Shott second, False and Miller third.

Match No. 5, sweepstake, five birds:

False	11110—4	Kath	11111—5
Miller	11000—2	Bandle	11011—3
Taylor	11001—3	Shott	10110—3
Dewald	11010—3	Wick	11110—4

Kath first, False and Wick second; ties on 3 divided.

Match No. 6, sweepstakes, 5 birds, first money (dark):

False	11001—3	Kath	00111—3
Taylor	11010—3	Bandle	11010—3
Dewald	10011—3	Shott	00111—3

Money drawn.

CINCINNATI, Jan. 26.—Capt. Bogardus talks of opening a shooting school here as he considers it, he says, a good shooting center. F. C. Mustin, known as the "boy wonder," of this city, and Walter Keenan, the youngest expert shot of Dayton, O., are matched to shoot at 100 single bluerocks and clay-pigeons, half and half, at Dayton, O., Washington's birthday, Feb. 22. Both rank above .90 in average, and the match, if shot, will be one of the most interesting in an amateur way on record. Young Keenan has a record of 92 out of 100 to his credit, made at the last Cleveland (Ohio) tournament, and Mustin has a reputation of being one of the most reliable sweepstake shooters in the State.

CINCINNATI, Jan. '25.—The Cincinnati East End Gun Club held their first annual live-pigeon shoot of the season to-day. The birds were excellent, good of wing and extra tough, judging from some of the charges they carried off. McPhee set the pace and held it to the finish, landing a good winner. The scores made were: Live birds, 30yds. rise, from 5 traps, use of both barrels, Hurlingham rules. First match, live birds:

Ferris	01111—4	Bandle	11111—5
Murphy	22011—4	Taylor	11111—5
Girton	20111—4	Shott	12220—4
Schatzman	01212—4	McPhee	12111—5
Cole	20121—4	S G	00111—3
N G	11021—4	Ties divided.	

Second match, live birds:

Bandle	20112—4	Cole	11111—5
N G	12112—5	Apking	11022—4
McPhee	11201—4	Murphy	12020—3
Shott	11220—4	Deck	10110—3
Taylor	10212—4	Bill	12111—5
S G	21021—4	Girton	12121—5
Schatzman	11011—4	Ties divided.	

Third match, live birds:

Bandle	11210—4	Girton	22211—5
Shott	21100—3	Schatzman	02102—3
Taylor	11101—4	Richard	11010—3
S G	11110—4	Bill	10111—4
Cole	02111—4	Deck	02220—3
McPhee	12212—5	Ferris	11011—4
M J N G	20011—3	Murphy	21211—5
Apking	00221—3	Ties divided.	

Fifth match, miss and out at live birds, won by McPhee:

Bandle	1112100210	Bill	1222110000
N G	1021100001	Deck	1000000000
Cole	1212100100	Richard	0102000000
Shott	1210200000	Boutet	0220000000
S G	1221102000	Schatzman	1121000000
Taylor	1011100000	Murphy	2112100110
Apking	1002100000	Ferris	2112200000
McPhee	1112100212	Ties divided.	

EATON, N. Y., Jan. 26.—In view of the fact the Dr. had never won the badge, and, added to this, his magnanimous spirit, he decided to-day to donate a box of cigars to the boys of the gun club. The highest score to take badge and cigars. At 2 o'clock seven of the boys shot, and the Dr. walked away with both, with the following score:

Hamlin	1110111011—8	Morse	0001101000—4
Short	1011001000—4	Tuck	1011010010—5
Richardson	0111101110—7	Curtis	0111001117
Briggs	0000110110—4		

The cigars, being won by the donor, were again shot for, which resulted as follows:

Hamlin	1000001011—4	Morse	1000011100—4
Short	1011110011—7	Luck	1001110003—5
Richardson	1100111111—8	Curtis	1010001111—6
Briggs	1110101111—8		

In shooting off Briggs won.

NORWICH, Conn., Jan 28.—I send you a report of Saturday's shoot. The club is divided into two classes, according to previous averages, and two gold badges are given—one for each class. The contest commenced Aug. 11, 1888, and ends Aug. 10, 1889, being shot for on each alternate Saturday, the party winning either of the badges the most times to own it. Any one winning a badge at 18yds. is handicapped 2yds. each time until he reaches 24yds., and there he remains until the contest is ended. They have been shot for thirteen times, and have been won as follows: In Class A., C. C. Richards once, A. S. Chilas once, Irving Harvey once, E. W. Yerrington ten times. Class B. J. B. Mershon once, A. Mitchell twice, Geo. F. Bard, J. E. Olcott and G. L. Bidwell three times each.

Saturday's prize shoot was for the best score in a possible 25 Keystones. Class A—Yerrington, 24yds., 20; Pattison, 18yds., 19; Palmer, 18yds., 18; Barnes, 18yds., 14; Harvey, 50yds., 18: Class B —Bidwell, 24yds., 23; Johnson, 18yds., 21; Olcott, 24yds., 21; Mitchell 23yds., 16. Johnson and Olcott will shoot off at the next shoot.

Ten clay birds, 5 traps, 18yds.: Yerrington 10, Mitchell 5, Harvey 5, J. H. Ames (New London) 8, Pattison 2, Barnes 7, Sargent 3, Bidwell 5.

Ten clay birds, 5 traps, 18yds.: Yerrington (20yds.) 8, Robbins 8, Bidwell 7, Barnes 7, Ames 7, Mitchell 5. Ties div.

Five pair Keystones: Sargent 9, Bidwell 7, Pattison 7, Yerrington 6, Robbins 6. Ties div.

NYACK, N. Y., Jan. 26.—Nyack Rifle and Gun Club, sweepstaks at 30 birds (Lockport bats), use of one barrel:

H Garner	011101110001001011000101011010011—20
L L Laurence	111001111111010111010111001111111101—27
G Chapman	011111000011101001100111101101100—21
L C Van Ripen	101111111111100110111011111101101—29
P Moeller	001010111110101111110011111011111101—25

BROOKLYN, Jan. 25.—A prize shooting will take place at Wissel's Cypress Hill Park, Feb. 4, at 1 o'clock, between the members of the Acme Gun Club.

WORCESTER, Mass., Jan. 24.—At this week's attendance at the third of the classification prize shoots the attendance was not as large as usual, but all the contestants proved to be in Class A, and the purse which is usually divided for three prizes for each class, was divided into four prizes for those contesting. In the classification score there were 4 strings of 6 birds, a possible 24, and in the prize score a possible 10. The first prize, $6, was divided by Howe and Smith; second prize $4.50, was divided by Dean, Rugg and Snow; third prize $3, was divided by Gilmore, Russell and Knowles; fourth prize $1.50, was divided by Holden and Webber. The work of each man more in detail follows:

	Classif'n.	Prize.		Classif'n.	Prize.
C H Howe	20	10	M D Gilmore	20	8
E T Smith	19	10	G W Russell	17	8
W R Dean	22	9	E S Knowles	17	8
G J Rugg	20	9	C B Holden	21	6
E F Swan	17	9	H W Webber	18	6

CHICAGO, Ill., Jan. 24.—The Gun Club held its eighth annual meeting at the Sherman House last night with President J. B. Reeme in the chair. The secretary and treasurer's report showed a very satisfactory financial outlook, and on motion, it was voted to appropriate $190 to be divided into four prizes and awarded to the four men holding the four highest averages during the year. Appropriations were also made for the ground, trap and miscellaneous medals, and the directors were instructed to call one shoot in February and one in March and two each month thereafter until September. The following officers were elected: President, F. C. Donald; Vice-President, J. M. Hutchinson; Secretary and Treasurer, C. E. Willard; Board of Managers, C. S. Burton, W. L. Shepard and P. F. Stone. The board of directors were empowered to make the club's donation to the tournament of the Illinois State Sportsmen's Association, and also to issue challenges and arrange matches with other clubs. The Mak-saw-bas hold another big tournament shoot at their club grounds at Davis, Ind., next Saturday, Jan. 26. It will be considerable of a shoot and there is going to be close work and plenty of fun. Scores will be sent in.—E. H.

OAK POINT, N. Y., Jan. 24.—The fifth weekly sweepstake match of the Mt. Morris Gun Club took place at Oak Point this afternoon. The conditions were that each man was to shoot at 20 live pigeons, 25yds. rise, 80yds. boundary, from 5 traps; $25 entrance each man; a winner of a previous match to be handicapped 2yds. The entries were as follows: P. Mullen, P. McKeon and J. L. Mott, Jr. Mr. Mott shot from the 27yds., while Messrs. Mullen and McKeon shot from the 25yds. Frank Banham of the Crib Club was referee, and L. Contoit scorer. G. Rea handled traps. The following is the score:

Mott	10101011110111111113—16
Mullen	11100111101111110100—14
McKeon	11011111110011111111—17

There was also a clay-pigeon sweepstakes, $10 a man, which resulted as follows:

Mott	1110111111—9	McKeon	1001110111—7
Mullen	1010110101—6		

BERGEN POINT, N. J., Jan. 25.—The members of the Carteret Gun Club assembled in force this morning at their club house here to witness a pigeon shooting match in which two members of the Riverton Gun Club of Philadelphia vanquished the best shots of New York. The match grew out of a challenge issued by Mr. Phillip Randolph and Mr. H. Yale Dolan to shoot two of the best known shots of New York for a purse of $100. The Carteret Club selected Capt. Pierson and James Gladwin to represent their skill, and the conditions were according to the Hurlingham rules, which provide 50 birds for each man, with 30yds. rise. The New Yorkers, being much older men than their antagonists, were confident of an easy victory. They were disappointed. The score was as follows: Capt. Pierson killed 43 birds and missed 7; Mr. Gladwin 41 killed, 9 missed. For the Philadelphians Mr. Dolan killed 48 and missed 2; Mr. Randolph killed 45 and missed 5. Altogether the shooting was remarkable for its excellence, and the skill of the Philadelphians was a surprise to their older competitors.

SUBURBAN SHOOTING ASSOCIATION.—The opening tournament for the season of 1889 will be held on the shooting ground at Chicamant, N. J., on Friday and Saturday, Feb. 22 and 23. The programme includes the following events: Team Sweepstakes, Feb. 22, open to teams of 5 men each from any gun club having been organized three months; a club may enter as many teams as they choose, but no man shall shoot in more than one team of 5; 10 single rises, entry $1 per team. Team Sweepstakes, Feb. 23, teams of 3 men each, same condition as above, no man can shoot in more than one team of 3; 15 single rises, entry $5 per team; No. 1, 10 singles, entry $1; No. 2, 10 singles, entry $1; No. 3, 15 singles, $25 guaranteed, entry $1.50; No. 4, 5 pairs, entry $1; No. 5, 10 singles entry 50c.; No. 6, 10 singles, use of both barrels, entry $1; No. 7, 20 singles, $60 guaranteed, entry $3; No. 8, 10 singles, entry 50c. Programme will be the same both days, except team shooting. Announcement will be made of the merchandise prizes and trophies for amateurs. The shooting will commence at 9 A. M. and continue all day. The shooting will be on the Keystone plan. Club shoots will be held on these grounds every Saturday afternoon. Monthly tournaments every fourth Saturday, commencing at 9:30 A. M. For full programme address the N. Y. Suburban Shooting Grounds Association, No. 291 Broadway, N. Y.

PHILADELPHIA, Pa.—The traps of the North End Gun Club are now sprung by electricity, being operated on a system worked out by Mr. James Wolstencroft, a prominent member of the club. It is an original plan, and was so successful at its first trial that the club adopted it at once. It lets the birds leave the traps quietly and quickly, with diminished chances of breakage. On Saturday, Feb. 2, the North End will shoot a friendly match against the Cinnaminson Gun Club, of Cinnaminson, N. J.

WELLINGTON, Mass., Jan. 26.—The weather conditions were favorable for good shooting to-day, and in the merchandise and silver pitcher matches some very good scores were ma'e. In the merchandise match points were scored as follows: Stanton 13, Perry 14, Swift 12, Sanborn 10, Bradstreet 7, Bowker 10, Melcher 9, Lang 14, Schaefer 11, Bond 8, Wilson 11, Garfield 13, Robinson 7, Baxter 9, Chase 11, Baldwin 8, Choate 14, Rule 9, Short 13, West 10, C. E. Savage 13, Tribble 8, Snow 12, Field 14, Warren 13. In the silver pitcher match, at 8 clay-pigeons and 7 bluerocks, the following scores were made: Stanton 13, Perry 13, Swift 14, Sanborn 12, Bradstreet 12, Bowker 12, Melcher 9, Lang 9, Schaefer 11, Bond 1, Wilson 12, Garfield 11, Baxter 9, Chase 13, Choate 12, Rule 8, Short 12, West 11, Stone 9, C. E. Savage 9, Snow 9, Field 12, Warren 10. Following are the winners in the several sweepstakes: Six bluerocks, Choate, Bowker and Nutting; 6 bluerocks, Lang, Swift and Staaton; 6 clay-pigeons, Bowker, Schaefer, Garfield and Baldwin; 6 macombers, Choate and Stanton; 6 bluerocks, Lang, Perry, Webster and Warren; 9 bluerocks, Wilson and Field; 3 pair clay-pigeons, Perry, Lang, Choate and Short; 6 Macombers, Stanton; 7 bluerocks, Chase; 6 Macombers, Perry; 6 bluerocks, Perry and Choate; 3 pairs clay-pigeons, Stanton, Choate and Short. Swift was first for the silver pitcher with 14 out of a possible 15, and will have to stand back 2tyds. from the traps at the next shoot. An all-day's shoot will be held next Thursday, when the contest for the amateur team badge will take place between the Jamaica Plain Club and the Wellington and others. The challenge amateur individual badge of the Massachusetts Shooting Association, now held by R. F. Schaefer, will be contested by C. B. Sanborn, the shooting to be at 8 clay-pigeons and 7 bluerocks. The team match will be at 5 bluerocks and 5 clay-pigeons.

KEOKUK, Iowa, March 12, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. LOWRIE.—*Adv.*

A LEFT-HANDER NOT FROM A COWARD.

Editor Forest and Stream:

The shades of night are falling fast as seated in the midst of some fragrant-smelling marlin, with the usual amount of canoeists' truck around, the last few moments of the fast ebbing day are employed in perusing "The Right-Hander," from my friend Mr. Vaux, which seems to be principally devoted to striking blows below the belt. Suddenly the paper is dropped and the next few moments are devoted to lashing myself securely to the mainmast while the order is given to see that all is clear "for'ard!" that the decks are cleared for action, and that every mother's son arm himself with a pea-shooter and prepare to receive—well, almost anything, from porridge tossed at you with a boat hook to—to a threat to stop the crew's grog.

There are one of two points in the Right-hander that to one who did not read my first epistle might appear rather strange, and I take this opportunity of putting myself straight on the question *re* changes in the sailing regulations.

Mr. Vaux infers that I would change the rules every fifteen minutes, and, with several references to the "fifteen minute MacKendrick plan," says, "Where would we be if the regatta committee were allowed to change the rules at their discretion every fifteen minutes?" I presume Mr. Vaux did not intentionally misrepresent what I said, so I will copy for his benefit from my article in the FOREST AND STREAM of Dec. 20, of the same paper from which he took his quotations. I wrote as follows: * * * "The greatest and almost only evils, which could be checked by simple rules introduced by the regatta committee and passed upon by the executive committee," and also, * * * "after seeing about 3in. of a similar saw projecting above the combing that it would just take a regatta committee about fifteen minutes *to see* that if by the sailing regulations," etc., etc., and after they "had seen" (not legislated) they could take the constitutional method that I mentioned before of having their suggestions made into rules. There were many other points of a personal character, not bearing at all on the questions at issue, but as my friend has doubtless ere this recovered his usual good temper we will pass them over and drop anchor alongside the questions on which we do not agree.

It is a pleasure to have "wid us" the chairman of last year's regatta committee on two out of the three points raised. I quote his words of Jan. 3, *in re* the sliding seat: "Yet I would not oppose its being ruled out if extending past the side of the canoe," and "likewise I would not oppose a rule forbidding the board coming above the deck," and as we are a unit on those two points we will hoist anchor and lay for the standing sail work and see if we cannot come nearer one another's ideas by a little quiet discussion.

Mr. Vaux says "The performance of the Fly proved that the hoisting rig is quite the equal of the standing rig in points of speed (contrary to Mac's statements)." Well, that is Mr. Vaux's opinion perhaps, but it is not the opinion of many who are competent to judge. Mr. W. P. Stephens, canoeing editor of FOREST AND STREAM, who spends a considerable portion of each meet examining just such points as that, and is therefore, probably, the person most competent to judge in the whole A. C. A., says in the FOREST AND STREAM of Dec. 27: "The probabilities are that within certain limits of wind and under such conditions as maintain in many races, the standing sail is faster than any lowering and reefing sail can be." The fact that the Fly took a good place among a number of standing rigs does not by any means prove that it was the lowering sail that put her there, no more than a paddler wins his races simply by his having a good paddle. I have no hesitation in saying that the standing sail properly made is a faster sail, area for area, than the best hoisting sail that ever has or will be made; and any one knowing the care and ability which Mr. Butler displays in handling and sailing his canoe, will rather incline to the opinion that it was his able seamanship that took the Fly into her well won position, and not, as Mr. Vaux believes, that it was the lowering sails that did the work. The fact that many of our best men have adopted the standing rig and retain it proves that, area for area, it is faster than the lowering rig or they would discard it quicker than they'd drop a hot brick.

Last winter when we were discussing this same question, Com. Gibson suggested that, as we already had limited our races to one man, one canoe, we should take the next natural step and make it one suit of sails, *i. e.*, one man, one canoe, one suit of sails. The Northern Division was quick to see the advantage of Mr. Gibson's suggestion, and when publishing their programme in '88 stated that one suit would have to be used throughout their races, and the success that attended the experiment confirmed the opinions held by the regatta committee when they introduced it, and not a single standing rig was seen at the meet.

(1) It has this effect on those intending to enter the races, it reduces the excessive sail area, such as were carried by Dimple or some of the other canoes at the last meet. A person getting a suit of sails that he intends using throughout all the races says to himself: Well, me bucks! if I've got to carry these sails, blow high or blow low, methinks I'll get a moderate-sized suit or a pretty big suit that I can reef and make nice and snug if it blows hard.

(2) It also has the effect of making one devote more time to the single rig, and therefore get a more perfect one than if he had to fix up and monkey with a box full, two-thirds of which would be left on shore, while he uses the one suit which is built for the wind that happens to be blowing at the start.

(3) If he has to use but one suit, the chances are nine to ten that it will not be a standing suit, and few would care to run the risk of going to a meet, where it is just as likely to blow hard as easy, with only one suit of the standing article.

(4) It has the effect of making the record men have lowering sails; if they just use one suit as a standing sail they cannot enter the combined race.

(5) It has the effect of encouraging the all-around canoeist as distinguished from the machine man, and if adopted would in a year do away with the "standing, non-stowable abomination" as effectually as if they had been summarily ruled out, though any one who considered a suit of standing sails better as all-round sails than a lowering rig would be quite at liberty to use them.

(6) It would have the effect of bringing into use a class of sails that could be used for cruising to and from the meets with comfort, and a class of sails that canoeists could point at with pride as general purpose articles fit for all weathers.

(7) It has the tendency to head canoeing in the direction from which we have been steadily drifting since '86.

The editor, in the FOREST AND STREAM of Feb. 16, 1888, says, "The great problem in all racing is to make the sport interesting and popular, to induce men to take part and to work for the prize;" and methinks the sport would be more popular and just as interesting were the races competed for on canoes of the Fly persuasion as distinguished from the Dimple lines; they would be more popular and just as interesting to the new men, and much more so to those old veterans like Gen. Oliver, Fernow, Gibson, Stephens, Baldwin, Rogers, Edwards, Butler, etc., who cannot but look back with feelings of regret when they contrast the appliances that are now used compared to the sails and fittings used from '80 to '84 and '85, when each member was trying to make the canoe what she should be—a good, safe, general purpose boat, with the best cruising gear that could be devised; or to the time when ex-Com. Gibson, in writing with reference to cruising one-rig men, says, "I am one of them and Vaux is another; all the Mohicans and many others are one-rig men whose boats are cruisers first and racers afterward. Could any of the hikers with the non-stowable articles point with pride to the club of his persuasion and say he gloried in being able to say he was a hiker, a standing-rig man, with centerboard in middle of his canoe?" etc., etc.

I tell you, gentlemen, the road we have been drifting since a Mohican was proud to slap his chest and proclaim himself and his whole club as one-rig men whose craft were cruisers first and racers afterward, is not the correct road, and it behooves old veterans who looked after things in those days to again don their war paint, and, with shoulder to the wheel, endeavor to extricate it out of the present rut into which it has temporarily fallen.

I believe one of the very best ways by which this can be accomplished is by reverting to what was then an unwritten rule, which the Mohicans (who were the leaders in canoeing in those days) and many others observed. I refer to the one man, one canoe, one suit of sails, which was then observed without a rule to enforce it, but which now, under altered circumstances, requires a rule to be made to that effect.

To do this we would have to decide as to what should make a complete suit of sails, and as a start I beg to suggest this definition —a suit of sails shall consist of all the sail or sails that a canoeist can hoist at once, and which when not hoisted must be carried on board throughout all the sailing and combined races. I know this will not suit my friend Vaux, who wants to carry four sails, probably two mainsails, a mizen and a spinaker, but arguing on that principle, if he goes to his tailor for a suit of clothes he will, I suppose, expect to get one coat, one vest and two pairs of trousers or probably two coats, one vest and one pair of trousers, but methinks his tailor will soon disabuse his mind of the idea that there are two pairs of trousers in a suit of clothes, or two mainsails in a suit of canvas. The one suit would embrace mainsail, mizen, spinaker, topsail (if one is wanted) and in Pecowsic's case would include a third sail in middle of boat if one is wanted, and it appears to me that one ought to get all the sail they could wish for under that rule. What say you? The cook has just jabbed his head out of the cabin to say dinner-r-r-r!! and I'll drop the quill for my knife and fork and lay to before the other boys do me out of my soup. WILL G. MACKENDRICK.

TORONTO, Jan. 19.

P. S.—While waiting for a second plate of soup a thought just strikes me *re* the centerboard coming above the combing. Mr. Vaux says "there was only one that projected very much above the combing;" and because there is only one, now is the time to allude to that one, not to wait until there are twenty of them. The first year there was only one standing sail. How many are there now? I believe the skipper of that one is getting a new craft, and unless he has changed his mind or is headed off by a rule the new craft will have the same style of centerboard, and perhaps there are many like him. Take time by the forelock and don't wait till the forelock gets past you, leaving nothing to hang on to but the animal's tail, which in most cases is a mighty bad rudder. —W. G. McK.

ATLANTIC DIVISION, A. C. A.

To the Members of the Atlantic Division:

The Executive Committee of the Atlantic Division has been, for some time past, collecting information which it is thought will be useful to a canoeist while cruising. It now proposes publishing, and sending to each member of the Division, a book containing the names and addresses of the officers of the Association, of the Division and of the clubs in the Division; tide tables, canoe pilot, calendar, weather indications, information regarding prevailing winds, navigation, buoys, lights, etc.; a list of totems, burgees and sailing signals of the Division clubs; directions for reaching clubs by rail or steamer from New York city; and, when possible, charges for canoe transportation.

A concise canoe cookery; also a description of useful knots, splices, etc., will probably be added next winter, at which time it is proposed to add to the pages now in course of preparation a series of maps of the Division waterways, on which the location of good camping ground, springs and wells, club houses, canals, etc., will be marked. These maps can not well be published at present on account of the expense they would involve.

Any suggestions or expressions of opinion regarding this publication, the expense of which will have to be met by the Division, will be of much benefit to the committee, which also requests information relating to any of the subjects mentioned, but especially that relating to good camps and location of springs or wells. Letters may be addressed to Lincoln B. Palmer, 57 Lincoln avenue, Newark, N. J.

PURITAN C. C.

OUTSIDE the chilling northeaster is whirling around the house, endeavoring to tear it from its underpinnings. The windows rattle and the building shakes, but inside all is light, warmth and comfort. Lying back at ease, propped up by numerous canoe cushions, I idle away the time and meditatively watch the blue rings of smoke curl lazily out of my old cruising companion, my brier. That old pipe is like a voice from another land; and as I sit in the warm and cheerful club room of the P. C. C. my mind drifts retrospectively over the crisscross of a past season of enjoyment. More than half the enjoyment of cruising is in the reminiscences which pass in review before one's senses; and thus sit I here deep in study, drowsily dreaming over the cruises and races participated in or vividly portrayed by the tales of my brother members. Here are some of them, taken by members of this club in 1888: From New York city through the rivers and lakes to the Thousand Islands, 600 miles, by T. L. Batchelder, Jr.; from Boston to Cape Cod, 50 miles, by Messrs. L. Hedge and F. A. Heyer; from Boston to Monument Beach, 70 miles, by Com. F. T. Baxter; from Boston to Nashua, N. H., Ocean and Merrimack rivers, 110 miles, by your humble servant, also one from Boston up the Charles, down the Sudbury, Concord, Merrimack and Plum Island rivers, up the Ipswich and down the Essex to Gloucester and to Boston, 200 miles, by the same. Besides these countless short cruises by all the members to Marblehead, Cohasset, Hull, and about the harbor and bay. In racing not much has been done, since the last was our first season, but 1889 will show a full racing schedule.

The club now numbers twenty-five active and twelve associate members, and is free from debt. The location is unsurpassed both for paddling and sailing, and we look forward to the time in the near future when the Puritan C. C. will be one of the largest and most successful clubs in the country. The fleet of canoes numbers eighteen, of all kinds, makes and sizes, only two being canvas. There are four of Robertson's Twilights, and racing is decidedly interesting between them.

The first annual meeting and dinner were held at Vercelli's on Jan. 12, thirty members and friends being present. The dining hall was decorated with flags, paddles and other articles of canoeing interest. I inclose a copy of the *ménu*. The following officers were elected: Com., Francis T. Baxter; Vice-Com., Charles F. Dodge; Rear-Com., Joseph S. Dean; Sec., James W. Cartright, Jr.; Treas., Lothrop Hedge; House Com., Baxter Brown, Hedge: Membership Com., Lothrop Hedge, W. S. Partridge and Cartwright; Meas., John R. Robertson.

Francis T. Baxter is to build a 15×30 canoe. J. S. Dean contemplates a 16×45 cruiser. The club house at City Point, adjoining the Boston Y. C., is open to traveling canoeists for the period of one week, and all are welcome. ILEX.

SOME CRUISING EXPERIENCES.

Editor Forest and Stream:

I have been asked to jot down a few hints to canoeists, to guide them in selecting a cruising kit, and in putting it into use. My experience has been confined to the open canoe, as all my cruising with one exception has been done in Canadian waters, but still I dare say that some of the matters to which I will refer may not prove uninteresting to those who use the decked canoe. The canoe most generally found in Canadian waters is what is known as the No. 5 Peterboro canoe, the dimensions of which are 16ft. long, and 30×12in. beam and depth. This canoe carries two persons comfortably with their cruising outfit; it is an easy paddler, and not too heavy to be carried over a long portage. It is also a canoe that travels well under a small lateen sail, say about 40ft. of canvas, and as a "girling" canoe it is, I think, unequalled.

Most old cruisers prefer this canoe made of basswood and painted, as it can stands a good deal of rough usage and is not so sensitive to scratches and other minor accidents as is the varnished cedar canoe. The latter is of course a prettier boat, and probably preferable for ornamental paddling and racing, but for the hard work of cruising the painted basswood will be found more serviceable.

On long cruises I have always carried a tent, usually a ridge-pole tent, 7ft. square and the same height. A tent this size is large enough for four, and very comfortable and roomy for two. The tent and pegs can be put into a canvas bag that will stow across the canoe amidships and take up very little room. The poles are not inconvenient and should be placed in the bottom of the canoe. A good rubber blanket is also essential, although the size may vary; and if the cruising party consists of four canoeists in two canoes, each canoe should have a rubber blanket large enough to cover half the floor of the tent. Over this I usually spread a thick woolen rug or a pair of heavy gray blankets, and carry another pair of blankets to use as a covering. All the bedding should be packed in the rubber blanket, as this protects it from the almost inevitable splashing of water from the paddles and from unexpected showers.

The cruiser's wardrobe is of course a matter dependent to a great extent upon individual taste, but it should be as limited as possible. The great charm of genuine cruising is the feeling of relief from all restraint in the matter of dress, the wearing of old rough clothes about which one has no feeling of anxiety, and which can be thrust into the rag bag at the end of the trip. In the same way toilet requisites should be confined to actual necessaries, and every superfluous article dispensed with. A small army dunnage bag should be sufficient to carry everything included under the last two heads. In the same way elaborate cooking utensils should be carefully avoided. With a good frying-pan and a couple of pails, an experienced camp cook will do wonders in the culinary line.

You will also need a few granite ware plates and cups, and a supply of common knives, forks and spoons. A tin pail is a very useful article, as it can be used for many purposes, one of the most important of which is the washing of the dishes. Don't forget that this has to be done, and be careful to provide yourself with dish cloths and a bar of common soap. Above all things see that you have a good hatchet or small axe, as there are always tent pegs to be driven and fire wood to be cut. As to provisions, it is difficult to advise, but I can only repeat the caution to keep the weight down as much as possible. For myself, I was fully content with a small supply of such necessary groceries as tea, sugar, salt and pepper, with a pound or two of bacon, and enough butter and eggs to carry me to the first farm house. Some bread or biscuits according to the locality, and then such luxuries as jam, pickles or marmalade, as individual taste may suggest. A canoeist will always carry a trawling line or such fishing tackle as will provide him with a constant supply of fresh fish, and be content with this dainty diet during his cruise.

A point of great importance as contributing to the pleasure of the cruise is the judicious selection of a camp ground. Upon many routes there are camp grounds which have been used ever since the days of the pioneers; delightful spots situated near well-known springs, or in the vicinity of a good fishing ground. In the selection of a camp site there are many points to consider, and it is well as early in the afternoon as 4 o'clock to be on the watch for the best place for the night's camp. Unless one is very familiar with the ground and certain of a spot ahead, it is unwise to push on until sundown, as there are many things to do which can best be done by daylight. The place selected should not be too far from the water's edge, nor difficult of access, as everything in the canoe must be carried up at night and carried back again in the morning, and so far at least as I am concerned, I have no faith in over-exertion as conducive to enjoyment. The ideal camping ground is a well sodded glade on a bank about 4ft. above the water, and about 12ft. from the water's edge. The trees near enough to protect the tent from the wind, and far enough away not to attract mosquitoes and flies. A hundred yards further inland a clear spring in the dim recesses of the leafy woods. A sufficient supply of driftwood on the beach to make a good campfire, a pleasant outlook, fine weather and good company.

Let us suppose a party of four in two canoes reaching such a spot at about half past four in the afternoon, just as the wind which has been behind them all day and made their journey a pleasant one, is beginning to go down with the sun. As soon as the keels have grated on the shore, all set to work to carry the baggage to the camp ground. Two of the party should then be detailed to put the tent up and in order. Another will construct the camp kitchen and get the water boiling, while the fourth is sent out to fish for the evening meal. Let us see how the two cruisers whom we have detailed to arrange the camp are proceeding. They first select the smoothest and softest piece of grass on a slight rising ground if possible, so that should a storm occur, the rain will run from the tent and not into it. This suggestion will likely be unnecessary to any A. C. A. men who attended the last camp at Long Island, as they had enough experience in wet weather precautions to last them a life time. The tent should be evenly set and the pegs well driven in, after which prudence has usually suggested a row of small boulders around the curtain which keeps the wind from blowing in and creating unpleasantness during the night. If the camp is to be at all a permanent one, the floor may be spread with soft young branches, but so far as my experience has gone, this is a purely theoretical way of adding to the comfort, as the branches are apt to grow larger and thicker during the night than one would imagine possible when they were cut, and to intrude themselves most unpleasantly. After a day's hard paddling, one should not have any difficulty in sleeping on any ordinary camp ground. After the tent is pitched the rubber blanket should be spread and the woollen rugs placed in position but not unrolled, as they are apt to be more or less dirtied if spread on the tent floor before bed time. The dunnage bags and the provision boxes should be brought into the tent, and a stick driven near the center on which to mount the candle. By this time the camp fire will be started, and the fisherman should have returned with at least one good fish. There are one or two things to be learnt even about the cleaning of fish, and although it is not a pleasant job, there is a right way to go about it. In the first place the scales should be carefully removed by scraping the fish from tail to head with a large knife. Then the fish is split down the back and the bones cut out, the head, backbone and tail being removed all one piece. The fins are then cut off and the fish thoroughly cleaned. You then have all that is good of the fish in one piece and its future treatment depends of course upon the size. If the fish is a very large one, a dainty picking for the cook may be made by boiling the backbone and the head, after which the cheeks and pieces about the backbone make very good eating. The rest of the fish is usually fried with bacon. The success of a meal in the open depends to a very great extent upon having it served hot, and the cook's skill will be displayed as much in this matter as in the mere cooking of the food. If there are several things to be cooked, one should always select that which takes the longest time for the first so that there may be as little waiting as possible.

It will hardly be necessary for me to attempt any description of camp dishes, as every canoeist knows more or less about cooking in general, and there is no better way to become an adept than by experience. It may be well, however, to give one or two cautions against mistakes which the beginner is apt to fall into. For instance, it is injudicious to attempt to make your tea in the same pot in which you have boiled potatoes. The result will be a mixture known to old campers as "the famous hair oil tea."

Another point of great difficulty will be the cleaning of the frying pan, and I have heard very many plans suggested for accomplishing this job. The best I know of is to fill the pan with water and boil out as much of the grease as possible, first of all scraping it fairly clean. After this the water should be thrown out and the pan put on the fire again empty and thoroughly heated. If it is then plunged quickly into the river it will come out quite clean and dry. The washing up of the dishes should be done immediately after the meal, and everything should be made bright and clean before being put back into the canoe. The canoe itself will be treated with the greatest consideration by every true canoeist.

I fear I have already exceeded what the editor may consider a reasonable limit, and in closing I would only express the hope that all who read this may before long have an opportunity of learning from their own experience how great is the enjoyment and how lasting the physical benefit of canoe cruising. CARL FULLER.

MONTREAL, Jan. 18.

THE ROYAL CANOE CLUB OF ENGLAND.

Editor Forest and Stream:

It is with a feeling of pain and vexation that I read in the FOREST AND STREAM of Dec. 27, under "New Rules Abroad, a paragraph reprinted from the English *Model Yachtsman and Canoeist*, and your comments thereon, wherein it is asserted that "the spirit of the new rules was to bar any of the Yankee flying machines that might come over," etc., etc.

When I read that paragraph in the *Canoeist* I was simply disgusted, and wrote to contradict it in January number.

I was the proposer of the whole of the new rules. During the discussion American canoes were frequently referred to, in that some of them were examples exposing the fact that racing considerations, if unchecked, might entirely override all cruising desiderata.

It was pointed out that even at present American canoes had, in some instances, gone beyond desirable limits; in fact, they had centerboard cases right in the middle, rendering sleeping aboard impossible and even sitting down a cramped position; that they had standing rigs, sliding-out deck seats, and that there was nothing in the rules to prevent small "bucket wells," low-ended cigar-shaped hulls, and many other monstrosities, which, though quite allowable from a pure racing point of view, must be detrimental to the popularity of canoe sailing and cruising.

None of these questionable fitments had as yet appeared in English canoes, except perhaps the extreme shallowness of hull found in the Charm, but this was the very reason for at once stopping the possibility of their appearance, *i.e.*, legislating before vested interests could stand in the way. Each of these fitments and their general tendency had been freely and fully denounced over and over again in the FOREST AND STREAM in America and in the *Field* in England; and at the R. C. C. meeting the new rules, conserving cruising qualities and barring "machine" tendency, were passed unanimously; and I see the executive committee of the A. C. A. has also unanimously given the same opinion and ordered the regatta committee to take steps in that view in framing the race conditions for 1889.

Now, sir, in framing those new rules I was most careful to avoid barring any existing canoe in America or England; for we might possibly be granted the pleasure of seeing (for such a record) either Eclipse or Fly and others come over to England during 1889, and we therefore added at the end of the rules of classification a note that "the above limitations shall not affect adversely any canoe built prior to November, 1888, which might have been eligible to sail in the R. C. C. matches under the rules in force in 1888."

Therefore, I hope sincerely that American canoe sailers will acquit the Royal C. C. of the mean and unsportsmanlike sentiments attributed by the *Model Yachtsman and Canoeist* to the members who passed the new rules.

Here allow me to point out under the rules in force in 1888 English and American canoes were limited in exactly similar manner in each country—with but three small exceptions. These exceptions were in the English rules, viz.: Sail limited to 112 sq. ft. No sliding out deck seats and centerplates to house within the canoe, *i. e.*, not stand up above the case, and that the new '89 rules add to these that "the committee has power to order in some races that sail or sails shall be kept lowered for a time previous to the starting signal," *i. e.*, practically a bar to standing rigs, if it be found desirable to use such a bar.

Thus every American "flying machine" existing up to date is eligible to race in R. C. C. matches if she either complies with the rules in force up to 1888 or with the new rules.

Now, where the new rules pinch some existing American canoes is solely, I believe, in regard to position of the centerplate case. The new R. C. C. rules say "the after end of the case—except in the case of bilge plates and centerboard cases that do not rise more than 4in. above the inside of the garboards alongside the keel—shall not be aft of the center of length." This did not exist in the rules in force in 1888. Possibly the "minimum depth up to within 2ft. of either end, from top of deck to lower edge of garboard not less than 12in.," may not include some, Vagabond, for instance, but here again this was not in 1888 rules, so Vagabond is not hurt.

I think it will be admitted that no existing canoe is cut out; and I feel sure it will also be admitted by all who really have the popularity of canoe sailing at heart that the "canoe of the future" is not hurt. What have we done, simply we have said and ordered that it shall be possible in future for a man to race with a fair chance in his one canoe both in paddling and in sailing races; hence we institute but 3 classes, and order maximum and minimum governing dimensions. Then we say also, this man shall not be driven by one or two racing men to build or fit in a manner antagonistic to the more general and useful branches of canoeing; we therefore order certain minimum depth to be fixed so as to insure a reasonable amount of stowage capacity and buoyancy. We order at least space to sit down in and we limit center plates to a handleable and stowable size, and sail area to a reasonable racing limit; leaving the designer otherwise unfettered as to model, building, proportions, balancing and sail plan. As to "flimsy building," "apparatus of a light character" nothing was ever mentioned at the R. C. C. of such a nature; substance or mode of building were not touched upon, and purposely, "match box" construction soon becomes consumptive and, unless repeatedly patched and strengthened with extras, dies an early death.

I think you, sir, will admit that the Nautilus of 1887 was no flimsy construction, and her sisters since, though actually much lighter as a whole, have in reality been much stronger by being more perfectly fastened, and all superfluous wood and metal banished, and if the craft in racing trim weighs not over 200lbs., I am satisfied (though "1888" was 40lbs. lighter).

Whatever the near future may in "unlimited America" produce in the racing machine direction, it will at least be of great interest and value to those who think as I do, that canoe sailing is the highest and most intelligent form of sailing, the most interesting and the most healthy branch of sailing and indeed any sport.

Though we conserve cruising qualities for the popular benefit of canoeing in general, we welcome any novel device brought out by the keenness of racing, so it be compatible with cruising.

Sailing a light canoe under a cloud of sail is the nearest approach by man to the controllable flight of a bird and the governable passage of the fish in the water, and all that can be legitimately introduced to perfect such action should indeed be welcomed. W. BADEN-POWELL, Nautilus, R. C. C., England.

[Our comments applied only to the changes and the reason for them as first reported. Since we have learned their real nature we heartily approve of them. We hope that what we had already written last week, before the above letter was received, will serve as sufficient apology.]

SOUTH BOSTON C. C.

THE annual meeting of the South Boston C. C. was held on Jan. 2, at the club house, City Point, South Boston. The following officers were elected and committees appointed for 1889: Com., James W. Craddock; Vice-Com., Allan M. Hird; Sec'y, John J. Martin; Treas., Joseph A. Frizzell; Meas., Vincent B. Johnson, Geo. F. Frizzell, Samuel M. Wales and Thomas Ackland, together with the above officers, were choosen a Board of Directors. Membership Committee, Com., Sec'y, J. A. Frizzell, V. B. Johnson, A. M. Hird, Thos. Ackland and Geo. Frizzell. Regatta Committee, Allan M. Hird, chairman; William Bunlett, John J. Kelleher, Geo. Frizzell and Chas. McNeil. John J. Martin, V. B. Johnson and George Armstrong were appointed a committee to make arrangements for the annual dinner which will take place on Jan. 30, at the United States Hotel.

During the past year the club has held a series of regattas with both club and open races, which have been keenly contested, showing that the racing spirit is an active one in the club. The entries in the open races were especially large, and gave the racing men an opportunity of meeting the best canoes in the vicinity of Boston. In knocking about the harbor we noticed a very suitable place for holding a local meet, with a good stretch of water for racing. This is the southwest end of Pettick's Island, which has good camping facilities and a comparatively smooth beach. We have decided to hold a local meet on June 16 and 17, the meet to be held under the auspices of the South Boston C. C., and of course all neighboring clubs will be invited to participate and make things pleasant.

While the interest in racing has been keen, the cruising men have earned for themselves an enviable record as salt water cruisers. The longest cruise undertaken by members this summer was successfully made by Allan Hird, Fred Lovis and Vincent Johnson, who cruised from Boston to Portland, Maine, in July. They experienced fair weather until the third day out, when it began to blow. They put into Kittery, Maine, where they were weatherbound for three days. The weather moderating, they resumed their cruise and reached Portland in two days, the last day being a run of forty-five miles across to Casco Bay under sail from 4 A. M. to 4 P. M., the canoeists being sometimes several miles from land. On reaching Portland Harbor they made camp on Cushing's Island, where they remained for the rest of their stay, returning home by steamer.

Another cruise of similar character was made one month later by Messrs. John J. Martin, John Lannon, James McNalley and John Ackland. It had been the original intention at starting to reach Plymouth, but owing to unfavorable weather the progress made was slow, and two of the party foreseeing that if they kept on they would not have enough time to enable them to return within their vacation, turned back after going about half way. Messrs. Martin and Lannon kept on, and although the sea was so rough at times as to hide one boat from the other in the trough of the waves, they finally reached Plymouth. The trip down occupied six days, owing to the unavoidable delays necessitated by the weather.

After stopping a day at Plymouth the canoeists started for home, making their first stop at Brant Rock. After wandering about the place the trip was resumed. The weather which had been mild since leaving Plymouth now changed, and a southwest breeze sprang up which soon developed into a mild gale. With wind abeam the cruisers tore along under full sail with the lee rail buried and the canoeists at an angle of forty-five degrees to windward, doing their best to hold the little craft right side up. There was a good sea on, and more than one green comber found its way on deck, but the skill of the sailors brought them through all right. Putting into Scituate, where they ate dinner, the wind showing no signs of abating they deemed it prudent to reef; so, accordingly, two reefs were taken in mainsail, and mizen stowed. They arrived at Black Rock, where they made a portage to Straight's Pond, which connects with Weir River, thus avoiding several miles of outside work, spending the remainder of the time in camp at Weir River. Several short river trips were also made up the Neponset and Charles Rivers. These trips form an agreeable change from the salt water cruises, as they are always made under paddle with specially light boats.

Judging from the preparations that some of our racing men are making, an exciting racing season may be expected. The commodore is hard at work on a design for a flying 16-footer, with plenty of dead rise and fine lines all over. The vice-commodore and measurer have just had built two 15-footers which promise to be speedy. Both are from designs by Mr. George Armstrong, a member of the club. The treasurer says little, but goes about smiling mysteriously when racing is mentioned, so the knowing ones predict that he will swoop down on them with something "to beat 'em all." Several other members are also building, and the open race on Decoration Day promises to bring out a fine fleet of new boats. According to the time-honored custom of all clubs we hold an annual dinner, though we do not, like some of our brethren, attend in canoeing costume. Still, we can eat just as heartily and tell as many whoppers in the canoeing line as though we were in camp. JOHN J. MARTIN, Sec. South Boston C. C.

MOHICAN C. C.—The annual meeting was held on Jan. 16 at the residence of Capt. Palmer, the following officers being elected: Captain, Robert Shaw Oliver; Mate, M. N. Rochester; Purser and Secretary, C. Y. Winne; Executive Committee, F. G. Mather. After the meeting the members were entertained by Capt. Palmer, the evening being passed with songs and stories. The club is now in a properous condition, with 46 members, every one being also a member of the A. C. A. One new member, R. L. Banks, Jr., was elected. On Jan. 12 Mr. W. C. Titus sailed six miles down the river to the country house of the club and back.

PLEON Y. C.—The annual meeting of the Pleon Y. C. was held at the Parker House, Boston, on Jan. 23, with Com. A. G. Wood in the chair. The officers elected for the ensuing year are: Com., A. G. Wood; Vice-Com., W. O. Taylor; Sec., F. L. Rhodes; Treas., W. T. Palmer; Meas., Howard Whitcomb. Regatta Committee, Com. Wood, F. L. Rhodes, Howard Whitcomb, F. B. Litchman, B. B. Crowninshield. Entertainment Committee, H. W. Perry, H. Whitcomb, C. W. Barker. The membership fee was raised from $1 to $2. A club book, containing list of members, yachts, etc., will be published this year.

CRUISING CUTTER VELMA.—OWNED BY H. L. PARKER, LYNN Y. C.

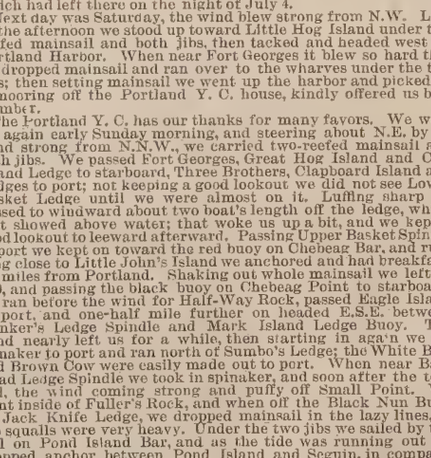
A CRUISE IN A SINGLEHANDER.

THE cutter Velma, of the Lynn Y. C., was modeled by John H. Keating, of Marblehead, and built by Allan Hay, at Lynn, in the spring of 1887. The owner, after reading the cruises of the Coot and Pilgrim, and a careful study of C. P. Kundardt's excellent book "Small Yachts," concluded that the sloop he then owned a share in was not suitable for such a cruise as he wished to take, so after looking for some time among the shipyards of Salem, Marblehead, South Boston and Quincy, and finding no boat that suited him exactly, he concluded to build, as a boat was wanted which should not cost too much at first and not be too expensive to keep.

The dimensions at last decided upon, a general plan of the boat was given, with orders for good accommodations for cruising, an uncapsizable boat, and a safe boat in any weather liable to be met with, and lastly, to have fair speed. Two seasons' use has proved the boat to be what was desired. Her dimensions are as follows:

Length over all	20ft. 7in.
L.W.L.	17ft. 6in.
Beam extreme	6ft. 3in.
L.W.L.	5ft. 9in.
Draft extreme	3ft. 7in.
Least freeboard	1ft. 8in.
Displacement (long tons)	2.97
Ballast, keel, iron	.55
" inside	.53
Ratio of ballast to displacement	.48
Area lateral plane	57.5sq. ft.
midship section	7.86sq. ft.
immersed surface	13.7sq. ft.
C. B. below l.w.l.	10½in.
from fore end l.w.l.	9ft. 6½in.
C. L. R. from fore end l.w.l	10ft. 5¼in.
C. E. from fore end l.w.l.	9ft. 4 in.
C. E. above l.w.l	11ft.
C. L. R., below l.w.l.	1ft. 7½in.
Mast, from fore end l.w.l.	7ft.
deck to hounds	18ft.
Bowsprit, outboard to sheave	9ft. 6 in.
Boom	18ft.
Gaff	13ft.
Area, mainsail	240sq. ft.
topsail	70sq. ft.
jib	68sq. ft.
total	378sq. ft.

The cockpit is 4ft. long and 1ft. deep, the deck forming seats, with scuppers above water. The fore hatch is 15in. in diameter. The keel, keelson, stem, sternpost and rudder are of 4in. oak; frames oak, 2×2; floors, 1½ sided, 2½ thick in throat; plank, cypress, ⅜in.; ceiling, ½in. pine; deck frame, 2×2 spruce. The forestaysail sheet is single, working itself in tacking. The cabin house is 6ft. long by 4ft. wide, with over 4ft. head room; a length of 7ft. forward of the house gave over 5ft. height and plenty of room for oil stove and cooking utensils. A series of railed shelves forward held all the dishes, and a long rack on port side of cabin close up to the clamp gave room for charts and many other small things.



Canned goods and vegetables were kept under the transom. A five-gallon keg for water was fitted under the cockpit, so as to be easily taken out, or trigged with a small wedge so it never worked loose. Butter and lard were kept under the cockpit, and they were always cool. Oil in a two-gallon can supplied our wants for a long time. The large locker on each side of the cockpit gave plenty of dry storage for clothing and light sails. Bread was kept in a tin cake box set in one of the after lockers, and it would keep well for a week.

Our ground tackle consisted of three anchors, one 25, one 20 and one of 12lbs. with 25 fathoms 1½in. manilla line and 25 fathoms 2in. line, also one sea anchor or drag. We carried three lower sails, gaff and jibtopsails and spinaker. Just before the Fourth of July the ballast was shifted aft and a new mast put in, which was the same length as the old one from deck to hounds, but a longer pole, with 10ft. height from hounds to topsail halliard sheave. This enabled us to set gaff and jiptopsails well up, as we expected considerable light weather in July. Lazy lines were fitted to the mainsail, and their use saved a deal of work and trouble. Under the jib and staysail the boat will go to windward against a heavy breeze and chop sea, and never miss stays in tacking.

On July 5 we left Lynn at 9:15 A. M. with a good southwest wind; we rounded the weir off Bass Point at 9:50, and set gaff and jibtopsail. After passing Nahant we steered N.E. by E. ½ E., and set spinaker to starboard, we were off Marblehead Rock at 11:35, and Half-Way Rock at 12:10; then we passed the tug William Sprague with a party of Lynn gentlemen on board, who were out for a day's fishing. Firing our revolvers in the air, we received in return a salute from the steamer's whistle. We got to Eastern Point at 1:25 P. M., then took in the spinaker, and the wind falling we drifted a short time. Catching a little breeze we passed between Thatcher's Island and the Londoner at 3 P. M., 2¼ knots from the start.

We headed N. ½ E. from the Londoner between the flat ground and Little Salvages. The wind increasing we took in topsails, as the pole bent strongly. Heading for the Shoals, we passed White Island light at 7 P. M., having made the 20 knots from Cape Ann in just four hours.

When near Portsmouth entrance we caught a sharp thunder shower. Hearing the rain coming on the water and remembering the old saw, "when the rain's before the wind," we dropped mainsail and jib, and kept on our course under staysail alone. The rain fell in torrents, and the wind blew fiercely for a short time, but soon passing over we set all lower sail again and worked

VELMA—MIDSHIP SEETION.

up into the harbor, where we anchored at 9:30 P. M. on the Kittery side off Fort McClary, having made 51½ nautical miles for the first day's run of twelve hours.

We were up next morning early, and started out of the river with a rattling breeze, raising the whitecaps, and a heavy chop sea following the cutter, which carried whole mainsail and jib; the wind coming down in hot gusts off the shore, we double-reefed the mainsail, and keeping well off the land we soon set the staysail and afterward whole mainsail again. We passed Cape Neddick at 8:15, making the 10½ miles in just two hours. We were off Cape Porpoise at 11:30 and Wood Island at 1:07 P. M.; steering about N.E. we got to Cape Elizabeth at 3 P. M.; hauling up for Portland Head, the wind was dead ahead and fast getting lighter; we did not pass the light until 5:20 and dropped anchor at Peak's Island at 6 P. M., day's run 46½ miles. Here we met the Ruth, of Lynn, which had left there on the night of July 4.

Next day was Saturday, the wind blew strong from N.W. Late in the afternoon we stood up toward Little Hog Island under two reefed mainsail and both jibs, then tacked and headed west for Portland Harbor. When near Fort Georges it blew so hard that we dropped mainsail and ran over to the wharves under the two jibs; then setting mainsail we went up the harbor and picked up a mooring off the Portland Y. C. house, kindly offered us by a member.

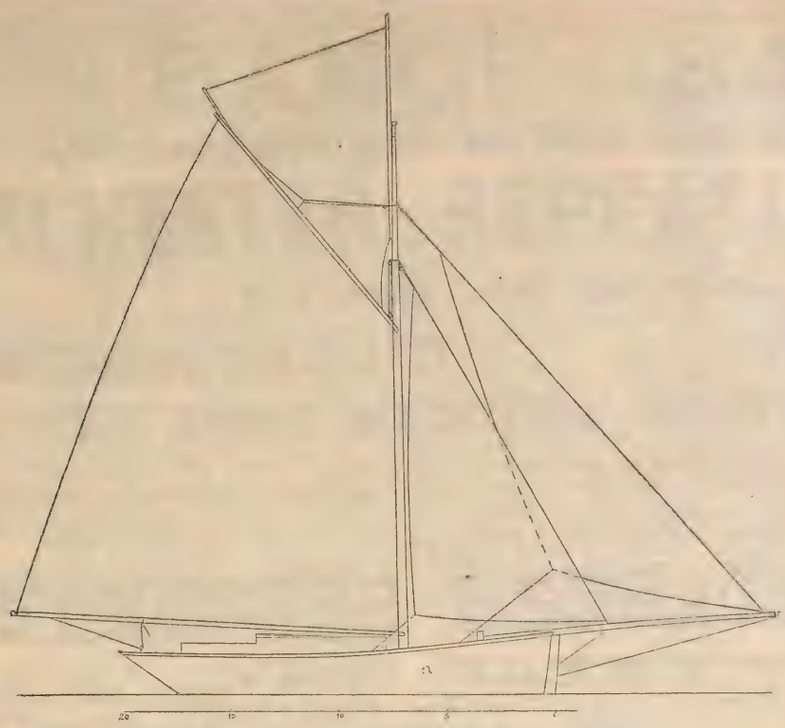
The Portland Y. C. has our thanks for many favors. We were off again early Sunday morning, and steering about N.E. by E., wind strong from N.N.W., we carried two-reefed mainsail and both jibs. We passed Fort Georges, Great Hog Island and Cow Island Ledge to starboard, Three Brothers, Clapboard Island and Ledges to port; not keeping a good lookout we did not see Lower Basket Ledge until we were almost on it. Luffing sharp we passed to windward about two boat's length off the ledge, which just showed above water; that woke us up a bit, and we kept a good lookout to leeward afterward. Passing Upper Basket Spindle to port we kept on toward the red buoy on Chebeag Bar, and running close to Little John's Island we anchored and had breakfast, 8¼ miles from Portland. Shaking out whole mainsail we left at 9:30, and passing the black buoy on Chebeag Point to starboard, we ran before the wind for Half-Way Rock, passed Eagle Island to port, and one-half mile further on headed E.S.E. between Dunker's Ledge Spindle and Mark Island Ledge Buoy. The wind nearly left us for a while, then starting in again we set spinaker to port and ran north of Sumbo's Ledge; the White Bull and Brown Cow were easily made out to port. When near Bald Head Ledge Spindle we took in spinaker, and soon after the topsail, the wind coming strong and puffy off Small Point. We went inside of Fuller's Rock, and when off the Black Nun Buoy on Jack Knife Ledge, we dropped mainsail in the lazy lines, as the squalls were very heavy. Under the two jibs we sailed by the bell on Pond Island Bar, and as the tide was running out we dropped anchor between Pond Island and Seguin, in company with two big three-masted schooners, also bound up the Kennebec. We were 19½ miles from Little John's by our course. We lay at anchor until 5 P. M., when, the tide turning, we beat up the river, passed Fort Popham with a light wind, and were near Bald Head, at the mouth of Back River, when it grew dark, the wind died out, and we tried to get to Phippsburg Centre, but the tide set us up toward Lee Island, so we dropped anchor for the night. Day's run about 34 miles.

We were very near the rocks, and it was thought best to keep watch until the tide turned, which would set us away from them. The tide ran so strongly, and it was so dark, that we did not feel at all encouraged to get our anchor and try to make a safer berth, as in the dark we might make a bad matter worse. The tide turned at about 1 o'clock, and then we all went below and slept well until about 4 A. M., when a shout from the crew awoke the skipper, who made short time in getting on deck. It was broad daylight, and the rocks were nearly all around us. Jumping into the tender and taking a second anchor he rowed quickly down stream until the 25-fathom line was all out, and dropping the anchor hurried to the yacht and took the end of the line we had laid to all night. The cutter was dropped down stream to the end of the cable, then the first anchor was hauled aboard the tender, this process being repeated two or three times until we were well in the stream with plenty of room all around. When hauling the anchor the last time a loud hallo from the yacht attracted attention, when it was seen she was fast drifting down stream and making toward the west bank of the river. The anchor was quickly got in the boat, and pulling toward the yacht it was dropped well away from the banks, and taking the end of the line in his teeth the skipper pulled his best for the boat, and as luck was with us the line was made fast around the bitts, with a few fathoms to spare. The cutter swung around to the line, and cleared the bank by a very short distance. On examining the cable it was found to have been chafed on the rocks, and when the cutter was snubbed it parted near the anchor.

One of the crew threw over a small 12lbs. anchor and neglected to take a turn over the bitts, so the line went through his hands and he had to let go or be pulled over, as the momentum of the boat was too much for him. It all might have been prevented had we anchored before dark, but the tide being with us we wished to make up river as far as possible.

The tide turning again about 7:30 A. M., we went up river, passing Pettis Rocks and Ram Inlet to port. After going through Fiddler's Reach the river widened and the city of Bath was in full view.

As the wharves did not look very busy we hauled up to one and made fast. Here we were shown many favors and had to answer many questions as to the use of the pole we carried on port side, a light spinaker boom, 20ft. in length. We bought a new 30lbs. anchor and about 37 fathoms of 2¼in. line.



We left Bath next Tuesday morning early and went down with the tide, with a light air, carrying spinaker part of the way. We passed close to the bell buoy near Pond Island, heading south of Jack Knife Ledge and Fuller, we steered for Half Way Rock, but the wind fell light and then flattened out entirely. We drifted awhile, and then a light breeze started in from S.E. We passed Half Way Rock, and steering for the Chunk of Pork, we passed between the red buoy off Green Island Reef and the black buoy on Johnson's Rock and soon came to White Head Passage. We went through with a good wind and came to anchor at Peaks Island at 6 P. M.; distance run, 31 miles.

Next day was Wednesday. We went over to Portland after dinner and anchored among the yachts off the yacht club house. Here one of the crew left on the Fremont for Boston, as his time was up. A strong wind had been blowing all day, and it increased at night and blew a heavy gale. Thursday the rain fell heavily at times in the night, with heavy thunder and sharp lightning. One schooner yacht near us dragged with three anchors out. The cutter Vayu of Boston lay near by, also the big steam yacht Narod.

We lay at anchor all day Friday, and at evening rowed down around the fine steam yacht Electra. She was lighted from bowsprit end to topmast heads and end of main boom with one hundred incandescent lights, forming a huge arc of fire that showed up finely in the darkness. We left Portland at 5 o'clock Saturday morning, wind very light, passed Portland Head Light at 6. After passing Cape Elizabeth we steered S.W., half west, for Wood Island, passing close to Old Anthony on the way. We passed Wood Island, and soon the wind came out ahead and gave us a long leg along the shore and a short one outside. We saw two white cutters standing across Saco Bay, but they were so far inshore from us we could not make out who they were. Off Cape Porpoise a white cutter was seen coming with the wind, she looked familiar, and we ran alongside and spoke her. It was the Otter, of Marblehead, also of the Lynn Y. C., bound east, cruising. About sundown the wind died away, we were then off Bald Head Cliff, heading for Cape Neddick. After drifting around some time and finding no wind at all we jumped into the tender and towed the cutter into York Little Beach, where we anchored at 9:30 o'clock between two small fishing schooners, the moon shining quite brigatly. Distance run, 36½ miles.

Sunday morning we were up in good season and went ashore to the bakery for provisions, and after breakfast weighed anchor at 7 A. M. and made a couple of tacks out of the harbor and then stood out around the Knubble, and headed S.W., with spinaker and topsail set, toward Portsmouth. Near York Spindle passed the Eastern Y. C. on their cruise. A white schooner was showing the way and a white cutter was to windward outside York Ledge; after them came a number of black schooners, some carrying big maintopmast staysails and trying to catch all the wind possible, which was not much. We passed Portsmouth entrance at 11:35, and heading S.W. by S. on a good full with light wind we made the Whistling Buoy off Newburyport Bar, and as wind and tide were both with us, we ran into the harbor and picked up a mooring which was kindly pointed out by yachtsmen aboard a small sloop. Time, 4:30 P. M.; distance sailed, 26½ miles.

Monday morning was pleasant, and a good breeze blew up the river. We got under way at 8 A. M. and beat down the river with the tide. When up to the breakwater the wind seemed to fail, and a heavy, short sea bobbed the cutter up and down and sent her bowsprit under water to the stem at times; but she took no water on deck. By close attention and quick work on jib and main sheets the yacht was kept head to wind and the strong tide soon carried us over the bar, and, paying off to starboard, we caught the wind again and headed S.E. by S. for Halibut Point, with quite a sea and a strong wind a little forward of the beam. We passed the schooner yacht Kestrel, evidently bound to New-

SAIL PLAN OF VELMA.

buryport. We went close to the point and between Avery's Ledge Red Buoy and Straitsmouth Island Light, and keeping outside of Thatcher's Island, we passed inside the Londoner at 12:15. After passing the Londoner we set spinaker for a while, and the wind fell quite light. We sailed around among the dory fishermen, and went into Gloucester harbor, where we anchored among the yachts near the beacon in the inner channel at 3 P. M. Distance sailed, 26½ miles.

We left Tuesday at 11 o'clock and starting some distance astern of a fleet of six fishing schooners, one schooner yacht and two 22ft. sloop yachts, the cutter showed her fine light weather qualities by drifting steadily through the fleet with scarcely a breath of air, and catching a light breeze outside was nearly a mile away before the next boat left the harbor. We passed Kettle Island to starboard, Baker's Island to port, then Eagle Island on starboard. The schooner yacht was then seen making Marblehead Harbor ahead of us, she had got out of Gloucester and standing outside of the Islands, had caught a good wind and with light sails aloft had made good time. We went up to the head of the harbor and dropped anchor at 4 P. M., distance sailed 11 miles. We left Marblehead, Wednesday at 9:30 with light wind and heavy chop sea. A heavy fog bank was seen well to the east so we steered about S.S.W. to clear the breakers outside of Pig Rocks, as we expected the fog to shut in at any minute. The weather kept clear and we passed around the weir at Bass Point and anchored at 12:15. The fog soon shut in very thick and lifted again in the afternoon, and the tide being about half in we went up Lynn Harbor and picked up our mooring at 4:30 P. M., having sailed 13 miles by our course. This was the first fog seen in the two weeks we were out.

The boat's deck and all above water was newly painted, and while waiting for it to dry the skipper took a run up country for a few days, returning in company with Mr. H. E. Feineman of Rochester, N. H. The boat was again provisioned for a short cruise, leaving the yacht club wharf on Wednesday, July 25, at 2:30 P. M. We carried a light breeze to near the whistling buoy off the Graves, and then losing it we drifted awhile, and finally headed for South Boston. The tide was against us, and we had very little wind, but at last got to the South Boston flats off City Point, and dropped anchor at 9 P. M. and went below. Next morning we had breakfast early, which went well with the exception of the coffee, which had a taste that troubled the skipper, as he had taken lessons at home on coffee making, and felt that he was quite an expert. On making inquiries it was found that the water was dipped from the sea, as there was more there than in the keg. We drank milk instead of coffee that morning, and at 10:30, hoisting our sails, went down the back way between Thompson's and Ward's Islands.

At Peddock's Island the wind was very light, and the tide running in strong, but after passing Boston Light we had a good breeze, and headed for Marblehead, passing close to the whistler off the Graves. The wind held until we were past Tom Moore's Rock Spindle, then we towed the yacht a short distance, then getting a light wind entered the harbor. We passed between Volunteer and schooner Miranda, and anchored well up the harbor at 6:30 P. M. Next day it rained and we went ashore, and at 2:30 P. M. went out to fish, the rain having ceased. The sea was a little rough, but we anchored on the fishing grounds, and fished some time, having fair luck. We lost one palm from the anchor which was caught on the ledge, not having stopped the cable so as to trip the anchor. We went back into the harbor and anchored for the night. In the morning it was blowing hard from the northeast, giving the cable more scope we rode all right. We were ashore nearly all day and going aboard toward evening the harbor was so rough that the skipper paid tribute to Neptune for the first time in twelve years.

Next morning was bright and clear, and leaving Marblehead at 5:30 A. M. we found a good north wind and a heaving old sea outside. We headed south for the Gurnet Lights near Plymouth, and had a fine run before the wind. We would rise on a big wave and then drop into the trough, and could see nothing but the waves around us. The swell was very heavy. We passed a long way outside of Boston Light and Minot's Ledge, and at length sighted Manomet Point, and then the Gurnet. The excursion steamer Shrewsbury passed us near High Pine Ledge, where the Pavonia struck some time ago. Jibing the mainsail at the Whistling Buoy, we soon passed the Bug Light on the Roxbury Pier, and followed the channel to the wharves and dropped anchor at 2:30 P. M., having sailed 40 miles from our last anchorage. We slicked up and went ashore, had a good dinner, and then went about town. The next day we went through Pilgrim Hall, and looked over the old burial ground and the new monument. From the Cemetery Hill we could see the sandhills at Provincetown at the end of Cape Cod.

Tuesday morning we left Plymouth at 5 o'clock, and after passing the Gurnet headed up the coast with a good rail breeze abeam. Off Scituate cliffs we dropped mainsail and sailed on our course under the jibs, reefing the mainsail at leisure. We set it double reefed and passed Scituate at 8:20 A. M., and Minot's Light at 9:10 A. M., then hauling on the wind for the Graves we passed between the Graves and Roaring Bulls at 11 A. M. Shaking out the reefs we soon passed Old Crotch Buoy, and going up the channel ran the boat in the mud as near our moorings as we could get at 12:10 P. M., having sailed 36 knots since 5 A. M. Furling the sails and putting out an anchor we took our traps ashore, well pleased with our trip.

VELMA.

DORCHESTER Y. C.—On Feb. 8 Commander Eaton, U. S. N., will deliver a lecture on charts before the Dorchester Y. C. The annual dinner of the club will be held on Feb. 21 at Young's Hotel.

YONKERS CORINTHIAN Y. C.—A new club by this name has been organized in Yonkers, the officers being: A. J. Prime, Com.; A. T. Rose, Sec., and H. Skinner, Treas. The other officers will be elected next month.

THE REGULATION AND DIRECTION OF YACHT RACING.

WHILE it is as yet too early to forecast definitely the racing of the coming season, its leading features are outlined with sufficient clearness to show that it will open under radically different conditions from any past year. The fight that began with the first agitation in favor of the cutter in 1878 may be said to have ended in 1887, if not really sooner, and though it is impossible to say in detail just what the yacht of the future will be, there can be no room for doubt as to her leading features. In general appearance she will not differ greatly from such craft as Sea Fox, Katrina and Baboon; she will in all cases be provided with a heavy lead keel, in some cases with a centerboard added, and in rig she will be a cutter, but with the laced mainsail, semi-housing bowsprit, and many minor changes that have been made from the conventional British rig. As to beam, the question is still open, but the limits are smaller in at least one extreme than in the past. As we hope to show, the maximum limit is a matter of uncertainty, and under existing conditions it may run to much more than one-third of the length; but as a minimum, we are not likely to see on either side of the Atlantic anything approaching the extremes of the past; in fact, the minimum here is not likely to be less than Bedouin, about 1/3 beams to length. The furious battle of the sloop and cutter is a thing of the past, and for a time at least there are no great matters of principle under discussion, but yachtsmen generally have settled down to a fairly unanimous understanding on the leading points once in dispute. Last season was in itself peculiarly barren of results or of grounds for any definite conclusions, but at the same time it served a good purpose as a period of rest and reflection after the three great international battles of '85, '86 and '87, in which the losses and gains on all sides might be carefully considered.

As a result of the long struggle many old ideas have been rooted up and new ones planted, yachting has been more thoroughly nationalized in America than ever before, and in addition it has been newly founded on safe and correct principles, so that the end of last season left the whole yachting system in a peculiarly plastic state, in which it may be permanently moulded for good or ill, according to the immediate action of the leading clubs and yachtsmen. While the interest in yacht racing is keen in all parts of the country, the fleet of modern yachts that are really good enough for racing is very small, and now is the time when action or inaction will exert the greatest possible influence on the fleet that will cover the sea coast, the great lakes, and even the smaller inland waters, within the next five years. What we have to say applies to the country at large, to every club and every yachtsman, though we will confine ourselves only to the great center of American yachting, the coast from New York to Boston. What is true of it is true of the entire country, so it is not necessary to speak in detail of other localities.

The racing fleet of this section to-day contains but three classes, the 90ft. schooners, with less than half a dozen modern boats, Grayling, Sachem, Sea Fox and the new Forbes schooner. The 70ft. class of single stickers has four, Bedouin, Shamrock, Titania and Katrina; while below this class is practically nothing until the 40ft. class is reached. In this class there will be over a dozen racing craft, with plenty of sport for this season, at least, though no man can tell what the future may bring forth. The 30ft. class also promises to be very well filled by the opening of the season, while the smaller classes that are patronized by the great number of clubs will be well looked after. The three classes first named, however, include all that enter in other than local races, so we will confine our comments to them.

In the 90ft. and 70ft. classes the general features of design are fixed within satisfactory limits in most respects, some purely keel craft and some with board as well; and though the tendency to oversparexists with them, there is little prospect of any radical departure from the general type exemplified by the boats mentioned. It is to the 40ft. class that we must look for the most emphatic illustration of the present evils, as well as for the still greater evils that are imminent in the near future. The class is at present the direct offspring of a length rule, modified somewhat in some clubs by a nominal tax on sail area, but in no case to an appreciable extent. In the Larchmont and Atlantic clubs the length only is measured; in the New York the merest shadow of a tax is placed on sail area; while even in the Seawanhaka and Eastern clubs the penalty on sail is hardly enough to be evident in the yachts themselves under canvas. All the evil tendencies of the old length rule, or of any rule which taxes one dimension only, are evidently at work to-day, and the results are nowhere better seen than in the 40-footers. Power, through its functions of beam, draft, lead and canvas, is at a premium, while the refinements of design are neglected to a most disastrous extent. The vital question of how much power can be applied to a length of 40ft. and with the best results to yacht racing at large, as well as the pockets of owner, is entirely lost sight of in the hurry to secure the utmost possible speed the class will admit of, regardless of all other considerations.

Under wise and far-seeing legislation the 40-footers should be the ideal class of American yachting; large enough to make the passages required for general racing and to afford a good cabin and an owner's stateroom besides; small enough to be built and run by the class which must be looked to as the main support of yachting, the younger men, of limited time and means, but unbounded enthusiasm, whose love of the sport, fostered by early experience in small craft, will take them step by step into larger vessels and keep them from the turf, the tennis court or the steam yacht. Though in the boats now built and building the extreme has by no means been reached, the latest of them fall far below this ideal, and worse still, show plainly what their successors are likely to be. Up to date we have reached a first cost of $8,000 for a plainly finished boat, a draft of anything under 10ft., an amount of beam and low lead that cannot fail to make a very bad sea boat; limited accommodation below for the cost and draft; and a sail area that is extravagant in first cost and in crew, that is unfit for cruising, and that with the lead keel is destructive to the boat. These extremes have been reached already, but it is within the possibilities of the next three months that we may see even them exceeded. Already a 40-footer with a draft of 11ft. has been discussed, while it is more than likely that one of the new boats will be nothing more than a racing shell, nothing inside at all. The "lengthers" of Southampton Water are generally recognized as an undesirable type, but it has remained for Yankee enterprise to outdo them in two short seasons.

It may be that all is true that was once urged against the narrow cutter, excessive cost, too great draft, bad sea boats, little accommodation; but it would be hard to show how the extreme development of the present type will be much better. For the same length of waterline the wide boat will cost more to build and much more to run with a racing crew, she will draw more water, be far weaker in construction, and where the cutter will sail under water the wide boat will toss the crew off the deck if they attempt to go to sea in her. The advantage of deck room and space below are on the side of the modern boat, but against the comparatively small rig of the narrow one must be offset her towering spars.

It looks now as if, by next season, we will only have to search the files of our contemporaries, from the day when, in the old *Aquatic Monthly*, "Big Topmast" first sounded the war cry against "lead mines" and "half-tide rocks," to find plenty of abuse that will almost exactly fit the coming craft.

It is by no means certain that the extreme boat will be the fastest, but even though she should, it is hardly necessary to remind thoughtful and intelligent yachtsmen that extreme speed, unhampered by any other requirements, is not the sole end and aim of yacht racing. The matter involves several curious paradoxes which have never, so far as we know, received the attention they are entitled to. First, as to the duties of a yacht club, they are to promote yachting, and yacht racing, not in the form of one specially fast craft against which no other can compete, but to keep alive a general competition between all the racing members of the club. So long as this is done, the club will prosper, even though its fleet be composed of inferior vessels; but as soon as one boat attains a practically unassailable position, no matter how much improvement may be embodied in her, the result is disastrous to the club. The same rule applies to unions of clubs, and is well illustrated by the continued success of Irex and the simultaneous decay of yacht racing in the Y. R. A. Of course in this case some other factors were at work, but the main facts are that the rule which has undoubtedly produced a very fast vessel in Irex, has at the same time killed yacht racing in Great Britain for an indefinite period. While then the clubs must encourage racing, it must be done wisely and carefully, and with the most careful study of every rule and its tendencies.

As to the owner, like Gilbert's Lord Chancellor, who pleads his own cause before himself, arguing both sides and giving what he calls an impartial decision, he occupies a totally different position as one of the members of a club from that which he holds as an individual owner of a racing yacht. In the former capacity it is to his interest to place such restrictions on the sport as shall insure its general prosperity and prevent him and many more like him from being driven out by a man who will spend unlimited time and money simply to win prizes. Once the rules are made, however, and he starts to build his yacht under them, it is to his interest to push to the very limit of the rules, building as powerful and speedy a craft as they will admit of.

The designer, too, is similarly placed. He must do the most possible for his client, his boats must win or his reputation suffers; but let him once succeed in evading the spirit and letter of the rule and he opens the way for others to follow, and even though he may be more successful than they, his success of itself serves to kill all competition. The present revival of the interest in the smaller classes promises to bear fruit soon in increased racing in the larger boats; but even now there are some careful observers who prophesy that the 40ft. class will exhaust itself within the present season. The result of a racing shell of unlimited draft, with nothing but a light floor below—a build that would stand but two or three seasons' service—and with a large and well-trained racing crew aboard through the season, is easily seen. She would stand a good chance of sweeping the coast, capturing every prize, killing the young class, and robbing the owners of their sport and the designers of a harvest which they may reasonably expect in the future.

The evils which threaten the class now, as well as other classes in the future, are two: size, which includes draft; and very light build, which includes the necessity of stripping the average boat for every race. While the former is the more serious, the latter is by no means trifling, involving as it does the life of the boat and its use to the owner for every purpose but a few races. The average racing owner desires a strong and staunch craft under him, nor does he care to sacrifice strength to a little speed, but if one or two are allowed to go to the extreme the others must either drop out entirely or follow the example. In the same way, most men who would own a 40-footer wish to live aboard her a great part of the time, as the owners of Baboon and Pappoose, or to use the boat for general sailing as well as racing, for which purpose Chiquita is admirably fitted up.

As a rule the fitting up of the new boats is not specially elaborate or heavy, but we have seen one handsome cabin converted into a dreary wreck by dint of a hard day's work before a race. How long it took to restore it we have never heard. The whole interior of the yacht was gutted completely, every shelf, every little door that could be removed by means of a screw driver, was sent ashore; no companion ladder, barely floor enough to stand on, every lid removed from the transom lockers, a pair of blankets on one locker for a man to sleep on, and the boat looking as if she was hardly half completed inside. Such a job as this is distasteful to almost all owners, but even now the feeling is that it is essential to success, and that in racing against good boats, not mere shells.

The necessity for some regulation of the sport has been recognized for some time by the more thoughtful men among the leaders of yachting, but no united and comprehensive action has yet been proposed. The matter of draft has received more attention than any other detail, especially in Boston, where rumors of deeper craft are rife; and a proposal to tax draft directly has been made by the Boston *Globe*. A curve of maximum draft is given, the limits being as follows:

Length..10ft.	Draft..2.6ft.	Length..60ft.	Draft..12.1ft.
Length..20ft.	Draft..5.0ft.	Length..70ft.	Draft..12.2ft.
Length..30ft.	Draft..7.0ft.	Length..80ft.	Draft..14.2ft.
Length 40ft.	Draft..9.0ft.	Length..90ft.	Draft..15.0ft.
Length..50ft.	Draft..10.7ft.		

We must say that there is nothing small or mean about the limits laid down, the narrowest cutter fiend could hardly quarrel with them, giving as they do 1ft. more draft to Shona and Delvin, over 1ft. to Ulidia and Queen Mab; a foot more to Clara, the same to Ileen; 3ft. to Bedouin, a foot to Genesta, and a full 15ft. to Thistle. It would seem alongside of the modern American "keel sloop" that the poor British cutter was only a shoal, half-way sort of an affair at best. As far as practice goes the limits are certainly generous enough, but we object to them in that they do not reach the case at all; they are unnecessary; and further, the *Globe*, until the means now at hand have been thoroughly tested there is no excuse for hunting up other methods, and those who really wish to further a material reform in the fleet will find an instrument ready at hand in the length and sail area rule.

While nominally such a rule is now in use, it is a recognized fact that in the New York Y. C. the rule is but a farce so far as it restricts sail, and even in its more stringent form, in the Seawanhaka and Eastern clubs, it bears far too lightly to afford any test of its value as a rule of measurement. Volunteer was built to race under the New York Y. C. rules, yet she was unable, from merely physical reasons, to use that amount of sail which she could easily have paid for by the rule, so that actually her sail was untaxed. The larger and newer mainsail, with its 87ft. boom, was tried and rejected because the boom, a perfect stick of Oregon pine, could not be made to stand satisfactorily. Though it is six years since the length and sail area rule was first adopted by the New York and Seawanhaka clubs, the proportion of sail, even in the latter, was too small to afford a thorough test of the value of the rule for building purposes, nor has such a test ever been made. As we have before stated, the rule has amounted in practice to little more than a length rule with a small correction for sail area, and under even the Seawanhaka rule the yachts have been wide and deep for their length, and with abnormal spars and canvas.

There is every reason to believe that a decidedly heavier tax on sail area would work a great change for the better throughout

the racing fleet, large and small. The New York Y. C. rule, as most yachtsmen know, uses length twice as a factor and sail area once; the Seawanhaka rule, in use also by the Eastern Y. C., the L. Y. R. A. and several other clubs, uses length and sail area each once, making them of equal value. A still better form of the rule would be a reversal of the N. Y. formula, using length once and sail area twice. Such a rule would reach far more effectually than has ever yet been done, the excesses in the direction of draft and ballast, and would place a premium on model rather than on an amount of power out of all proportion to the length of the boat, as at present. Such an alteration of the rule entails no radical change, it would compel a reduction of spars, and perhaps in some cases of draft and ballast, which most owners would be only too glad to make, while few, if any, existing boats would be injured by it. The change, too, is easily made in practice, as no new measurements of the boats would be necessary, the only difference being in the final calculation.

Of all the rules of measurement ever proposed, every one more or less faulty, we believe the length and sail area rule in some such form as is now used here to be the nearest approach to perfection yet devised. Objections may be made to it from technical and scientific standpoints, but the evidence thus far indicates that the rule will work well in practice, the only question being the adjustment of the ratio between the two factors, length and sail area. The perfect mean can only be found by careful trial, but we believe that the form of rule suggested above, length plus twice the sail area, divided by three, is well within the limits of practice, and that a trial would show that the proportion of sail area in the rule could be increased, rather than diminished. The immediate result of sharp racing under the present rules promises to be a craft of great draft and at the same time of excessive beam about the waterline, but with little depth of hull; certainly a most undesirable type, both in the matter of interior accommodation, draft, sail area and sea-going qualities. Such a boat, however, would never be built if sail were taxed to a reasonable degree, as the designer would, on a given length, be able to dispose of his displacement in a model of reasonable beam and draft but with greater depth in the sections, allowing a much smaller rig and giving very nearly as much available space inside, at the same time making an easier boat.

A short time since a prominent English designer, tempted no doubt by the possibilities offered by unrestricted beam after years of designing under the old tonnage rule, tried his hand at a racing 40-footer under the New York rule. When he came to the question of sail spread and found that this 40ft. boat would need some 2,100ft. in lower sails in order to keep up with the existing boats in the class, Baboon, Nymph, Banshee and the rest, or in other words, a larger sail plan than an old 20-tonner of about 48x10ft., he tore up the design in disgust. Compared by their sail areas, less than 2,000ft., the old 20-ton cutters such as Vanessa, Quickstep, Freda, Sayonara and their class, were better boats than the modern 40-footer with from 100 to 300ft. more in the lower sails. The added length of 8 or 9ft. gave far more room than was lost by the lessened beam of 9ft. 6in. to 10ft. in place of 13ft. 6in. to 14ft. in the new boats; the old cutters cost less, required a smaller crew, and had a better rig for cruising. Of course, if required to give time under the New York rule they would be heavily handicapped against the 40-footer, but that of itself does not prove that they were not faster, as well as better boats. We are not arguing for the restoration of such craft, they have had their day and there is no reason for building such narrow boats, but it must be plain to all that they would make a very favorable comparison with the new boats, and that a rule which would encourage something more like them, but allowing more beam if it be desired, would be a substantial improvement on the present state of affairs.

There are comparatively few who would care to build and maintain a racing machine such as we have described; the conditions which obtain in American yachting demand a fast boat, but at the same time she must be strongly built, with good accommodation below in proportion to her length, of reasonable cost, both in build and maintenance, and of a draft and model that will make her available for cruising as well as racing. Speed must be a prime consideration, but, at the same time, few yachts now sail more than one race a month during the five or six months they are in commission, and during the rest of the time their owners desire to live aboard and cruise about the coast. Under such conditions, the advent of one or two racing machines would mean the exclusion of the rest of the class from all racing, and would effectually hinder that extension of racing and development of model which is now easily attainable.

In order to get the most possible good to the greatest number out of yacht racing, two safeguards are essential, the first a good rule for racing, and at the same time for building under, whether by length and sail area, or some other elements; and secondly, some restriction as to the condition in which a yacht shall come to the line for a race. The latter subject is a most difficult one, to say what constitutes racing and what sailing trim, but at the same time it is one that should be dealt with now, before another boat is off the stocks. It will be a hard matter to formulate a law saying that such and such fittings must be retained, as the views of yachtsmen differ so greatly, and a large degree of liberty must be allowed to every man; but the rule should be so framed as to encourage a neat, compact and shipshape arrangement below. If it be made a rule that no permanent fittings shall be removed for a race; that stove, doors, companion ladder and similar articles must be kept on board, the result will soon be evident in an effort to lighten and perfect these details, rather than to cumber the yacht with a lot of shore stuff, to be carted ashore and back for every race. To most men, especially those who use their boats much for both racing and cruising, as Pappoose and Baboon are used, such a rule would be most acceptable, as they live on board all the time, racing or no racing; the only ones who would object are the men who own large yachts as well as a small racer, or those who prefer to live ashore and lose the use of their boat for an indefinite time before and after each race.

If it be admitted that some such legislation as we have outlined is necessary there can be no further question as to when and by whom it should be done. Now is the time, before the evils indicated become so powerful that they cannot be dealt with; in three months more the season will open and it will be too late for this year, and no one can say what the condition of yacht racing may be in another twelvemonth. The conditions now are peculiarly favorable to such changes, very few existing yachts, if any, would suffer, and there would be less opposition now than later. As to who should do the work, the matter is equally plain; it should be the result of a united action on the part of the leading clubs, and it would be a discredit to the spirit and intelligence of the great majority of yachtsmen to say that such a union is not easily possible. That it would meet with strong opposition from some quarters has been fully proved in the past, and local jealousy and the "rule or run" policy would come to the front to kill this as it has other movements for the improvement of racing; but such action is confined to a small number, nearly all non-owners or non-racing men, who would be utterly powerless if those chiefly concerned would each and all awaken to a sense of their responsibilities and interests.

We have long since given up the Utopian idea of a national yacht racing association that shall spring into existence at once, fully organized and ready for efficient and intelligent work, but as we pointed out in discussing the matter of classification two years since, such an association must follow, not precede a concerted action on the part of the leading clubs in such questions as the present. Without wasting time over the matter of organization, constitution and rules, the leading clubs, the New York, Seawanhaka, Atlantic, Larchmont and Eastern, have it in their power to appoint a joint committee to deal with the two specific questions of a change in the measurement rules and a new rule that shall place some limitation on fittings. If properly inaugurated by one of the above clubs the movement will find many friends and supporters, and time yet remains before the season opens for deliberate and careful settlement of the entire matter.

BUILDING NOTES.

OUR list of last week has brought in additional information, and we hope to reprint it in a fairly complete form in a few weeks. Mr. Frederick Grinnell, owner of the new Burgess schooner building at Piepgrass's yard, writes us to the effect that the l.w.l. is 65ft., not 61. We have had one or two complaints from owners of inaccuracies in the table, but as no further information accompanies the complaints we are unable to correct the errors. We have to add, in the way of new yachts, a 45-footer, similar to Mr. Ellis's craft, but deeper, for Mr. C. D. Owens, one of the late owners of Sachem. Mr. Burgess has made the design and Lawley & Son will build her. At Buffalo, Hingston & Sons will build a keel cutter, from designs by C. P. Kunhardt, for Mr. Frank E. Ward. She will be 33ft. over all, 24ft. l.w.l., 8ft. beam, 4ft. 6in. draft, with 5,000lbs. on keel. She will have flush deck, clipper stem and long overhang aft. At Rocky River, a suburb of Cleveland, Henry Gerlach is building a sloop from his own design and for his own use. She will be 29ft. l.w.l., 9ft. beam, draft about 4ft. 6in., with heavy iron keel and small board. At Boothbay Me., George Rice is building two sloops for Portland yachtsmen. Mr. Morgan's 40-footer will draw 10ft., the hull being of steel; and it is likely that Piepgrass will build her. The new Lawton 40 will have hollow spars throughout. Lawley & Son are timbering up the Forbes schooner, the Ellis 45-footer is planked and the inside partly completed, the keel for Mr. Beebe's 40 has been cast, and a beginning has been made on Mr. Belmont's 40. At the Atlantic Works the Ford steamer has floors, deck beams and bulkheads in place and two strakes of plating on. Martin has the frame of Mr. Forbes's steam yacht up, and Wood Bros. have two steam yachts in hand and another in prospect. Pryor has two steam yachts in hand, one planked and the other in frame. At Frisbee's yard, Salem, the McVey 40-footer, will soon be in frame, but the 30 has not been commenced yet.

AN OCEAN RACE OF SMALL CRAFT.

THE coming season will witness a novel and exciting race among the small cutters about New York, the following agreement having lately been signed by the owners of three yachts, while some others will do so later:

"We, the undersigned members of the Knickerbocker Y. C., with a view of testing the seaworthiness and speed of our yachts, hereby agree to sail an outside race, subject to the following conditions: The course to be from Norton's Point, Coney Island, to and around Montauk Point to Fort Pond Bay, L. I., finishing when Culloden Point bears south, distant not more than one mile; total distance 110 miles. The start to be by gun signal from yacht Nanita. It is agreed that the weather must be fair at the time of starting. Each yacht to take her own time at finishing point, and if at night to burn signal and fire one gun. The prize to be a silver cup. There will be no time allowance, and no yachts over 20ft. l.w.l. allowed to enter. Each yacht shall burn a colored signal light at every change of watch; colors to be hereafter agreed upon. Each yacht shall keep a log giving full particulars as to courses steered, and time of passing all lighthouses when such lights bear due north. The race to be sailed during the month of July, the exact date to be hereafter agreed upon. (Signed) Chas. Coughtry, cutter Nanita; W. G. Newman, cutter Madge; C. J. Dunn and C. L. Wegant, yawl Tadpole.

CRUISING IN SMALL LAUNCHES.

THE following is but a sample of several letters we have received in regard to "Pacific's" brief but interesting story of steam yacht cruising. The subject, though novel, seems likely to be a popular one, and we hope to hear from him at greater length:

Editor Forest and Stream:

Could you not induce your genial correspondent "Pacific," whose interesting romance on a steam launch appeared in your issue of Jan. 10, to relate more in detail his experience on the 21ft. boat? I would like to hear how he cooked his food, how he slept, where he went and what were his approximate expenses per week. Also if a craft of this length could start from New York, and by selecting good weather safely cruise outside as far south as the Chesapeake? Also how such a boat would act in the rough waters of the bay. I am sure his answer, if obtained, would interest not alone amateur boatmen, but all lovers of fine writing as well. W. P. A.

PROVIDENCE, R. I., Jan. 19.

ICE YACHTING IN THE WEST.—*Editor Forest and Stream:* Reports from the further West have the following, which would indicate that life is not without its charms even in a Minnesota winter. The sport of ice yachting is more general in the West than is commonly supposed. On Lake Erie it is very common, although the rough ice and wide cracks necessitate a very strong and heavy model there. No one who has once tasted the wild exhilaration of ice-boating would ever neglect a chance to repeat it, and the Minnetonka men are to be congratulated. "People who have been led to believe that the only place where ice-boating is a success is on the Hudson River would be surprised at the number of ice-boats to be seen on Minnetonka during the past two weeks," says the report. "The ice is now in splendid condition on both of the lakes, owing to the non-appearance of the deep snow which usually spoils the sport at this season. For two weeks past at least a half-dozen different boats might have been seen on the lower lake on any day when there has been sufficient wind to furnish the motive power. This sport—and for excitement it is vastly superior to tobogganing—has been indulged in on Minnetonka for the past three winters, but never before has there been so much interest taken. There are now three first class and three that are considered good boats on the lower lake. Among those who either own boats or take an interest in the sport are Capt. West, B. C. Hurd, A. C. Loring, Dr. Headley, Geo. A. Brackett and Messrs. Morse and Harrigan. Ordinarily the yachting on Minnetonka has been confined to January and February, when the snow has begun to melt, but so far this season, while the weather has been cold enough to freeze the ice to a sufficient thickness, there has been no snow and the only thing required has been sufficient wind for sailing. A number of yachting parties have already enjoyed the sport and several more are in anticipation."—E. H. (Chicago, Ill., Jan. 24).

SEAWANHAKA CORINTHIAN Y. C.—The annual dinner of the Seawanhaka C. Y. C. was held in the club house on Saturday night, Vice-Com. Center presiding. The following guests were present in addition to eighty of the club: Rear-Admiral Bancroft Gherardi, U. S. N., Commandant New York Navy Yard; Rear-Admiral D. L. Braine, U. S. N., Commanding South Atlantic Squadron; Commander Frederick Rodgers, U. S. N., Inspector Third Lighthouse District; Com. Elbridge T. Gerry, New York Y. C.; Com. G. C. Lowery, Larchmont Y. C.; Com. Sanford B. Pomeroy, Corinthian Y. C. The tables were handsomely decorated with models of yachts and yachting gear and many prize cups. An orchestra in an adjoining room provided music during the evening.

GEN. PAINE AND VOLUNTEER.—The report has been current about New York for the past week that Gen. Paine had sold Volunteer to Mr. Archibald Rogers, owner of Bedouin, for $25,000. It has, however, been contradicted in Gen. Paine's name by the Boston *Globe*. The report further stated that Gen. Paine would at once build a schooner from his own designs. It is also reported that the commodoreship of the Eastern Y. C. is at his disposal, but that he is unwilling to take it.

CRUISING.—Republic, schr., sailed on Jan. 23 for Bermuda, where Mr. Hall and his guests will join her....Coronet, schr., R. T. Bush, arrived at Colombo on Dec. 21, from Singapore....E. M. G., steam yacht, owned by E. M. Goodall, was last reported at Charleston, S. C., on her way from Norfolk to Indian River, Fla. She first made the trip by rail to Norfolk from Sanford, Me., then steamed by the sounds and canals to Charleston.

CHANGES OF OWNERSHIP.—Permelia, steam yacht, has been sold by Ward Hopkins to Geo. C. Rand, of New York, who has had her name changed to Lorna. She will go South shortly. ....Julia, keel sloop, has been sold by J. F. Sullivan, of New York, to Wm. Smith, of Cleveland, O., and will go out by canal this spring.

GITANA, schr., Com. Weld, was to have started on Monday for Gibraltar in charge of Capt. Sherlock, but in hauling out from the dock she was carried by the tide against the steamer Italy, losing davits, stanchions and rail, and crushing in her side above water. She will be docked at once for repairs.

THE MORGAN SCHOONER CUP.—The cup won by Sachem in 1887 in the race from Vineyard Haven to Marblehead, lately presented to her owners by Mr. Morgan, is a fine specimen of old English workmanship, dating from about 1820. It is in the form of a bowl 15in. high and 10in. diameter.

CLEVELAND Y. C.—This club is preparing to build a handsome club house near its anchorage.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

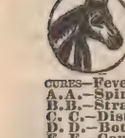
OWEN NOX, Boston.—Please send name and address to this office.

E. J. F., Sands, Va.—The Philadelphia dog show will be held April 16 to 19.

F. M. S., Newburgh, N.Y.—Domino was very highly commended, at Hornellsville, 1887.

H. B. C.—Each of the rifles has strong advocates. The .40cal. will do the hardest shooting; it gave no indication of corkscrew motion. "Sam Lovel's Camps" is now ready. Stephens's "Canoe and Boat Building" gives details of flat-bottomed boat.

AZTEC, Mexico.—In a recent copy of *Youth's Companion* is a story about "wild dogs" chasing an elk in Wyoming. Are there any wild dogs in the Rocky Mountains? Ans. We do not believe that there are wild dogs. All these stories are probably merely the flights of fancy of imaginative newspaper correspondents.



G. L. LAR., Dayton.—Could you kindly inform me if there is a New York law permitting the killing of fish, game and birds, and animals of all kinds for scientific purposes? If so, could you furnish me with a copy, and what would it cost? Is there an Ohio law for such purpose; and if no such law in either State, what State has such a law, and what would be the cost of such law? Ans. New York requires license for killing certain species, to be had on application to Mr. J. E. Allen, American Museum of Natural History, Central Park, New York. Massachusetts licenses are supplied by the Commissioners of Inland Fisheries and Game, and by the president of the Boston Society of Natural History. There is no such provision in Ohio.

GUATEMALA.—Near by there is a mountain stream 2,000ft. above the level of the sea, with plenty of trout from 6 to 10in. long; they will not take a fly nor any kind of bait that I know of, but as I know very little about fishing except what I have read in books, etc., it may be that I have not gone about it in the right way. Can you give any advice as to how they may be caught? Ans. If "Guatemala" will send to FOREST AND STREAM a description or drawing of the trout mentioned in his letter there will probably be no difficulty in identifying it. There is no member of the salmon family in Guatemala as far as the records inform us. The families which resemble the salmon family most nearly in external appearance are absent also from Central America. There is a family of fishes, however, in Guatemala, some genera of which are trout-like in shape—the *Characinidæ*, or toothed minnows—and have an adipose dorsal fin: it may be possible that "Guatemala" refers to one of these. Perhaps a skin of the fish can be sent in dry salt to the office of FOREST AND STREAM. This could be forwarded by mail and the question may be settled readily.

FOREST AND STREAM never was more readable nor higher in tone than to-day. It is first-class, especially its features in which I feel most interested, natural history, fishing, woods and tent life, editorial, National Park, etc.—GEORGE E. NEWMAN.

PAULDING, O., Nov. 4, 1888.—*United States Cartridge Co., Lowell, Mass.:* Dear Sirs: I recently used some of the U. S. cartridges which my father has had for about ten years, and they shot well at 50yds. (.22-cal.) and without keyholes. Yours truly (Signed), LOREN KIRK.—*Adv.*

The Forest and Stream Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, FEBRUARY 7, 1889.

VOL. XXXII.—No. 3. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year: $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE INTRODUCTION OF EXOTIC GAME.

AN important enterprise, undertaken at private expense for the public good, should have every protection the public can give it. There is just such an enterprise now seeking protection at the hands of the Massachusetts Legislature.

Some time ago Mr. Chas. B. Cory, a well known ornithologist, bought Great Island and Egg Island, on the Massachusetts coast, for the purpose of establishing a game preserve, where extended experiments might be made in the introduction and propagation of exotic species of birds and mammals.

Among the species imported were the English pheasant (*Phasianus colchicus*), the silver pheasant (*Euplocamus nychthemerus*), and the golden pheasant (*Thaumalia picta*), also the English partridge (*Perdix cinerea*) and ring pheasants (*Phasianus torquatus*). Many of these birds, Mr. Cory reports, have been turned loose, while others have been paired, and houses built for them, in which it is hoped they will live and become acclimated, and breed in confinement. The preserves were also stocked with quail and hares, and many quail have gone over to the mainland, and thus supplied the covers there. The island is a harbor for black ducks, which find on its shores a place to rest and feed, thence passing to the ponds on the mainland. There are on Great Island more than one hundred deer in large and small inclosures, and orders have been given for a number of European fallow deer, which it is believed will breed here.

This enterprise, it is seen, is one which contains tremendous possibilities. If it can be demonstrated here on Great and Egg islands that foreign game may be successfully bred, the meaning is that Americans can largely augment their game supply by carrying out similar enterprises on a larger scale. As Mr. Cory very reasonably suggests, it is probable that "by a comparatively small outlay the vast practically waste lands of our coasts might be made to teem with various kinds of game when now scarcely a living form of animal or birds remains. A little care in protecting our game and the establishment of breeding stations would again give us our woods filled with game and permit the farmer or laborer to have game (in the proper season) on his table of his own killing if he wished it."

Mr. Cory's experiments are as yet only in their initial stages, but he is already confronted by an obstacle which threatens to retard if not entirely thwart his purposes. Having bought his islands and imported his game, all at an expense of thousands of dollars, he finds that the one thing wanting is adequate protection from the shotguns and hounds of covetous gunners. The islands have already been invaded by men and dogs which chased and killed a number of the deer; and an attempt is now made to secure such a change in the Massachusetts game law as shall permit further invasions. A bill has been introduced into the Legislature to repeal the law forbidding shooting between high and low water marks.

The result of such a license would be that gunners would invade the shores of preserves like that of Mr. Cory's, and disturb and harass the game. How disastrous this would be in the case of the Great and Egg islands preserves is shown by the nesting habits of the pheasants there. Many of these birds, as Mr. Cory has found by observation, lay their eggs in February and March; he has seen eggs with snow a few inches from them; the pheasants pair in January, sometimes earlier, and if they are separated or disturbed, they will not breed that year. Many of the pheasants seek the edges of the beaches, possibly finding food among the seaweeds. If these birds are shot at or frightened, they will not breed.

It is entirely too much to ask that this undertaking, already having involved so great an outlay, and so promising in its results, shall be ruined because one gunner, or one hundred gunners, are eager to gobble up the island game.

If the law be repealed nothing can prevent the killing, or the disturbance—equally disastrous—of the game; dogs will be landed on the shores to chase and worry the deer, the game harbor will be broken up, and for all this there will be not one single public benefit in compensation.

When citizens of a State, animated by public spirit, are moved to undertake experimental enterprises of such economic importance as this one, the very least that a Legislature can do is to afford them protection. If the movers of the bill to permit shore shooting are sincere in their declarations, that the measure is intended only to benefit Cape Cod market-shooters, let them so amend the measure as to exempt private and public preserves; let them not insist upon the folly, greed and injustice of opening the shores of Great Island and Egg Island to the vandals. To do that would be a legislative outrage, for which we can conceive of no palliation.

ADVANCE.—I.

THE report of the Michigan Game and Fish Warden marks an epoch in the history of game protection in that State; and we cannot permit its publication to pass by without recalling the fact that the system now in such active and effective operation is a fruit of the labors of members of the Michigan Sportsmen's Association. Year after year that society fought for the principle that since game protection is a public good, it should be a public concern, taken charge of and carried out by the State. It was a long, tedious and up-hill fight, but they finally won the day; and what they have accomplished may be read of all men in Warden Smith's report, in our game columns. And the moral is that the sooner other States cease to depend upon the treasuries and the voluntary individual exertions of game societies, and undertake this work of game protection by paying public officials to enforce the laws, the sooner will they reap the rewards of intelligent action.

This result in Michigan is only one of the many evidences of advance, which may well cheer all workers in the field. The growth and triumph of right public sentiment are no less manifest in Wisconsin. To the situation there we shall recur in our next issue.

THE new Dominion Alliance of game clubs is a promising movement, as described in our game columns. Its scouts will find an abundance of work awaiting their best efforts.

SNAP SHOTS.

UNUSUAL activity prevails among the manufacturers of game and fish laws in various Legislatures this year. New York is always ahead in number and complexity of bills; Massachusetts, Michigan, New Jersey, Missouri and others follow, each with a very creditable display. Missouri and New Jersey are discussing the ethics of pigeon shooting. The New Jersey seasons will without doubt be changed; and an attempt will be made to amend the law relating to non residents. One bill provides that for fishing or shooting the stranger must pay a license fee of $22, of which $20 shall go to the county game society. The bill is said to be prompted by opposition to the West Jersey Game Society, which is made up of Philadelphians. The bill authorizes the formation of county societies empowered to stock the covers with game and to provide wardens.

The charming sketches descriptive of "Sam Lovel's" camp life, written by Mr. Rowland E. Robinson, and published from time to time in this journal, have been collected into a volume entitled "Sam Lovel's Camps, or Uncle Lisha's Friends under Bark and Canvas." There are several added chapters, in the course of which tidings are received from Uncle Lisha in his 'Hio home—or homesickness for the old Vermont hills—and Sam and Huldah are brought to that happy day where, after the fashion of so many heroes and heroines who have delighted the world, they are left by the author to live happily forever after. The high excellence of these character studies by Mr. Robinson cannot be over-estimated; as faithful studies of the Yankee character and Yankee idiom, of the time and place, they are unapproachable; and their qualities of accuracy and deep insight into the life described are very different from those likely to mark the work of a well-known author who has recently removed from Louisiana to Massachusetts, and is just now reported to have been on a flying trip down East to secure material for New England dialect stories.

The bill to create a Territory of Ocklahoma has passed the House, and in the Senate has been referred to the Committee on Territories. The purpose of this bill is to take away from the Indians land which they purchased and paid for as long ago as the year 1830, and which the United States solemnly covenanted and agreed should be theirs forever, and should not at any "future time, without their consent, be included within the territorial limits or the jurisdiction of any State or Territory." Efforts have been made for the past forty years to deprive the Indians of their rights in this territory; but they have been resisted, and the Government has time and again announced that these lands could not be taken from their present owners except by an utter forfeiture of honor on the part of the United States. It may be hoped that the Senate will consider well before passing this bill whether it is worth while to add to the shame which already attaches to this Government in connection with the Indians.

Michigan deer hunters have projected a variety of schemes for protecting deer; among them was a plan of fencing in a large territory with wire fencing for a deer breeding park. The latest proposition is embodied in a bill introduced into the Legislature by Mr. Tyrrell, of Jackson, to set apart the island of Bois Blanc, in the Straits of Mackinac, as a deer park; to stock it and preserve it for the term of ten years. The island contains 23,000 acres, is isolated and in every way well adapted to the purpose. This Michigan undertaking proposed by Mr. Tyrrell is in direct line with Mr. Cory's Massachusetts enterprise.

The Adirondack deer question is one which interests a vast number of people. We have several communications relating to it and will print them in our next issue. One suggestive indication of the trend of opinion is the fact that some of those who were a few years ago most strenuous in urging the passage of the present law permitting hounding now want to see the hounding season shortened. Facts are stubborn things; all the plausible reasoning in the world cannot make black white, nor prove that hounding Adirondack deer preserves the supply.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

THE BRONZE BACKS OF SUSSEX.

AMONG the hills of Warren and Sussex counties, not fifteen miles away from the Delaware Water Gap, or going up to the Pocono Mountains, an hour distant by rail, the eager sportsman still finds a fruitful field for his double-barreled Parker, and quiet streams and the swift Lehigh River still abounding in gamy trout. During the early summer I have, for several years, found an attractive resting place near Goldsboro, Pa., on the D., L. & W. R. R., and as I hear the January winds blow cold I wish it were summer once again and I was hunting with that skillful fisherman, Teddy O'Boyle (who was always "dry," however deep the trout holes), among the laurel bushes, for the sacred spots whence I used to draw 100 speckled trout before a late breakfast on a May morning, when, as Cullen Bryant hath it—

> "The May sun sheds an amber light
> The new-leaved woods and lawns between"—

The famous Teddy O'Boyle still lingers, as the Methodist brethren say, "On praying grounds and pleading terms." I called Teddy the "animated gin bottle," a name he proudly acknowledges, and which will linger among his friends and acquaintances till Teddy himself passes in his checks. Teddy was wont to dig his red worms early in the evening, and his early daylight cry was that his gin bottle should be filled. Much to his joy I used to compare him to Maginnis's "Timothy Thaddy O'Mulligan, who niver emptied his tumbler of punch without wishing it was full again!"

After many a morning's tramp along the waters of the Lehigh, with a creel full of "speckled beauties," when the sun reached the meridian, poor Teddy O'Boyle would always come to me, as I rested on a flat stone among the laurel bushes, and say, "Mister, it's dry I am. Let's go up to the house;" and no earthly inducement could stir Mr. O'Boyle to the glory of fishing for trout again till his gin bottle was filled to the brim!

It was in Monroe county Teddy and I once treed a bear with only bird shot in our guns, but Teddy informed me that he had lost no bears and made a beeline for Simond's Hotel, and I stood not on the order of my going; I went at once.

But the trout are nearly all gone. The "heinous wing of modern improvement," as Mr. Malaprop would call it, has quietly swept over the land, and the sawdust from the lumber mills has choked the little trout streams and they are gone, all gone, the dear, familiar faces—of the trout. The lumbermen have made such havoc among the big timber that even the gray squirrels have sought fresh fields and pastures new. Jay Gould's old tanyard still remains, sole monarch of the ruined landscape. Here Jay Gould began to lay the foundation of his fortune. He started a tanyard with a gentleman named Leupp near Gouldsboro, and the great financier gave name to the place. An unfortunate quarrel broke up the partnership, both claiming possession of the tanyard, armed their respective followers, and many a broken head and not a few indictments in the Scranton Court House testify to this day the bitterness of the partnership quarrel for domination. Jay Gould won the day, as he usually does, and partner Leupp, in bitter disappointment, cut his throat and died.

The few pheasants remaining in the laurel thickets were too few, or too shy to tempt a sportsman, so I laid aside my gun and took a train down to Delaware on the D. L. & W. R. R., and via Blairstown, N. J., sought Deckertown, in Sussex county, a quiet little country town nestling amid the grand old hills of Sussex. This was the home of that doughty warrior General Judson Kilpatrick, whose whole life was a romance, and whose bravery in battle might justify the poet's lines:

> "Time was when he who won his spurs of gold,
> From royal hands must woo the knightly state.
> But the knell of old formalities is tolled,
> And the world's knights are now self-consecrate."

Gen. Kilpatrick, with a magnetic presence, but without any real basis of intellectual culture, was not only a brave and dashing cavalry officer, but essentially a man of affairs. He succeeded in impressing Lincoln's Secretary of State, the great optimist, Wm. H. Seward, with his powers as a diplomat, and Kilpatrick was twice sent as the American minister to Chili, where he wedded a beautiful Spanish girl, who still survives the once celebrated hero, soldier and diplomat, who was scarcely forty years of age when he died in Chili, about the same time Minister Hurlbut died, while minister and envoy extraordinary to Peru.

I found the landlord at Deckertown a most companionable disciple of Izaak Walton, knowing every pickerel pond, trout stream and lake abounding in black bass anywhere in the two counties of Sussex and Warren.

I said to the gray-haired, but genial Boniface, who told me he knew every lake where the black bass most did congregate: "I must catch a 4-pound bass in the morning, for I have brought to boat the lordly *Esox nobilior* at the Thousand Islands, pulled in out of the wet a 10-pound *Salmo fontinalis* in Lake Superior, bagged a 30-pound salmon in the Bay of Chaleur, but as yet have I never caught a genuine bronze-backed bass of over 2lbs."

Old Boniface laughed me to scorn, and, shaking his long gray mane, he first said: "Jine me, stranger, in a ten-year bottled glass of applejack, which was in wood before the war of 1812."

I "suspended the discipline," as good old Barclay Haines used to say, and found the old apple rare and radiant with age and strength.

After the "jack" he called Scipio Africanus, and ordered him to be out before daybreak after the helgramite or "dobson" bait, not forgetting three dozen crayfish (crawfish they are called in the West).

Scipio's mouth stretched like a poor man's lease, from (y)ear to (y)ear; and he expressed his delight by an exhibition of his ivories, glad at the thought of a day off, with nothing to do but to lie on the sunny side of Truesdell's Lake while his boss and the guest caught black bass.

By daylight, behind a Patchen colt which traveled the turnpike like a "stallion shod with fire," we soon were spinning in a two-seated wagon, Scipio driving, over the splendid turnpike, and paused before Farmer Carpenter's barn, within a stone's throw of the beautiful lake, lying lovingly between two of the grandest hills in old Sussex.

Scipio hastened to bring out his bait boxes, having added fresh minnows to his helgramites and crawfish and green frogs. I was eager for a four-pounder: the jolly old landlord gave me his best lancewood rod, light as a feather, but supple as a lawyer's conscience. I first tried a crawfish as bait, and after reaching the middle of the lake in a light birch canoe, made a cast and waited for results. In ten minutes I felt a powerful pull; I paused one instant, then gave my wrist a twist, and as the reel whizzed frantically, and the line paid out rapidly a hundred yards, I knew I had hooked the black bass of my piscatorial dreams. I was cooler than I imagined I could be under the circumstances. He sulked. I gave a light tap on the polished rod; the telephone reached him and the bronze back was off again, jumping high in the air, giving his head a shake to dislodge the hook. But it was no go. In fifteen minutes the bass, kicking the beam at 4½lbs., was lying panting in the bottom of the skiff, and I was conscious of what my lord Roscoe would call the "greatest effort of my life." Nor was this the last.

Old Boniface seemed to know all the deep holes, and by going on the rocky side of the pond we soon had twenty big bass, the smallest weighing 2lbs. It was glory enough for one day, and I cried "Eureka" over the first genuine day's sport in my life among the big-mouthed bronzed-backs.

The ride home was through a magnificent country, where the barns, always larger than the dwelling houses, were filled with winter grain for the horses and the cattle upon a thousand hills.

Boniface said, "Stranger, you didn't know what old Sussex was." I admitted that the country with its hills cultivated to their tops was a surprise to me. When we reached home Scipio Africanus cleaned three of the biggest bass, which made a good supper for the house; and as the jolly and warm-hearted landlord remarked after getting 3lbs. of bass inside of him, "he felt as the Psalmist said, 'As if a child might play with him.'" Just when the Psalmist said it I could not remember.

He told me many interesting anecdotes of Gen. Kilpatrick, whose farm joined his, near Deckertown, and is still owned by the Chilian widow of the slashing trooper, whose audacity won the unstinted praise of old Gen. William Tecumseh Sherman. There were a hundred kind things said by his neighbors and friends about Kilpatrick; side lights on the character of the brilliant lecturer and soldier, which left a new and pleasing impression on my piscatorial mind.

Many of your New York "cadets of hope and soldiers of endeavor," would fly to the mountains of old Sussex, and in the proper season take a day off among the bass, which do most abound in Carpenter's and Truesdell's lake, if they knew how much sport awaited them. Anyway, I will not soon forget where I had my first and best day's outing among the "bronze backs."

J. M. S.

Natural History.

SNAKES.

IN the summer of 1848 I began a rather intimate acquaintance with snakes, which has been kept up and extended ever since.

I had found an exceptionally large and beautiful "garter," and as he would not move on, but seemed inclined to fight, I caught him in my bare hands. Of course he bit me, but these bites cured me of "fear of snakes" for all times. My hands were scratched by his slender sharp teeth, and bleeding, but not very sore, and he had done his level best.

Since then I have handled many hundreds of the species found in Ontario, and have usually kept a good series of specimens in captivity almost every summer, and often through the winter, and studied their habits very closely.

During the period of forest clearing, piles of brush, log heaps, rotting stumps, dense growths of epilobium, solidagoes and asters were common everywhere, affording to snakes shelter from enemies. Drainage was not thought of, and swales, swamps, ponds and small rivulets abounded, giving conditions favoring the increase of batrachians, supplying them with abundance of food. Of course, in such an environment snakes were very numerous, notwithstanding many untiring enemies. Among these were hawks, owls, the fox, fisher, mink, coon, skunk, but especially men, women and children, who, with an ever-present, unreasoning, brutal prejudice, cruelly destroyed these harmless creatures. It is far from pleasing to hear a frog or toad expressing fear and pain in an unmistakable language, which speaks directly to the universal heart; but it is the same as the roar of an ox on the shambles when knocked down by the axe, and the gurgling bleat of the lamb when the knife pierces its innocent throat. All these, like the unheeded protest of the martyr, eloquently evidence a world of wrong.

When not goaded by ill treatment, snakes are very cleanly and docile pets, especially the smaller species, and although low on the scale of mind, the graceful and ever varying curves of their lithe bodies is a pleasure to every unprejudiced artistic eye.

In our Ontario group of garters we have *E. saurita*, *E. sirtalis sirtalis*, *E. sirtalis ordinata*, *E. sirtalis parietalis*, and several intermediate forms. In central and northern Muskoka there is a form in which the stripes are almost, or altogether, wanting, being almost uniformly black above.

The largest garter I ever measured was 46½in. in length, and 4¼in. in girth. It was a typical *E. sirtalis sirtalis*, and was captured in the early part of May, 1883, in the immediate vicinity of Toronto. This form is most generally distributed, and is found north of Lake Superior.

E. saurita is found sparingly about Toronto, and I have captured specimens in Muskoka and Manatoulin, but it is most common along the Lake Erie shore, where it breaks into two or more varieties. It is the only Ontario form of that slender, graceful and somewhat highly-colored group of garters, of a western fauna. The *parietalis* form is not generally distributed. I have never met with it, except in the extreme southwestern counties, and even there it is not common. In general habits all these species of garter are pretty much alike. When ang their bodies are inflated and depressed, and the wh scales become conspicuous.

They take to water readily, and are good swimme they climb trees fairly well. I have often surprised th ten feet from the ground, in dense brushwood, and sor times a short distance up large trees having rough ba They winter under mud, in swamps and marshes, un piles of logs, in caves or crevices of rocks, beyond reach of frost.

In captivity they are best wintered in a barrel of wat having bars across toward the bottom to enable them keep under.

They feed on frogs, toads, salamanders, young bir the smaller species of snake, and sometimes on their o young. The young feed readily on fish worms, an have fed them on "maggots" carefully washed in c water. Garters very seldom seize their prey, unless it alive and moving. I have on a few occasions got them take recently killed frogs and birds, partially plucked, jerking them about. I have tried them with house mi young rats, *arvicolæ*, and young squirrels, living and de but never could induce a garter to "tackle" one of the Garters do not "constrict," and did they seize sm mammals as they do frogs they would be severely bitt

Toads, in the presence of snakes, usually remain p fectly still, in this is their only safety, for did they ma the least movement they would immediately be caug I have known a hungry snake lie waiting over an h for a frog to move, and even push with the nose to s him up. This has been called "snake charming," a indeed it looks like it, but the toad is the charmer, snake the charmee.

I remember one day I dropped a toad in the midst o pit of snakes I had in my back yard. He at once beca perfectly still, though surrounded by more than a doz hungry snakes. There was a circle of fierce heads a glaring eyes around him, but he would not move. T circle narrowed, until the protruding tongues alm touched him, yet he was immovable. Just then I w called away for over half an hour, but on returni found the toad, in grave dignity, still holding the f by most masterly inactivity. This lowly helpless cre ure, strong only by adherence to a natural faith, th baffling enemies numerous and powerful, brought Dan before the mental vision, more vividly than Rivie celebrated picture.

The senses of seeing, hearing and smelling are ve defective in garters, they can see but a few yards most, and even at short distances of but a few inch they are often at fault.

A snake was seen pursuing a frog, a half-grown *Ra halecina*, in a sawmill yard; the sawdust and open spa were greatly in favor of the snake and against the fr The frog made long jumps and the snake made a dire line to the spot where he alighted, but before reaching the frog had again jumped in another direction, and the hunt went on for about half a minute; the snak quite unable to trace the frog in his aerial progress, w directed only by the disturbance made in alighting. last the frog, more by accident than design, alighted on t flat surface of a rough board which stood leaning again a pile of lumber at an angle of about 80°, and sat p fectly still, about 10in. from the ground. The snake w quite puzzled; he looked, listened, sniffed and poked abo for several minutes, passing close to the end of the boa several times, but the hunt was an utter failure, and slunk away toward the brushwood, a very mad and d gusted specimen.

Hundreds of similar cases could be cited, all showi the defective character of the special senses of the garte

On feeding snakes, where several are kept together, y will often find two or more seize the same frog, when lively contest for possession ensues, which sometim ends in the larger swallowing the other contestant, fr and all. I have known them on several occasions, wh hunting a frog, seize and swallow *dekayis* and young their own species. Frogs are often first caught by o hindleg, but the snake soon gets hold of the other, a both go down together; otherwise the free leg would an obstacle to entering the mouth when the abdom was reached. Toads are often seized by the side shoulder, when the snake, by a peculiar movement the flexibly articulated jaws, moves his hold round the nose, when the act of swallowing begins.

Garters feed greedily for a few days, it may be a we or two, then seek a resting place, and remain inacti for a time. During this period the blood and nervo energy seems to be centered in the digestive apparatu and the functions of digestion and assimilation go c with great rapidity, and when completed, moultin usually takes place. I have known moulting to occ five times in one season; three and four times are n unusual.

Snakes drink freely, and in the absence of food ma sustain themselves on water only for at least one seaso While drinking they put their nose in the water and slight movement of the throat and jaws may be observe somewhat like that made by a deer.

There is no singing in the love-making of garter nevertheless it is as chaste and poetical as that of bird In the pairing season, the male fondles and caresses h lady love with much tenderness, accompanying h everywhere, and if not disturbed and separated, they a true to each other for a season. Where they are nume ous and where the males outnumber the females, the are sometimes found in a bunch of a dozen or more mal firmly twisted together, embracing one female. pairing they are usually stretched side by side, with t tails crossed, and remain in the act often for a day, an sometimes it is repeated at intervals of a day or two.

As in birds, the egg is full size before it is fertilize but incubation is effected within the body of the mothe In Ontario, pairing occurs in August, and the ova a mature in three or four weeks. When laid, the ova a irregularly oval shaped, flattened, about an inch i length. The average of 35 from a medium-sized moth was 25×15.4 mm., measured immediately after bein laid. The shell is a delicate transparent membrane, an the young snake is doubled up several times. A fe seconds after the egg is laid the occupant begins to mov when the membrane is ruptured, and breathing begi at once.

The fragments of the shell are soon broken off, an when dry the young garter is about five inches long. A average of 20 gave 5g. They are quite active and im mediately commence life on their own hook, moving o

in different directions. When disturbed there is an instant scattering, not the least thought of seeking protection from the mother. When about to ovaposit, the mother snake selects a sheltered, sunny, grassy spot, by the side of a fence, stump, log or brush heap, not far from water, and not frequented by shrews nor *arvicolæ*. The laying of the eggs completes her duty, and she has not the least maternal care nor thought of her progeny afterward. I have repeatedly disturbed garters while ovapositing; I have cautiously approached them unobserved, and carefully watched them, and have thrown my hat in the midst of the litter; and in captivity I have watched them for hours, while coming out of the "shell" and afterward, and time and again "scared" them, and in every case, without any exception, unmistakably, the mother cared nothing for her young, the young cared nothing for their mother. Neither sought nor offered protection of any kind. I have seen a mouse kill two young snakes before the very nose of the mother, without a shadow of protest.

I have seen a large *Rana clamata* catch and swallow three young, in three consecutive gulps, close by the side of the mother, and she did not even wink at it.

Garters are often captured when about to ovaposit, smashed to bits with clubs, or dashed to pieces against stumps or logs, scattering the eggs about, when the egg membrane being ruptured by the violence, the young snakes soon become active and scamper away; sometimes giving the impression they were stowed away in the mother's stomach for safety.

Why the snake was adopted by the ancient Egyptians as an insignia of royalty and intellectual power, or why it is spoken of in the Bible as remarkable for cunningness and wisdom, is not easy to explain. Surely the idea could not have been suggested by the mental qualities of any of our present existing species. It may be the idea, and many legends are from a prehistoric species, which in the age of reptiles attained remarkable brain development, lived through the triassic period, became contemporary with and a special enemy to man, but losing hold of environment took to its belly and crawled out.

In this there may also be some explanation of the widespread, cruel, popular prejudice, which prevails among enlightened as well as savage peoples, against our existing harmless species. W. B.

KENT SCIENTIFIC INSTITUTE.—Grand Rapids, Mich., Jan. 29.—Following are the officers for 1889: President, E. S. Holmes. Vice-President, W. A. Greeson. Recording Secretary, C. W. Carman. Corresponding Secretary, E. S. Holmes. Treasurer, C. A. Whittemore. Director of the Museum, W. A. Greeson. Curator, C. W. Carman. Librarian, E. L. Mosely. Board of Directors: Wright L. Coffinberry, W. A. Greeson, Samuel L. Fuller, E. S. Holmes, J. W. Jones, C. A. Wittemore. Officers of the Board: Chairman, W. A. Greeson. Secretary, E. S. Holmes. Treasurer, C. A. Whittemore.

GOLDEN-WINGED WOODPECKER IN MASSACHUSETTS.—Gloucester, Mass., Feb. 3.—*Editor Forest and Stream:* While taking a walk this morning I saw a golden-winged woodpecker (*Colaptes auratus*). The bird was flying from tree to tree in an old apple orchard quite near town. I am aware that some of our familiar birds are to be found in the thick woods in winter time, but I did not know that *C. auratus* was among the number. I should be very glad to know if this is the case, or if this is very early for the bird to arrive.—GEORGE HUGHES COUES.

THE *Audubon Magazine* for 1888 has been bound, and makes a valuable volume. Among its contents is a biographical sketch of Alexander Wilson. The twelve full-page plates are photo-engravings of Audubon's bird portraits. The price is $1.00.

JANUARY ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One Javan loris (Nycticebus javanicus), one nutcracker (Nucifraga caryocatactes), two goldfinches (Carduelis elegans), one St. Thomas conure (Conurus xantholæmus), two Mexican guans (Ortalida vetula), two Mexican cardinals (C. virginianus coccineus), and one Madagascar boa (Pelophilus madagascariensis). Presented—Two opossums (Didelphys virginiana), one Virginia deer (Cervus virginianus), one screech owl (Scops asio), one canary finch (Serinus canarius), one horned lizard (Phrynosoma douglassii), and two gopher tortoises (Xerobates polyphemus). Exchanged—One American bison (Bison americanus).

Camp-Fire Flickerings.

"That reminds me."

258.

WE were possum hunting. Overhead in a moonless November sky an innumerable host of stars shed their soft, seductive light, while under our feet rustled the crisp, brown carpet of leaves which a month before had spread a glory of mingled gold and crimson all over the wood. In the sharp air the music of the hounds rang in multitudinous melody from hill to hill. Having followed the little creek, flowing with a dark, quiet current, not yet swollen by winter rains, out of our usual range, we were at a loss for a "foot log" on which to cross. One of the boys, noted for the size of his boots, the noise he made in getting through the woods, and the facility with which he could fall down and get up, presently called out, "Here's a place we can jump," pointing to a bank about 3ft. high under which flowed a narrow but dangerously still channel, flanked on the opposite side by a pile of brown gravel. As we came up he stepped back for a "go," and cleared the bank in his best style. When his No. 10 brogans landed on what the blinking stars had persuaded him was a bank of gravel, the eddied leaves parted lightly, and with a mighty splash he went into 3ft. of ice-cold water. "Ugh-h-h, gosh!" he yelled, scrambling out on the other side, while the rest of us rolled on the ground and howled. AZTEC.

THE SHOOTING CLUBS OF CHICAGO.

V.—THE TOLLESTON CLUB.

PASSENGERS on the C. R. I. & P. Railway, running south of Chicago, notice in the vicinity of Washington Heights, Morgan Park, Blue Island, and indeed for a long distance along the road, a smoothly rounded, wooded ridge rising at the right of the track to a considerable height above the wide level which serves as a passageway for so many railway lines running out of the city. This long, low bluff is distinctly marked for miles. Upon its brow one may look off toward the big lake over miles of flat ground, which will appear to him like the bottom lands of some vast river, so regular is the trend of the bank wherever he stands. The town of Pullman lies in the middle of this flat tract, and back of this, creeping sluggishly around to Blue Island upon the right, sleeps the slow Calumet, met by the ditch that runs from the "Sag," a semi-lake lying further back in the country. The whole panorama is such as a child might make in play upon the sea sands, when the retiring tide has sunk from his little dykes and left a lazy and tortuous trickle or two of water creeping home to the big ocean. But this is a panorama formed of hands almighty, and part of a canvas whereon near by mighty scenes of civic history have been enacted; whereon also, even now, enough of nature remains to warrant the minor chronicling of some subordinate scenes. This wide valley is, in short, the bottom of what was once part of the great inland sea.

By what cataclysm or slow process of nature there was formed the vast intercepting sand ridge which rims this valley from the present sweep of the big waters, or the lesser ridges which divide it, no one really knows; but it seems clear that such a ridge has been washed up or deposited. Back of this lie the Calumet and other marshes. Along these marshes are situated what we may call the Calumet clubs, or the "sand hill clubs," which may include the Grand Calumet Heights, the Lake George and the Tolleston clubs.

The latter club is the one chosen for this week's mention. Its grounds lie in Indiana, within twenty-nine miles of the Chicago Union Depot, and yet it is one of the most interesting and important clubs of the city, so far as actual field results are concerned. It is, without question, financially the strongest sporting organization of Chicago, and it is much to be doubted whether any field club in America embraces a similar amount of wealth in its membership. Wealthy, successful, a bit seclusive, perhaps, the Tollestons have been, in a way, the envy of those few brothers who are open to any such feeling, though themselves generous, unaffected and simple to a degree.

The Tolleston Club was incorporated March 27, 1873, and now numbers 108 members. Its lists are always full, and there are any number of applicants waiting for an opportunity to buy stock, for which $400 or $500 a share would eagerly be offered if any were for sale. The club associations are socially very desirable, and more than this, the Tolleston marsh, lying close and convenient as it is, has lately been showing good bags of ducks, when the other clubs were crying in a wilderness of duckless nothingness. I am disposed to think that this fact weighs more with the *hoi polloi* of the craft than the concurrent fact that among the lists are the names of such prominent gentlemen as Mr. Marshall Field, Mr. Farwell, Mr. Peacock, and dozens other of the city's best and biggest business men.

The station of Tolleston, or "Tollestone," as it is printed on the Pittsburg and Fort Wayne Railway tickets, lies in the heart of a sandy barren, covered with stunted oaks and other low growth. The little town at the siding is precisely of that nature which will make you wish to get away from there as soon as possible. Therefore no delay will be made in repairing to the telephone which the club, for its own convenience, has put in between the railway station and the club house. The response to the "halloa" of the wayfaring man is to the effect that a team will "be there in a few minutes;" and before very long the visitor is whirling along over the sandy road to the valley marsh where the Tolleston Club makes its home. It was a bright and eager day in early winter when I called up the club house, and armed with the necessary letter of introduction from the veteran president, Mr. F. A. Howe, waited for the team which would be over in a minute. This team I soon found to be the bay mare Idle Girl, with a record of 2.17, and the driver was Mr. Willard West, the resident superintendent of the club, a man gray-haired enough not to take me for a tenderfoot, and not to tell me, as we spun over the four crooked, frosty miles, of the time when he and a partner of his, hunting in the Calumet cat holes, once killed 476 mallards with four barrels—a story which naturally elicited one even more solemn and painful in response, since I felt it would not do to have FOREST AND STREAM appear to a disadvantage when it came to any reminiscences of a serious nature.

Mr. West was yet pondering what he should say in surrebutal, when Idle Girl whirled us out of the scrub oaks to a point where we could see the valley of the Tolleston marsh, lying long and flat and narrow, in easy grays and browns that showed clearly in the winter sun. Upon the opposite side, two miles away, a low ridge of scrub oak ran continuously. "Ruffed grouse in there," Mr. West said. Upon the hither side there were little farms of rye fields—the only cereal sure to grow upon that soil—and wide wet meadows which the jacksnipe had but lately left, and close to the road, which now turned sharply up along the sandy timber edge, there nestled the barns and buildings of a cosy farmstead, which, said my informant, had been purchased and made part of the club domain, simply because their former owner had some marsh which he would not sell unless the rest of the land went with it. As far as one could see, in either direction, up and down, from our standpoint, the marsh belonged to the Tollestons, their possessions running over five miles in length, and being in width from three-quarters of a mile to a mile and a half, or perhaps two miles. Somewhere out in the wide flat of rice and "cane" and rushes, the lazy Little Calumet was crawling toward the lake, along its wide valley flanked by low-lying sandy ridges.

Half a mile along the boundary of oak and wild rice brought us to the club house, lying at the crest of the slope, among a scattered group of grand old crooked forest trees. Of the premises no adequate illustration can be made, as the grounds and buildings are scattered over too wide a space. The barns, sheds, kennels and kindred numerous buildings lie at some distance from the house, and are grouped against the edge of a solid body of second-growth timber. In the barnyards there appeared all the multitudinous life of a large and prosperous farm. Chickens, ducks, geese, turkeys, sheep, swine and even goats vied with each other in such rural sounds as may often have pleasantly fallen upon tired ears on other clear and frosty mornings. High-grade cattle and horses filled the stalls, and there was at least one Jersey cow which I would like to have chained fast to my desk in town. The whole scene hardly looked like the property of wealthy city men, yet one could easily see how desirable it would be to have this bit of rural life left just as it is, here by the big city, so that just these same city men might always be able to see a bit of nature undefiled with smoke and jar. Not altogether wanting, however, were signs of the real character of the place. The trap grounds lay on the level at the base of the hill, shaded by magnificent oaks, and flanking these, past the ice houses, and along a little willow-lined ditch, ran a good board walk, to where, nearly half a mile away, stood the cluster of boat houses, at the edge of the long ditch cut out to the channel of the Little Calumet, which stream serves as the main artery of the marshways.

The club house itself is a big, long building, with no claims to modern pretentious architecture, but fairly radiating an air of perfect comfort. It is only what it was intended to be, a spacious, solid house, simple, strong, home-like, admirably adapted to its use, and with a wide and sheltering air of direct appeal to one coming from buildings of quite another character. Some of the Tollestons are a little bit ashamed of their club house, and are in for building another on more magnificent lines. This may be necessitated by the social demands of such an organization, but should it ever be done, I trust that the old building will be left just where it is and just as it is. To me it seems the most desirable sort of a club house, and quite the sort to be preserved unchanged.

The gun room of the Tollestons is a veritable hunters' den, touched with an indefinable spirit of ease and luxury. There was the same big box stove I had seen at the Maksaw-bas, and from the ceiling depended the same *spolia optima* of a departed army of boot-wearing men; but the great cane-seated arm chairs grouped outside the stove-railing looked suggestive of men who knew how to take their ease in their inn; and the glasses and decanters, the lemons and bottles of Apollinaris, the cog-wheel corkscrew and the various flasks spoke in plain and simple language of the fact that here was the home of the Tolleston cocktail—a beverage which, so I am told, is a life experience and an after dream. This sideboard is maintained by the club, and is quite as free as the ice-water tanks, if any cared so to look at it. There was a case of books, standard authorities on sporting topics, over one of which I later fell asleep by the fire. There were a few little tables, and hard by them stood a few little boxes filled with white, blue and red ivory discs, which had a pleasant clinking sound, but with whose use I was not acquainted. I presume they are used for some sort of targets. Upon the shelves were piled up the shell boxes, mostly made of stout and serviceable tin, and of proportions whose generosity indicated the demands sometimes put upon them by the flight. The lockers were all closed, the gun racks were empty, and all denoted the fact that the club house was virtually closed for the season, although it transpired later that there was still to be some shooting, even when December was nearly done. Mr. Brown and Mr. Gillespie, two gentlemen who were out on the marsh during that day, were of the opinion that they had seen the last of it for the year.

The little alcove off the main gun room contained two large cases of admirably mounted specimens, all of game birds or birds of prey killed upon the Tolleston grounds. Among these I remember to have seen the mallard, redhead, blue or green-winged teal, sheldrake, golden eye, ruddy duck, gadwall, pintail, canvasback, widgeon, dusky duck, butterball, woodduck, bluebill, ringbill, etc.; the Canada goose, the swan and the pelican; also the Wilson snipe, the rail, larks, etc.; the quail and ruffed grouse, a number of hawks and the great snowy owl. The collection was a very interesting one and certainly showed the variety of sport afforded by the grounds.

The sleeping apartments of the club are upstairs. They are all furnished alike, solidly and handsomely. As to the table, my recollections are only vague and confused. I know I dined in solitary state in the big dining hall at a great table bearing that due relation to snowy linen and gleaming crystal, which the civilized mind has accepted as the height of prandial accessories: I have a recollection also of a fine series of sporting pictures upon the wall and of a general air of peacefulness; after that all was a wild struggle between me and the Jersey cream, nor did I give over until I was master of the situation and asked Mr. West what he would take for the cow.

In the boat houses I found as complete sets of decoys as I ever saw and everything else was in keeping. There is not, however, much necessity for artificial blinds on the Tolleston marsh, the natural cover being so good. The most prevalent style of boat seemed to be a light flat-bottom, sides of one piece, with a considerable rake. These boats are made, I believe, by a builder in South Chicago. I should not wonder if a close student of FOREST AND STREAM could discover where to buy a better boat. Still the model is not badly suited to the locality, the distances not being great and the going mostly along shallow and reedy channels. I think it a better form than the long round-bottomed "Monitor" model. It approaches the Green Bay model a trifle, but is higher in the side and not so straight on the bottom. There were, of course, different styles of boats, but I saw more of those named.

Speaking of decoys reminds one of Mr. West's live decoys. He had at one time forty or fifty young wild ducks, raised from eggs taken upon the marsh, but the minks came up through the swamp drain and made havoc with the birds. Crippled ducks left by the flight often breed upon the marsh, and so also do numbers of others. Nests of the wild goose have been found here within thirty miles of Chicago. The laborers found two wild duck nests upon the hay meadow the past spring.

THE TOLLESTON CLUB HOUSE.

During the past year the waters have been unusually low upon all the marshes of this section of the country, and at the time of my visit the Tolleston marsh was lower than it had been for years. It was, therefore, difficult to get about, as many of the ordinary channels were only streaks of mud. The marsh is very treacherous and dangerous, and in many places one could easily be guilty of a mysterious disappearance whose solution could never be found. Even in its half frozen condition we found it laborious and risky walking when we left the boat, and, laden with shells and decoys, undertook to walk from the river to the Middle Slough. I was accompanied by Ernest, the head pusher, who was thoroughly acquainted with the marsh. We had both to bemoan the fact that the ducks wouldn't decoy on our day, although there were hundreds of them on the Middle and Big sloughs, and in fact, pretty much everywhere.

The present acreage of the club is about two thousand acres. This is the growth from the nucleus of sixty acres purchased in 1871 by the founders of the club. The bulk of the land was acquired in 1881. It comprises all of the marsh lying between Ewing's and the Ft. Wayne bridges. The land is all inclosed with wire fence, and posted against trespass. Several Pinkerton policemen have acted as assistants to the local officers and keepers, and no effort is spared to make a trespasser feel that he is a trespasser the moment he crosses that wire fence. The lawless element of the adjacent town of South Chicago has made frequent trouble, and nothing but the absolutely determined and uncompromising attitude of the club has served to keep the public off their coveted marshes. On one occasion five boats came up the river, resolved to shoot on what they declared the State of Indiana gave them as public ground. They were met by Mr. West and an officer, and the former sent a load of goose shot through the boat of the ringleader; this was followed by other loads, until the would-be hunter was forced to leave his sinking boat, to give up his gun, and hurry after his fleeing companions. The big Pinkerton men grab these rough fellows, pound them up, throw them in the river, confiscate their guns, smash their boats, and by other gentle means endeavor to convey the impression that the Tolleston Club owns the Tolleston marsh. The club will test the constitutionality of the absurd Indiana "over flowed lands law," and has no doubt of winning in the upper court. It has now on hand, I believe, six or eight suits against trespassers. It won one suit last summer, and cost a bull-headed neighbor $83 before it got done with him. It has repeatedly confiscated the guns of trespassers, and has all the way been aggressive whenever it could be. This was the only possible way it could command the respect of the element with which it had to deal. It should be stated at this point that the club will not abondon its past policy one iota. It means fight, and has all the money it wants to fight with. Its ultimate success is unquestioned. It has bought this land and has a right to it. An aggressive champion for its own and all similar rights, the Tolleston Club deserves and commands the respect and approval of all organizations of a like purpose.

Owing to the difficulty in getting about over the marsh during my visit, which rendered a personal knowledge of its features impossible, I beg to offer, in description and comment, the following extracts from the little historical sketch published by the club in the neat little volume which contains its by-laws:

"The club house is located on the north bank, nearly in the center of the extensive marshes of the Upper Calumet. These marshes lie upon both sides of the Little Calumet River, which winds its tortuous length through them, and embrace all between the meandered lines of the government surveys. The marsh is some ten miles in length and a mile to a mile and a half in width. The whole of this district is covered with alternate water and wild rice, in about equal proportions, and so peculiarly interspersed as at once to command the admiration of sportsmen.

"That portion of the marshes just above the club house (which is conceded to be the best portion) is divided into three general divisions, viz., the 'North Sloughs,' the 'Center Sloughs' and the 'South Shore Sloughs.' The North Sloughs are entered near the landing, and lie on the north side of the river channel, extending eastward in a continuous chain of successive water and rice some two or three miles, through the entire length of which boats can pass without touching the channel at all.

"The Center Sloughs lie between the channel and 'Big Slough' (so-called), and consist of a complete labyrinth of alternate sloughs and rice, lying in all possible shapes, some two miles in length by a half mile in width.

"The South Shore Sloughs lie south of the 'Big Slough' and river, and consist of alternate water and rice, in places a mile or more wide, over which boats can pass for miles without striking the channel at all.

"The 'Big Slough' is a body of water or bayou off southeast from the channel, in places a hundred rods wide, and nearly three miles long, with its hundreds of minor bayous, islands and out channels.

"The whole of the area above described (which area embraces only a small section of these extensive marshes) is covered with innumerable sloughs, bayous, morasses, ponds and mud holes, of endless variety of shape, in size all the way from a small pool up to a forty-acre pond or lake, divided and interspersed with fields of wild rice and cane, bogs, lily pads, rushes and muskrat houses, and yet so formed by nature that a hunting boat can pass through openings (known to hunters and easily learned) almost over the entire ground, and even to the river proper. Still, even to this day, there are many sloughs wholly inaccessible to boats, so that no number of hunters can frighten the game wholly from the marsh.

"Persons who have hunted these marshes for years are continually surprised on discovering new shooting ground and passages which they never before supposed to exist.

"The Tolleston marshes seem to be formed by nature for a retreat and feeding ground for wild ducks. Situated at the foot of the great Upper Lakes, they are the natural flyways for wildfowl.

"Peculiarly is it the home of the mallard, the blue-winged teal and woodduck, while snipe are plenty in their season. It may appear somewhat extravagant to say it, but nevertheless those who have shot in these marshes, and know their formation and abundance of game, will probably, to a man, sustain the assertion that, take it season by season, they afford the best duck shooting ground of equal extent in the Northwest.

"In the fall of 1882 over 8,000 ducks were bagged by the members of the club on these marshes.

"Upon the main channel of the river fishing is good in season. Pickerel, perch and bass are taken at times in large quantities.

"The affairs of the club have steadily improved since its organization. The club owns some $50,000 worth of property, and with a list of members so prominent in business and professional circles, eminent in wealth, station and culture, who never pull trigger for pecuniary profit, nor in wanton cruelty, believes itself to be second to no association of the kind in the world."

Nor is it second.

These words about the plenty of game on the Tolleston marsh are not exaggerated. For the past three years the shooting has been better there than it has anywhere else in this vicinity, and it is no use for other sportsmen to deny that fact. This is partly and largely due to the fact that the Tollestons have put out large amounts of feed for their ducks. I have before this made mention of this matter, which was watched with much curiosity by sportsmen all through the West; space fails to make long mention of it now, or to say more than that the club proposes to continue its efforts in this direction. This work was carried out under the directions of the able president of the club, Mr. F. A. Howe, an old and observant shooter, and there is no longer any doubt possible as to its efficacy. I was talking with Mr. Howe the other day in regard to the future plans for this work. He said he thought more corn would be used than anything else. "The first choice of the mallard duck for food," said he, "is the acorn, and after that comes corn." Mr. Howe is firm in his belief that the natural food now offered in our marshes is not adequate to the demands of large bodies of wildfowl.

I do not know better how to give an idea of the shooting on the Tolleston marsh than by a hurried look at some scores I caught while looking over that most delightful of all sporting books, the club register, between whose covers I spent a pleasant hour. I find that in 1880 daily scores of 25, 33, 42, 36, 39, were not at all uncommon. Mr. F. A. Howe, whom the records show to have been perhaps the most successful duck shot of the club, is frequent with such scores as 23, 93, 51, 65, 41, 46, 58, 74, 44, 34. The total of ducks killed in the fall of 1880 is 4,215. A frequent entry of description says "mixed ducks." The shooting may therefore be known to be varied and interesting by reason of novelty. This is a feature of the marsh.

On Nov. 15, 1880, "A. R. H." has written: "Very cold. Big Slough frozen stiff, and river frozen in places. Think jig is up for '80, unless James Gordon Bennett or other Arctic explorer chooses to visit these haunts."

To show how quickly the northern flight comes in after it starts compare the following entries for the spring of 1881. The season opened April 5, and the score was 1 bluebill. On April 8 there were scores of 30, 40, 80.

On Sept. 23, 1882, A. N. Young killed 42 teal in four hours, and J. C. Knickerbocker killed 118, and was back at the club house at 2:15 P. M. The total for that one day was 343 ducks.

On Nov. 11, 1881, there were the following entries: "Baron d'Abouville, Capitaine d'etât-mas'sr (a guest), 9 mixed ducks; Georges Lejeune, 2 bluebills; Comte de Gouvello, Lieutenant de Chasseurs à pied, 1 redhead. It would seem that the latter shooter, instead of being a chasseur à pied, was pretty near being a shooteur à son tête. Wonder if he came all the way from France to kill that redhead!

"April 15, 1884," says Mr. L. G. Fisher, "season closed. Marsh full of ducks." Then for Aug. 20 and 21—hot days—is the following pleasant note: "Small party of twelve spent a day at the club in rest and recreation." In the summer the club is much visited by ladies. On Aug. 5, 1886, it seems Misses Jesse and Maud Wilson's party caught two 3lbs. pickerel.

On Aug. 9, 1885, "The Big Slough was covered for acres with the lotus flower. No such flower exhibition ever seen before on our marsh." So says Edward Starr, the present secretary of the club, a man, it appears, not devoted blindly to the gamebag. Again, on Aug. 31, Albert Hayden and his guest, C. H. Allen, of St. Louis, were "resting, not hunting with powder and shot." But then came "Sept. 20: opening of the teal flight." Probably they didn't rest so much then.

On Nov. 1, 1883, Mr. Geo. L. Thatcher killed one duck of the mudhen variety, and with the modesty of the true duck sport, forgot to record it." On April 3, 1888, Robert Peacock slew 11 turtles. On April 24 Geo. R. Wells bagged 46 snipe, and Mr. F. A. Howe bagged 40 snipe in a half day. On May 31, Julian Hayden and Miss Dora left the following record, highly suggestive that somebody else's sister and brother were there too: "Beautiful day; splendid dinner; all lovely." Following this is the brief utterances of a summer widower, perhaps, "July 22. No wife. James Wright." Record is also made of the "annual game dinner, Dec. 17."

The following scores, however, will be found interesting, for they were made from Oct. 1 to 24, in 1888, the *annus iræ* of Western duck shooters. They are taken almost at random and run 34, 66, 40, 33, 36, 41, 27, 23, 29, 52, 75. Now find the scores of our other clubs for those dates and you have all the answer and comment you want on the question, "Does it pay to feed wild ducks?"

The Tolleston Club does not allow shooting upon Sunday, nor after sundown upon any day. It allows only one gun to go out in each boat. It allows no loaded guns in the house and no dogs. It would impose a $25 fine for

any case of intoxication, though I believe it has never had occasion to do so. It chooses its pushers by lot, and also the stands at which members shall shoot upon each day. It allows each member one guest per season, and that is all. The pusher's fee is $2 a day, or $1.50 for a half day. If the boat is not at the landing at 12 M., the term is called a whole day. A bulletin is kept by the superintendent, by which the name of each shooter out on the marsh, his stand, and the name of his pusher, are clearly shown. Copies of the club house rules are pasted up, and every member knows that they mean strictly business.

Such is some short little account of a club as important and interesting as any to be found in this country. It is a type of Western activity and thoroughness. It is a model for sportsmen's associations. It is the sure index of what form sport must take in this country hereafter, and a direct guide to the manner of its proper preservation.

Space would fail in any case to make comment on a list of names such as are given below. There are no better. The membership is as follows:

Officers.—President, F. A. Howe; Vice-President, W. R. Linn; Secretary, Edward Starr; Treasurer, C. D. Peacock. Board of Directors: C. C. Moeller, Jas. Wright, P. Schuttler, J. N. Crouse, S. M. Moore. Superintendent Club House, Willard West.

Members.—Geo. E. Adams, E. E. Ayer, O. F. Aldis, W. T. Baker, S. P. Brown, W. L. Brown, W. H. Colvin, J. N. Crouse, John Cudahy, Albert M. Day, D. H. Denton, Wirt Dexter, J. B. Drake, Geo. L. Dunlap, A. C. Ducat, J. H. Dwight, N. K. Fairbank, C. E. Felton, L. G. Fisher, Marshall Field, R. M. Fair, E. E. Flint, O. R. Glover, J. B. Goodman, W. C. D. Grannis, J. M. Gillespie, H. F. Griswold, Albert Hayden, S. R. Haven, C. D. Hamill, C. M. Henderson, F. A. Howe, L. C. Huck, W. V. Jacobs, W. T. Johnson, C. P. Johnston, N. S. Jones, J. Russell Jones, Edson Keith, S. A. Kent, J. B. Kirk, J. C. Knickerbocker, W. W. Kimball, H. A. Knott, L. Z. Leiter, T. G. Lefens, W. R. Linn, J. M. Loomis, Thomas Lynch, C. A. Mair, F. MacVeagh, Geo. Manierre, R. H. McCormick, John McConnell, C. C. Moeller, S. M. Moore, L. T. Moore, Thos. Murdoch, H. N. May, John Mattocks, Murry Nelson, J. S. Norton, Edmund Norton, E. J. Ovington, Jr., Arthur Orr, John Parsons, C. I. Peck, Ferd. W. Peck, R. A. Peters, C. D. Peacock, Elisha Peacock, E. S. Pike, Geo. M. Pullman, J. C. Peasley, C. L. Raymond, S. B. Reymond, J. B. Reeme, O. H. Roche, A. A. Sample, A. Schmitt, P. Schuttler, J. A. Swan, G. A. Schwartz, Geo. Smith, Byron L. Smith, C. F. A. Spencer, A. G. Spalding, W. E. Strong, Edward Starr, Jas. Stinson, Geo. L. Thatcher, J. L. Thompson, W. H. Thompson, V. C. Turner, Frederick Ullman, E. C. Waller, R. A. Waller, Wm. Waller, Geo. C. Walker, W. D. Walker, H. Washburn, Geo. P. Welles, F. T. Wheeler, F. C. Wilson, Norman Williams, James Wright, T. W. Wilmarth, A. N. Young.

Following is the list of members of the Waltonian Club (see last issue) for the present year: Hon. David F. Barclay, President; Abner Piatt, Vice-President, U. S. Yards; Annas Hathaway, Secretary and Treasurer; Executive Committee, Josiah Stevens, A. Kershaw, J. W. Ranstead, A. Piatt, C. A. Kerber, Henry Muntz, J. H. Rogers, W. P. Gray, W. J. Hunter, Josiah Stevens, A. Kershaw, Peter Caldwell, Geo. F. Ross, R. L. Morgan, Henry Tetzner, G. Rosenkrans, Frank Preston, Mrs. B. W. Wilcox, J. F. Rogers, W. A. Pratt, J. W. Ranstead, E. C. Hawley, C. W. Gould, D. B. Sherwood, S. H. Cox, A. Dunning, Geo. W. Hancock, Eugene Hammond, T. M. Bradley, Theo. Schroeder, C. E. Lightner, Chas. L. Frey, C. E. Stewart, M. H. Thompson, L. F. Brayman, L. C. Sterling, Annas Hathaway. E. HOUGH.

NO. 175 MONROE STREET.

GROUSE SHOOTERS AND SNARERS.

Editor Forest and Stream:

At the annual dinner of the Massachusetts Fish and Game Protective Association, President Samuels in his speech said in substance, "that unless snaring is made unlawful the ruffed grouse is doomed."

With due respect for the opinion of the president of an Association, which I believe has done more for the protection of game than any one institution in the State, I beg to file exceptions to his broad statement, that ruffed grouse can be exterminated by snaring. I know there is urgent need of a stringent law for their protection and I respectfully suggest a legislative act making it unlawful to trap or kill the grouse during the next five years.

Perhaps it would be well for me to state that I am in a position to know something of the status of the ruffed grouse, in one part of the State, at least. Summer and winter for over four years I have lived in the woods, in hermit style, and have devoted a large part of this time to the study of birds.

It has been my experience that the dog and gun will come nearer to exterminating the grouse than the snare, and that neither can do it, and combined they can but check the increase to the original number.

Let me illustrate my meaning: Around my log cabin home there is a tract of woodland containing about one thousand acres. Turning to my notes for the year 1887 I find that the last of September I made an estimate of the number of young grouse on this tract ready for the sportsman on the opening of the season, Oct. 1. I found the number to be about one hundred. I was perfectly familiar with every rod of this tract of land. I knew where the broods were reared; I watched them when first out of the shell, while the old birds scratched their food from under the matting of last year's leaves; and, later, I knew when the coveys flocked to the blueberry grounds; and, yet later, when they gleaned the blackberry patches; and, when the gunners and snarers had worked their will, I knew where the forlorn hope held out to feed on belated barberries, chokeberries, various leaves and birch buds.

The snarer did his best, and so did the gunner, to exterminate these birds, notwithstanding the law, which is a dead letter in this locality.

The grouse is a wary bird, and soon learns to avoid the snare, so when the breeding season was at hand, I found that ten females had run the gauntlet. As the grouse lays from ten to fifteen eggs, and often rears two broods in a season, it will readily be seen that the increase would make good the original number, provided the birds were not molested while breeding.

However, it is possible that the birds could be exterminated. They might get crusted under and some be lost, thus reducing the breeders to a dangerously low number. Several severe winters might result in extermination, therefore there is need of an effective law for their protection, but I do not believe in a law that discriminates against the snarer and in favor of the gunner.

In the fall of 1887 I became acquainted with a gentleman, a Cape Ann fisherman, who made a practice of setting snares through the winter. I asked him one day if he did not think it wrong to violate the law, and he asked me how many grouse I had killed through the season. I answered eleven. "Shoot them on the wing?" he asked. "All but two," was my reply. "Very well," he said, "I am not the owner of a gun, and if I were it would do me no good, for I cannot shoot on the wing. What right has the State of Massachusetts to legislate you eleven birds and me none?" Who can gainsay such an argument? I cannot, for I believe in "equal rights." As a matter of fact this gentleman caught only two grouse, with forty snares well tended for three months.

My article is already too long, but I cannot close without calling attention to an evil that will exterminate the ruffed grouse in Massachusetts in the next ten years without the aid of gun or snare. I refer to bird dogs running at large in the breeding season. That these renegade dogs are on the increase, to an alarming extent, is evident from the fact that I see as many as five now where I saw one four years ago. They harrass the old birds while nesting, and when the chicks are hatched they destroy them before they fly.

Every day I see two grouse that have run the gauntlet of snares and guns for three years. Each season they have nested almost within a stone's throw of my cabin. Last spring one brought out eleven chicks and the other fourteen. The dogs killed these chicks when two days old, and were racing the old birds from tree to tree when I found them.

On the tract of woodland before mentioned only eight young grouse were reared this season. At this writing five of the number are alive, with only four old birds, and some of these will be slaughtered before spring. The Legislature makes laws that read well on paper, to protect these birds, but who enforces the laws? What is true of grouse is true of quail, and if our Legislature this winter does not deal with this matter in a vigorous manner we may say good by to these famous game birds.

GLOUCESTER, Mass., Jan. 30. HERMIT.

RIFLES FOR SMALL GAME—V.

Editor Forest and Stream:

As I have so many communications requesting me to write more concerning the .22cal. for game shooting, I again come to you for space to give my experience with this tiny but powerful cartridge, the .22-15-45, W. C. F. solid head brass-shelled cartridge. Up to the time of writing my last article under the above heading I had so little experience as to hardly warrant an opinion as regards its merits as a cartridge for game shooting. Some time ago the writer was requested by a gentleman in a large jobbing gun house in Boston to make a test of this cartridge in a rifle made specially for it, viz.: the well-known Winchester single shot. The gentleman referred to handed the writer a 26in. half-octagon rifle, with 100 factory-made cartridges and 10 standard 50yds. targets, with a request that the thing be given a thorough trial and a report be sent in without fear or favor. While I did not expect to get the results from this cartridge at the target that I could with the .22 long R. F. cartridge, after all that I have seen and read about the latter, I must confess that I found myself very agreeably surprised. The .22 long rifle cartridge, under favorable conditions, will do very accurate work up to say 100 to 125yds., but the least puff of wind will blow it one side, which, together with its high trajectory, makes it very unreliable, and, on the whole, the opinion of the writer is that it is not so very much better than the old reliable .22 short after all. To be sure it has more powder and lead, but the twist has to be increased to 16in. to make the shooting effectual, thereby causing more friction and shortening the life of the barrel, which, if it is to be used for gallery purposes, is a consideration. This cartridge just at the present time is having its boom like many other things, but it has several very serious faults, which are not likely to be overcome, and which make it take about third place as a hunting cartridge, and on the whole the writer considers it a failure in the woods. Regarding the 15grs. C. F. Winchester cartridge the first point of advantage is—speaking from a practical point of view—its low trajectory. I am well aware that the low trajectory business has been very much overdone in the past few years, and that in the larger calibers that accuracy and steady shooting has been to a certain extent sacrificed for a low curve, but with this tiny 45grs. bullet it is different. Of course we know that this little bullet is not to be compared with the large bores on a windy day, for a strong wind will have a greater effect on the .22 than a .33 or .38cal. at 200yds. With the larger calibers a rifle will shoot steady with a light charge of powder, even a little wind will not make much difference, so that with its slow flight and high trajectory a .45cal. will come down and strike the bullseye if the proper elevation is given it. Not so, however, with the little .22cal., for this bullet, in order to be successful, must have a very swift flight to its destination, thereby giving the wind so little time to act upon it, that although it may not shoot quite as steady in a dead calm will more than outbalance its difference in the wind and in low flat trajectory. This cartridge, in a 26in. barrel, has a curve of less than 2in. at 100yds., which is about as far as small game is usually shot, and in using the two rifles side by side, shooting them alternately—viz., the 15grs. and the 5grs. long rifle cartridge—these points are strongly marked. In a dead calm the long rifle cartridge will beat the C.F. cartridge at 50yds. for accuracy slightly, but not enough to make any practical difference in shooting, where most of the shooting is done offhand, but just move the target away 25 or 30yds. without change of sights, or let a light breeze spring up, or move your target away to 125 or 140yds. and guess at the distance as, for instance, one would do in duck shooting on a river or lake, and you will find the long rifle cartridge is simply nowhere, while if the wind does not blow too strong the 15grs. cartridge has a great deal of "get there" to it; and I know of several parties, some of whom are contributors to our FOREST AND STREAM columns, who have used this rifle and had good success with it the past season, shooting ducks at distances where the rim-fires would be of no use whatever. The target scores referred to in the commencement of this article aggregated 894 on the Standard target for 100 shots, fired from a rest at 50yds., Winchester rifle, Lyman rear sight and Beach front sight; two 6s and five 7s only were out of the bulls-eye, while one run of seven 10s was made. The rifle was cleaned every five shots, whether it would shoot well with less cleaning the writer does not know. I do not believe in using a dirty rifle anyway. The 10grs. U. M. C. Co. C.F. cartridge is a good one for hunting small game, but everything considered the 15grs. Winchester is by far the best. For short range work, such as gallery shooting, English sparrows, etc., around town or city back yards the .22 short will give good satisfaction; while it is cheap, effective and convenient at short range, it is almost useless at distances over 50yds. A rifle with interchangeable barrels, like the Maynard, makes with these two cartridges a perfect .22cal. outfit.

IRON RAMROD.

SOMERVILLE, Mass., Jan. 19.

Editor Forest and Stream:

I have been much interested in the discussion going on in the last few issues of the FOREST AND STREAM in relation to a favorite of my own, the .22cal. rifle, and to which I owe many pleasant hours in the past five years.

I can fully bear out, from my own experience, "Byrne" in his statement that for any distance up to 300yds. it is only a question of patience on the duck's part and ammunition on the shooter's to translate the mistaken bird to the better land. Many a time has an old and staid coot or a coquettish oldwife, trusting to the distance with scornful indifference, watched me while I have been trying to get the range, until at last a luckier or perhaps better aimed shot than the preceding ones laid him low.

But I am free to confess that the statement of "Byrne," that he found he could do nothing with the .22cal. at geese or brant) is a surprise to me. I cannot understand why he should meet with this result. It seems to me from past experiences with my Remington (although not at geese or brant, that I would be willing to stake a good deal that a .22cal. ball, even from the short cartridges, fired from the Remington at any distance up to 125yds., and hitting a goose or brant about the body, would soon deprive it of any further cares in this world.

Of course I cannot say positively he would be my meat, but I would be willing to go hungry if he were not. The penetration is certainly sufficient to drive the ball into the vitals at that distance, if, indeed, not entirely through the body. And if this be the fact as to penetration, the .22cal. has one great advantage over the .32cal., namely, the lacking of the loud report. Birds will lie often for several shots from the smaller caliber when they will leave, and in a hurry, too, from the first shot of the larger caliber.

I would suggest to Friend "Byrne" that, as he has had much experience with the .22cal. at geese and brant, he give us the benefit of it through the FOREST AND STREAM.

HAPPIE GO-LUCKIE.

EAST ORANGE, N. J., Jan. 18.

NOTES OF A POT-HUNTER.

I BELIEVE I am what sportsmen call a pot-hunter, which means, I suppose, a still-hunter or a great anxiety to have the game sit very still. There are some little jests at our mode of hunting, but as we usually get our share of the animals and birds we can well allow the application of the humorous title to our style of hunting. My companion of a day of sport is an United States army gun, date of 1843, of excellent shooting character, long range, and a tendency to press backward about the time of being fired. It is altogether a successful battery, even in the hands of a moderately good pot-hunter.

This has been, and is yet to some extent, a famous region for wildfowl of most all kinds, and especially for the millions of ducks which assemble during the occasional high waters from the Des Moines and Mississippi rivers. The bottom land here is six miles wide upon an average, and it is subject to be invaded by both rivers. Upon this broad and beautiful lowland there are many extensive lakes and numerous ponds or sloughs. It has been a noted place for swan, pelican, geese, ducks, brant and other water fowl. One July some years ago we had an invasion of the Des Moines, and of course at that season of the year almost all vegetation was destroyed. The high water brought ducks of all kinds, and after the water went down hunting was fairly good for a month or more. Upon this occasion was my first duck shooting, as I had came into possession of the army gun the previous spring.

One day in early September I took a stroll over some fine farms that had been submerged and deprived of their vast crops of corn. The low places were yet filled with water, and several kinds of ducks were already present. Along east of me a flock of six splendid mallards came sailing from the north, flying tolerably low, and in search of a resting place. After flying around over a broad pond a few hundred yards southeast of me, they settled upon the quiet water. Some slough grass along the margin of the pond afforded a chance for approach, so I crept along over the level ground, keeping concealed from the objects of my desire. Do you guess my heart was pulsating a little extra? I believe it was, for I had not killed my first deer yet, and of course I was attacked with "buck fever," even at the sight just ahead of me. Advancing to a fair distance, I slowly rose up, with the gun ranged toward the ducks; and obtaining a good sight I ordered the battery to fire. Boom! and as the smoke clears to one side, a very pleasant sight is presented to my view. Three large mallards lie upon the surface of the pond, and my success as a hunter is fully assured. The other three ducks circled around over their lost number and then flew south. This was my very first experience at duck shooting, and you may surmise I had a pretty good opinion of United States army guns in general and an excellent estimate of myself in particular. The Ute Indians of Nebraska called Major Thornburg "The chief who could shoot the stars," and I kind o' thought I was the sub chief who could hit the mallards—if they would sit right quiet.

ALEXANDRIA, Mo. J. B.

KANSAS CITY, Mo., Jan. 26.—Geese have been flying back and forth in considerable numbers, but I look for very late flights, as we certainly shall have some cold weather before spring.—TILE.

MAINE GAME EXPORTATION.

Editor Forest and Stream:

Noting the article printed in issue of Jan. 31, over the signature of "Anthony Morce," prompts me to reply to some of the points made in that article. A part of that article I heartily concur in, as a sportsman, a citizen of Maine quite familiar with the interests of the State as contained in the woods and waters of the State, and as a member of the present Legislature. What Mr. M. writes, so far as the fishing, or more properly, perhaps, the angling, interests of the State (and the State's interest is the sportsman's interest as well), I heartily concur with. But when he comes to the deer, I take issue with him at once. As the result of both experience and observation, I believe it is impossible to frame a law to allow the sportman to "carry home his bit of venison or the head of his big bull moose," and not allow the market-hunter to market his spoils to almost any extent. That has been a task attempted over and over again in Maine and elsewhere, and with the same invariable result, and that result simple failure.

All the reason why August should not be added to the open season, and that reason is ample, is that but a part of the fawns are weaned, and capable of caring for themselves. Is not that a sufficient reason for a sportsman? A denial of this fact by interested parties will carry no weight with those who know. The reason for making August part of the open season is simply to allow jack-shooting to be indulged in. So far as I myself am concerned, I am not in favor of making September an open month, and for the same reason that I assigned for not being in favor of August being an open month; but, of course, in less degree. I have seen a doe shot in September with milk in her udders, which presented every appearance of being in active use to support a young and helpless life, and that sight I beheld in Canada, much further north than here. The writer of the article relates a conversation in a Rangeley resort, when the guides stated the position they occupy precisely. They "wouldn't dare to do nothing." Certainly not; those men do not guide for fun; they work for money. What they might think, what they might believe, is not conveyed in that conversation. But they would not dare to take any measures which would injure them in the estimation of their customers. And if some of that party were to come to the woods to crust-hunt (and possibly such a project was in the minds of some of the party, hence the questions asked the guides), the guides would "not dare" to do themselves injury in the minds of their employers. The next sentence shows that the first-named class of law breakers are not entitled to any consideration whatever. Mr. Morce would not have us believe that, in his opinion, the way to prevent law violations is to repeal the law, so that the trout fisherman, who in summer carries his rifle into the woods, may vary the terrible monotony of catching trout in the proper season by shooting deer in an improper season?

For myself I can see but little difference between jack-shooting in summer and crust-hunting in winter. Possibly the crust-hunter's method may be less cruel, because he is sure to kill his victim in the deep snow, and the jack-shooter is not only likely to inflict wounds upon animals he does not get, but besides to kill a doe while attempting under cover of night to obtain food to sustain her system in the duty of nursing her helpless infants. Of the two the crust-hunter is less cowardly. In this same paragraph, where the first class of law breakers is spoken of, occurs a most remarkable statement. It has a familiar sound to me. Just such statements have been made to men in my hearing. The most outrageous stories are told by parties who wish to evade any and all law. And the Commissioners! and the wardens! What awful tyrannies they do perpetrate.

I am not writing in any spirit of discourtesy. I wish Mr. Morce to understand that I am addressing him through the FOREST AND STREAM as one sportsman would address another. I am only trying to do my part, feeble though the attempt may be, to create a proper understanding among sportsmen who fish and shoot for sport's sake. But how it is that one possessed of such a degree of intelligence as Mr. Morce shows himself to be in the article I am both criticising and commending, can, in apparent sincerity, put upon paper such an unjust, misleading and necessarily untrue statement as that doubtless told him by some lawless, greedy hotel keeper and guides, is totally incomprehensible to me. A moose was killed, out of season presumably; a guide reported the fact to the Commissioners; the warden demanded the fine; and though the man who killed the moose had left the State, and consequently could neither be arrested, prosecuted nor fined, the hotel keeper and the guides made up the amount themselves and paid the fine which was not and could not have been imposed, because the guilty party was out of the State, and hence out of the reach of the law; and then that yarn runs on saying that the visitor was not permitted to know even that a fine had been levied. Why, I did not suppose that the editor of our paper would allow such statements to be made through its colums. See its absurdity. As though a man under such circumstances could be fined without arrest or trial! Or that one of those awful wardens had authority to levy and collect a fine, even in case of an arrest, to say nothing of levying and collecting a fine on a man in another State, and out of the reach of Maine authorities. The supposition which it was intended that Mr. Morce should entertain, by the spinners of that preposterous yarn, was that the hotel-keeper and his guides felt that it was more for their interest to make up the fine from their own pockets than to have the moose killer angered by any inconvenience which should result from his lawless violations of statutory provisions. And again, if any such demand was made by a warden, and if a sum was paid as alleged, it by no means follows that the poacher was relieved from liability of arrest and conviction should he again visit the State and thus place himself where the laws of the State could reach him. These statements as to what things wardens have done similar to this are being constantly repeated, and I wish to state that wardens have no power to levy or receive fines without process of law, under the statutes of the State of Maine.

Then follows another hotel keeper's statement that simply gives the whole thing away. "One may says to me, 'I would'nt give anything to catch trout after the first day or two, but I'd rather kill one deer than catch all the fish in the lake,' etc.," then goes on to state that if they were allowed to kill in August and September they would "mighty soon put a stop to crust-hunting and hounding too." Ah! would they? The same hotel keeper gives the refutation of that when he says sportsmen (?) won't chase moose through the woods with the natural uncertainties which following game in a sportsmanlike manner entails. If killing moose and deer were allowed in August, the same sort of "sportsmen" would demand that dogs be used to drive them into the water, so that he might have the satisfaction of shooting them while lazily sitting in a boat.

Then follows the remarkable statement, for one living within the bounds of civilization to make, that killing a deer at any season is not wrong by natural laws. If so, why does nature provide that it is so difficult for wolves to follow does when they are nursing young? This natural provision is all that enables fawns to escape the fangs of wolves at all, to say nothing of other predatory animals who hunt by scent. I submit that, when nature makes such provision as that, man, who is supposed to be gifted with reasoning powers far above quadrupeds, cannot make the assertion quoted above, and say that there is not a natural law against the killing of animals and fishes at such times as they are engaged in perpetuating their species. The same sort of reasoning would justify the taking of trout from the spawning beds.

Mr. Morce brings up again the idea of putting in force a shooting license system. That would seem the most just system that could be devised. But these words in the U. S. Constitution would seem to dispose of that scheme effectually—"The right of the people to keep and bear arms shall not be infringed."

I will ask Mr. Morce, in conclusion, to pardon me for these comments on his article, written over a name not my real one. But, as a member of the present Maine Legislature, I do not wish to attract attention to me individually. NOR'EAST.

Editor Forest and Stream:

I see the Commissioners of Maine are asking the Legislature to give them a good, square non-exporting law. Such a law for the prevention of the shipping of game to the markets of other States is doubtless a good thing, but if it is applied to sportsmen from other States, it probably will have a tendency to keep them out altogether. I spent nearly all of last October in northwestern Maine, going there with the hope of killing a moose and a caribou, and certainly I thought I could bring out the head and antlers of any game I killed. Had I killed a bull moose or caribou, I should have brought out the head and mounted it myself, and would have prized it very highly (they would be of no value unless of my own killing). As the weather was stormy about all the time, my trip was unsuccessful. I saw and killed two does and a buck. These deer were killed before I had been a week in the woods, but had I killed the buck a day or two before coming out I should have tried to bring him home whole. None of this game was wasted, it all being taken to Danforth's Camp.

According to the non-export law I should not have been allowed to bring out any part of these deer. But can such a law be enforced? I have read of a recent case which came up in Michigan (where I think there is a non-export law). A sportsman went into the State and killed some game, which he attempted to send or take home. He was arrested, but carried the case before the Supreme Court of Michigan, and the court ruled that as the game was killed legally it was the property of the party killing it, and he could dispose of it as he saw fit. If this is the decision of the court of Michigan, would it not be similar in a like case in Maine? It is a strange law truly, which says to the sportsmen from other States, You may go into our woods, spend your money freely, kill one moose, two caribou and three deer; you may leave this game in the woods to rot, burn it in your camp-fire, or bury it, but you shall not take any part of it out of the State to your home, where it may be of some benefit to your family or your friends. As I have said I spent nearly a month last fall in Maine, and had made arrangements to go again in December, but owing to bad weather gave it up. I am now looking up a favorable place to go next fall, and I am willing to spend a month or six weeks hunting for moose or caribou, but if I am not allowed to bring home any part of the game I kill I shall give Maine a wide berth, and look for some more favorable State.

Certainly, none of the sportsmen who go into the woods will try to bring out a cartload of game. The head, antlers and hide of a bull moose or caribou will make a pretty good load to pack out; or, if deer only are killed, the carcass of one will cost them all it is worth by the time they get it home. What say some of you who have been there? C. M. STARK.

DUNBARTON, N. H., Feb. 2.

PRO BONO PUBLICO.

Editor Forest and Stream:

In your issue of the 31st ult. is a letter from "G. B. W.," of Leon Center, on "Diminution of Game," urging more active interest, more push and energy, for more protective game laws. In his last three lines he declares himself opposed to prohibiting "spring shooting."

If this killing in breeding time is not protection with a vengeance, what is it? The trouble with the game laws at present arises from too much of this kind of individual sentiment and unwillingness to forego any personal privilege for common advantage. The moment a purely protective law is passed there comes a flood of sportsmen (?) from all over the State, insisting upon exceptions as to their "locality" or their own conveniences, by which all real benefits of protection are lost or obscured. "G. B. W." may well and profitably mature his reflections by the fact that the way to "protect is to protect;" that protection means restrictions for all persons and in all localities during breeding time, Leon Center or elsewhere not excepted.

In recently turning over the files of your valuable paper (issue of Sept. 15, 1887, p. 145) there came to notice a communication on New York game laws as much to the point now as then. "G. B. W." is cordially referred to the views there expressed, and if he or others of like sentiment are really earnest and practical in a desire for protection, they must manifest a willingness to submit to greater limitations upon the killing privilege in common with all others *pro bono publico*. Till then it is probable that he will wander more and more disconsolate over the hillsides with his gun growing heavy and tired, and his game bag growing empty and light. OBITER.

MICHIGAN GAME AND FISH WARDENS.

THE first biennial report of the Game and Fish Warden of Michigan has just been made. There are in addition to the chief warden 151 deputies. The report says:

The work of "enforcing the statutes of this State for the protection and propagation of birds, game and fish" was entered upon immediately after my appointment, and as shown by the monthly report filed in the office of the Secretary of State April 27, 1887, there were thirty-five arrests made for violations of the game and fish laws in the first month of the existence of this department, and several trials were had and convictions obtained before the end of the month. In view of this statement, it is needless to add that prior to the passage of the game warden act, but little attention was paid to the game and fish laws and they were generally disregarded. The sentiment of the people regarding them soon changed when it became generally known that they were to be enforced, and in the place of open and flagrant violations the department had to deal with offenders who covered their violations as far as possible. This clearly demonstrated the necessity of the aid of competent deputy wardens in each county to make complaints and secure evidence sufficient to convict guilty parties; and this in turn showed the need of some provision by which the deputy wardens might be assured of proper remuneration for services performed and expenses necessarily incurred.

The game warden act leaves it to the boards of supervisors of the respective counties to fix the compensation of deputy wardens, and in most of the counties of the State the supervisors have voted a fair compensation and have given their support to the work of the department. The compensation awarded ranges from $2 per day for time actually spent, to an annual compensation of $1,000. In other counties (notably Saginaw, St. Clair, Alpena, Macomb and Missaukee), the supervisors have persistently refused to compensate the deputy wardens in any manner. In other counties the compensation awarded is so meager as to be of little value as an incentive to work. For obvious reasons this has rendered it quite impossible properly to enforce these laws in such counties; and this provision regarding the compensation of deputy wardens, or rather a lack of such provision, I regard as one defect in the game warden act which should be remedied. A provision granting the deputy wardens the fees of sheriffs for like services, and leaving it to the supervisors to allow such further compensation as they will, would improve this branch of the law and secure good service by the deputy wardens in counties which now grant no compensation. In this connection I desire also to call attention to the need of at least three State deputies to assist in securing competent county deputies, and proper work on their part, and to do special work in localities where the sentiment is opposed to these laws, and to assist generally in the work of the department. The need of this and other revisions of these laws may be emphasized in the proper time and place.

I have said that during the first month after the creation of this department there were 35 arrests made for violations of the game and fish laws. The trials of many of these parties did not take place until the following month, and the monthly report for May 25, 1887, shows that out of 65 arrests up to that date there were 59 convictions, and the fines and costs imposed and paid amounted to $344.83. The arrests during the month of June, 1887, numbered 28, the convictions 25, and fines imposed amounted to $173.78. It seems unnecessary to call attention to each month's report. During the first six months after my appointment, the number of arrests for violations of these laws averaged 39 a month, and in each month nearly all of those arrested were convicted. The average number of arrests during the last nine months has been 24, and the average for the entire 21 months that the department has existed is 23.

A monthly report has been required from each deputy warden, upon blanks prepared for that purpose, showing all arrests made, the offense charged, the result of trial and the fine and costs imposed. These reports show that from March 15, 1887, when this office was created, to Dec. 15, 1888, there have been 482 arrests made for violations of the game and fish laws. Of that number 398 were convicted, either upon trial or by pleading guilty, while eighty-four were acquitted, discharged, or the cases *nolle prossed*.

The fines imposed upon conviction vary from $1 to $50, and the total fines and costs paid by these offenders aggregate $5,632.11. In many instances the magistrates released the offenders upon suspended sentences, while fourteen of those convicted served short sentences in the county jails in lieu of payment of fines.

The monthly reports show that the offenses charged against these offenders are quite evenly divided between the game and fish laws. The violations of the game laws for which arrests were made number 243, and the violations of the fish laws number 239. A large proportion of the violations of the game laws have related to deer and quail, while the offenses against the fish laws are about evenly divided between unlawful spearing, the use of unlawful nets and the use of dynamite.

Three cases arising under these laws have been taken to the Supreme Court. In the first (People vs. Kirsch) a conviction for illegal fishing was affirmed and the constitutionality of the act under which the complaint was made was declared. In the next case (*In re* Moore) the Supreme Court granted the discharge from custody of a party convicted and imprisoned at Mt. Clemens for fishing in inland waters with a net, contrary to one provision of Section 2, Act No. 265 of 1887, upon the ground that such provision was not covered by the title of the act. No opinion was filed by the judge in this case and there was a general misapprehension as to its extent and meaning. It was generally declared that the entire fish laws had been declared void. The department, by circulars and letters and through the medium of the press, corrected this erroneous report of the decision as soon as possible, and the law, with the exception of the one provision referred to, has been enforced as far as possible and violators prosecuted.

The third case appealed to the Supreme Court was that of the People vs. O'Neil (39 N. W. Rep. 1). The conviction of the respondent for selling quail after the eight days' limit was reversed upon the ground that the quail were purchased in Missouri and that our laws apply only to Michigan game, although not so limited in express

words. The constitutionality of the section claimed to be violated was affirmed by the Supreme Court, so far as Michigan game is concerned.

In trials before juries there has been little disposition shown on the part of jurors to acquit accused parties where the evidence has shown them to be violators. There are exceptions in some counties. And invariably the better sentiment of the people is in favor of the enforcement of any law that the Legislature sees fit to put upon the statute books.

It belongs to the State Board of Fish Commissioners to show how large, important and valuable are the food product of the State. The game interests are equally as important, and as a food product the game of this State is much more important than is generally known.

Knowing the extent of these interests, it is clear that their preservation depends very largely upon the enforcement of the laws pertaining to them. In order that the people might become familiar with these laws, nearly the entire edition of 10,000 copies of the game and fish compilation has been distributed, under the supervision of this department, throughout the State. In addition to this, the substance of the more important laws has been published in the form of notices of warning, which have been generally posted.

My visits for consultation with the deputy wardens and in the general work of the department have extended to all parts of the State, and I find that ignorance of these laws can rarely be claimed in excuse for their violation, so generally have they been published and circulated. And I have observed an increasing interest on the part of citizens generally in seeing them enforced and offenders of them punished. WM. ALDEN SMITH, Warden.

ADIRONDACK DEER.

Editor Forest and Stream:

In the Jan. 24 issue of the Booneville *Herald*, a very good newsy paper in the main but a little off on deer protection, is an article recommending the careful watching of our Legislature, lest they tinker with the game laws and make further unwise legislation, and saying that there is a growing sentiment among a large number of sportsmen, who are looking for the best interest of the deer, that advocates a shorter season, from Aug. 15 to Oct. 5, and is also in favor of a law to prohibit the killing of does. It says that by Oct. 5 sportsmen who take their summer vacation in the Adirondacks have left, and that the deer usually killed after that time are killed for market or are packed down for winter use. Such a law would be almost entirely in favor of the jack shooters and hot-weather hunters. I suppose they lay claim to the name of sportsmen, but for my part I can see very little difference between a jack shooter of does in the month of August and a club hunter in January. If anything it is in favor of the man with the club, as he usually saves and uses what he kills, and the jacker wounds and leaves to rot beside our lakes and streams more than he recovers, and what he does get is mostly wasted on account of hot weather. Neither of them have in my opinion any very great claim to the name of sportsman.

An amendment to prohibit the killing of does looks very well on the face of it, and might do some good late in the season. With the best intentions any man in nine cases out of ten in the imperfect light of a lamp and fog cannot distinguish a buck from a doe, and not every man would withhold a shot if he did. There is a growing and almost universal sentiment among us on the borders of the Adirondacks and elsewhere that prohibits the shooting of all deer until some time in September. This would be the most sensible and practical thing to do for the preservation of our deer. The three-deer clause of the present law shuts out the market-hunter; but if three deer are too many make it two,

And we believe that any man who will in the cool weather of November by the still-hunt, giving the deer fair play, pitting his own unaided skill against the acute senses of the deer, with a single bullet bring him to bag, will get a better piece of venison to take home to his family and friends as the weather then will permit, and will have much more cause to feel proud of his achievement, and get his deer in a more sportsmanlike manner, than he would to riddle a suckling doe with buckshot at short range. For this reason we say give us November for an open season. Maine does it, Michigan does it, Wisconsin does it, New Hampshire does it, and all are apparently satisfied.

The sentiment is also growing pretty fast that it is about time that we stop legislating almost entirely in the interest of the summer vacationist, and legislate more for the protection of the deer. A VETERAN.

HOLLAND PATENT, Jan. 28.

FACTORY AMMUNITION.

Editor Forest and Stream:

I have been fitting out for turkeys, and have weighed a lot of Remington bullets very accurately. If the inclosed list of their weights is of any use to the FOREST AND STREAM print it. The main idea is to show the slight value of home-made as compared with factory-made:

Weights of 252 swaged bullets, factory-made.

Cal. .44, patched, weight 550grs.: 550grs. 2; 550 to 551grs. 7; 552grs. 1	10
Cal. .44, patched, weight 530grs.: 520 to 521grs. 4; 521 to 522grs. 5; 522½grs. 1	10
Cal. .40, patched, weight 370grs.: 370grs. 1; 368 to 369grs. 9	10
Cal. .40, patched, weight 330grs.: 323 to 324grs. 3; 324 to 325grs. 5; 328 to 329grs. 2	10
Cal. .40, not patched, weight 265grs.: 263 to 264grs. 1; 265grs. 1; 265 to 266grs. 5; 266 to 267grs. 1; 268 to 269grs. 1; 272grs. 1	10
Cal. .38, not patched, weight 330grs.: 327 to 328grs. 2; 328 to 330grs. 2, 330 to 331grs. 4; 331 to 332grs. 2	10
Second lot: 329 to 330grs. 7; 330 to 331grs. 9; 331 to 332grs. 4	20
Cal. .38, not patched, weight 306grs.: 304 to 306grs. 21; exact 20; 306 to 307grs. 33; 307 to 308grs. 4; 308 to 309grs. 10; 309 to 310grs. 3; 310 to 311grs. 10; 311 to 313grs. 11; 313 to 314grs. 3	120
Cal. .38, not patched, weight 255grs.: 254 to 255grs. 3; 255grs. 8; 255 to 256grs. 13; 256 to 257grs. 18	42
Cal. .38, not patched, weight 245grs.: 243 to 244grs. 4; 244 to 245grs. 3; 245grs. 3	10
	252

Weight of 17 bullets, hand-made.

255gr. mould: 271grs. 1; 271 to 279grs. 11	12
265gr. mould: 294grs. 1; 313grs. 1; 315grs. 1; 316grs. 2	5
	17

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

INCIDENTS IN MY HUNTING LIFE.

I ONCE caught a very large bear in a steel trap. He carried the trap some three miles, as I estimated. The trap was fastened to a heavy clog, the whole weighing 75 or 100lbs. He would often get brought up in the brush or small trees, and would tear and bite and twist the trees like mad until he got the trap clear; then go on again, sometimes taking the clog in his mouth and carrying it a quarter of a mile or more, making no signs on the ground, so I had to strike a circle to find his path again. In this way he followed until he had circled around to within a quarter of a mile of where he started from, and here I found him after spending the most of a day following up the signs.

The bear was very fierce and made fearful exertion to get clear, jumping toward me the length of his chain, and gnashing his teeth and making mumbling, short, repeating growls every moment, giving me the impression that, should he clear himself from the trap, I should be his objective point and stand a small sight for escape unless I got in a deadly shot in a hurry.

I had with me a doublebarrel, smoothbore, muzzle-loader shotgun, loaded one barrel with bullet and the other with shot. I approached him with caution, not liking his big growls of ursine swear words, and fired at his heart the bullet when he reared to jump at me; for he was so active it was difficult to draw a bead on his head. The shot did not seem to affect him in the least, and he continued his jumping. I rolled in a bullet on top of the shot in the other barrel and aimed and fired as before. Then I at once commenced to load both barrels with powder and balls, and had wadded down the powder and was rolling in the bullets when the bear fell. After skinning him I cut him open to find out where the bullets hit and found that both had passed through the heart. The bear had plenty of time to reach me after I fired my first shot, had he been clear of the trap; and this supports my theory that the only safe place to hit a bear is in the head.

I think it depends on the state of the lungs about the length of time a bear lives after a bullet pierces his heart. If the breath is in, he will live until he has to breathe again; if out, he cannot draw in another.

I once found a bear dead in a trap. It was in a swamp where the spruces and firs were very thick and grew very slim and tall. When the bear felt the jaws of the trap on his legs he tore around furiously and cleared quite a piece of ground of small trees and rotten logs, and then struck out climbing one of the tallest trees, breaking off most of the limbs as he went up until reaching the top some 50 or 60ft. when he just slipped the trap—which was on his foreleg—over the top of the tree and let go, probably thinking to rid himself of the trap. When I found him he was down some 10ft. from the top, the tree sticking up through the trap. I had to fell the tree to get him. He weighed about 200lbs.

I once found a bear in my trap in a cedar swamp, hung up between two trees. The trap was on his forefoot and he had climbed a cedar which branched apart 10 or 12ft. above the ground, and he had dropped from the top into the fork of the tree, the trap and clog going one side and the bear the other, his hindfeet just reaching a log on the ground, so he could bear his weight (no pun intended) enough on the log to jump up a foot or two, then settle back to the log again, but could not extricate himself. In this manner I found him, and he was dancing a lively jig, which he continued for a long time, giving the appearance of actually amusing himself in this funny manner.

Several times I have found bears in my traps, burrowed under the roots of large trees, where they had dug a hole under large enough to conceal themselves, and I found it difficult to dispatch them and get them out. On one occasion I came up with a bear in my trap and found him lying down, his forepaws stretched out and his head resting on them. It was nearly dark, and I felt in a hurry to kill him and get back to my boat before night, so I aimed detween his eyes and fired. He did not move, and his eyes shone as bright as ever. I waited some time for some evidence of life or death, but not seeing any change I cut a long pole, sharpened one end, and went to punching him. He did not move, so I cautiously approached him and found him stone dead. J. G. R.

BETHEL, Me.

MAN AND OTHER ANIMALS.

BOSTON, Mass., Jan. 28.—Connected with the idea of fish and game protection there are some peculiar features, not the least of which are the notions of philosophers and even profound thinkers. Mr. Edmund Noble lectured on Sunday evening, in the Church of the Unity, Boston, on the Rights of Animals and the Tortures of Legalized Sport. The lecture was intended to reach the best society of Boston, and the lecturer was introduced by the Rev. M. J. Savage, pastor of the church, and one of Boston's most popular pulpit orators. The lecturer dwelt on the cruelties to animals being slaughtered for food, and his ideas were good and true, had he carried them to logical conclusion; that is, that every creature slaughtered for food, or to rid it of a miserable existence in old age or decrepitude, is entitled to a painless death. But when he came to dwell upon the cruelties of sport with line and hook it was evident that he was dealing with pure sentiment. If Mr. Noble believes that the trout with a hook in his jaw suffers all the pangs that a human being would with a corresponding iron hook in his jaw, then Mr. Noble could not be blamed for never going a fishing, and it is a very commendable thing in him that he dared to get up before an intelligent audience and disclaim all legalized sport. But had Mr. Noble ever indulged in these legalized sports he would have long ago come to the conclusion that the capabilities of the trout for suffering pain are not quite up to those of a human being. If he had ever caught a trout with half a dozen hooks in his jaws, with no appearance of gangrene or soreness, not even enough but that the trout was as fierce as in the case of the first one, he would have asked himself the question, "How long would a man live with six iron hooks in his mouth of an inch in diameter?" A little careful thought will convince anybody that the capabilities of animal, fish or insect life, for suffering pain are measured by the position they occupy in the order of animal existence, with the sponges as the lowest individuals in the order, and human beings as the highest. It should be remembered that some of the fishes are so destitute of nerve or of feeling, that they may even be frozen solid into the ice in winter, and yet on the thawing of the ice in the spring, the fish swims away as though nothing had happened.

Again the lecturer declares that all laws for the protection of fish and game, all "close time for brutes" he puts it, "are but means for the multiplication of victims." The lordly moose and the fleeting deer are protected by our laws, only that the hunter may have the opportunity to kill. "Do we not shelter and protect the diminutive lobster that later we may boil him alive?" asks the lecturer. Yes, this is true, but so does the farmer rear his stock, only to send it to the butcher. If such be cruelty, if such be a wrong to the animals in question, then what a load of sin has the farmer and the stock raiser to answer for? What a brute—yes, even a murderer—must the butcher be! Even the lecturer himself may not be devoid of cruelty, if he allows himself to partake of other than farinaceous foods. The partaker has got some of this sin of cruelty to answer for, if cruelty it be. The beautiful deer may enjoy the life that nature has given him, but if he falls from the bullet of the hunter, that existence is instantly blotted out. There is little or no pain. What might not have the end been finally, had the hunter never fired the death shot? Would that deer have finally been tortured by death at the teeth of dog or wolf, or would he have met his end from starvation, when age had left him toothless and unable to feed upon twigs in winter?

The lecturer deplored the fact that the partridge must take his chance with the shotgun of the cruel sportsman under our modern civilization, but he forgot to mention that the same bird, were it left to choose, would probably prefer death from a well-directed charge of shot to being riddled by the eagle or the hawk, or rooted out of the snow in the night time by the hungry fox. The lecturer may claim that the hunter is cruel, but in all fairness he must admit that nature herself is ten times as cruel. The true sportsman aims to administer instantaneous death, but nature leaves the deer that happens to break a leg, the partridge that happens to break a wing, to fall and die of thirst or starvation. Death comes to every form of animal life, sooner or later, and the sportsman who brings down the bird on the instant has committed no act of cruelty.

One day last autumn a Boston gentleman, spending his vacation in the Maine woods, came upon a flock of partridges. Two were shot, and one fell with a broken wing. Hunt as thoroughly as we might, that bird could not be found before nightfall, which soon came on. It was two miles from camp, but the gentleman was very loth to give up the search, remarking several times "I am sure that that bird is hid near by somewhere, for I saw her running with a broken wing." But they were obliged to leave for camp. Several times the gentleman remarked during the evening, "I should feel better if I knew that that partridge was dead and not suffering from a broken wing." In the morning it rained and snowed by turns and the weather was very disagreeable, but the shotgun was soon shouldered by that sportsman. He whistled to his setter, and took a foot from one of the grouse killed the day before in his pocket. Reaching the scene of the shooting of the day before, the foot was given to the dog to smell, and in a few minutes he came to a point in a little thicket. No bird could be flushed, however, but on approaching the wounded partridge of the day before ran out and was immediately shot. The gentleman coolly pocketed the bird with the expression that he was satisfied. There was now no wounded partridge to haunt his reverie by the camp-fire.

The Church of Unity lecturer objected, or seemed to object, that our choicest table fish, under modern civilization, are sheltered during the breeding season, in order that they may bring forth more victims for the hook and the line; it were better perhaps that the female fish were early destroyed, thus thousands of fish would never be brought forth, only to meet the hook and afterward the frying-pan. Such nonsense reminds one of an eccentric character that was once well known in Boston. He never married, because he was a great enemy to pain and misery, and he desired no children to be born to him, only to inherit pain and misery. Later in life he would always lament the birth of a child to any of his friends in this wise, "Oh, misery, pain and misery! Poor, poor little thing! Born to suffer pain and misery! Nothing but misery, misery!" SPECIAL.

MARKETING MOUNTAIN SHEEP.—*Editor Forest and Stream:* In the Kansas City *Star* of Jan. 26 appeared this notice: "D. Mogg has on exhibition at his butcher shop, 119 West Ninth street, a fine specimen of Rocky Mountain sheep, shot by Mr. Al Knollin, sheep buyer for Swift & Co. The animal is said to be the first one of its kind shown in the Kansas City markets." This was most startling to me, knowing full well the recent action of the Colorado and Montana legislatures regarding game, especially the former, by which the Rocky Mountain sheep are protected eight years from 1887. I can readily excuse the sportsman who is far from market, no fresh meat, and a band of sheep or any other game within reach of his rifle, but when such flagrant usage is made of rifle and opportunity, I am excusable for "cussin'." The idea! Killing a sheep for market!—that species of game so nearly extinct, so nearly a thing of the past, game of the sort which men go hundreds of miles to look at, much less kill—and here it is offered for sale in a butcher's shop hundreds of miles from its native heath. With all due respect for Mr. Mogg, I shall endeavor to trace this matter to a head, and, if possible to effect a conviction, it will be done. There is no danger of the killer or shipper seeing this article; such men as pot and market hunters rarely can read, let alone become subscribers to periodicals; but for the sake of doing with others as I would have them do to me, and protect me should such things occur under their own eye, I shall most certainly sift this matter to the bottom.—TILE.

TO DESTROY SKUNK'S ODOR.—Huntington, Mass., Jan. 21.—Richard Gear Hobbs, in your last issue, asks how to destroy the horrible smell of the skunk, so he may skin them. If near swift-running water in brook or river, after killing the animal take a stout cord or wire, attach one end to the skunk's hindleg and the other end to a pole, then put the skunk in the rapid stream so the water will cover him for 48 hours; he will then find no scent upon the fur. The two scent bags or sacks lying at root of tail each side of vent should be removed before trying to skin the animal.—H. W. M.

PUTTING OUT QUAIL.

THE Passaic County Fish and Game Protective Association, of Paterson, N. J., has resolved to abolish the collection af monthly fees from each member and to entitle all to membership who shall have or may in the future pay the sum of $1 for admission. This step is taken in the hope of inducing a large number of farmers to join and giving them the power to enforce the game laws, it being believed that a stricter enforcement of the laws could be obtained in this way than by the collection of fees with which to carry on prosecutions. Resolutions were also passed at the meeting providing for the stocking of the woods of Passaic county with quail and rabbits. The severe storm of March 12 last did a great deal of damage to game of all kinds, and steps will have to be taken for the purpose of preventing a total extermination of game. CHAS. A. SHRINER, Secretary.

Editor Forest and Stream:

Local sportsmen complain about the scarcity of quail during the past season, accounted for in most cases by the blizzard of March 1888, which in the district over which I generally hunt, almost exterminated them. I and some brother sportsmen made up a fund to purchase a few dozen of live quail, which we ordered and received, and they were put out about a week ago, and I received word a day or two ago that they were getting along nicely. Now, my idea in writing this is to suggest that the sportsmen in parts of the country where the birds are now very scarce, and I think this is the case in the track of the blizzard, club together and purchase a few dozen birds for re-stocking. Objection will be made that these sportsmen stand the expense and others who contribute nothing share the benefits. This is unavoidable, but the principal point is the enforcement of the game laws, and these sportsmen, having a moneyed interest in the birds and being anxious to have them thrive, will keep a more or less sharp lookout after them, and in protecting the birds they have distributed will of necessity be compelled to guard all kinds of game in their neighborhoods, and in this way insure better game protection than given by the constables. These birds can be purchased in any moderate quantity, and should not cost above $4 per dozen. This has been a good winter so far for game, and myself and friends expect to make up in 1889 for the poor shooting of 1888; and it will go hard with any who try to convert our birds into meat before the opening of the season of 1889. . WM. A. B.

NEW YORK.

GAME IN TOWN.

Editor Forest and Stream:

Let me add a few lines to the matter of game in town by relating a little story told to me by Sergeant Oliver Tims of Captain Thomas Reilly's Nineteenth Precinct in New York city. In August, 1881, Thomas Dempsey, doorman of the station house, which is on Thirtieth street between Sixth and Seventh avenues, shot a woodcock which came flying over the buildings at the rear of the station. Dempsey was sitting on the bridge which connects the prison with the office part of the building. He was cleaning his 14-gauge Westley Richards, and had in his gun-rag box two or three cartridges. While rubbing the exterior of the barrels he saw a bird in the air a great way off. He thought it was a swallow at first, but upon the bird coming nearer saw that it was a woodcock. Hastily inserting one of the cartridges he waited until the cock flew in range of the great windowless wall of the adjacent brick building and then took quick aim and pulled. The cock was badly hit, for instead of falling plump it kept its wings spread and, whirling round and round in its descent, fell lightly on the steps leading to the tramps' room. Hurrying to the spot where it fell Dempsey found it with both wings spread, its great eyes wide open, its head bobbing up and down, and its long bill gently tapping on the iron step. It was soon put out of its misery and Sergeant Tims ate it for dinner the next day. It was a male bird, very fat, and of fine plumage. Considering the locality, Dempsey says he made a great shot. Had he not waited until the cock flew in range of the big brick wall of the building, and had he not pulled before it flew past the wall, he could not have at fired all, owing to the great number of buildings with windows in sight on all sides. This is an illustration of not only game, but good sportsmanship in town as well. CHAS. BARKER BRADFORD.

NEW YORK, Jan. 23.

PRESIDENT-ELECT HARRISON'S DUCKING.—Washington, D. C.—*Editor Forest and Stream:* In a recent issue an account was given of President-elect Harrison's hunting trip last fall, and the statement was made, in substance, that nothing more was known as to his love for or experience in that sport. Allow me to supplement it by briefly recounting all that seems to be known of his indulgence in that line in this vicinity during the six years he was Senator and resided here. One December he went, in company with Commander Evans, down to a ducking resort on Onesapeake Bay, and was gone two or three days. According to his own account of the trip, he suffered somewhat from exposure to cold while lying in a blind, but was moderately successful in bagging the wildfowl. After his return, an attack of rheumatism kept him in bed a day or two, and perhaps warned him to expose himself less next time. There is no reason to doubt, judging from accounts of his acquaintances, that he is a moderate lover of both hunting and fishing, but has found or taken comparatively little time for either pastime.—POTOMAC.

KENTUCKY QUAIL.—Glasgow, Ky.—We have very few ducks in this locality, but abundance of quail, and to each covey of birds at least two pot-hunters. One of these vandals agreed to furnish a game dealer not less than thirty birds per day for a term of two weeks, and before that time expired brought in over 500 birds. He is a dead shot, and with others of his ilk has not left twenty-five birds within a circuit of ten miles. Something must be done to stop this slaughter. "Missouri" says, "The time is coming when the law will stop it." God speed the day. —MAC.

ITHACA, N. Y., Feb. 1.—An enormous wildcat, with a ferocious inclination to paint surrounding objects a lurid vermilion, was recently killed a few miles north of here. Two dogs were fearfully cut up by the pugilistic feline before a well-directed bullet ended its career.—M. CHILL.

YELLOWSTONE PARK GAME IN MONTANA.—The Governor of Montana has sent to his council this very sensible recommendation: "My attention has been called to the statute law as found in Section 270, fourth division, Chapter 13 of the compiled statutes of Montana, page 580, with reference to the killing of buffalo or bison within certain counties in said Territory. I am advised that there are in the Yellowstone National Park considerable numbers of this species of animal, and with the view to prevent and save them from extermination, the Congress of the United States heretofore made provision for their protection while on the soil of that Park, and the statute of Montana referred to has been a supporting help to the law of the United States, and to those intrusted with its execution. It will be seen that the act of Montana will expire Feb. 21, 1889. The migratory character of the animal is such that at certain seasons in the year they stray abroad from their usual home grounds and hence may be found without the pale of the United States' guardian care. I recommend that the legislative assembly re-enact said provisions and prohibitions so as to apply to the entire Territory of Montana."

NARCOOSSEE, Fla.—A good many deer have been shot around here lately, and on account of the unusually heavy rains they have been forced to leave the swamps and seek dryer quarters on the oak ridges, consequently making it much easier to get at them than is generally the case, much to the delight of the market hunters. Why cannot Florida have a close season for game? Quail have not been as numerous as last season, the coveys being neither so large or as strong. I hear from report that snipe are as plentiful as ever this winter, but not having been out yet I cannot vouch for it.—GENERAL.

TOMS RIVER, New Jersey.—The outlook for quail shooting next fall seems to be very good in this section. Sportsmen report large coveys of old birds quite numerous. The winter has been very favorable for them thus far.—H. W. S.

NEW YORK LEGISLATURE.

[*Special Correspondence Forest and Stream.*]

ALBANY, N. Y.—Assemblyman Cronin has introduced a bill for the protection of fish in Jamaica Bay. It provides that it shall not be lawful by day or night to put, place, draw, or in any manner use any purse net, pound, weir, or other device except hook and line for the capture of menhaden or other fish in Jamaica Bay, nor in any arm, bay, river, haven, creek or basin thereof.

Senator Sloan has introduced an amendment to the Forestry Commission act of last year, including Oneida county in the forest preserve. The county was omitted by mistake.

Assemblyman McAdam has introduced a bill prohibiting the selling of partridge and woodcock, killed in Oneida county, outside the limits of that county.

Senator Coggeshall has introduced his bill of last year amending the penal code to prevent fishing in private ponds. This is to make such fishing more difficult.

A bill by Assemblyman Maynard, of Madison, amends the law of 1888 allowing a fishway to be placed in Chittenango Creek. As the law read, the fishway would have been placed in Madison county. The amendment allows it to be placed in Onondaga county. The Assembly has passed the bill.

Assemblyman Savery, of Cayuga, has a bill reappropriating $3,000 appropriated in 1886 to construct fishways in the State dams across the Oswego and Seneca rivers.

Lake Ontario comes in for its share of attention thus early in the session. Assemblyman Lane, of Jefferson, wishes to repeal that clause of the law of 1888 relating to the waters of Lake Ontario in the town of Ellisburgh, in his county. The law noted above prohibits fishing with nets, and Mr. Lane wishes to repeal it so far as Ellisburgh is concerned.

A bill, by Savery, relating to Lake Ontario, amends the bill of last year (not signed) to protect fish within one mile of the shore of Lake Ontario and inlets thereof in Cayuga county. The protection provided that fish shall be caught only by hook and line. But a judge in Watertown has held, under the existing laws, that while a fish and game protector, or constable, could confiscate nets, yet he could not destroy them. Therefore this bill of Mr. Savery's has been altered from the bill of last year to conform to this judge's decision. If it becomes a law confiscation will not follow the seizure of the nets.

Senator Coggeshall has introduced his bird bill which did not succeed last winter. Briefly it provides shorter seasons for woodcock and partridge. The bill came from the Utica Fish and Game Protective Association. The board of supervisors of that county (Oneida) have passed the same law as to woodcock and partridge for the county and have also adopted a recommendation for a similar general law for the State which is likely to come in later. It is understood that supervisors of other counties have taken similar actions, all going to show that there is a wide sentiment through the State to shorten the season for those birds. It is said that the action of the Oneida county supervisors has been backed by one of the greatest market hunters of the State, and that when such a man as he becomes alarmed at the scarcity of woodcock and partridges every one may well be assured of the necessity of the Coggeshall law, or even of shorter seasons for the protection of this game. It is declared by the Coggeshall bill that the lawful season for killing woodcock, black and gray squirrels, shall be only during September, October and November. They may be possessed or sold for fifteen days after the close of said season. In the law as it stands the open season for woodcock is September to January in the counties of Oneida and Delaware, and in other parts of the State August to January. The open season for squirrel is between August and February. It is also provided in the Coggeshall bill that no person shall kill ruffed grouse or pinnated grouse except during September, October and November. They may be possessed and sold for fifteen days after the close of the season. According to the present law the open season is between September and January.

The bill provides that in any action to recover penalty for selling, or offering for sale, any of said birds in violation of this section, proof that after a careful examination thereof, such bird did not show any bloody and contused shot marks or injuries, indicating that such shot marks, or injuries, had been inflicted and followed by natural bleeding during life of such bird, shall be received as *prima facie* evidence to establish the fact of its being snared or trapped. There is a provision excepting the nests of night hawks from the section forbidding the willful destruction of nests; and it is further provided that no person shall set any trap, snare or net, or bird lime or other adhesive substance, or place bird food saturated with alcohol or any deleterious or stupefying drug or substance for the purpose of capturing any game bird, nor shall any person sell or expose for sale, or have in possession the eggs of any wild bird, except those in this section above excepted. The final provision of the bill is that no person shall kill, or expose for sale, or have in possession after the same has been killed, any wild duck, goose or brant between the first day of February and the first day of September in each year. The present law reads May instead of February.

Senator Collins has introduced four bills of great interest to those who care for fish and game matters. They may be briefly described as follows:

First—The amendment to the salmon law was necessitated by the fact that hundreds of small salmon less than 6in. long were taken last summer in the Adirondacks with rod and line. This was reported to the State Fish Commission by the gentleman sent by the U. S. Government to make a report on the river as a salmon stream. He found at the headwaters of the Hudson they were used as a pan fish in place of trout. There is no necessity for this, as there is plenty of other fish there for table use, and if allowed to continue it will not be possible to give the people of the State a fish that has before been unknown to its waters.

Second—The amendment to the shad-net law simply requires that Westchester county shall not be exempt from its provisions, which is, that all nets should be out of the river over Sunday. All the people along the river should be treated alike in their fishing rights. As the law is now it is a dead letter, for it permits nets to be used Sunday only south of Westchester, which makes a barrier across the river near its mouth, and so spoils the good purpose of the law, which was to give shad and other fish one day in the week clear sailing to get up to their spawning grounds.

Third—The bill providing for fishways in future dams that may be built on public waters is no more than just to the people's interest in the food fish of a stream. The State gives private owners valuable franchises free of charge, and they should at least put in fishways at their own expense in any new dam, as much as a bridge company is required to have a draw where the stream is navigable. The States of Maine and Illinois are more advanced in these matters, having laws that leave it discretionary with the State Fish Commission to order fishways in dams already built as well as those that may be built in the future. The expense of all the construction is paid by the owner of the dam. This law was recently tested in the Court of Appeals of the State of Illinois and pronounced constitutional.

Fourth—The bill for fishways at Mechanicville and Northumberland is one that is earnestly asked for the people along the upper Hudson. The Hudson is a large and important river for food fish, supplying not only this but adjoining States, and many varieties of fish require to get above tidewater to spawn or they are soon exterminated. A start has been made in this direction by one built in the Troy dam last summer, and when the two above mentioned dams are provided with fishways the fish can then ascend to Fort Edward, which will be sufficient distance to show the value of the fishways. The four bills above mentioned are approved and recommended by the Fish Commission of this State.

Assemblyman Little, of Niagara, has introduced a bill forbidding the shooting of quail and partridge in Niagara county. The original bill prohibited this for three years, and as the time is about up now the new bill simply extends the period for another three years.

Sea and River Fishing.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

FISH AND FISHING IN ALASKA.—II.

[*Continued from page 37.*]

THE sea raven is occasionally seen in Alaska, and Dr. Steindachner records it from the coast of Asia. It is true that the Alaskan sea raven has been described in Proceedings Phila. Acad., 1880, page 233; but I have seen the type of the supposed new species and do not consider it different from the common Atlantic form.

There is on the New England coast, in moderately deep water, a handsome fish called the redfish, Norway haddock, bream, rosefish, red perch, etc. The family to which this belongs is represented by seven species of a closely allied genus, *Sebastichthys*. One of them is brilliantly red in color; a second is marked and mottled with yellow, brown and orange, and its spines are high and strong; another is bright orange red, and its sides show five broad, black, vertical bands, making it one of the handsomest fishes in the Territory. All of these species are excellent for food and take the baited hook freely. They are locally known as rock bass, and one of them, *melanops*, really resembles the black bass in its general appearance. The smallest species reaches about 1ft. in length and the largest nearly 2ft. They seem to be limited to the Gulf of Alaska and the vicinity of the Aleutian Islands, and are extremely plentiful.

The family of *Chiridæ* is one that we do not find represented on the east coast of the United States, but in Alaska it has many members, constituting some of the best known and most highly esteemed food fishes. Most of the species belong to the genus *Hexagrammus*, and are known to anglers and fishermen as rock cods. These are found in nearly all parts of the Alaskan seas, one of them occurring as far north as Port Clarence and on the coast of Kamtchatka. The most brilliantly colored one ranges throughout the Aleutian chain to Attu and southward to Monterey Bay. The male is much the more beautiful in coloration, and is further distinguished by the green color of its flesh and intestines, due no doubt to the nature of its food. Another species, which is very common at Unalashka, is called "green fish," because of the green color of its meat; the female of this fish has smoky brown eggs. These fishes have always reminded me of the tautog in their variable colors and their general appearance. The color of the flesh does not destroy its excellence, for it disappears in cooking. None of the species are very large, the largest one scarcely exceeding 18in. In one species the sexes are so differently marked that some authors have supposed them to be distinct, and so described them. One of the most important fishes of the family is the kelp fish, Atka fish, yellow fish, striped fish or Atka mackerel (*Pleurogrammus monopterygius*). One of the most striking peculiarities of this fish is its taste after salting, which closely resembles that of the mackerel. Its scales are small and the skin is tender and thin. In the fresh state it has a different taste from the mackerel, but when preserved in brine the similarity to salt mackerel is very great. Its favorite haunts are about the Aleutian Islands even to the extremity of the chain, the Shumagins and Kodiak. It is found in great schools at certain seasons, and might be taken in purse seines. Its movements are sometimes capricious, and it may disappear from a locality for months or even years at a time. As a bait for the cod there is nothing better. The species seldom exceeds 18in. in length. The largest fish of the *Chiridæ* is the cultus cod, *Ophiodon elongatus*, which is found all along the coast from Santa Barbara to southern Alaska. This is a bold, hard biter, and a fine food fish. In length it reaches 3ft. or more, and specimens weighing nearly 40lbs. have been taken. The last of the series is the beshowe of the Indians, *Anoplopoma fimbria*, sometimes incorrectly styled the black cod. Our friends on the West Coast seem to have determined to perpetuate the name of cod, and, to that end, they have applied it right and left among fishes which have no more relation to a cod than a black bass has to a salmon. The beshowe is considered a very poor fish in San Francisco, where only small or moderate sized individuals are common in the markets; but large fish taken in deep water off Puget Sound and northward are highly prized. The color of these fish is very dark brown, while the young are grayish silvery. As a salt fish the beshowe is much liked, and especially for smoking in the manner followed with the halibut. Shipments have been made to Gloucester and Boston for trial by this method, and the fish has gained an enviable reputation. I have recently learned that the Albatross took this species much further south in California than it was known to occur. In Alaska we have it only from the southern part of the Territory, where it is sometimes mistaken for the common mackerel.

The viviparous perches send a single representative into southeastern Alaska, the *Micrometrus aggregatus*, a small fish with very little value as food. Capt. H. E. Nichols found it for the first time at Port Wrangel in 1882.

The sand launces, or lant, are very numerous and widespread, one species extending above the Arctic Circle in summer. These little fishes constitute a large part of the food of cod, salmon and other valuable species; they are in great demand also for bait.

The pike (*Esox lucius*) is a very common inhabitant of the Alaskan lakes, and grows to a large size. An example measuring 39in. was taken in July, 1887. We have it from the Bristol Bay region, the Yukon basin, and north to the Kowak, a tributary of Hotham Inlet. It is regarded as a very good food fish, although in northern Alaska it is fed principally to dogs. Curiously enough Mr. Fisher has found the pike on Kodiak Island, where it must have been resident before Shellikoff Strait formed a separation from the mainland and set up a barrier to the movements of the fresh-water fishes.

The singular little blackfish forms a family of its own, the *Dallidæ*. It exists in countless multitudes in the fresh water lagoons, and is one of the most valuable fishes to the natives. We have specimens from the Bristol Bay region and the vicinity of St. Michaels. Nordenskjöld found it at Port Clarence and also in Siberia. Hundreds of tons of this palatable fish are eaten annually.

The smelts are well distributed and very abundant, the true smelts (*Osmerus*) occurring only in Behring Sea and northward. They are eaten both fresh and dried, and constitute an important part of the food supply. The surf smelt (*Hypomesus pretiosus*) so called because of its habit of spawning in the surf, appears to be limited to the Gulf of Alaska, from wheuce it extends southward to San Francisco Bay. A smaller species of the same genus has the peculiarity of spawning in fresh-water ponds and is more northerly in its distribution, reaching Kotzebue Sound on the American shores and Kamtchatka on the west. The capelin is identical with ours and is quite as abundant and valuable; it finds its way around the shores everywhere, the young swarming in Plover Bay and on the east side of Behring Strait in summer; we took it at Cape Lisburne in August. In Cook's Inlet, early in July, the salmon were feeding greedily on capelin, and near Kodiak we found the cod gorged with the same delicate food. The eulachon or candle fish, so named because the dried fish will burn like a torch, is one of the best known fishes of Alaska, but it seems not to occur at all in Behring Sea. Southward it extends to the Columbia River. This fish is about equal to the smelt in size and resembles it in general appearance. Ascending the streams in dense masses, it is caught in immense quantities and utilized fresh or dried. As a pan fish it is said to be delicious. On the west shore of Shellikoff Strait, at Katmai, something is done in the way of salting eulachon and the product is sold at Kodiak, where it is greatly esteemed. Eulachon fat is used instead of butter by the Indians, and as a substitute for cod liver oil by some of the druggists of the West Coast.

The whitefishes abound in Alaska and enter very largely into the food supply of the natives. One small species, the round whitefish, occurs on Kodiak Island, the southern limit, I believe, of *Coregonus* in the Territory. The largest of the species has some resemblance to the common whitefish of the Great Lakes, but has a much smaller head and longer body; this one ranges northward to Point Barrow, and rivals our commercial whitefish in size and flavor. The smallest seldom exceeds one pound in weight, and is little used by white people, but extensively by natives and their dogs; it is somewhat unusual to meet a traveling party along the shore that has not several bunches of this bony species. Nelson's humpback whitefish is larger than the last, but scarcely more valuable except for dog food; it appears to be most common from the Yukon northward. The round whitefish, notwithstanding its small size, is a very valuable addition to the food resources of the country; it extends entirely across the northern part of America, reaching New England and Kodiak on the south; some authors state that it enters the Arctic Ocean. The Lauretta whitefish is another small species, not often exceeding 3lbs. in weight; it is the prevailing whitefish in the far north, being common at Point Barrow. Related to the whitefishes is the great *inconnu* of the voyageurs—one of the largest and finest of the food species of Alaska—known to reach a length of 4ft. and a weight of 50lbs. It may be known by its enormous size, strongly projecting lower jaw and its elegant silvery body. Frequenting the large rivers most of the year, from the Kuskoquim to the Kowak, it is most abundant and in its finest condition in midsummer; at the close of the spawning season in January it disappears.

The grayling is one of the handsomest fishes in the fresh waters, and in the spring, which is the season of its greatest abundance, it is much valued as food. Dall mentions it as the only fish in northern Alaska that will take the hook, meaning, of course, in fresh waters; we should fully expect, however, to take the pike and trout in that way. We can trace the grayling now as far as Kowak and eastward to the Mackenzie.

Alaska is famous for its big trout, and they are plentiful enough to satisfy the most exacting. Three black spotted species occur, one of them, the rainbow, once taken near Sitka. Clark's trout, or the red-throated, is abundant and grows very large. We cannot define its northern limit with accuracy, but there is no evidence yet of its occurrence far beyond Unalashka. Gairdner's trout, the ah-shut of the Sitkans, certainly ranges further northward, McKay having found it in the Bristol Bay region. We found ripe females of this species at Sitka in June, and were struck at the time by their similarity to the Kennebec salmon—a resemblance which some dealers are turning to their pecuniary advantage at the present date. The Dolly Varden becomes so large and is so numerous that it forms a staple article of commerce in the sea-run condition under the name of salmon trout. At Kodiak and elsewhere it is extensively packed in brine for shipment to California. This trout is one of the great travelers, and is known to occur in the Colville, the Mackenzie and eastward to the Saskatchewan; southward it dwells in the McCloud. In northern Alaska the natives prepare the skin of this charr to be made into waterproof clothing. The same species is taken plentifully in Plover Bay, Siberia, and also in Kamtchatka. The lake trout, *namaycush*, abounds in the headwaters of the Yukon, principally in the lakes, and in the sources of the Kowak; specimens measuring thirty inches in length have recently been caught. The color of Alaskan individuals is darker than the average specimen from Eastern waters, but there are no important differences to separate them. This trout seems to be unlike all others in America and the Old World. Its teeth and its excessively large number of appendages near the end of the stomach cause it to stand out alone from its relatives and give it a unique character. Its range is very wide, both in latitude and longitude, covering as it does the whole northern portion of America, and extending south to Idaho and New York. TARLETON H. BEAN.

[TO BE CONTINUED.]

A MYSTERIOUS MILLPOND MONSTER.

Editor Forest and Stream:

Early in September last there was taken from a small sawmill pond of only three or four acres, in the town of Shirley, Mass., a fish which weighed 16½lbs. "What is it?" inquired every one who saw it, but none could give a satisfactory answer. No one had ever seen anything like it. Calvin N. Farnsworth, the owner of the sawmill and pond, himself an expert fisherman, in fact, most of the people who saw the fish, presumed it to be a black bass (*Micropterus dolomiei*) or common sucker (*Catostomus teres*). But no one had ever heard of a black bass weighing over 7 or 8lbs., and 3lbs. would be a large sucker to be caught anywhere in eastern New England. Hearing the "fish story," I became interested and determined to ascertain the facts. The pond was visited and such items of interest as could be gleaned from the captor and his neighbors were obtained.

The owner of the pond, some eight years ago, caught in a small pond, the outlet to Fort pond, in Lancaster, an adjoining town, some shiners for pickerel fishing through the ice. Among the minnows so caught were a good many of what he called black suckers. Possibly, as he was not familiar with black bass, and since they had been planted in that neighborhood, the little odd looking fish may have been of that species. However, he took them all along together, and when he had finished fishing, in the following spring, a goodly number of the bait were left on hand, which, for safe keeping, he turned into his millpond. Some years afterward he observed an odd fish wandering about his pond. The fish grew, as did also his curiosity. Years passed rapidly by, and the monster fish—for such it had come to be—attracted the attention of others. The news spread from town to town, and numbers of people from Lowell and other places came to see it. The pond was so small that the fish could be seen on almost any day. No one of the visitors had, however, attempted to identify it as belonging to any group of fishes known to them. Curiosity ran so high that the owner had reason to believe that an attempt would be made to seize and carry off the prize. All attempts to catch it with hook and line had failed, even when the most tempting baits were offered. One day, as the monster was lying in shoal water near his mill, the owner took his rifle and shot a ball through the fish near the base of the pectoral fin. The huge thing was secured and shown to some of the neighbors, who were surprised that so large a fish should grow in so small a pond, and the question still was "What is it?"

Mr. Farnsworth and others thought it must be the outcome of the shiners deposited in the pond eight years before. The shape of the mouth, the decurved nose, the absence of teeth, its refusal to take bait, all pointed to the sucker family. The depth of body, large scales and spinous dorsal fin would seem to place it with the bass family. But then, bass have sharp teeth in both jaws. The specimen before them had none. The sucker has an elongated body and soft rays. The present example had a very broad body somewhat like a croppie or sheepshead, and in the absence of a little scientific knowledge, much wrangling ensued. At length, the fish was cut up, distributed, cooked and eaten. A cross section was sent to Edwin L. White, a very reliable and intelligent man, though not well up in piscatory matters. He did not attempt to classify the fish, but the enormous size of the section, 28in. in circumference, provoked a desire to know more of the monster. He at once set about the investigation with the following result: Lateral line, body lying on a board, 26½in.; dorsal line, end of nose to end of tail, 31in.; depth of body, 10in.; width, 5in.; girth 28in.; caudal fin extended, 11in.; scales, 2in. long. He had the good fortune to rescue from the frying pan some portions of the skeleton, which were carefully preserved and kindly lent to the writer for identification. The fragments were submitted to Professor Putnam of the Peabody Institute, and also a member of the Board of Fish Commissioners for Massachusetts, and to Curator Samuel Garman of the Agassiz Museum, Harvard College. They both on seeing the pharyngeal bones with teeth attached, identified it as belonging to one of the carp family. To quote from Pope:

> "The thing we know is neither rich nor rare,
> But wonder how the devil it got there."

Mr. Garman became very much interested and determined to find out where the carp came from. Carp had been planted in Plymouth, N. H., and in other waters tributary to the Merrimac, but how could one of these small fry stray away so far and get up over a twelve-foot dam? He was, however, untiring in his efforts and had the satisfaction of seeing his labors crowned with probable success. He discovered that a gentleman residing in Lunenburg, the next town above Shirley, had stocked a little pond on his premises with carp (*Cyprinus carpio*). There was a great fever about that time for importing this species from Europe. Great effort was made to cultivate them in this country, we think much beyond their merit gastronomically speaking. While it attains an immense size, possibly to nearly a hundred pounds, yet the edible quality is very low. In central Europe where fish are scarce, carp are eaten by the lower classes to some extent, but we do not remember anywhere on the continent having seen carp served in a first-class hotel. Suckers are sometimes eaten in this country, but are not, we believe, regarded by any class as a luxury. Those who partook of the monster above referred to did not, we understand, pronounce it as possessing fine flavor. But the little pond, which is on one of the affluents of Mulpus Brook, the stream that supplies the pond which was the habitat of our hero, was stocked with twenty of the carp some eight years ago. The next season was a dry one and the pond nearly disappeared. The owner, to save his carp, attempted to remove them to a larger pond, but to his surprise could find but four remaining. The others had probably died or gone down the little stream. It is now believed that the monster above described was one of the escaped convicts from the Lunenburg prison.

BOSTON, Jan. 23. W. HAPGOOD.

[Mr. Hapgood deserves credit for having solved the question of the fish's identity. While we do not consider the carp one of the best fish in the United States, we are by no means willing to admit that it is suitable for and relished by none but the lower classes. Some very nice people in Germany, the United States and some other countries rear the carp and profess to enjoy eating it. We have in mind a very successful carp grower near Covington, Ky., who has ample supplies of bass, wall-eyed pike, crappie and other game fishes in his ponds, and yet he eats carp frequently and says they are good; but he never takes them out of muddy water and hurries them at once to be cleaned for the table; they are always kept a few days in pure cool water before they are killed. We have eaten carp taken from a river and really liked them. Much of the blame attached to this fish really belongs to its surroundings.

WHAT A GOOD TIME JIM HAD.

WE had just finished our dinner when Jim came paddling across the lake in an old dugout that I knew had been condemned twenty years before, using a piece of board for a paddle. The craft was half full of water, and every now and then, as she drew nearer, we could see Jim trying to shovel some of it out with his extemporized paddle. When he came within speaking distance some one hailed him: "Well, Jim, what kind of a time have you had?"

"Just splendid."

"Get anything?"

"Two beauties and some little ones."

Jim came ashore and showed his string of fish, two of about a pound and a half each and five or six of about half a pound.

"I tell you, fellows, I have had great sport. Wouldn't have missed it for anything."

"You look as if you had got wet."

"Well, you know that big boulder down in the second rapid? I was just trying to wade out to it, and I stepped on one of those round, slippery stones and down I went. Swashed me away into the pool, the current did. I think I must have rolled over a dozen times. Held on to my rod, though."

The magenta of Jim's necktie had evidently parted with a good share of its coloring matter in favor of his white flannel tennis suit.

"Where's your hat?"

"I lost it in the rapids."

"How did you get your trousers so torn?"

"Got my flies caught in a tree and had to shin up to get 'em loose. Coming down I slipped and tore my trousers and scratched my leg. I say; have any of you fellows got any sticking plaster?"

"How did you manage to break both your tips?"

"Broke one when I fell in the rapids. Broke the other just before I came away. Hooked a big fellow in strong water and struck him too hard. Smashed my tip and lost my flies."

"Whose rod is it, anyway?"

"Belongs to my brother Jack. He lent it to me. That is, he said I might take it if I would promise to be careful of it. Jack'll be mad as a hatter, sure."

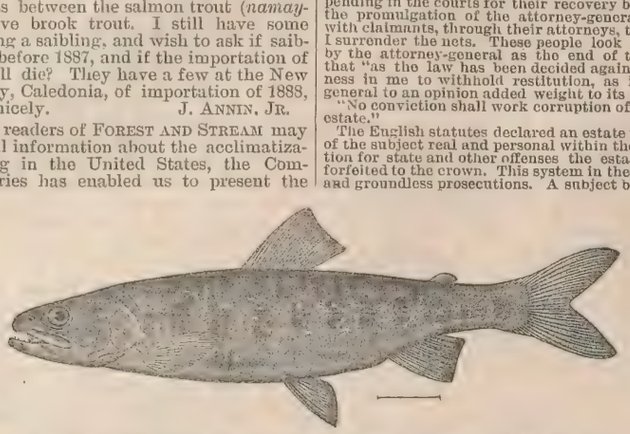
"Lose all your flies?"

"Every blamed one."

"About time you came away, wasn't it?"

"I'd have stayed longer if I hadn't broken my rod and if I'd had some more flies. I say, Cook, is there any soup left? Dick, old man, lend me a pair of trousers, will you? And a shirt. And some kind of a hat. How much sticking plaster? Oh, about six inches long and two inches wide. Blistered my hands, too, paddling that confounded water-logged old dugout. Scarlet fever in my nose? Well, it was rather hot in the sun after I lost my hat. Broke my bottle of fly fluid and cut my fingers with a bit of the glass. Expect I'll look to-morrow as if I were just getting over the smallpox. Never mind, it's my last chance this season. Cook, come now, hurry up that soup, will you? Beans? Yes, lots of 'em and plenty of pork. Fry a couple of trout? No, can't wait. Haven't you got some cold ones left over? Only three? Well, bring 'em along. Holy smoke! I never had so good a time in my life. I say, Tom, lend me your rod this afternoon, will you? I know there must be another big fellow just where I hooked that last one. I'd like to take him home to-morrow, only to show the boys what fun there is up here."

So Jim, with the appetite accumulated from 4 A. M. to 1 P. M., ate up all the cooked provisions in the camp, borrowed dry clothes and a rod (for nobody ever refused to lend Jim anything) and went out just before sunset and caught the big trout and went home to show the other fellows what a good time he had had. If he forgot to say that he had tumbled into the rapids, lost his hat, scraped six square inches of skin off his leg, broken a borrowed rod, lost all his flies, been eaten up by mosquitoes, got his face burned to a crisp, his fingers cut and his hands blistered, it was because such trifling mishaps detract so little from the pleasures of an outing among trout streams. G. DE MONTAUBAN.



QUEBEC.

MICHIGAN FISH LAW.—The Michigan Fish Commissioners have prepared a bill, submitted to the Legislature, which prohibits catching speckled trout or landlocked salmon from Sept. 1 to May 1, and the catching of grayling or California trout from Nov. 1 to June 1. But the State Board of Fish Commissioners may give written permits to any person to fish for a limited time. The fine for violations of this section is from twenty-five dollars to one hundred dollars, or imprisonment up to thirty days or both. The bill further makes it unlawful to kill or attempt to kill fish with dynamite or Indian cockle, or any means employed to stupefy fish. It prohibits spearing or catching with nets during March, April, May, June September and October, except in the Great Lakes and the rivers connecting them, and forbids the killing of speckled trout, landlocked salmon, California trout or grayling, except with hook and line. The hook and line provisions cover the St. Clair River and flats also. Nets may be used to catch minnows for bait. Fish stocked in lakes by the Commission may not be taken until three years after such planting, and hook fish in streams cannot be taken if less than six inches long.

SAIBLING IN STERLING LAKE.

CALEDONIA, N. Y., Jan. 30.—*Editor Forest and Stream:* In your last week's paper (Jan. 24) I notice an article on "Saibling in Sterling Lake." I saw one of the fish mentioned and took it to be a hybrid trout, one of the many crosses made at the New York State hatchery at Caledonia, a cross between the salmon trout (*namaycush*) and our native brook trout. I still have some doubts about its being a saibling, and wish to ask if saibling were imported before 1887, and if the importation of that year did not all die? They have a few at the New York State hatchery, Caledonia, of importation of 1888, and they are doing nicely. J. ANNIN, JR.

[In order that the readers of FOREST AND STREAM may contribute additional information about the acclimatization of the saibling in the United States, the Commissioner of Fisheries has enabled us to present the

SAIBLING—YOUNG MALE, 9½IN. LONG. STERLING LAKE, N. Y.
(The line represents one inch of length of fish.)

accompanying illustration, made from the specimen obtained in Sterling Lake and described in this paper Jan 24. It is a very difficult matter to obtain accurate knowledge of the success or failure of fishcultural experiments, and the coöperation of the people interested in such measures is earnestly requested. Fishculturists and anglers familiar with the trout will see at a glance that the fish herewith shown is not a hybrid between lake and brook trout. That cross was described in these columns Jan. 17, and it is very different indeed from the saibling. The latter species seems to have made its appearance in the United States Jan. 22, 1881. 60,000 eggs were forwarded from Germany and received for the U. S. Fish Commission by Mr. Fred Mather, who sent them next day to Mr. A. H. Powers, at Plymouth, N. H. The eggs hatched Feb. 28. Mr. Powers deposited 30,00 fry in Newfound Lake on May 18. Some were retained at Plymouth, we believe, for Col. Hodge took about 600 eggs Dec. 3, 1883. There has been some distribution of saibling evidently, and we want to find out, if possible, where they were liberated. In this our readers can help us and we hope they will. In the meantime the saibling from Sterling Lake is in the National Museum, where it can be examined by any one who wishes to see it.

THE OPEN WINTER AND FISHING.

WEBSTER, Mass., Feb. 4.—*Editor Forest and Stream:* A black bass weighing 5¼lbs. was caught to-day in the lake here through the ice on a tilt-hook set for pickerel. It is not unusual here to catch large bass through the ice in late winter when fishing for pickerel, but it never happened as early as this. I know of no instance where one was caught earlier than March, which makes the present catch the more remarkable. Would it indicate an early spring, or was it caused by the late frequent rains? The lake has been twice already free from ice since it first froze over, in December, which is another very remarkable occurrence. The ice now is only four or five inches thick. WORCESTER COUNTY.

[The mild temperature affords sufficient explanation of the activity of the bass. We see it reported that Connecticut anglers "expect that trout will be plentier than usual this spring because the brooks have remained free from ice, under which the muskrats easily catch trout, to them a dainty feed." The effects of an open winter on the supply of game fishes cannot be safely anticipated. Ice will not destroy the eggs, it is true, but abundance of rain will cause high waters charged with a superabundance of mud, which may cover spawning beds and suffocate young fish. If we could have clear water with our mild winter the beneficial effect upon the trout especially would doubtless be very marked. The spring, however, is the critical period for many of our finest species not belonging to the salmon family. One result of the open winter is the disappointment of the pickerel fishermen, who are almost as down-hearted as the ice barons over the etherial mildness.]

THE SEIZURE OF NETS.

IT will be remembered that the question of the legality of seizing nets used illegally, before they have been condemned by "due process of law," was discussed by a New York judge, who gave an opinion that the seizure was illegal. The same principle is involved in an Ohio case, and Judge Emery D. Potter, the Commissioner, has made the following reply to a demand for the restitution of confiscated nets:

TOLEDO, O., Jan. 29, 1889.—*S. F. Foote, Esq., Attorney-at-Law:* Dear Sir—Yours of the 16th inst., demanding the return of certain fish nets belonging to Andrew Carstons and R. C. Morgan, taken by W. W. Ward, warden for Ottawa county, while the claimants were unlawfully fishing in the Portage River, in said county, is received. You, as their attorney, base their claim for a return of the nets on an opinion recently promulgated by the Attorney-General as to the constitutionality of the law under which the nets were seized. My reply below will give my reasons for not complying with your demand. As there are other cases of a like character with yours, for their guidance, you will excuse me for making this communication public.

Section 6968, Revised Statutes of Ohio, amended April 14, 1888, p. 271, after defining what shall be illegal fishing, says: "No person shall draw, set or locate any trap, pound-net, seine or any device for catching fish as in this section forbidden; and any nets, seines, pounds or other devices for catching fish, set or placed in violation of the provisions of this section, shall be confiscated wherever found, and the same shall be sold to the highest bidder at public outcry, at a place to be selected by the Fish Commissioners; and the proceeds of such sale shall be placed to the credit of the fish and game fund, subject to the warrant of such commissioners."

I am told, but I have not seen the text of the decision, that this clause of the law has been declared unconstitutional by the attorney-general of the State. In support of his opinion, he quotes section 12, article 1, of the constitution of Ohio: "No conviction shall work corruption of blood or forfeiture of estate."

With all due deference to the opinions of our learned state official, I must beg leave to differ with him. Lawyers sometimes do differ in their construction of the law. I would not appear in this case in opposition to the attorney-general's opinion, but as fish and game commissioner, I have in my possession some sixty fishing nets confiscated under the law; in several cases suits are pending in the courts for their recovery by the owners, and since the promulgation of the attorney-general's opinion, I am beset with claimants, through their attorneys, threatening suits unless I surrender the nets. These people look upon the opinion given by the attorney-general as the end of the law, and say to me, that "as the law has been decided against me, it is only wilfulness in me to withhold restitution, as if the affix of attorney-general to an opinion added weight to its logic.

"No conviction shall work corruption of blood or forfeiture of estate."

The English statutes declared an estate to be the entire holding of the subject real and personal within the realm, and on conviction for state and other offenses the estate of the accused was forfeited to the crown. This system in the old world led to unjust and groundless prosecutions. A subject becoming inimical to the sovereign could be seized, tried, convicted and his estate forfeited whether right or wrong, by a court whose tenure was the will of the sovereign, and who were willing tools in the hands of a master who was to be enriched by their act. To strengthen the arm of power these forfeited estates were given to favorites, who became the titled lords of the land, and who, in many instances, thus received the benefits of their own corrupt conspiracies and a no less corrupt court. English history is full of these examples. The best Irish estates to-day are held by favorites of English sovereigns, forfeited for no other reason than that their owners were loyal to the land that gave them birth. It is no wonder that our republican constitution should declare that convictions should not work corruption of blood or forfeiture of estates. It is a blow at the corrupt systems of monarchy.

But it does not mean that offenders shall go unpunished or allowed to hold an estate in the implements with which they have committed offenses against society, and against laws designed for the public good. It does not mean that the counterfeiter shall hold an estate in his moulds and presses, by means of which he has preyed upon the public, nor the highwayman in his slungshot, his stiletto and his revolver. These under our laws are forfeited in the courts every day. The implements with which an offense is committed become part and parcel of the offense, without which there would be no offense. The offender may have an estate outside of the implements by which he committed the offense—of course that estate could not be affected by forfeiture. Does his entire estate consist in counterfeiting implements, slungshot, revolvers, and burglar's tools, by which he carries on his unlawful business, shall these be held inviolate under our organic law, which declares that "no conviction shall work corruption of blood or forfeiture of estate?"

The English definition of an estate was evidently the one understood and acted upon by the framers of our Constitution.

I shall not surrender the nets applied for in the absence of any higher authority than the attorney general's opinion. Very truly, EMERY D. POTTER, Commissioner of Fish and Game.

GREENWOOD LAKE.—The Passaic County Fish and Game Protective Association, of Paterson, N. J., will take steps to improve fishing in Greenwood Lake. There is little doubt that if the bass there were crossed with bass from some other water the result would be better sport. The Association has made arrangements for the procuring of a considerable quantity of bass at a nominal cost, and these will be netted as soon as practicable in time to be deposited in Greenwood Lake before the spawning season this year. Some time ago the Association accepted the offer of a hotel proprietor at the lake to furnish the screen if he would put it in position at the outlet of the lake. The screen was bought but nothing further has been done. The Association resolved to have the screen put in, the cost of which work will be about $45. The funds of the Association are very limited, having been expended in the interest of sport as they accumulated. The Association will depend on voluntary contributions from its members and from all interested in the preservation of sport and the propagation of game to defray the expenses of the several projects undertaken. The benefits which will accrue from each one of the several projects are apparent and need no elucidation, and the Association has no doubt that sportsmen will give such assistance as will enable the Association to carry out every one of these projects. Persons willing to contribute are requested to inform the secretary of the amount they will subscribe, so that the work may be proceeded with at once. Contributors are requested to designate in their letter to what purpose they wish the sum contributed expended.—CHAS. A. SHRINER, Secretary (Paterson, N. J.).

FROGS IN JANUARY.—Towanda, Pa., Jan. 26,—It is not often that a mess of frogs can be obtained at this season of the year in a country where for days the thermometer registers zero. One day the past week I passed a farmer acquaintance, who knowing my weakness for the sports with rod and gun called out: "Say, Will, I brought down a mess of frogs, and went to show them to you, but, not finding you in, left them at Jim Nestor's restaurant." Jim's head waiter produced his miniature frog pond, it consisting of a second-hand tobacco pail containing about four inches of water alive with the movement of large and small frogs. There were twenty-one, running from half-grown to old residenters, found while torpid in mother earth about six inches under ground while ditching through marsh and meadow. Poking out a big fellow and placing him on the floor he seemed as lively and hopped as far as he could in his native bog in the month of July. Lovers of frog legs have no doubt caused their destruction before this time.—W. F. DITTRICH.

A NEPIGON TROUT.—Mr. T. W. Fraine, the Rochester taxidermist, called at this office on Monday, and showed us a Nepigon trout of about 3 pounds weight, which he had mounted. The attitude of the fish, plunging downward with the middle fly of the cast in his mouth, is very artistic and lifelike; the coloring may appear exaggerated to people who have never seen a Nepigon trout at the moment of leaving his native stream, but we believe Mr. Fraine has been both conscientious and well informed in his efforts to preserve the fish in the hues of life. Mr. Fraine enjoys a high reputation among our leading sportsmen for his care in securing the data necessary to make his preparations faithful representations of the living specimens.

Fishculture.

INTER-STATE FISHERY BILL.

INTER-STATE fishery laws for the portection of the fishes of the Delaware River are now under consideration by the Legislatures of New York, Pennsylvania, New Jersey and Delaware, at the earnest request of the Fish Commissioners of those States. In Pennsylvania the fishery bill was to be considered by the Committee on Agriculture of the House of Representatives, Jan. 31.

The bill as it now stands is the outgrowth of conferences between the Fish Commissioners of the States named and is unanimously reccommended by them for passage. Uniform fishery laws for the Delaware River are urgently needed, to prevent the destruction of valuable fishes native to that stream, and to secure good results from the layout of money by the States bordering on that river for the introduction of valuable species from other waters. During the summer of 1888 the Pennsylvania Commission, in conjunction with the U. S. Fish Commission, planted 34,000,000 young shad in the Delaware between New York State line and Trenton. Until two years ago such efforts to stock the river would have been rendered practically useless on account of the innumerable fish baskets and weirs which completely obstructed the descent of the young shad on their way to the sea in the fall. We have seen the injurious effect of such engines of destruction in the Susquehanna, above the Columbia dam, when hundreds of thousands of little shad could be found lying dead on the wings and apex of the V-shaped traps that occupied the entire width of the river and extended over many miles of its length. These obstructions have been removed along the borders of Pennsylvania in the last two years and good results are already evident. The catch of shad in the upper Delaware in 1888 was largely increased over previous years and rockfish have been more plentiful. The bill provides for a close season for shad in the Delaware from June 1 to Jan. 1; also for the prohibition of net fishing from sunset on Saturday until midnight on Sunday, giving the gravid fish a chance to reach their spawning grounds. The size of the mesh of nets is to be fixed at three inches, or 1½ inches between knots, in order to prevent the waste of small fishes which are not of marketable size. The Pennsylvania Commission has introduced mature rock bass (*Ambloplites rupestris*) from Lake Erie, and pike perch (*Stizostedion vitreum*) from the Susquehanna. Black bass have become abundant in the Delaware. Continued artificial propagation united with wise protection will secure to this river an ample supply of choice food fishes.

FISHCULTURE IN WYOMING.

WYOMING TERRITORY has a fish hatchery about four miles southeast of Laramie in which Commissioner Louis Miller recently had 382,000 eggs, with the promise of 200,000 additional from the United States establishment at Northville, Michigan. The hatchery produced about 275,000 fry last year which were planted in various streams throughout the Territory. Five of the ten counties into which Wyoming is divided have fish commissioners, and the distribution is effected through their suggestions. The transportation is accomplished at the expense of the Territory. As soon as a title can be secured to the land on which the hatchery is located an appropriation will be made for enlarging the establishment and the work will be greatly increased. The following fish are now on the grounds:

California rainbow trout, yearlings	25,000
California rainbow trout, breeders	2,000
Eastern brook trout, breeders	40,000
Colorado trout	1,000
California salmon	200
Lake trout, four years old	500

Last year Commissioner Miller stocked all the streams east of the Black Hills as far down as Sybille; 14,000 breeding brook trout and 5,000 yearlings were deposited in the Big Laramie. The north fork of the Little Laramie was stocked also. The good results of this work are seen already; in the Big Laramie these trout have been seen spawning. The advantages of putting in yearlings and breeding fish are appreciated, and this policy will be continued. Mr. Miller has engaged some black bass and "striped bass" (probably not the anadromous species) for Hutton's and Ione lakes.

RESULTS OF HATCHING WHITEFISH.

WHITEFISH were reported to be so plentiful in Lake Erie last year that the fishermen scarcely knew what to do with them. Seven hundred and fifty tons were frozen for shipment by a single firm in Huron, Ohio. Sandusky is fast becoming one of the great fresh fish markets of the world. Mr. E. D. Carter, one of the most prominent fish dealers of Erie, attributes the present prosperity of the whitefish industry to artificial propagation. Three seasons ago the fishery for whitefish had become so unprofitable that he, with others, concluded to abandon it entirely. In 1886 a slight improvement was noticed, but now the catch is double what it was in 1886. This result, Mr. Carter states, is due to the work of the hatcheries, for the fish are almost without exception young, weighing about two pounds. The increased catch and the unmistakable character of the fish is admitted also by many experienced fishermen, and the establishments at Erie, as well as others in Michigan and Ohio, now receive the credit which fairly belongs to them. The prices of fish now are about two-thirds of what they were in 1885. The catch of whitefish at Erie in 1888 was 2,200,000lbs., an increase of a third over that of 1887.

MARKET FISHES.—We have the following information about fishes in the markets of Washington, D. C.: Jan. 29.—A few North Carolina shad are selling at 40 to 75 cents each. The eggs are immature. Young striped bass are caught in large numbers, weighing from ¼ to ¾lbs., but larger fish of this species are scarce. Yellow perch are in considerable quantities, from a very small size to about one pound; they are full of eggs, which are sometimes sold separately. Young red snappers, *Lutjanus blackfordi*, weighing about one pound or less, are occasionally met with. The steelhead, or Gairdner's trout, has commenced to pose as Kennebec salmon, but some dealers do not practice on the credulity of their customers by selling this cheap fish at high prices. Feb. 1.—A small lot of so-called whitebait upon examination proved to consist entirely of small silversides, *Menidia notata*, a fish no more to be compared with the whitebait than the sturgeon to a shad.

LAKE TROUT FOR LAKE GEORGE.—The Albany *Journal* reports: "Through the efforts chiefly of Gen. R. L. Banks, of Albany, arrangements have been made for the planting of half a million of lake or salmon-trout fry in Lake George during this winter. As the red or square-tailed

trout were formerly numerous, and of unequalled excellence in the lake and are now practically extinct, there is a splendid opportunity to test whether the lake can be restocked with this finest of all fresh-water fish. Their disappearance is attributed to the ravages of pickerel, but as this latter fish is much scarcer than formerly, it is believed that red trout can be made plentiful again. It is hoped that those having Lake George fish-planting in charge will make an experiment this winter in that direction. The water in the lake is now seven inches above the standard adopted at last fall's conference between Lake George property-owners and Ticonderoga water-power proprietors, but this is owing to the constant and heavy rains of the fall and winter. It is learned that the mill owners have made all the changes in the dam agreed at the conference, and there is no apprehension of a recurrence next spring of the high water which was the cause of so much uneasiness and ill-feeling last year." [The lake trout has demonstrated its ability to live and thrive in waters inhabited by pickerel and other members of the pike family. We are not sure, however, that *Esox* is the genus referred to by those who speak of the pickerel in Lake George. We are aware that species of this genus are found in the lake, but the pike-perch, *Stizostedion*, is also called pickerel by many persons and may be the slayer of the red trout. Lake trout will hold their own against all other fishes inhabiting the same waters and the project of planting a half million of the fry in Lake George through the efforts of Gen. R. L. Banks is wise and will probably produce good results. We should like to see, also, a lot of yearlings of the same species used for stocking the lake, but not at the same time with the fry.]

LOCH LEVEN TROUT FOR PENNSYLVANIA.—Washington, Feb. 1.—Mr. James V. Long, of Pittsburgh, Commissioner of Fisheries of Pennsylvania, has just completed arrangements with Hon. Marshall McDonald, of the United States Fish Commission, for transferring an allotment of Loch Leven trout from the Government station at Northville, Mich., to the western hatchery in Pennsylvania. The United States Fish Commission imported a large lot of these popular and delicious fish from Scotland within the last year, and their introduction and growth in the States will be watched with interest. Mr. Long is quite an enthusiast regarding the successful work of the Pennsylvania Commission, and is bound to have all the good things that may be obtained from the Government for the fisheries department of his native State.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Eu ison River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 19 to 22, 1889.—Thirteenth Aanual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

THE PITTSBURGH BENCH SHOW.

[*By a Special Reporter.*]

THE fourteenth annual bench show of the Western Pennsylvania Poultry Society, held at the Grand Central Skating Rink from Jan. 29 to Feb. 1, proved a financial success, as the attendance was exceedingly good. This goes to show that Pittsburgh will make any good show started out properly a paying undertaking. The entries numbered 284 and were of a general good quality. Mr. J. M. Taylor judged pointers and setters, while Mr. John H. Naylor handled the remaining classes in his honest, conscientious and capable manner. The dissatisfied exhibitors were as usual present in goodly numbers. As to the actions of the officials of the society during the show I do not desire to say anything in this report, as abler pens than my own will undoubtedly ventilate that matter thoroughly.

The mastiff classes were well filled. Wacouta Nap was absent. Moses, well known, won in the open dog class. Duke should have been second as he was clearly the best in the class excepting the first prize winner. The second and third winners are poor-headed animals. In the bitch class Hertha won. We preferred Emma for the place. The former is of better size, which we think accounts for her being placed over the latter. The puppy class was properly handled.

The St. Bernards we thought correctly placed. Meinrod is a good fronted dog, but lacks behind. The owner of Don Juan gave vent to his dissatisfaction at the judge's decision in a challenge in one of the daily papers to show his dog against Meinrad for $1,000 at the forthcoming New York show, and Mr. Stucky, owner of Meinrad, has in a very manly reply to this challenge, agreed to show his dog against Mr. Newell's dog at the New York show for a reasonable sum, and it now only remains for Mr. Newell to accept his proposition or to be classed as a "bluffer."

The Hornell-Harmony Kennels' greyhounds were the feature of these classes. Hazelhurst justly received the award in the dog class and Harmony proved an easy winner in the bitch class, with Kate, a very good headed bitch but possessed of bad quarters, second.

Pointers were of excellent quality. Lord Graphic in my opinion was fully as good as the winner of first. In light weights Rex won in dogs and Lady Smoke, a very good black bitch, in the corresponding bitch class. The puppy classes contained a number of most promising youngsters, some of which will be heard from again.

Paul Gladstone was unopposed in the champion English setter class, and added another to his long list of winnings. He carries his age well, but was not in the best of condition. The open dog class brought out the winner in Lindo, a fine young dog, who is bound to make his mark on the bench. Gladstone II., the winner of second, we did not like for the place, as he is off in head. Brandy Boy, a very useful looking dog, and Count Hendricks should have been placed higher. In the bitch class we considered the second winner as good as any in the class. The winner of first is a very fair bitch. Bess B. should have gone higher, and Lou was worthy of a letter or two. Blink Bonny was by long odds the best one of the puppies and ought to make a fine bitch.

In the black and tan setters Little Boy beat Don, and Roxie beat Rose in the corresponding bitch class. In the open dog class we thought Fred the equal of any in the class. This was a good class. The bitches and puppies were properly placed.

Blarney and Mollie Bawn were alone in the champion Irish setter classes. Dick Swiveller we liked better for second place than Red Biz. In bitches and puppies the Kildare Kennels had it all their own way with a splendid trio.

Spaniels were represented in Irish water spaniels by three entries, of which Patsy O'Connor was clearly the best. Spaniels over 28lbs., other than black, contained but one entry, a fair specimen. The under 28lbs. classes contained two corking good ones in Dick and Hornell Velda. The black spaniels over 28lbs. were represented by a long-legged black setter, and the judge properly withheld prizes. In the under 28lbs. class, Hornell Silk won in the dog, and Hornell Martha in the bitch class. Venus, a very good puppy, not right in head, received the award in the puppy class.

Foxhounds were quite a strong but motley lot. With the exception of two or three, all were of the American type. Lead and Jack, winners of first and second, were the best of this type, and were properly placed. The first honor in the bitch class should have gone to Queen, a very good young bitch of the English type. Puppies were properly placed.

Beagles were a fine lot indeed. Fitzhugh Lee was alone in the champion dog class, and Maybelle II. beat Lou in the corresponding bitch class. Neither of the two was in the best condition, but Maybelle II. had the best of it, Lou being excessively fat. Lou is better in muzzle and probably not quite so throaty, but in all other respects Maybelle II., with her abundance of Rowett quality, is clearly ahead of her. The open dog class brought out two splendid dogs in Royal Krueger and Racket II. To place the winner of second over the latter-named dog was a decided mistake. Racket II. will be heard from again. Royal Krueger is too well known to need any description. He is a hard one to beat. The winner in the bitch class deserved the award, but is not right in head or body. The second winner is a fair little one. The third winner, catalogued as Elf, we could not find. Elf is well known to us, as is also the bitch we found in her place. Here was a good chance for a just protest, but none of the exhibitors seemed to be aware of the imposition. The only entry in the dog puppy class proved oversized. The winning bitch puppy is a stylish one and built like a goer; should bring some good ones properly mated, but promises to be over the limit in height when fully developed. Mr. Krueger, the superintendent, had a splendid pack of seven of his beagles entered for exhibition only. They were in good condition and a workmanlike-looking lot, and attracted considerable attention.

In dachshunde the Pittsburgher Klocke had it all his own way with his string. Feldman K. is deficient in crook and body, otherwise a very good one. Lina L. is well known. Fritz K. promises to make a better one than than the winner in the open dog class, but his tan markings are imperfect. Wally K. II. will be heard from again.

Fox-terriers were a small class. The winner is not a first rater.

Nullamore won in the champion collie dog class and Bonnie Brae in the corresponding bitch class. How this bitch ever got into that class I do not know. She certainly is not a first rater. Prince was a good first in the open dog class, with Rob Roy, Jr., a small dog not in the best of coat, second. The others with the exception of the winning puppy were a poor lot.

Bull-terriers were not a strong lot. The Baron, well known, was the winner in the open dog class, and Royal Rose, a rattling good one, but sadly out of condition, in the bitch class. Bulldogs had but one entry, a poor specimen.

Black and tan terriers over 5lbs. brought out a good one in the winner in the open dog class, and one of the best we have seen in the corresponding bitch class. In the under 5lbs. class the winner in dogs is a fair specimen, but the winner in the bitch class proved a better one. Dennis, the winner in the Irish terrier dog class, is well known. The two entries in the bitch class were unworthy of any place. The only entry in the Italian greyhounds was a fair one. Prizes in the rough-coated and Yorkshire terrier classes were withheld. The winners in the Blenheim spaniel class are well known and good specimens. King Charles spaniels had only two entries, with little difference between them. The only entry in the Prince Charles class was sadly out of condition, and prizes should have been withheld. Pugs were a fine lot and were properly placed. Chesapeake Bay dogs contained two mongrels, neither of which were worthy of any mention. In the miscellaneous class, as a matter of course, Sir Lucifer bobbed up the winner, with a very good specimen of a basset second. Following is the list of

AWARDS.

MASTIFFS.—CHAMPION—Absent.—OPEN-*Dogs:* 1st, C. C. Cook's Moses; 2d and 3d, J. M. Chaplin's Beauquesne Neville and Reginald Neville. Very high com., H. Jarvis's Duke of Clarendon. High com., A. Freiss's Duke. Com., J. Gardner, Jr.'s Milo II. *Bitches:* 1st and 3d, C. C. Cook's Hertha and Nenglada; 2d, W. Wade's Emma. *Puppies:* 1st, C. C. Cook's April Queen; 2d, T. D. Wood's Commodore Perry; 3d, S. Johnson's Dudley.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Keystone Kennels' Meinrad; 2d, S. B. Cosgrove's Mont; 3d, C. D. Armstrong's Bernardo. Very high com., J. Newell's Don Juan. *Bitches:* 1st and 2d, Keystone Kennels' Mädchen and Orta; 3d, C. D. Armstrong's Matchless.

ST. BERNARDS.—SMOOTH-COATED.—*Dogs:* 1st, D. Steward's Bonito. *Bitches:* 1st, Keystone Kennels' Lola.—PUPPIES—*Dogs:* Withheld. *Bitches:* 1st and 2d, withheld; 3d, J. W. Fleming's Juno.

NEWFOUNDLANDS.—*Dogs:* 1st and 2d, withheld; 3d, C. Meyers' Jim.

GREYHOUNDS.—*Dogs:* 1st, Hornell-Harmony Kennels' Hazelhurst; 2d, withheld. *Bitches:* 1st and 3d, Hornell-Harmony Kennels' Harmony and Lady Olivia; 2d, P. Eckert's Kate. Very high com., J. W. Beddow's Bess of Braddock. High com., S. H. Vandergrift's Nellie. *Puppies:* 1st, Hornell-Harmony Kennels' Fannie M.; 2d, J. W. Beddow's Bill Nye.

POINTERS.—CHAMPION—No entries.—OPEN—LARGE—*Dogs:* 1st, Cannonsburg Kennels' Master McGrath; 2d, J. R. Daniels's Lord Graphic; 3d, J. Ward's Don. Very high com., W. A. Nicholson's Smoke. Com., C. A. Bailey's Shot. *Bitches:* 1st, A. Davis's Dell; 2d, withheld.—SMALL—*Dogs:* 1st, H. P. Parker's Rex; 2d and 3d, withheld. Com., R. Wheeler's Donald B. and J. Fawcett's Duke. *Bitches:* 1st, 2d and com., W. A. Nicholson's Lady Smoke, Jetsam and Jet; 2d, A. Smithnight's Trinket S. Very high com., A. W. Hitch's Meteor's Bell. High com., J. O'H. Denny's My Queen, A. J. Donnell's Daisy D. and C. L. Dick's Meteor's Kate. Com., J. Fawcett's Nell II. and Lucy.—PUPPIES—*Dogs:* 1st, J. R. Daniels's Graphic's Topic; 2d, H. O. Parker's Rex. Very high com., C. L. Dick's Graphic's Lad. High com., J. O'H. Denny's Patsey Clinker and M. M. Wilson's Wary. Com., J. O'H. Denny's Nellie's Bert. *Bitches:* 1st, J. R. Daniels's Graphic Chip; 2d, Dr. J. A. Hartman's Cambria. High com., Cannonsburg Kennels' Siberian Girl. Com., J. Fawcett's Lady Martin and Cannonsburg Kennels' Lewis' Nellie.

ENGLISH SETTERS.—CHAMPION—*Dog:* Mt. Washington Kennels' Paul Gladstone. *Bitch:* No entry.—OPEN—*Dogs:* 1st, Mt. Washington Kennels' Lindo; 2d, H. King's Gladstone II.; 3d, J. O'H. Denny's Brandon. High com., J. Dalzell's Brandy Boy, W. Moore's Nobe and W. J. Pfeil's Sank. Com., J. J. Snellenburg's Count Henricks. *Bitches:* 1st, A. W. Hitch's Liberty II.; 2d, P. Wolfenden's May P. Gladstone; 3d, J. Sullivan's Magnolia. Very high com., W. A. Nicholson's Daisy Fair Oaks and Mt. Washington Kennels' Nannie S. High com., W. H. Boal & Co.'s Bess B. Com., Mt. Washington Kennels' Zona, A. G. Carley's Nellie B. and W. H. Boal & Co.'s Lady Bessie.—PUPPIES—*Dogs:* 1st and very high com., W. McKnight's Tony Paul and Beulah; 2d and very high com., J. Fawcett's Thunder and Donald. High com., W. L. Turner's Bob Berwyn. *Bitches:* 1st, P. Wolfenden's Blink Bonny; 2d, C. A. Bowman's Birdy.

BLACK AND TAN SETTERS.—CHAMPION—*Don:* S. G. Dixon's Little Boy. *Bitch:* H. F. Smith's Roxie.—OPEN—*Dogs:* 1st, Mrs. H. C. Biddle's Leo; 2d, A. H. King's Fred; 3d, W. A. Mitchell's Vick. Reserve, A. Smithnight's Frank. Very high com., E. O'Neil's Duke and W. S. Hammett's Royal Duke, Jr. Com., J. W. Graham's Graham Duke. *Bitches:* 1st, R. W. Wehrle's Nellie Duane; 2d, withheld; 3d, P. Parker's Gip.—PUPPIES—*Dogs:* 1st, Mrs. H. C. Biddle's Leo; 2d, W. L. Turner's Stubble Wilson. Very high com., W. S. Hammett's Victory. Com., W. E. Rothermel's Don II. *Bitches:* No entry.

IRISH SETTERS.—CHAMPION—*Dog:* E. W. Clarke, Jr.'s Blarney. *Bitch:* C. T. Thompson's Mollie Bawn.—OPEN—*Dogs:* 1st, C. T. Thompson's Desmond II.; 2d, F. Pastre's Red Biz; 3d, P. Cambios's Dick Swiveller. Very high com., C. J. Hillard's Faro. High com., J. Dalzell's Cleveland and Don. Com., W. L. Washington's Count of Option. *Bitches:* 1st, Kildare Kennels' Ruby Glenmore; 2d, S. H. Marshall's Lady Fawn; 3d, F. Pastre's Bess P.—PUPPIES—*Dogs:* 1st, Kildare Kennels' Kildare Keno; 2d, Cannonsburg Kennels' Mack. *Bitches:* 1st, Kildare Kennels' Kildare Ruby; 2d, J. J. Koebert's Roxey Elcho.

IRISH WATER SPANIELS.—*Dogs:* 1st, J. R. Daniels's Patsey O'Connor; 2d, Hornell-Harmony Kennels' Capt. Muldoon. *Bitches:* 1st, withheld; 2d, Cannonsburg Kennels' Countess Bendigo.

FIELD SPANIELS.—OTHER THAN BLACK—*Dogs:* 1st, J. A. Heron's White Wings. *Bitches:* No entries.—BLACK—Withheld.

COCKER SPANIELS.—OTHER THAN BLACK—*Dogs:* 1st, Hornell-Harmony Kennels' Hornell Dick. *Bitches:* 1st, Hornell-Harmony Kennels' Hornell Velda.—BLACK—*Dogs:* 1st, Hornell-Harmony Kennels' Hornell Silk. *Bitches:* 1st, Hornell-Harmony Kennels' Hornell Martha; 2d, P. Demmel's Grandma. Reserve, Hartman & McKelvey's Rita II. *Puppies:* 1st, Hornell-Harmony Kennels' Venus.

FOXHOUNDS.—*Dogs:* 1st, 2d, and very high com., C. L. Dick's Lead, Jack and Trump. High com., J. Hoskinson & Co.'s Ransom. *Bitches:* 1st, H. Handel's Rose; 2d, E. M. Crocker's Queen. Very high com., C. L. Dick's Lady. *Puppies:* 1st and 2d, E. M. Crocker's Queen and Sport. Very high com. and high com. (2) H. Handel's Jumbo, Kate and Fannie.

FOX-TERRIERS.—*Dogs:* 1st, J. H. Shepherd's Shepherd Lad; 2d, B. F. Beale's Prince Albert. Very high com., T. H. Richons' Jim. *Bitches:* 1st, Cannonsburg Kennels' Lert.—PUPPIES—*Dogs:* 1st and 2d, withheld; 3d, Cannonsburg Kennels' Dusky Mark.

BEAGLES.—CHAMPION—*Dog:* Clark & Rutter's Fitzhugh Lee. *Bitch:* Clark & Rutter's Maybelle II.—OPEN—*Dogs:* 1st, Hornell-Harmony Kennels' Royal Krueger; 2d, Associated Fanciers' Little Prince. Very high com., Cannonsburg Kennels' Racket II. *Bitches:* 1st and 2d, Hornell-Harmony Kennels' Una and Baby W. Very high com., Associated Fanciers' Elf. High com., Kuhen & Beck's Nell. Com., Belle Vernon Kennels' Lady Skip.—PUPPIES—*Dogs:* Withheld. *Bitches:* 1st, Clark & Rutter's Rena; 2d, Hornell-Harmony Kennels' Kathleen W.

DACHSHUNDE.—*Dogs:* 1st, C. Klocke's Feldman K.; 2d, J. Caughey, Jr.'s Fritz. *Bitches:* 1st, C. Klocke's Lina L.; 2d, Associated Fanciers' Flash. Very high com., M. M. Wilson's Frankie Cleveland.—PUPPIES—*Dogs:* 1st, C. Klocke's Fritz K.; 2d, C. Stern's Waldman. *Bitches:* 1st, C. Klocke's Wally K. II.; 2d, C. Stern's Waldine.

COLLIES.—CHAMPION—*Dog:* W. D. Hughs's Nullamore. *Bitch:* W. D. Hughs's Bonnie Brae.—OPEN—*Dogs:* 1st, H. L. Shaffer's Prince; 2d, R. W. Isenthal's Rob Roy, Jr. *Bitches:* 1st, R. W. Isenthal's Belle Scott; 2d, G. W. Evens's Fawn.—PUPPIES.—*Dogs:* 1st, G. Will's Popsie.

BULLDOGS.—1st, withheld; 2d, Associated Fanciers' Glenwood.

BULL-TERRIERS.—OVER 25LBS.—*Dogs:* 1st, Associated Fanciers' The Baron; 2d, Hornell-Harmony Kennels' Count Dick. Very high com., F. F. Dole's Snow Dick. *Bitches:* 1st, F. F. Dole's Royal Rose; 2d, G. Will's Mermaid. Very high com., P. Eckert's Flirt.—UNDER 25LBS.—*Dogs:* 1st, G. Will's Sport. *Bitches:* 1st and 2d, G. Will's Flirt and Flirt II. Reserve, F. F. Dole's Nell Bright. *Puppies:* 1st, F. F. Dole's Snow Dick.

BLACK AND TAN TERRIERS.—OVER 5LBS.—*Dogs:* 1st, R. Stuckey's Sir Wallace; 2d, E. Probert's Jim. *Bitches:* 1st, F. F. Dole's Sheffield Lass; 2d, G. Will's Midge. Com., W. Dietrich's Tiny.—UNDER 5LBS.—*Dogs:* 1st, J. McKnight's Toby. *Bitches:* 1st, and high com., J. C. Dewire's Topsey and Tiny; 2d, J. H. Koebert's May Bell.

IRISH TERRIERS.—*Dogs:* 1st, J. F. McFadden's Dennis. *Bitches:* 1st, J. D. McKennan's Shelah; 2d, withheld. Com., J. McAtee's Norah Costigan.

ITALIAN GREYHOUNDS.—*Dogs:* 1st, J. McKnight's Rex.

YORKSHIRE TERRIERS.—Withheld.

GREAT DANES.—*Dogs:* 1st, E. Grimm's unnamed.

PRINCE CHARLES SPANIELS.—1st, J. Lewis's Prince Albert.

BLENHEIM SPANIELS.—1st, 2d and reserve, M. Dallett's Little Banjo, Rowdy and Joan of Arc.

KING CHARLES SPANIELS.—1st, J. Lewis's Romeo; 2d, E. Probert's Charlie.

PUGS.—*Dogs:* 1st, Mrs. A. B. Van Horne's Dandy; 2d, P. Eckert's Lewis. *Bitches:* 1st, Cannonsburg Kennels' Nellie; 2d and very high com., H. Meyer's Tiny and Tip. Com., P. Eckert's Nellie.—PUPPIES—*Dogs:* 1st, withheld; 2d, P. Eckert's Frank. *Bitches:* Absent.

CHESAPEAKE BAY DOGS.—1st, H. Steward's Jack. *Bitches:* 1st, H. Steward's Flora.

MISCELLANEOUS.—1st, C. Rosser's Sir Lucifer; 2d, Associated Fanciers' Mauprat. Reserve, J. H. Hope's Dobra. Very high com., Hornell-Harmony Kennels' Rover. High com., B. W. Meltenberger's unnamed.

SPECIAL PRIZES.

Largest number beagles, Hornell-Harmony Kennels; English setters, Mt. Washington Kennels; St. Bernards, Keystone Kennels; pointers, J. Fawcett; mastiffs, C. C. Cook. Best bull-terrier, Royal Rose; dog, The Baron; pair beagles in open class, Royal Krueger and Una; pair collies in open class, Rob Roy, Jr., and Belle Scott; puppy, Popsie; mastiff, Moses; bitch, Hertha; English setter (2), Paul Gladstone; field trial and bench show record, the same; in open class, Liberty II.; dog, Lindo; dog puppy, Tory Paul; brace sired by Paul Gladstone, the same with Beulah; setter owned in Westmoreland county, Brandon; pointer dog puppy, Graphic's Topic; puppy owned in Westmoreland county, Cambria; fox-terrier dog, Shepherd Lad; bitch in Washington county, Lert; Chesapeake Bay, Flora; toy terrier bitch (2), Topsey; pack foxhounds, H. Hundle; kennel greyhounds, Hornell-Harmony Kennels; bull-terrier, G. Will; dachshund bitch, Lina L.; puppy, Wally K. II.; beagle puppy, Rena; Blenheim spaniel, Little Banjo; black and tan terrier bitch over 5lbs., Sheffield Lass; spaniel puppy, Venus.

"SALISBURY'S PEDIGREE."—*Editor Forest and Stream:* Writing of the mastiff judging at Dundee, Mr. Wade states that "The judges of mastiffs were Hugh Dalziel and, I think, Rawdon B. Lee; Dalziel held for Salisbury and the other judge for Cardinal, and a third was called in who gave it to Salisbury." The judges were Mr. Hugh Dalziel and Mr. Vero Shaw, the latter a bosom friend of Mr. Taunton, the owner of Cardinal. The *Stock-Keeper's* report was as follows: "Twenty-four mastiffs make a large class for a Scotch show, even when the sexes are mixed, and the quality here was very good indeed. The renowned Salisbury, although suffering from temporary illness, is possessed of such undeniable mastiff properties, such grand proportions and so good throughout, and especially in his loins and hindquarters, where so many otherwise good dogs fail, that despite his invalid look, we thought he far surpassed all opponents, even Cardinal, whose really magnificent head and front will always command admirers; but he falls off a good deal in loin and hindquarters. The judges could not agree as to which of these should be first, and they were put aside until the afternoon, when Mr. Rawdon B. Lee kindly consented to act as umpire, and after a very careful examination of the competitors gave his flat in favor of Mr. C. H. Mason's great Salisbury."—CHAS. H. MASON.

ALBANY DOG SHOW.—Albany, N. Y., Feb. 2.—*Editor Forest and Stream:* Arrangements are nearly completed for our second annual show, which is to be held March 5, 6, 7, 8. The show will be benched by Pratts Patent, and Mr. Wm. H. Tallman will be our superintendent. We have secured Mr. James Mortimer to judge non-sporting classes. The premium lists will be out within a day or two. Everything looks favorable for a large entry.—GEO. B. GALLUP, Sec'y.

PROVIDENCE DOG SHOW.

Editor Forest and Stream:

The following is a list of winners at the first bench show held by the Rhode Island Poultry Association in connection with their exhibition at Infantry Armory Hall, Providence, Jan. 7 to 12 inclusive, 1889. The judges were C. Fred Crawford and A. H. Wakefield, who gave entire satisfaction and proved themselves worthy of the confidence reposed in them. Mr. Crawford's celebrated and widely known English setter Foreman, as well as Royal Albert, Dido Noble and Foreman's Lass were on exhibition only, and attracted a great deal of attention.

AWARDS.

ENGLISH SETTERS.—CHAMPION—Frank Leonard's Royal Prince II.; also special.—OPEN—*Dogs:* 1st and special, J. L. Wells's Bow Bondhu; 2d, J. W. Lawson's Ten Pin. *Puppies:* 1st and special, A. B. Aspinwall's Ben and Ned.

IRISH SETTERS.—*Dogs:* 1st, Aurion V. Chevers's Gleucho's Providence; 2d, Edwin Scott's unnamed. *Bitches:* 1st and special, George H. Bent's Garnet. *Puppies:* 1st, Michael Flynn, Jr.'s O'Donovan Rossa.

GORDON SETTERS.—*Dogs:* 1st, withheld; 2d, Henry C. G. Clark's Fredric. *Bitches:* 1st, J. L. Wells's Maud S.; 2d, C. A. Clark's Flossie.

POINTERS.—*Bitches:* 1st, withheld; 2d, George E. Leonard's unnamed.

FOX-TERRIERS.—*Dogs:* 1st and special, A. H. Warren's Tramp; *Bitches:* 1st, Harry A. Waldron's unnamed. *Puppies:* 1st, H. G. Gardner's Scamp II.

COLLIES.—*Dogs:* 1st and special, R. G. Davis's Rex D.; 2d, C. W. Wilcox's Gen. Grant. *Bitches:* 1st, withheld, 2d, James L. Allen's Fannie. *Puppies:* 1st, Richard W. Smith's Dido.

BULL-TERRIERS.—*Dogs:* 1st and special, Harry A. Waldron's Silver; 2d, Wm. J. Clancy's Max. *Bitches:* 1st, M. E. Boyle's Bess; 2d, Wm. J. Clancy's June.

ENGLISH TERRIERS.—*Dogs:* 1st, Wm. Rentley's Prince.

ST. BERNARDS.—1s, J. D. Lowe's unnamed.

TOY TERRIERS.—*Bitches:* 1st, Jerry Fleming's unnamed.

A. V. CHEVERS.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream:

I am not at all surprised by the storm of retorts, courteous and otherwise, provoked by my just and timely criticism of fox hunting as conducted by the "Western Massachusetts Fox Club" I do not care to pose as an authority on fox hunting, but I do claim the liberty to denounce a style of hunting which is, to say the least, questionable, and looked upon by many as murderous and unsportsmanlike. "Ahwahsoose" wants to know why the shooting of a fox before hounds is more unfair than the shooting of a hare or deer under the same conditions. The reason is plain; when the hare or deer is hunted like the fox, solely for pleasure, the gun is ruled out as depriving the hunted animal of its only means of escape, and thereby violating fair play; and the gun is allowed in hare and deer hunting only when the use of it is necessary to secure the game for food. The fox, unlike the hare and deer, is not edible; if the object is to destroy him as a noxious animal, he may, like other vermin, be trapped, poisoned or shot; but if he is to be hunted for sport, then by a law of fox hunting established by usage and common consent and based on the spirit of fair play, the gun is forbidden, and the hounds alone must be employed.

One objection to fox shooting is its cruelty. A fox overtaken by a pack of hounds is killed in two shakes of a lamb's tail, he is torn to pieces before he knows what has hurt him, whereas, if he be shot, he may get away cruelly wounded or crippled. Hence it is more merciful to the fox to let the hounds kill; besides, if the hounds do not get blood and mouth their game they soon lose their fire and dash.

The New England fox hunter is not attacked because his method is LOT English; but because it is in itself unfair and cruel.

I do not care to multiply words on this topic, which, I fear, is getting threadbare. Some of your Yankee correspondents have been pleased to call me an ignoramus and an Anglo-maniac, when I cannot defend my opinions by argument it will be time to resort to personalities.

My compliments to the New England fox hunter and may he find a ready market for his fox skins. TALLYHO.

COLORADO SPRINGS, Jan. 28.

Editor Forest and Stream:

As an amateur in fox hunting, I was a good deal amused by the comments of "Tallyho" on the ethics of the sport, as my experience in the sport means an early breakfast, a tramp of eight or ten miles until the hounds strike a scent, and then the greatest amount of hunting imaginable, until you get sight of something that looks like a yellow dog, and hear the deep bay of the hounds, when you take the most favorable position, and when you have a dead sure thing let pop both barrels of your gun, only to see Jim Reynard keep up the same business gait and the hounds in hot pursuit, and away you go until it is time to return for the night, when if you can get your dogs and get a ride home you feel as if you have had a fox hunt even if you come home empty-handed and hungry.

We have some excellent hounds in this vicinity, Walter Van Valkenburg having two that kept sixty hours on the scent Christmas week. The most unique incident in the fox hunting line that ever occurred here happened on the 25th ult., and is thus described:

Seven of our nimrods with a pack of hounds got after a fox on Friday last and ran it into the ground a few miles from this city. They were not to be disappointed in securing the hide to add to their collection by these tactics on the part of the fox, and so secured axes and spades and commenced digging him out. One of them who was digging came suddenly upon the fox and called to John Melhinch, who was standing guard over the other exit of the fox's home, to look out and not let him get away. Just then the fox rushed out and Mr. Melhinch grabbed him. The fox bit him severely on one hand and one of the dogs, who was wild through excitement, bit him through the other. Both wounds are very painful.

Perhaps it will afford "Tallyho" some satisfaction to hear that one of the murderous sportsmen got a little the worse of the fox hunt. AMATEUR.

Editor Forest and Stream:

Since fox hunting as practiced in the Eastern States has aroused the ire of "Tallyho," I must recount a chase which occurred Friday just west of Litchfield, Conn., wherein many breeds of dogs took part, from the diminutive fox-terrier to the fast-flying greyhound, to which many prominent citizens of both sexes were either willing or unwilling onlookers. "Tallyho" probably would not have taken any interest in it on account of the absence of a full pack and gaily dressed riders on their fleet hunters. The spectators, however, did enjoy it hugely, and the fox no doubt thought at first it was rare fun. He presumably had been out all night looking for some sweet morsel and was returning to his lair in the morning, when he was espied by Mr. Edward Bulkley as he was on his way to the depot to take the train. The fox failed to recall having had an appointment to meet Mr Bulkley, so he started off in an opposite direction to which Mr. B. was going, and with a burst of speed that gave Mr. B. the impression that reynard was in haste; whereupon Mr. B. hurried in his direction, and communicated to Mr. Will Marsh reynard's unwillingness to linger longer. It took Mr. Marsh but a short time to get together his own and Mr. Marvin Todd's hounds, and but a very few minutes ere they struck the scent and were off in full cry after reynard, while many of the dogs of the neighborhood joined in the chase. Reynard, however, was too much for the entire lot, and very shortly was galloping easily away from them.

Hon. Seth Pratt of Litchfield happened to be out at his place at Harris Plain with his greyhound sapling Ginger, just as the fox took it into his head to cross the great meadows at the south. Mr. Pratt espied him—so did Ginger. Away the latter went after the fox like shot from a gun, and reynard, realizing it was time for him to get up and dust, dusted. Over the meadows he went like mad, and though he had a great lead, Ginger, warming up to his work, pushed him too close. The fox circled, and back over the meadows he went for all he was worth. It was, however, a fatal mistake to have put his nose on to the meadow, for Ginger was upon him and at once brought him to bay. The other dogs coming up soon dispatched him, though he fought like a hero and ought to have saved his skin for his magnificent run and pluck. Though this was the first fox Ginger ever saw, he showed himself not only to be very fast, but full of pluck. He is a most promising puppy, out of Mr. E. B. Van Winkle's Bonfanti by the celebrated black and white field and prize winner champion Balkis. Should we ever have coursing here in the East, Ginger will no doubt be heard from as among the winners. Messrs. Marsh, Todd and Granniss coming up finally with the hounds, secured the fox, which proved to be a fine young dog. His skin when dressed and made up into a rug will go to Dr. Belden. FAIR PLAY.

Editor Forest and Stream:

The Walbons started a fox in or near Towanda Glen, and after giving him twelve shots he still roamed through the woods in search of birds and barnyards for poultry. Orual Kellogg will try him next with his brace of foxhounds, and we predict a kill, as Orual is an old timer after reynard and a sure shot at running game. The wing shots are housed up until next September. Our trap shooters until more pleasant weather. W. F. DITTRICH.

TOWANDA, Pa., Jan. 26.

CHOREA.

CHOREA, or as it is more commonly called, St. Vitus dance, is a spasmodic affection generally accepted as purely nervous. The causation is obscure. Worms have been assigned, but the evidence is insufficient Great mental excitement, fear and anger might induce the disease. It very commonly follows distemper. It is characterized by irregular contractions and twitchings of certain muscles, movements which the animal has no power to control. The affection may be extensive, involving several parts of the body, but it is more generally confined to one set of muscles, the head or a limb.

Treatment.—The disease is exceedingly obstinate, and recovery is by no means certain. The purpose should be to remove, if possible, all morbid states of the body which may tend to aggravate the disease, such as constipation, indigestion, worms, debility, etc. To sustain the general strength, and improve the vigor of the nervous system by tonics, nutritious diet and every influence conducive to perfect health.

A diversity of remedies have been advised by different authors as a cure for this disease Doubtless the most serviceable drugs are strychnine and arsenic, the preference given to the former. It should be commenced early in the affection, and may be given as follows:

℞ Strychnia Sulph.....gr. ii.
Aqua.....℥i.
Ft. Mist. Sig. Dose, three drops twice a day.

The dose should be increased one drop daily until the physiological effects of the strychnine are observed, as evinced by a stiffening of the legs or neck. When this occurs the dose should be at once reduced to three drops, and increased again as before. It will not do to make the giving of this medicine a matter of convenience, it must be regularly and faithfully administered, and its action carefully watched. If no decided improvement follows the use of strychnine after a reasonable quantity has been given, arsenic should be substituted. The most convenient preparation is Fowler's solution, and of this four drops can be given twice daily, and increased one drop every two or three days until the specific effects of the medicine are produced; when it must at once be discontinued. These are puffiness about the eyelids, loss of appetite, a disturbed digestion, occasionally a falling out of the hair, and salivation. If it is deemed wise to add iron to the arsenic, one-half an ounce of the Ferri et ammoniæ citratis can be mixed with an ounce of Fowler's solution. The dose of this preparation is three drops. If the bowels are constipated the syrup of buckthorn should be given as needed, to promote a free action. In exercise fatigue should be avoided. The use of the nerve tonics, strychnine or arsenic, should be prolonged, even after the chorea has disappeared. and when they are discontinued, cod liver oil, in tablespoonful doses, should be substituted, and persisted in until perfect health is restored.—"*Ashmont,*" "*Diseases of Dogs.*"

DOG SENSE.

Editor Forest and Stream:

The article in a recent issue by "Laube" "reminds me." A friend of mine owned a small canine of nondescript breed, noted for his keen nose. He was probably a cross between a Skye terrier and a Podunk rat dog. In his early years he had been in a free-for-all and injured his back. To remedy this defect his tail had been driven up, to strengthen his spine, and but an inch or two stuck out, just enough for him to wag. In color he was, like some of the Irish setters advertised in your columns, blood red. By the way, did you ever see a blood red dog? If not, you have no idea what a curious looking brute one is. But you can imagine the effect on a stump-tailed bull, especially in fly time. Well, my friend proposed one day that we try his dog's nose. So we stole away from him, first giving the women at home instructions to turn him out in thirty minutes. We then walked rapidly to the river, a distance of perhaps a half mile, when we got into a boat and rowed down stream some distance, crossed the stream and then rowed back up, and passed the starting point, going above it to a bridge which spanned the river a quarter mile north. There was a balloon in the vicinity into which we clambered, and letting go all holds were carried up stream some three or four miles, came to earth, and again taking to boat dropped back to the bridge, where, getting into a buggy, we drove to the house. Now, what puzzles me is, how in the dickens and Tom Walker could that dog have followed our scent through all that journey?

DUPONT.

IOWA CITY, Ia.

FOX-TERRIERS AND RABBITS.

Editor Forest and Stream:

Just let me call your attention to the fact that when Mr. C. J. Peshall, in your issue of Jan. 17, quoted the *Live Stock Journal* to support his assertion that none but the lower classes in England indulged in rabbit baiting, he ingenuously omitted this pertinent paragraph:

Mr. Peshall, though, misinformed his interrogator on one or two points in reference to what is done in England. He said that rabbit coursing in this country is only practiced by pitmen and miners, or the lower classes. This is hardly correct, for a great many gentlemen who are in business in the city pass the Saturday afternoons in this manner.

As this is a portion of the *Live Stock Journal's* discussion of the rabbit baiting business. Mr. Peshall must admit its authority. S. PECIAL PLEADER.

DOG TALK.

IT appears that the pug dog entered at the Buffalo show last September as Royal Duke (E. 21,463), winner at some of the best English shows, was not Royal Duke at all, but an unknown animal that was palmed off on the unsuspecting exhibitor as the genuine article. The purchaser, Mr. Henry Smith, of Buffalo, N. Y., while in England recently, discovered that the original Royal Duke was still winning prizes there, and so learned that his dog was a fraud. Mr. Charles H. Mason, who judged the class at Buffalo, placed this dog third to Dude and Othello, and in his report of the show published in FOREST AND STREAM Sept. 20, he said of him: "The winners in these classes, with the exception of Royal Duke, placed third, are well known. Royal Duke, who is winner at Barn Elms, Darlington and Scarborough, England, must have met a very ordinary lot of dogs at those shows. There are twenty or more in this country that can beat him. He is very defective before the eyes, is pounds too heavy and is not clear in color." No other journal had a single word to say regarding this dog in its report of the show.

Mr. J. W. Newman, secretary of both the Massachusetts Kennel Club and the New England Kennel Club, sends us the following clipping from the columns of the Boston *Globe:*

One of the officials of the Massachusetts Kennel Club, of this city, and a prominent supporter of bench shows, called at the *Globe* office yesterday, and stated that there was danger of confusion in the public mind as to the show to be given in Lynn next March. Said the gentleman: "The Massachusetts Kennel Club, of Boston, is an incorporated body, its title has never passe out of its possession, and is as much its property as the records. The club gave bench shows in Boston as far back as 1877, and its exhibitions, with the awards made thereat, are officially recognized under the American Association of Kennel Clubs.

"That it is still very far from dead," continued the gentleman, "can be shown. On Jan. 18 the members met and elected officers as follow: President, F. Blackwood Fay; Secretary, J. W. Newman; Treasurer, Geo. A. Fletcher.

"We have notified the secretary of the A. K. C. that our title has been infringed upon by the kennel club of Lynn, and have also requested the latter organization to select some other name than the one which belongs to our club and to us alone."

The Massachusetts Kennel Club, of Boston, and the New England Kennel Club, of Boston, are now practically under one control, and the dog shows given in this city during the past eleven years have been under the auspices of these two clubs.

Scene at Pittsburgh Show.—Wixom putting dogs in their crates an hour before closing time. Enter vice-president of show. Says Vice-Prest., "You can't put your dog in there." Wixom—"Hey?" Vice-Prest.—"You can't put your dogs in there, I tell you." Wixom—"I can't? Go in there, Juno. (In goes Juno.) What's the reason I can't? Come here, Hurst. (In goes Hurst.) What's the matter with you? Do you think I never put a dog in a box before?" Vice-Prest. —"You shan't take those dogs out of the show before 10 o'clock." Wix.—"I shan't? After getting permission of your president and superintendent? Come here, Bob." (Bob appears, takes hold of other end of crate, exit Wix., Bob, dogs and all). Grand finale; Wade rearing round, wishing Frank Dole was here to fight his way out also with his dogs; Vice-Prest. hot. Exhibitor who had agreement that if he didn't send his dogs his entry fees were to be refunded, preaching "duty to the show." Squire Handle shaking his fat sides, Krueger white with rage. Grand indignation meeting of "managers." Frank Dole's crate stolen away by somebody who didn't own it. Joe Myers packing up Dole's dogs to take them to his kennel, cussing about "that crate thief." "Kickers" swearing about their dogs not all being first, etc., etc.

We have received the monograph on the fox-terrier, by Hugh Dalziel. In addition to all the important facts in relation to the breed, as well as many of the theories of ancient historians and the speculations of modern writers, the author gives us in his inimitable style his own views upon the subject matter, as well as the conclusions that he has drawn from a careful study of the breed and its history. Among the illustrations are portraits of Result and Diadem, both well known to all fanciers of the breed. The weights and measurements of a large number of noted dogs, as well as the tabulated pedigrees of representatives of the best blood of the breed are given, and light is thrown upon pedigrees that were obscure, making the work invaluable to every finder of the breed. Price $1.

Mr. E. M. Oldham returned from his visit to England last Saturday. We learn that he brought over the well known black spaniel Glencairn. He was whelped April 17, 1884, and is by Easten's Bracken, and out of Easten's Belle, both by champion Solus and out of Beverly Bess. Glencairn has won prizes too numerous to mention; some fifty in all, many of them at the best shows, and we have no doubt that he will uphold his owner's reputation as a judge of the breed by winning many more on this side of the water. He should also prove invaluable in the stud on account of the double cross to Solus—probably the best dog of his class that has ever been shown.

We are advised that the premium list of the dog show to be held at Lynn, Mass., March 26 to 29, is nearly ready for distribution. In addition to the regular prizes the club will offer liberal kennel and special prizes. The Armory, a large building in the center of the city, has been secured for the show, which will be held under A. K. C. rules. Spratts Patent will bench and feed the dogs. Premium lists and entry blanks may be had by addressing the secretary, Mr. D. A. Williams, Box 283, Lynn, Mass.

Mr E. H. Moore, Melrose, Mass., recently imported from the kennel of J. F. Smith, Sheffield, England, the St. Bernard bitch Saffron, by champion Plinlimmon and out of Belladonna; also Mr. Richard Cook the mastiff bitch Ilford Lady Coleus, by champion Benefactor and out of Vistala. This is a young bitch whelped Aug. 1, 1887. She is a well bred one of good size and has done some winning on the other side, and will probably make her mark at the coming shows.

"Commencing with Newfoundlands." It is currently reported that one of our most noted sportsmen commenced his career as a shooting man on the wild shores of Long Island with a Llewellin setter as his cherished companion. This was all right, up to the times and quite tony until some one who was posted pronounced the wonderful setter nothing but a mongrel Newfoundland, and proved it, too.

By way of Worcester comes the news that certain members of the Worcester Kennel Club favor the selection of capable and honest judges, while a few others think that the cheaper and less experienced judges will do if they are backed by a clique. How the matter will end our correspondent does not intimate. Let us hope that the advocates for the best will carry the day.

We have received from Mr. C. H. Mason a photograph of the head of Palmerston, taken after death. Old Pam, as he was familiarly known, was without doubt the best Irish setter in England, and the picture before us shows that there is not nearly so good a head on the show bench to-day. The portrait will appear in the second volume of "Our Prize Dogs."

Mr. E. W. Durkee, of New York, well known as a breeder and exhibitor of English setters, has established his kennel

at East Patchogue, Long Island, under the name of the Nahmke Kennel. Mr. T. M. Aldrich has charge of the dogs, which, we understand, in addition to the setters include some St. Bernards and a capital team of cocker spaniels.

Mr. Paul H. Gotzian of Forest Lake, Minn., has purchased the Great Dane Cæsar that won first prize in the open class at St. Paul. The dog will be shown at some of the Eastern shows.

Some of the knowing ones in the New England Kennel Club's rooms anticipate a very large number of entries for the forthcoming show. It is confidently believed that a total of 1,500 will be reached. The majority of the classes will be judged by Mr. Charles H. Mason and Mr. Fred Gresham. Boston means to be ahead.

It is reported from London that the proper dog now is the greyhound. Greyhound pups have recently fetched as high as 850 guineas, that price having been paid at a London auction for the puppy Fullerton. Sixty to seventy guineas is said to be a common price for young dogs with any claim to blood.

Troy has completed arrangements for an excellent show, and enthusiasm runs high among the Trojans. We are informed that the entries are coming in rapidly and everything points to a very successful exhibition.

It is rumored that a Western bench show circuit is being formed including Chicago, Milwaukee, St. Paul, Detroit, St. Louis and Kansas City, for the purpose of holding a series of shows during the summer and fall. Such an association would be a strong one, and we have no doubt would be most successful.

All who have printed pedigrees of dogs of any breed will confer a favor by sending copies to this office. We are constantly receiving requests for extended pedigrees, and the labor entailed would be greatly lessened in many instances if we had the tabulated forms to send to our correspondents.

Every evening on the Brooklyn Athletic Club track may be seen a slender youth traveling at a ten mile an hour gait. He is accompanied by a white and blue greyhound. Both are in "training," one for a hurdle race, the other for a dog show. Hello there! Highland Chief.

We are informed that Mr. Belmont will send his team of fox-terriers to Boston this year. If this is true and other classes are equally good we shall probably not be far out of the way in reporting the Boston show as first-class.

Mr. John Davidson, who has been shooting in Mississippi, has had an attack of malaria fever, but has shaken it off and will be in good form when the setters are called out at New York.

The dog actor, Sultan, owned by Miss Marie Wellesley, died Jan. 15, at Minneapolis, Minn., from cancer. Sultan was on the stage for nearly ten years, and was quite an intelligent performer.

Dr. M. H. Cryer, who is unquestionably the most successful breeder and exhibitor of pugs in America; will in future devote less time to his dogs.

We are pleased to note that there is considerable talk among the old members of resuscitating the old Rod and Gun Club of Springfield, Mass.

Mr. Wilmerding's team of Clumber spaniels has arrived. They were imported from No. 12 Wall street.

Mr. James Watson has taken charge of the kennel department of *Reins and Whip*. In the number before us the dog appears to hold both the reins and whip.

The entries for the New York dog show so far as received up to Wednesday noon number 1,373. This beats the record.

The managers of the New York dog show have made the usual arrangements with the express and railroad companies for the transportation of dogs to and from the show.

Will some one send us the pedigree of the Irish setter bitch Lady Fire Fly II.? She was whelped Sept. 10, 1886.

Mr. Wm. Phillips, who is well known as a successful exhibitor of toy spaniels, has bought a fairly good St. Bernard and will show him at New York.

Messrs. Oldham and Willey will show a very large and strong team of spaniels at Troy.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Argyle, Athol, Angus, Arnot, Alcen, Alton, Alice and Alida. By Geo. Shepard Page, Stanley, N. J., for deerhounds, four dogs and four bitches, whelped Jan. 5, 1889, by Dunrobin (Torrom—Loyal) out of Shelloch (Ossian—Brenda).

Odaceen. By C. Van W. Fish, Cleveland, O., for white and orange St. Bernard dog, whelped Oct. 12, 1888, by Beauchamp (Beauchief—Berengaria) out of Lady Hanley (Plinlimmon—Lady Burghley).

Fluke and Stray Shot. By E. W. Durkee, East Patchogue, L. I., for black, white and tan English setter dog and black and white ticked bitch, whelped June 22, 1887, by Gogo (Leicester Crook—Spright out of Calico (Foreman—Belle of Allendale).

Freckles. By E. W. Durkee, East Patchogue, L. I., for black, white and tan English setter dog, whelped July 4, 1888, by Royal Albert (Sir Alister—Novelty) out of Calico (Foreman—Belle of Allendale).

Armada, Lady Catherine and Fulda. By E. W. Durkee, East Patchogue, L. I., for black, white and tan English setter bitches, whelped July 22 and 23, 1888, by Roger (Count Noble—Queen Meg) out of Chintz (Foreman—Belle of Allendale).

Roybel IV. By W. Burd Patterson, Williamsport, Pa., for black, white and tan English setter dog, whelped July 3, 1888, by Roybel III. (Rush (Gladstone—Countess C.) out of Leah III. (champion Glen Rock—Leah II).

Nahmke Mint, Nahmke Tansy, Sambo and Frimousse. By E. W. Durkee, East Patchogue, L. I., for two black and tan and two black cocker spaniel dogs, whelped May 17, 1888, by Jumbo (Hornell Dandy—Hornell Dinah) out of Woodstock Norah (Obo II.—Woodstock Dinah).

Nahmke Juba, Nahmke Hannah and Trimbalmouche. By E. W. Durkee, East Patchogue, L. I., for two black and one brown cocker spaniel bitches, whelped Oct. 21, 1887, by Master Shina (Young Obo—Shina) out of Woodstock Noran (Obo II.—Woodstock Dinah).

Sheffield Lass. By F. F. Dole, New Haven, Conn., for black and tan terrier bitch, whelped Feb. 10, 1888, by King George out of Luce.

D. By Dr. I. O'Neill, Buffalo, N. Y., for white, black and tan fox-terrier bitch, whelped Aug. 20, 1888, by Handy Mixture (A.K.R. 5700) out of Lilly (A.K.R. 1228).

Ridgewood Kennels. By Chris Wagner, Brooklyn, N. Y., for his kennels of St. Bernards.

Nahmke Kennels. By E. W. Durkee, for his kennels at East Patchogue, L. I.

Bradford Kennels. By John F. Campbell, Montreal, Can., for his kennels of terriers.

BRED.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Chippy. Black, white and tan beagle bitch, whelped July 2, 1887, by Elmore's Bob out of Jennie, by C. H. Starks, Chatham, N. Y., to Jas. Ireland, Johnstown, N. Y.

Racket, Jr. White, black and tan beagle dog, whelped April 19, 1887, by Cameron's Racket out of Krueger's Nellie II., by C. H. Starks, Chatham, N. Y., to O. G. Stolz, Horicon, Wis.

Bonnie Knowe. Sable and white collie bitch, whelped March 17, 1886, by Red Gauntlet out of Brenda, by Chestnut Hill Kennels, Philadelphia, Pa., to Dr. J. P. Gray, Rochester, N. Y.

Leonard—Drumlin Moss whelps. Collies, whelped Oct. 30, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., two sable dogs to Dr. J. P. Gray, Rochester, N. Y., and one sable and white dog to E. M. Lynch, New York.

Scotilla, Jr. Sable collie dog, whelped Nov. 19, 1888, by Scotilla out of Cora II., by Chestnut Hill Kennels, Philadelphia, Pa., to A. H. Jones, Germantown, Pa.

Caractacus—Pitchdark whelp. Black, white and tan collie bitch, whelped Sept. 12, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., to Miss F. G. Shell, Richmond, Va.

Wacouta Donna. Stone fawn, black points, mastiff bitch, whelped Jan. 31, 1888, by champion Ilford Chancellor out of Ilford Comedy, by Wacouta Kennels, Omaha, Neb., to Dr. Geo. B. Ayres, same place.

Berkshire Caution—Berkshire Zulu whelp. Fawn mastiff bitch, whelped May 8, 1888, by Berkshire Kennels, Hinsdale, Mass., to H. A. Beyler, Reading, Pa.

Berkshire Caution—Nina (A.K.R. 5631) whelp. Fawn mastiff bitch, whelped April 19, 1888, by Berkshire Kennels, Hinsdale, Mass., to W. C. Crandall & Co., Springville, N. Y.

Berkshire Caution—Lady Belle (A.K.R. 6707) whelp. Fawn mastiff dog, whelped Oct. 5, 1888, by Berkshire Kennels, Hmsdale, Mass., to L. B. Wood, Cheshire, Mass.

Slam. Liver and white pointer dog, whelped Sept. 1, 1886, by Bang out of Flora, by T. M. Steele, Dover, N. H., to Pine Grove Kennels, Lynn, Mass.

Roybel IV. Black, white and tan English setter dog, whelped July 3, 1888, by Roybel III. out of Leah III., by Isaac Yeursley, Jr., Coatesville, Pa., to W. Burd Patterson, Williamsport, Pa.

Veva. Black cocker spaniel bitch, whelped March 20, 1888, by Master Shina out of Woodstock Nellie, by A. Laidlaw, Woodstock, Ont., to John E. Davis, Butte, Mont.

Master Shina. Black cocker spaniel dog, whelped Sept. 15, 1885, by Young Obo out of champion Shina, by A. Laidlaw, Woodstock, Ont., to H. D. Brown, Waterbury, Vt.

Woodstock Ada. Black cocker spaniel bitch, whelped June 30, 1885, by champion Obo II. out of Woodstock Dinah, by A. Laidlaw, Woodstock, Ont., to Abbott Kennels, Pontiac, Mich.

Sensation—Starlight whelps. White bull-terriers, whelped Dec. 20, 1888, by F. F. Dole, New Haven, Conn., a dog to Mr. Haley and a bitch to H. A. Harris, both of North Wilmington, Mass.

My Queen. White bull-terrier bitch, whelped July 28, 1888, by champion Grand Duke out of Maggie May, by F. F. Dole, New Haven, Conn., to H. A. Harris, North Wilmington, Mass.

Flash—Flirt whelp. White fox-terrier dog, whelped May 17, 1888, by Berkshire Kennels, Hinsdale, Mass., to Harry G. Reed, Lancaster, Pa.

Bacchanal—Surry Clove (A.K.R. 1399) whelp. White, black and tan head, fox-terrier bitch, whelped May 8, 1888, by Berkshire Kennels, Hinsdale, Mass., to Harry G. Reed, Lancaster, Pa.

DEATHS.

Daisy G. Mastiff bitch, whelped March 8, 1886 (A.K.R. 5620), owned by Barkshire Kennels, Hinsdale, Mass., Dec. 5; from bite of another bitch.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

COCKER SPANIEL, Philadelphia.—The dog seems only out of condition. Purge with full dose of castor oil, and give one of Bland's iron pills three times daily. You can conceal the pill in a small morsel of meat.

W. B. H., Marlborough.—He may have distemper, or may have poisoned himself. Give tablespoon of syrup of buckthorn, and follow with a 5-grain quinine pill. Continue to give a 5-grain quinine pill morning and evening for a week. Look for worms.

THE MUTUAL LIFE INSURANCE CO.—The annual statement of his long established company, of which Mr. Chas. H. Raymond is the New York agent, is out, and is published this week on another page. The figures in which it deals are so stupendous as to stagger the imagination. The total assets are $123,082,153.56, and this is an increase of more than seven and a quarter millions of dollars. As will be seen the surplus of the company is $7,940,063.63, an increase of $1,645,022.11. Seventeen thousand four hundred and twenty-six more policies are in force now than last year. All this indicates the growth of the business. Its solidity is shown by the statement of the way in which the enormous surplus is invested. Nearly fifty millions of dollars are represented by bond and mortgage, nearly forty-nine millions by United States and other securities; real estate and loans on collateral account for more than twenty-one millions of dollars, and the remaining six millions consists of cash in banks and trust companies drawing interest, and of interest accrued, premiums deferred and in transit, etc. The statement is one of which the officers of the company may well feel proud, and is such as to inspire the utmost confidence.

Rifle and Tray Shooting.

BOSTON, Feb. 2.—Judging from the large number of riflemen present at all the shoots at Walnut Hill since January came in, the interest of rifle shooting must be gaining very fast. To-day Mr. Wilder wins the gold medal in the 20-shot rest match and C. C. Clarke the championship medal. Following are the scores made to-day:

20-Shot Rest Match.

S Wilder	10	8	8	11	7	11	11	11	12	12		
	12	9	11	9	10	12	12	11	9	12	209	
J B Munroe	11	12	10	12	12	9	11	9	11	12		
	10	11	10	12	10	10	9	10	8	9	208	
J Francis	9	9	12	12	8	12	10	12	4	10		
	9	10	8	9	9	9	11	9	12	10	194	
J N Eames	11	9	9	11	12	8	9	11	12	9		
	10	7	10	9	9	7	7	9	10	12	191	
J N Frye	10	9	9	8	11	7	8	10	8	8		
	9	12	10	8	8	10	12	10	10	9	186	
L R Avay	9	8	9	7	9	10	11	11	10	9		
	8	10	8	12	11	11	7	8	11	7	186	

Champion Medal Match.

C C Clarke	8	7	9	7	10	5	8	9	8	7	8–78
A Loring	9	9	6	8	8	10	5	9	8	6	7–78
W Charles	5	8	10	7	8	5	7	10	8	9	7–77
C E Berry	8	8	9	6	7	8	8	5	9	8	7–76
J A Frye	5	5	7	10	8	6	9	7	10	7	7–74
W Gardner	2	8	5	7	8	7	6	8	9	6	6–64

50-Yard .22-100 Rifle Match, 200yds.

G L Osborn	10	9	10	10	9	7	10	10	8	9	9–92
C Smith	8	6	8	8	9	10	4	9	10	7	8–81

50-Yard Revolver Match.

A S Hunt	6	7	9	7	7	8	7	9	6	6	6–74

Victory Medal Match.

J A Frye	8	8	9	9	10	7	8	10	7	9	8–85
A Loring	9	7	9	4	7	9	10	8	9	8	8–8)
A F Brown	7	7	8	8	9	7	8	6	9	7	8–74

Medal and Badge Match.

H L Lee	6	9	10	8	7	8	7	9	10	8	8–82
G B Warren	7	9	8	10	9	8	4	7	8	6	7–76
A F Brown	7	9	3	10	7	6	5	7	8	7	8–69

All-comers' Match.

George R. Russell made a score of 89 with the Springfield military rifle, which beats all records before made with this arm in a 10-shot match at 200yds.:

G R Russell (mil.)	10	10	9	10	10	9	5	8	8	10	8–89
G B Warren	7	9	9	7	10	10	9	8	8	8	8–85
W Charles	9	9	10	8	9	8	7	7	8	9	8–84
A Loring	6	6	10	9	10	10	9	7	8	6	8–81
G B Warren	7	8	8	7	10	7	9	7	7	7	7–77
D L Chase	10	6	4	10	7	9	8	10	7	9	9–75
A S Hunt	9	8	7	10	6	9	7	6	6	7	8–75
B G Barker	8	10	5	7	6	9	4	9	8	5	7–71
A S Field (mil.)	5	7	4	10	5	9	7	6	7	10	7–70
S Ham	8	4	7	7	7	7	7	5	8	7	8–66
W Ames	8	7	4	4	6	4	10	10	7	4	6–64

ST. LOUIS, Mo., Feb. 2.—Mr. L. V. D. Perret was in good form last Wednesday when the St. Louis Pistol Club held its shoot, and he rolled up 89, which proved high and the medal will be his for the coming week. The attendance was fair and with the exception of a few scores the shooting was comparatively good. Standard American target, 20yds.:

L V D Perret	10	7	9	9	10	10	10	9	7	8	8–89
W Bauer	7	8	9	8	8	9	10	9	8	9	8–85
E Mohrstadt	5	9	7	10	10	10	7	10	5	10	8–83

H Griesdieck	0	5	10	10	5	8	5	5	8	6	6–62

UNSER FRITZ.

SMITH VS. OAKLEY.—Because somebody has presented Miss Annie Oakley with a badge labeling her the champion rifle shot of the world, Miss Lillian F. Smith is out with a series of 13 challenges, as follows: No. 1—Fifty shots at a Creedmoor target, Creedmoor rules, 200yds., caliber not to exceed .32. No. 2—Fifty shots at a 25-ring target, 200yds., single loading rifle, shots must be fired in 3 minutes. No. 3—To shoot at 50 balls 2¾in. in diameter, 50yds., .22cal. rifle, single loader, the shooting must be done in 3 minutes. No. 4—To shoot 10 shots at any ring target with a bullseye 1½in. in diameter, 75ft., .22cal. No. 5—To shoot at 50 balls thrown in the air, 40ft., .22cal. No. 6—To shoot at 25 balls thrown in the air, 30ft., .22cal. No. 7—To shoot at 20 balls thrown in the air, 15ft., .22cal., singleloading rifle, shooting to be done in 1 minute. No. 8—To shoot at 10 pair of balls thrown in the air, 20ft., repeating rifle. No. 9—To shoot at 50 balls thrown in the air, 30ft., 2 repeating rifles, .22cal., to be shot on time. No. 10—To shoot at 20 pennies thrown in the air, 20ft., .22cal. No. 11—To shoot at 100 balls on a swinging target, 30ft., 2 repeating rifles, to be shot inside 2½ minutes. No. 12—To shoot at 20 balls on a swinging target, 30ft., .22cal. rifle, singleloader, time of shooting 1 minute. No. 13—To shoot at 25 balls thrown from a trap 4ft. high, 30ft., .22cal. rifle.

BOWMANVILLE Ont., Feb. 2.—A shooting match between the Highland Creek and Bowmanville Clubs, composed of ten men on a side, took place here to-day. Bowmanville using military and Highland Creek sporting rifles. The following is the score, five shots each at 200 and 400yds. range.

Highland Creek.	200.	400.	Bowmanville.	200.	400.
R Parker	23	22—45	W S Russell	22	22—44
W Closson	22	21—43	W C King	21	21—42
W Closson	22	21—43	J H Morris	23	21—44
H Westren	23	14—37	J Curtis	17	17—34
W Morrish	21	17—38	J B Mitchell	24	23—47
C Humphrey	22	24—46	E Livingston	21	21—42
T Chester	23	21—44	J Sauder	21	25—46
R S Humphrey	19	16—35	J Horsey	23	13—36
T Parker	22	11—33	N S Young	21	21—42
G D Closson	22	12—34—396	D Beach	21	19—40—417

WHITE ELEPHANT RANGE.—The second off-hand Massachusetts target match at the famous White Elephant rifle range, Broadway between Thirtieth and Thirty-first streets, New York, resulted in another victory for Mr. Hiscoe, who was also the fortunate winner of the first contest at this target. Mr. Benedict, who was the winner of the third prize in the same contest, pulled up to a very good second, being only one small point behind first place and winning the second medal with the fine score of 246 points out of a possible 252, which was the highest score made in the last match. The following are five of the leading scores:

Chas C Hiscoe	83 81 80—244	W C Althouse	79 79 79—237
W K Benedict	81 81 81—243	F G Loeb	78 78 78—234
E Castel Best	81 79 79—239		

The siver match at the silver coin target with rest which was commenced Jan. 28 and ends Feb. 11, promises to be very close and exciting. This match is for five elegant silver badges.

FRANKFORD, Pa., Jan. 31.—With the wind blowing a 30-mile gale the Hartranft Rifle Club faced the targets on their range at Frankford this afternoon. Messrs. Doyle, Steiber and Dailey were guests of the club during the day. Mr. Doyle shot a .45-cal. Springfield, and Messrs. Steiber and Dailey used a .32-40 Wurfflein; not being used to the rifles their scores were as good as could be expected. Mr. Steinbeisser's remarkable score was made with a .22-cal. Wurfflein gallery rifle, U. M. C. ammunition. This rifle only weighs 7½lbs. and has the plain open sights that are used in the galleries, all shooting being on American standard targets, 200yds., off-hand:

Ed Travis	8	7	8	8	10	9	6	9	6	—79	
J J Mountjoy	8	8	7	7	9	10	6	5	6	8	—74
C Dailey	6	7	8	8	6	6	7	8	8	9	—73
Geo Doyle	4	7	6	8	3	8	5	6	10	6+4	—67
Lardner	2	5	6	9	5	9	4	10	9	8+4	—67
L E Toboldt	8	6	6	5	9	3	8	6	5	5+4	—65
E Stees, Jr	10	4	9	10	8	4	3	4	5	7	—64
C Steiber	5	9	6	9	2	2	9	7	7	7	—63
W Wurfflein	7	4	7	4	4	9	7	5	9	5	—61
J T Oliver	7	2	6	10	4	6	3	6	9	6	—59
H Steinbeisser	2	10	4	2	8	8	4	8	8	2	—56
J H Buehler	8	3	8	5	4	10	4	6	2	5	—55
C Mareau	3	4	4	2	7	0	0	5	0	2	—27

Military rifle, 4 points allowance.

NEWARK, Feb. 1.—The twenty-third match in the United Amateur Rifle Association tournament took place on the Monroe range last evening, and was the most exciting and interesting match of the season. Dan Erskine, of the Monroe Club, was put to the test, and showed himself capable of performing the task set for him, having to make a bullseye in the tenth shot to win the match. Both scores are the highest that have been made thus far in the tournament. Mr. Hall's 117 is the highest individual score to date. Appended is the score:

Monroes.		Howards.	
J Stadelhofer	100	E Theurich	113
Andrew Coons	109	H Schroeder	115
William Raab	109	C Derivaux	102
Fred Hall	117	J Meyer	107
Henry Snyder	108	F C Dietz	112
William Clark	107	J Heiter	104
Geo H Taggart, Sr	99	H Wolfaith	93
F Gilliland	97	M Strauss	98
Gus Widman	110	J Berger	106
Dan Erskine	106—1062	F Swyg	111—1061

The standing of the clubs to date are as follows:

	Shot.	Won.	Lost.	Average.
Monroe	7	6	1	1,027 3-7
Oakland	6	5	1	1,025
Excelsior	6	4	2	1,020 1-7
Howard	7	3	4	1,013 4-7
Lakeside	7	3	4	979 2-7
Annie Oakley	7	2	5	959 6-7
Columbia	6	0	6	954⅚

At the regular meeting of the United Amateur Association this evening the following officers were elected for the coming term: Mr. Frank Gilliland, President; James P. Williams, Vice-President; Gus Widman, Recording Secretary; F. A. Bishop, Financial Secretary; John Bauer, Treasurer; D. Mahoney, Sergeant-at-Arms. The association is in a flourishing condition, and promises to be very successful in its undertaking. The next meeting takes place March 1, at the Lakeside range.

HARTFORD, Ct., Feb. 2.—To-day was a superb one, just the day to make the novel match between the 10 shooters of the Colt Gun Club against 10 bullseye scorers of the Franklyn Rifle Club very enjoyable. The match opened at the Franklyn range at 1:30 P. M., the conditions being that the shots at the targets should count exactly what they showed on the target, and that every clay pigeon hit should count 10. It was perhaps a trifle in the favor of the riflemen, for a clay-pigeon if hit at all is usually broken, and that counted 10, while to score 10 on a target, bullseye shots are necessary at 200yds. The following was the score by teams:

	Rifle Score.	Pigeons Broke.	Total Points.
Colts	864	64	1094
Franklins	838	20	894

SPRINGFIELD, Jan. 26.—The Broad Brook Rod and Gun Club built a new set of targets that are a great improvement on anything to be seen in the State. The targets are on an endless screen which is operated from a house, on the front of which is a large dial plate used in registering scores. A telephone line will be built between the shooters' stand and the markers. These scores were made to-day:

Allen					7	10	5	4	8	7	6	10—57
Derby	6	8	5	5	7	7	7	7	6	9—70		
Parsons	8	5	5	3	7	6	10	4	9	9—66		
Sherman	6	10	6	7	5	7	4	5	9	8—70		

GARDNER, Mass., Feb. 1.—Regular meet of the Gardner Rifle Club, at Hackmatack Range, standard target, 200yds., off-hand:

G F Ellsworth	8	10	6	10	10	9	9	7	8	9—86
	7	5	8	8	10	10	7	7	10	10—82—168
J N Dodge	10	10	6	8	7	10	9	10	8	7—85
	8	8	7	8	6	8	8	9	8	9—79—164
C N Edgell	8	7	8	6	9	10	7	8	10	9—82
	8	8	6	7	6	8	9	7	8	8—75—157
C J Crabtree	6	7	10	8	7	10	6	6	10	9—79
	7	7	6	10	9	8	7	8	9	7—78—157
With Military Rifle.										
Alec Knowlton	7	8	8	9	6	7	7	9	8	10—79
	9	7	10	7	6	8	7	9	5	7—75
F B Edgell	9	8	10	7	7	10	7	8	5	9—80

TORONTO, Jan. 31.—The annual meeting of the Toronto Gun Club was held in the club rooms to-night with President George Pearsall in the chair. About 50 members attended. Eight new names were added to the roll, and the club goes on for another year with very bright prospects. These officers were elected: President, Ald. C. C. Small; Vice-President, Geo H. Briggs; Secretary, W. Miller; Treasurer, R. Meldrum. The annual match between teams chosen by the president and vice-president will be shot in a few weeks.

ZETTLER CLUB, Jan. 30.—The match between the Our Owns, of Newark, and the Zettlers, of New York, on the latter's range to-night, resulted in favor of the New Yorkers. At the finish the scores were 2,374 for the Zettlers to 2,341 for the Our Owns. Snellen's 245 was high for the evening. Dorrler and Flack made 243 each for the Zettlers. Neuman 223, and Weeks 224 were low men. After the match a fine supper was served by the Zettlers, the principal dish being a 31lb. porker, which was recently won by Mr. Dorrler in a competitive shoot.

THE following letter received by the United States Cartridge Co., Lowell, Mass., from Mr. F. S. Lindsley, Supt. American Wood Powder Co., West Hoboken, N. J., speaks for itself: "I am perfectly willing that you should use my name to indorse your shells, and especially your new primer for American wood powder, and I heartily recommend your shells to wood powder shooters. As a matter of fact I have recommended your paper shells for the last eighteen months, and have in that time shot thousands of them, and given away thousands of them loaded with wood powder.—*Adv.*

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE AMERICAN SHOOTING ASSOCIATION.

A BODY of manufacturers and others having the interests of trap-shooting very much at heart, formed, it will be remembered, an association last fall for the furtherance of the sport of trap-shooting. These men were in a position to know that there is a wide disproportion between the consumption of guns, powder, shot and all the *et cetera* of a shooter's outfit, and the showing made at the various trap meetings. In one sample State, where there are 20,000 shotguns held, it is a good meeting indeed where fifty gather for competition. It was to remedy this state of things that the Association was formed. Those who visit the various big shoots in different parts of the country were agreed that there was need of a radical change in the complexion of these shoots before the amateur would venture out to measure his fairly exerted skill against the methods of the pot-hunter squad present at all the meetings. It was no longer a test of skill, fairly and squarely, but it was a test of ability at the trap, combined with a clever juggling with the rules as they had been built up, generally by iron-clad precedent, for the benefit of the trap tricksters. A simple-minded amateur might get up as far as the 8 class in a ten bird shoot, but it was only to find that some expert had dropped back there to meet him; and then in the shoot-off, which was always insisted upon under those circumstances, the amateur had as much chance as a dove with a hawk. But let two of the hawks find themselves in the 8 class together, or facing each other after all the doves had been slaughtered, and then the divide came sharp and sure.

The Association has several big slices of work cut off for it. In the first place, a set of rules should be formulated, and in them everything should be set down in black and white, and nothing left to irregular precedent. Every man, for instance, should be scored on his shot as made, and many of the present absurd rules, under which a man is scored a miss without having had a shot at a bird, be done away with. "No shot, no bird," would be a simple peg to hang all the rules for behavior at the score upon.

Then comes the question of ties. It were a very simple one, indeed, if every man stepping out to shoot would do his level best with every shot fired. Then the whole question would resolve itself into the clerical one of sorting out the classes, and with a simple miss and out the respected class winners would be determined. The application of currant rule to the present body of trap-shooters does and will keep every amateur out of the matches. Luck must be brought in to supplement the trial at the trap; and the introduction of this element of uncertainty will upset the cut and dried plans of those who hit to win or miss to win, as the pots may offer.

Apart from the amendment of the rules there is a large task for the Association in spending wisely the money which its members have subscribed. One proposition is the organization of the clubs of the country into a number of leagues, determined by State limits, and then when each State has by a series of shoots fixed upon a champion team, to have a central meeting for the placing of the leading National team for the year. Those who urge this scheme have the baseball league system in their minds' eye, and hope by rousing local pride to secure a profitable gate money following from the general public. To carry out such a plan would require the sinking of a large capital, while the question of return would be a very uncertain one. Besides, this very plan of rousing trap-shooting interest has been tried before, and in a very large measure has failed.

Another plan proposed is that of having the Central or National Association place certain sums at the disposal of local clubs for the guarantees of matches. In this way a small club, which might not feel ready to give a match with guaranteed purses, might turn the risk of loss over to the big association, which could better afford to stand it. Of course in such cases the Association would have its own rules in force, and would supervise the conduct of the meeting and generally look after its interests, while at the same time doing a local benefit in fostering a love for this most delightful form of outdoor sport. By carrying out this line of effort the Association could do a great missionary work. Many local shoots as now conducted are so run as to disgust and deter those who might otherwise be made enthusiastic trap-shooters. There are so many hitches and so much annoyance that a trap meeting becomes a synonym for a grand rumpus, ending in a universal growl. It is doubtful whether the Association can so look over the ground as to go with safety into the matter of guaranteeing meetings during the year 1889; but that it is the correct line of effort the majority of those who know the field will agree.

For the present season, then, the best plan would seem to be that suggested by some of the members, in having a series of meetings, model gatherings, as it were, carried on in various parts of the country. Five, for instance, would cover the field pretty thoroughly and afford shooters in every section a chance to attend a meeting near at hand, with the assurance that they would get a fair showing at the honors and profits of the occasion. An Eastern meeting at New York or Boston ought to make an enjoyable occasion and satisfy the Association managers that there is a good field among the seaboard shooters. The South has an increasing number of men who love a shotgun and would be pleased to show their proficiency with it at the trap. Montgomery, Ala., or Macon, Ga., would either of them prove a good mustering place. Then a Western shoot would or should gather in an army of shooters and make a great stir in the shooting world. Cincinnati, Chicago or Cleveland, with the preference for the first named, would be the locality for this big meet. Up in the Northwest a meeting at St. Paul or Minneapolis ought to be given for the benefit of the many marksmen in that region, with an assurance of a good representation from further down the Mississippi. Then a Pacific coast meeting at San Francisco would round up the quintette and give the shooters of that section a chance to add their share of praise to the Association for having solved the problem of how to run a meeting so that the designing expert should not unchallenged use his ability to gather in the ducats of the confiding inferior shot.

For the season of 1889 it is hardly likely that much beyond this five tournament plan can be carried out. These meetings might be given dates so as not to conflict with local fixtures, and they will test the temper of shooters generally on the Association rules, while from FOREST AND STREAM fair, full and excellent reports of proceedings may be confidently expected.

THE FORESTER GUN CLUB, of Davenport, Iowa, will hold a tournament Feb. 12, 13, 14 and 15. Three regular progamme events at live pigeons will be shot off each day, and the clay bird matches will be numerous. This tournament will be a big affair.

UNIONTOWN, Ohio.—A match will be shot at Uniontown, Ohio, on Feb. 22, between teams of twelve men each from the Buckeye Gun Club, of Cairo, and the Brimfield Gun Club.

CORRY GUN CLUB.

SOME weeks after the Keystone Mfg. Co.'s tournament in September, at Corry, Pa., a gun club with the above title was formed at Corry, and the following officers elected: Wm. Lewis, President; W. Ed. Marsh, Vice-President; C. H. Wetmore, Secretary; F. H. Park, Treasurer; and H. A. Penrose, Captain. The club now has 29 members, with 6 applications to be acted upon at the next meeting, and is in a flourishing condition. They have a weekly shoot on the fair grounds, over the same screen and traps as used at the tournament and all shooting is done under Keystone rules, which makes things lively and entirely does away with the dragging and dreary club shoot. The club has only been in practice for six weeks and many of the members prior to that time had never shot a gun, which must be considered in reading the scores, but they go at it as a pleasant recreation from business cares and their enthusiasm promises well for their skill in the future.

The weekly shoots, held on Thursdays, are open to all, club members or otherwise, except that outsiders can not contest for the club medals. However, they can enjoy the sport, and at a trifling cost, as on these occasions birds are sold at one cent each.

On Thursday last, Jan. 31, the club had as its guest Mr. Brower, of Westfield, N. Y. Seventeen members gathered at the grounds to test their skill. This is a goodly number for any club shoot, but is extraordinarily so when the weather conditions are considered. The ground was thickly covered with snow and the air heavy with flying flakes driven by a sharp wind from the northwest, which tingled the noses and finger tips and made exposure to the air anything but pleasant by contrast with a position near the club house stove.

The club shoots for two trophies; one a handsome gold medal, made in the form of a keystone, for first prize, and a leather medal for consolation prize. It need hardly be said, however, that the members hanker after this form of consolation, and it is a constant struggle to keep away from the low score. Mr. Blydenburg had held the gold medal for five weeks out of the six, and seemed almost invincible; many were the jobs put up on him to cause its loss, but on the occasion in question he was somewhat out of trim, not having his own gun to shoot, and so forfeited the prize to Mr. Jess Oliver, who was exceedingly proud of his victory. Messrs. Wetmore and Penrose, by reason of their superior skill, are barred from competition for this medal.

The leather medal fell to the lot of Mr. Jack Austin, but he redeemed himself in the subsequent team shoot, and we venture to prophesy that he will not be called on to wear it longer than one week. Will Lewis, with his new Smith gun, started in with a straight ten and looked like a sure winner, but unfortunately made a bad break and failed to get there. The boys want to look out for him in the future, however, as a look of stern determination was on his countenance as we rode homeward. Below are the scores:

First Squad.

Berliner	0311011110000010101111010—14
Newman	1010030100111011110011100—13
Lawrie	0000010011003110001003010—8
H Arnold	1011100100010011011111101—14
Palmer	0000101111000001000100011— 9
Mead	1110011000011001010110010—12

Second Squad.

Bowers	1100111010101100100010000—11
M Arnold	0000100010100100111110100—10
Howard	1010111010100100111110100—15
Wetmore	1110101100101010101111111—16
Austin	1100100000101000010000000— 6
Oliver	1111011100101010110111111—18

Third Squad.

Swan	1111110111001010011111000—16
Blydenburg	0010111011101011010110010—15
Wilson	0011011011110100101000110—13
Ellis	1000110111100000011011001—13
Penrose	1101011111111111011011001—18
Lewis	1111111111000011000110111—17

After the competition of the clubs contest sides were chosen for a team match at 25 birds, with Messrs. Newman and Berliner as captains. Berliner's team was allowed the odd man. In this contest the scores show up rather differently, some improving their record of the club shoot and others retrograding, Berliner's team winning by 14 birds.

Team Race.

Newman, Capt	1001000101000011010011011—11
Penrose	1111011111111111111111101—23
Lewis	1001110010011001010010100—12
Brower	0110110101101100111010—14
Mead	1101000300011001110000011—10
Lawrie	0001000001010010000110— 8
Ellis	0011000111010001011010110—12— 90
Berliner, Capt	0000100000010011030100000— 6
Wetmore	1111101111010111111111111—22

Howard	0110000111011010111010111—15
Austin	1011001010111010100100100—13
Palmer	0101110001010010001011—11
Ward	1010030100000001010100001— 8—104

The club proposes to hold a two-days' tournament in the latter part of each month, from April to October, open to all, when sweepstake matches of various kinds will be shot; and it is also proposed to form a sort of union gun club, which shall take in residents of five or six places near Corry, practically a league of five or six clubs which shall meet at the different towns at stated intervals. This seems perfectly feasible; at any rate the residents of Corry and nearby towns will not lack for opportunity to shoot at the trap the coming season. F. MASON.

HUTCHINSON, Kan., Jan. 26.—The Hutchinson Gun Club has elected for the ensuing year President, E. H. Young; Vice-President, S. W. Forsha; Secretary and Treasurer, Will Allen. Board of Directors, Wm. Chamberlain, Ben French, and W. L. Woodnutt. Practice shoot, Jan 17, 15 singles and 5 pairs bluerocks:

Young	1111111111111101	10 00 10 10 11—19
Allen	1110101111111110	10 10 10 10 10—16
George	1100101111111010	10 10 11 10 10—16
Chamberlain	1001010011100011	10 10 11 11 10—15
French	1001111001011111	11 01 10 01 00—15

Match No. 2, 15 single bluerocks:

Chamberlain	1110101010110101—10	George	1100001001110111— 8
Young	1110111001001101— 9	French	1100101001011001— 7

Jan. 24: E. M. Young carried off the honors of the day. Match at 10 single bluerocks:

Young	1111111111—10	Chamberlain	1011011011— 7
George	1111011111— 9		

Club match, 15 singles and 5 pairs:

Young	1111111111111111	11 11 10 10 11—23
Allen	1111110100101011	10 01 11 10 10—17
Jones	1111111010100100	00 10 01 10 11—15
Allen	1000011011001101	10 10 00 10 11—12
Chamberlain	1110011001001110	10 10 10 01 10—13
Burslem	1011110100011001	00 00 10 10 11—12

Match No. 3, 10 singles:

Young	1011111111—9	Chamberlain	1010111001—6
Allen	1111010111—8	Burslew	1111010010—6
Jones	11101 0111—8		

Match at 9 single and 3 pairs bluerocks:

Young	101001111 10 11 11—11
Chamberlain	011111011 10 10 10—10
Allen	011000011 10 11 11— 9
Burslem	011110001 10 11 00— 8

SHADY.

WORCESTER, Mass., Jan. 31.—The classification prize shoot under the auspices of the Worcester Sportsman's Club, were continued this week. In the classification score each man shot four strings of bluerocks with a possible 24, while in the prize score there was a possible 10. In Class A Bowdish won first, Houghton second, while Smith, Swan and Sampson divided third. In Class B the prize was not contested for but divided by the four equally. The work of each man's score in detail follows:

Class A.

	Classification.	Prize.		Classification.	Prize.
A R Bowdish	19	9	G J Rugg	18	8
L Houghton	22	8	E T Smith	19	7
M D Gilman	18	8	E F Swan	17	7
E Griffith	20	8	Geo Sampson	19	7
W R Dean	17	8	Dr Bowers	18	6

Class B.

O B Holden	16	E S Knowles	14
Dr Frank	14	A B Franklin	14

MATTOON, Ill., Jan. 31.—Live and inanimate bird shoot between J. Bell, E. Tetzell and J. Staff, of Terre Haute, and Tom O'Neill, George King, J. Heermans and J. Carouthers, of this city. Following was the result: 5 live birds—Bell, first; O'Neill, second; Heermans, third. 4 live birds—First divided between Staff and O'Neill; Carouthers, second; Heermans, third. 9 clay birds—King, first; Tetzell, second; Heermans, third. 4 clay birds—Heermans, first; Tetzell, second; O'Neill, third.

PHILADELPHIA, Pa., Jan. 30.—Philadelphia Sportsmen's Club, on their grounds at Fernwood, Jan. 24. In the contest, 25 Ligowskys, from 5 traps, Mr. Edward Maher with his new 12-bore Greener, lately purchased from Capt. John Brewer (and with which Brewer won the championship of England), after missing his first bird, made the enviable score of 24 straight breaks. Mr. Maher is really entitled to 25 straight, as his first bird was picked up and found to have two shot marks through the center of it. Other good scores were also made. Our new grounds at Fernwood are conceded to be the finest and best appointed club grounds in or about Philadelphia. The members are all gentlemen and substantial business men, who realize there are many things in this world besides a gun, but nevertheless greatly enjoy their weekly shoots. The members all have very nice guns, and I give the make each man shot as a matter of interest to readers, who think the Quaker boys maybe haven't got through with the old hammer gun, and ain't up to the times; the guns are all hammerless. At 15 singles and 5 pair bluerocks:

Penn, 10 Smith	1111011111111111	00 11 11 10 11—21
Maher, 12 Greener	0111011011111111	10 01 11 11 11—19
Brallier 12 H. & R.	1101100111101101	10 10 01 10 10—15
Brown, 12 H. & R.	1111110111001111	00 10 10 01 11—17
French, 12 H. & R.	1111011011011101	01 11 11 01 11—19
Smith, 10 Clabrough	1101110110011011	11 10 00 11 01—16
McKinney, 12 Scott	0111011110011011	11 00 01 11 11—17
Nebeker, 12 H. & R.	0010111110110110	10 00 10 10 01—13

Twenty-five Ligowsky clays, National rules, 5 traps:

Penn	1111111111001111111111111—23
Maher	0111111111111111111111111—24
Brallier	1100101100111010101110010110—15
Brown	1010110111111111010111110—18

Sheppard, no name on this gun	1011111011101111111111001—20
Barrows, 10 Parker	1111111111101111111w —19

CLAREMONT, Jersey City, Feb. 2.—The fine weather still brings large numbers of shooters to the Suburban Shooting Grounds. Keystone traps were used Saturday. Most of the shooters preferred to practice, although a number of sweeps were shot, of which the following are the principal, each at 10 singles, 50 cents entry, ties div.:

Siegler	1111111111—10	Simpson	0111001011—6
Lindsley	1000110011— 5	Hathaway	0010101001—4
Mort	1011101101— 7		

Sweep No. 2:

Lindsley	1000111001—5	Simpson	0010111111—7
Siegler	1111111 01—9	Mort	1011111001—7
Hathaway	1101010001—5	Fox	0011000010—5

Sweep No. 3:

Lindsley	1111111111—10	Mort	1111100001—6
Siegler	0111110101— 7	Simpson	1110011111—8
Hathaway	1011011111— 8		

Sweep No. 4:

Lindsley	1010110300—4	Hathaway	0011010111—6
Siegler	0111111111—9	Simpson	0111101111—8
Mort	1010101110—5		

Shooting every Saturday afternoon. Parties wishing to visit the grounds during the week, by sending notice to office, 291 Broadway in advance, can always secure attention.

WELLINGTON, Feb. 2.—There was a large attendance at the grounds of the Wellington Club to-day and some good scores were made in the merchandise and pitcher matches. In the pitcher match Stanton made a clean score at 15 birds and will have to stand back at the next shoot 21yds. from the trap, as this is according to the conditions of the match. In the merchandise match at 9 bluerocks and 3 pair clay-pigeons the following scores were made: Choate 15, Chase 9, Lang 10, Sampson 10, Baxter 7, Schaefer 14, Bond 8, Perry 12, Sanborn 14, Bradstreet 9, Field 10, Snow 11, Stanton 11, Webster 6, Short 9, Lee 10, Melcher 11, West 6, Conant 7, Savage 8, Warren 8, Swift 10. The scores made in the match for the silver pitcher were as follows: Choate 12, Chase 9, Lang 14, Sampson 9, Baxter 8, Schaefer 12, Bond 12, Perry 14, Sanborn 11, Bradstreet 11, Field 12, Snow 11, Stanton 15, Webster 4, Short 9, Lee 10, Melcher 10, West 9, Conant 10, Savage 9, Swift 11. The winners in the sweepstake matches were: Six bluerocks, Choate; 6 bluerocks, Chase, Perry and Choate; 6 clay-pigeons, Choate and Bond; 6 Macombers, Perry; 6 bluerocks, Bond and Perry; 6 bluecks, Choate; 6 clay-pigeons, Chase; 6 Macombers, Perry; 6 bluerocks, Chase, Lang, Baxter and Field; 8 pairs clay-pigeons, Schaefer and Sanborn; 9 bluerocks, Choate; 6 bluerocks, Choate, Field and Short; 8 clay-pigeons, Swift, Perry and Stanton; 6 Macombers, Reese; 7 bluerocks, Sanborn, Lang, Snow and Stanton; 6 bluerocks, Choate; 6 clay-pigeons, Short.

HARRISBURG, Pa., Feb. 2.—To-day the much-talked-of live pigeon match between Messrs. Whiteman and Shoop, of the West End Gun Club, and Messas. Anthony and Hepler, of Steelton, came off at the Stock Yard Hotel grounds and resulted in victory for the West End team. Owing to the strong wind blowing and the fine quality of the birds (which were as fine a lot as were ever put in a trap) the score was not so bad for amateurs at 21yds.:

Whiteman	1110111011110110—11	Anthony	1111011011011010—11
Shoop	0111110101111111—12	Hepler	1101000101011101— 8
	23		19

FLATBUSH, L. I., Jan. 26.—The third match between the Flatbush Gun Club and the Amersfoort Athletic Association came off to-day with a very large attendance. The interest manifested in the shoots between these clubs has been on the increase, and considerable excitement has been shown. The first match was won by the Flatbush Club, the second and third by the Amersfoorts. Appended is the score of the third match, 25 bluerocks each:

Amersfoort Club Score.

Sweep No. 4:

Kunzweiler	111111—6	Schottler	111011—5
Wissell	100100—6		SNAP SHOT.

CLASSIFICATION OF SHOOTERS.—The Keystone Mfg. Co. have in view a new system for the classification of trap-shooters; a scheme which in their opinion will equalize the chances of the amateur shot with those of the experts. It will probably be tested at their tournament next fall and they feel will result in a much larger entry list from the amateur ranks. When the plan is perfected, it will be given to the shooting public through our trap columns.

EATON SPORTSMEN'S CLUB.—Eaton, N. Y., Feb. 2.—Frank Short offered a rooster for the best score on Saturday and the following scores were made in a strong wind:

Hamlin	0010010000—2	Curtis	1000000101—3
Bell	0001111011—6	Short	0010001001—3
Briggs	1011010110—6	Whitney	1111011001—7
Richardson	1110011111—8	Bonney	1011110011—7

G. F. BELL.

FRANKFORD, Phila., Feb. 2.—Quite an enjoyable shoot took place on the North End Gun Club grounds. A team from the Cinnaminson Gun Club, of New Jersey, came over as the guests of the N. E. Club, to try conclusions with them in a friendly match. A high and blustery wind prevented good scores. As a consequence ground-hog day and weather came in for a good deal of dissatisfaction. An appetizing lunch was served at the club house by the bounce of good caterers, Will Mather, and was enjoyed by all. It has been darkly hinted that one gentleman ate ten big bunches of celery to obtain the proper nerve before going to shoot, and that another, having no faith in celery as a nervine, Pack-ed away thirty large sandwiches for the same effect. After careful investigation I am inclined to think that they are entitled to the "Scotch verdict." The conditions were teams of 12, 20 bluerocks:

Cinnaminson Gun Club.

C W Davis	0100011000001101011 1—11
W M Thomas	1100110111111111011—16

Jas Wolstencroft	1011111111010111100—15
W M Pack	1011010111011101110—14—158

A return match will probably be shot at an early date on the Cinnaminson Club grounds. The N. E. Club have, through an ingenious device, invented by three of the members, Messrs. Wolstencrofts and Soley, fixed the traps to be sprung by electricity, and they work like a charm.—J. C. S.

MILLBERTHA, N. J., Jan. 31.—A match was shot here to-day between Miles Johnson and James Sampson, at 15 live birds each, Long Island Rules, 25yds. rise, 80yds. boundary, trap and handle, $25 a side. It resulted in a victory for Sampson by one bird, as see following score:

Johnson	1001101100110 11—9	Sampson	1101111100001 1—10

At the completion of this match a Mr. Turfort challenged Sampson to shoot at 10 live birds, 30yds. rise, use of both barrels, for $25 a side. Sampson, nothing loath, accepted the proposition, and distanced his opponent, who withdrew at the eighth round:

Sampson	1112012—6	Turfort	0120100 0—3

M.

NEW YORK, Feb. 1.—The weekly shoot of the Mt. Morris Gun Club took place to-day at Oak Point. The feature of the day was a sweepstakes match at 20 live pigeons each, 25yds. rise, 80yds. boundary, entrance fee $25 each, Hurlingham rules, the winner of a previous match to be handicapped 5yds.; 5 traps. The following gentlemen entered the match: A. Litchenhein, A. W. Mott, P. Mullen, J. L. Mott, Jr., and P. McKeon. There were several side bets made between individual shooters. One bet between Mr. Mullen and Mr. Litchenhein for a basket of wine was that they each would beat the other. There was also a bet of $50 between the Mott brothers as to their respective merits as pigeon shots. W. Frank Banham, of the Crib Club, was referee:

Live Pigeons.

P Mullen	1111001011101101110—16
P McKeon	1001110101010100111—12
A W Mott	1111010111110101111—16
A Litchenhein	1011100101011011011—13

A W Mott	1010101111— 7		
P McKeon	1111010011111—11	F Mullen	1010111101101110—10

Mr. McKeon and Mulien tied and shot the tie off, miss and out. Mr. McKeon won. This was a sweepstakes, $10 a man. This was the most successful meet the club ever held.

TORONTO, Feb. 1.—The sixth semi-annual handicap shoot for the Moore Challenge Cup was concluded to-day at C. Stark's athletic grounds, and was won by Mr. Charles for the second successive time. The birds were fairly lively and the competition very keen, no less than five men tieing and having to shoot off before the victory was finally settled. The following are the scores:

For the Moore Cup.

Lowden (27yds)	1100110111111110—11	C Charles (27)	..0110110011101l1—11

BRADDOCK, Pa.—The sportsmen and lovers of glass ball shooting here have just formed a club to be known as the Braddock Gun Club. The following officers were elected: President Richard Stevens; Vice-President, A. Baxter; Secretary, F. G. Kendall; Treasurer, John Shaddick.

BEAVER FALLS, Pa.—At the annual meeting of the Spring Chicken Gun Club, the following officers were elected for the ensuing year: President, J. F. Kurtz; Vice-President, B. E. Surls; Secretary and Treasurer, H. W. Nair; Executive Committee, Messrs. Kurtz, Surls and Nair; Captain, H. W. Nair.

ATHENS, Pa.—The Athens Gun Club held its annual meeting at its headquarters, and elected the following officers for the year 1889: President, Frank Fuller; Secretary and Treasurer, W. K. Park; Committee, E. W. Davies, N. J. Knasboro and Frank Sherman. Although the club is not in very active condition, a few members meet as often as twice a month; as soon as good weather comes, they will meet once a week.

THE MANHATTAN GUN CLUB has elected for the year 1889 Jos. A. Hoffmann, President; Frank L. Lambrecht, Vice-President; John W. Beyer, Secretary; John N. Gennerich, Treasurer; Henry Schmid, Referee. Meeting rooms at John Maisenholder's, 505 Sixth street, City.

THE A. C. A. REGATTA COMMITTEE.—*Editor Forest and Stream:* To carry on a newspaper debate to any advantage it is necessary at the start to define the limits of the subject. I had no intention of entering on a debate which would cover in its scope the entire subject of canoe racing, when I sent a reply to a letter written by Mr. MacKendrick. (MacKendrick's letter appeared Dec. 27, and mine Jan. 3). Mr. MacKendrick made specific charges of lack of courage and woeful neglect of duty on the part of the regatta committee of the A. C. A. These charges I answered briefly and to such effect, that Mr. MacKendrick in the column (Corinthian order of architecture) he hurled at me in your last week's issue, did not think it advisable to put in one word about the subject under discussion. I do not wish to debate with so prolific a writer as Mr. MacKendrick; life is too short and his field too large. When I write that I would not oppose certain changes in rules, it seems to me an unwarrantable deduction to infer that I favor such changes, as MacKendrick assumes. The time for changing the rules is between the end of the meet and Jan. 1, following, so as not to interfere with the building of new canoes.—C. B. VAUX.

1889—CANOEING—1889.

THE growth of canoeing in America has been surprisingly rapid within the last few years, and to meet its demands the Canoeing Department of the FOREST AND STREAM was established in 1883 in the hands of a veteran leader and expert. Since this time the FOREST AND STREAM has published more news relating to canoeing than has appeared in all other periodicals during the twenty years or more that canoeing has been recognized. The series of papers on

CANOE DESIGN AND CONSTRUCTION,

written originally for its columns, has met with the most encouraging success, having now reached its fourth edition in book form since its completion in the paper, and being accepted as the authority on all pertaining to the design and construction of canoes and the finer classes of boats. The great event of the year in the canoe world is the

MEET OF THE AMERICAN CANOE ASSOCIATION,

and its full and elaborate reports of this event have long been a special feature of the Canoe Department of the FOREST AND STREAM. The last meet, in particular, furnished material for the most thorough and exhaustive series of canoeing articles ever published, covering not only the meet itself from both social and technical standpoints, but such subjects as

BUILD, MODEL, FITTINGS, EQUIPMENT AND SAILS.

The collection of designs of American and English canoes is the most extensive and complete ever published, each design being specially prepared for the use of the

AMATEUR CANOE BUILDER.

It includes such famous craft as Dot, Sunbeam, Lassie, Snake, Vesper, Notus, Vagabond, Charm, Pecowsic, Guenn, with many special types of racing and cruising canoes. The larger members of the canoe family, the

CANOE YAWLS,

are also well represented, different specimens of this new class which is rapidly attaining a well-deserved popularity being given, while we shall add to the collection as fast as new designs appear. Besides the many distinct classes of pleasure craft mentioned in detail, there is always a demand for special designs for various purposes, many examples of which will be found in our columns. This feature we propose to continue, giving designs for such uses as may suit the wants of our readers, and also giving special prominence to such craft of local reputation as the

SNEAKBOX, DUCKER AND TUCKUP,

little known, save through the FOREST AND STREAM, to yachtsmen at large.

CANOE AND BOAT BUILDING FOR AMATEURS.

IF any proof be needed of the strong and vigorous growth of the mosquito fleet, in which may be included all craft small enough to be handled by one man, whatever their difference in model, it may be found in a comparison of the first edition of "Canoe and Boat Building for Amateurs," published in 1884, with the handsome volume just issued, the fourth edition. In size it has grown from 168 pages to 263, the plates being increased in number from 24 to 52. The book itself is a complete index of the march of improvement and development of small craft, showing in what directions the greatest changes have been made. The principles of boat and canoe building have altered little within the last five years, and consequently little change has been made in the first part of the book. The details, however, of model, construction and equipment of canoes have changed very materially, which changes are fully described and illustrated by the addition of the latest designs of canoes and sails. All the minor details of construction and fittings are thoroughly explained in connection with special designs. Among the additions are found such famous canoes as Vesper, Pecowsic, Notus and Vagabond, with sail plans; also the latest details in the way of drop rudders and centerboards.

In the first edition the part devoted to boats contained very few examples outside of the conventional rowboats, the only other distinct types, the canoe yawls and the sneakboxes, being represented by but two or three examples. Of the former class there have been added three very good examples of different boats, the lone, a large canoe, 18ft.×36in.; the Annie, a still larger craft, 18×5ft., but without fixed keel or ballast, a very large canoe; and the Iris, also 18×5ft., but a deep, able boat, for rough water cruising, with a lead keel; so that the collection of canoe yawls now includes six typical boats, of all dimensions, from 14ft.×40in. up to 18ft.×61in., both keel and centerboard craft.

The family of sneakboxes, represented in the first edition by the primitive little craft of Barnegat Bay, has been increased by the addition of three new designs, all produced since the date of the first edition, the Barnegat cruiser, the FOREST AND STREAM cruiser and the Delta. Each of these represents a decided step in the development of a very handy general purpose cruiser from the primitive ducking boat, the best qualities of the latter being retained and the undesirable features eliminated until a very satisfactory cruising craft has been produced. Two of these boats were specially designed and built by the author of the book for the purpose of experiment, and after continued use both have been pronounced highly successful. A very interesting addition to the designs are the full lines and description of the Delaware River boats, the duckers and tuckups. Both of these boats, though enjoying a local reputation, have hardly been known to boating men at large, and neither had ever been described at length. The lines and full details of construction of each are given, for the first time; and with two other sailing boats make this branch of the collection quite complete.

The great value of the book to the canoeist, the boat sailor, and, above all, to the amateur builder, has been established by the practical test of its success, and even professional builders bear testimony to the clearness and accuracy of its instructions. From it alone many very good boats, and some particularly fine ones, have been built by amateurs and even novices. While it would be too much to claim that any one could become a skilled builder by purchasing and reading the book, there is ample testimony to the fact that very many have produced most creditable work, both in canoes and larger craft, with no other aid than its pages afford. The chapter on designing and drawing, though brief and elementary, has met with substantial praise from experts for its clear exposition of principles that are applicable to far larger work than canoe or boat design. Altogether, the book fills most completely a very important place in the library of the canoeist, the boat sailor and the yachtsman. In consequence of the increased size of the book and the number of plates, the price has been increased to $2.

WESTERN CANOE ASSOCIATION MEET.

THE following programme has been decided upon for the annual meet at Ballast Island, July 10 to 19:

1. Sailing.—Twice around Ballast Island. Open to all canoes, A, B and C.
2. Sailing. Class B. Three miles. Record event.
3. Sailing. Class A. Three miles. Record event.
4. Paddling. Class II. One-half mile. Record event.
5. Paddling. Class III. One-half mile. Record event.
6. All classes. One and one-half miles; sail first half mile, paddle second half and sail third. Record event.
7. Paddling. Class I. One-half mile.
8. Paddling upset. Classes I. and A.; 300ft. No special appliances allowed. At signal each canoe must be turned completely over, righted, and with crew inside paddle across the finishing line.
9. Sailing. Novices. All classes. One and one-half miles. Open only to canoeists who never sailed a canoe prior to Sept. 1, 1888.
10. Sailing for the Gardner Challenge Cup. Classes A and B. Six miles.
11. Sailing consolation. All classes. Three miles. Winners of either first or second place in events 1, 2, 3, 6 or 9 excluded.
12. Man overboard. At a given signal the crew shall throw overboard astern on the leeward side a paddle, pick it up again and continue on the course across the line.
13. Sailing for the W. C. A. Trophy Cup. Classes A and B, 7½ miles. Record event.
14. Sailing for the Longworth Cup. Class C only. Course, distance and day of race to be announced by the regatta committee before the race.
15. The carnival will be called at the discretion of the committee.

WINTER CANOEING.—*Editor Forest and Stream:* Judging from Commodore Bell, of Brockville, Canada, in the FOREST AND STREAM of Jan. 17., I am led to think that he must have entirely misunderstood my paragraph headed "Christmas Canoeing," in your issue of Jan. 3. Surely it was not a boasting spirit that led me to send the brief mentioning of our Christmas outing to the FOREST AND STREAM, but rather pure and unadulterated hilarity at being able to indulge in our pet sport in the middle of a northern winter. I hope Mr. Bell will quickly banish this erroneous idea, for being descendants of that old Puritanic stock, by whom boasting in any sense was never tolerated, it behooves us to at least try to follow their example in this line, and keep their precept good. We are glad to know that our Canadian brothers are enjoying this delightfully mild and pleasant winter, and it is good to see that they are improving it in the interest and pursuit of that most glorious of sports, canoeing.—OROKIE (Puritan C. C.).

NECKEN.

Editor Forest and Stream:

Kindly find inclosed a bit of rhyming, whose composition seemed the only way to free my mind from the haunting of the air "Necken." Should you think it worth a stick or two of type you are welcome to use it.—KORAX.

"LIGHTS OUT."

Air—"Necken."

DEDICATED TO THE A. C. A.

COMRADES, the embers are fading;
Paler the sleepy stars glow,
Night into morning is shading,
Sing, ere to slumber we go.
Good-night, till the sun through the willows
Rains gold in the lap of the sea;
Rest, till the bonny blue billows
Nod welcome to Phœbus and thee.

List! how the bird dreaming yonder
Trills a quaint song in its sleep.
Hark! how the breezes that wander
Mutter their plots to the deep.
Good-night, till the lances of morning
Crash 'gainst the shield of the sea,
Rest, till the surf shouts its warning,
And flings its gray gauntlets at thee.

Hush we our stories and jesting,
Laughter a moment restrain,
Here's to the homes where are resting
The hearts we'll return to again.
Good night to each naiad and wood sprite.
Good-night to the rippling foam;
Good-night to bird song and starlight,
But thrice a good-night to each home!

KORAX.

A SALT WATER CANOE KIT.

Editor Forest and Stream:

The members of the Puritan C. C., being interested in cruising, seek all means of making their canoe kits as comprehensive as possible, and for the benefit of some who may be just starting out upon a cruising career, I will give an example of one of our kits.

Of the canoeist's wardrobe nothing need be said, "'cause every people's different." The stores are carried in the tin box used as a seat, which is divided into a dozen compartments rectangular in shape, and filled by tin boxes with large screw covers. This tin box is in turn put into a tarpaulin bag made to fit, thus keeping everything dry. Probably the most troublesome things about a canoe kit are the cooking utensils; this inconvenience is completely done away with by our very comprehensive apparatus. We have in it the following articles of use in eating and cooking.

1. A large 4-quart tin pail with iron handle.
2. A frying-pan with folding handle.
3. A smaller tin pail with spout (for coffee, etc.).
4. A pail with handle, divided into two compartments with lids (lard and butter).
5. A 6-gill tin cup with folding handle.
6. A 5-gill tin cup with folding handle.
7. A 4-gill tin box with cover.
8. A salt shaker.
9. A pepper shaker.
10. A cover for be large pail (used as a plate).
11. Knife, 12. Fork and 13 Two spoons.
14. An extra plate.

In the first place, the frying-pan fastens on to the bottom of the large pail with its handle up the side. Then, No. 3 goes inside of No. 1, No. 7 in 6, No. 5 in 5, No. 5 under the handle of No. 4; then this nest all goes into No. 3. Nos. 8, 9, 11, 12 and 13 all stick in between 3 and 1, the spout on 3 making room for this. No. 14 is laid on top of all inside, and No. 10 forming the cover of all, and fitting snugly. The whole apparatus is put in a cloth bag made for it, and forms a very complete and useful kit, having fifteen articles all stowed in a gallon pail. Our whole outfit (including 6×6ft. tent) is contained in a tin box, a tin pail and a tarpaulin bag that will stow beneath the deck. ILEX.

LEGITIMATE CRUISING APPLIANCES.

Editor Forest and Stream:

I have been very much interested by the discussion in your columns as to racing appliances and the qualifications of a cruiser, partly because I think the A. C. A. is fast approaching a crisis. The remarkable success of canoeing is due to causes peculiar to that sport, and I believe that those who planned the Association laid down the only lines on which it can be a success. It might pay some one to consider whether the canoeists of to-day are not losing sympathy with the faith of the early canoeists. So surely as they do canoeing will lose its vantage. It wants a wise head and a firm hand to resist the tendency that would place canoeing on the same footing as shell boat racing or tuckups, hikers and other classes of small racing machines. Surely it at least claims a higher standard than these. But it seems to me that it is by far the best policy to maintain even at the cost of thinned ranks the higher level of the sport, and that it is by far less dangerous to frame the issue now, with little danger of division, than to drift indecisively a little further and find a split, not only possible, but inevitable.

The only reason for encouraging racing consistent with Association principles is that it affords a reliable test of the qualities of the boats and tends to develop both canoe and canoeist. I reason, however, that development in any direction in which the cruiser cannot follow is beyond the field of canoeing and should promptly be headed off by A. C. A. rules. The canoeist ought to be placed in a position where he need not choose between features destructive to his chances in the races or fatal to cruising.

But (and this "but" is the practical theme of my letter) it ought first to be intelligently decided what the proper qualifications of a cruiser are; and in this respect I protest against making any concessions to those who seek to make the plea of cruiser cover their timidity or their laziness. For surely the cruiser, who takes the only risk incident to canoeing, should be no way lacking in energy, skill and nerve

The cruiser cannot and should not employ in his voyaging either the standing rig or the sliding seat. It would be a concession to argue that point. Nor would there be any injustice in banishing those two annoyances at once; indeed it works an injustice to delay the decision, for it will relieve those who are justly opposed to them from the necessity of employing them and give time to adopt new rigs.

But there are weighty reasons why the cruiser should employ the centerboard in its latest development, and as these involve my understanding of the requirements of a cruiser and include matters about which there is some room for doubt, I think they ought to be included in the discussion.

The normal posit on for the board is amidships, and to place it elsewhere is but a compromise, for it is the pivot upon which the boat turns, and unless you want an eccentric you must put your pivot at the center, which will be amidships unless some consideration of model or rig should require it elsewhere.

But so far as I can see no consideration of model need change it. The fastest and most seaworthy model, I believe to be, and shall assume to be, where the lines forward and aft are the same. This necessitates sitting amidships, and it would of course be intolerable to sit astride your centerboard, but by placing your trunk so that the after end comes amidships the weight of trunk and board and of the main rig enables the crew to sit some little aft without making any fullness of stern necessary.

As for rig, with the board in this position, mainsail and dandy are as 6 to 3, while with the ordinary arrangement of board it is 5 to 1.5. To carry more than 60ft. in your mainsail while cruising would be unsafe, as length of mast and boom would make it dangerous in a sea. The former arrangement, therefore, allows 90ft. spread, and the latter only 75. The result of this arrangement is a perfect harmony of parts. Weight, center of lateral resistance, center of effort and greatest beam are all concentrated practically amidships. The nicety and certainty of balance, and consequently better windward work thus obtainable, is obvious. But a result, not perhaps so obvious, is that it makes a better sea boat than is otherwise possible, not only because she will respond promptly and readily to the slightest touch, but because when she meets a sea, coming in on the weather bow say, she lifts readily and allows it to pass under; for there is nothing in the way, no board to catch the force of the wave and send the boat sweeping off, both giving the wind a better chance at you and bringing a tremendous strain upon the boat. The board, by its position amidships, has no tendency to twist or turn the boat in any direction, and allows the action of the sails in the roughest weather to keep her properly headed. Meantime, owing to the balance of model and the weight amidships, she is held nowhere but amidship, so that bow and stern, like the hulls of a catamaran, are equally free to accommodate themselves to the necessities of the moment. Finally the boat is much stiffer, for at the point where the upsetting force is applied (center of effort) are arrayed all the elements of resistance (board, greatest beam and weight), which is possible under no other arrangement. There is, in short, a harmony of parts.

But it seems to me that these three matters of speed, a generous spread of canvas and the ability to go to windward, are, next to seaworthiness, by far the most indispensable requisits of a cruiser. That windward qualities are most valuable in heavy weather goes without saying, but speed adds no little to the pleasures and the comforts and the safety of cruising. It is a common experience in cruising to find that one boat can cover in a day twice the distance its companion can, and, therefore, in a cruise (usually limited only by time) can double the distance, variety and experience possible. In salt-water cruising (and in salt water only, with few exceptions, can nice sailing be done) the reaches are long and the wind more or less constant. Sailing is here the cruiser's principal method of progression, and he should be ready to take advantage of it with all the sail that can be conveniently and safely carried. Half the pleasure of cruising, and the part that will linger longest in memory, will be those better-skelter scampers at full speed across the green bays with the sense of quick motion due to the smooth, clean movements of a well-modeled and well-balanced boat. And some of the pleasure comes, too, from the appreciation of the fact that it is advisable to get across those same green bays as quickly as possible. To require the cruiser to place his board well forward would be to greatly impair the usefulness and efficiency of his boat.

Against these considerations it is urged that this position of board would be uncomfortable in case the cruiser should desire to sleep in his boat; and when the board is made readily removable, that he might want to sleep in it afloat, though this the requirements of cruising in this country hardly ever make necessary and very rarely desirable.

If distinctively racing appliances (of which the board in any position certainly is not one) are kept out I do not see that there can be any danger under A. C. A. limits that racing will develop vicious extremes of model. Natural laws make the boat that is most boat not only the best sea boat but the speediest. For in light weather model counts for little or nothing, while in heavy weather (when rapid motion develops waves) it is everything. A longer experience than canoeing has had has taught the shell-boat builders that the model fastest under a force applied as in rowing (or paddling) is for the midship section practically the arc of a circle. But for sailing yachtsmen seem now to agree that a deadrise section is best adapted for speed and seagoing qualities. Your flat-floored cruiser with its enticing spaces that tempt to overweight your boat if compelled to weather a storm is very apt to prove a death trap. Considerations of use, except such as determine the general type, need not and should not be allowed to enter into model and balance. These are of too fundamental importance to be conformed to any but the natural laws that apply to any boat. It is axiomatic that the boat best adapted to any locality is the boat in common use there. In canoeing the requisites of cruising in this country have developed a boat entirely different from the English boats, that is, a boat without ballast, essentially light and handy, a light, low deadrise boat (without grips if ought to be). Such a boat may not stand the weather that a heavily ballasted boat will, but it will stand far more than such boats as Notus and Vesper sailed without ballast.

But you must keep the water out, and in this respect the talk about "roomy" cockpits seems to me ill-considered. If my experience of two years in a Rushton Vesper is reliable, nothing is surer than that if your approved cruiser, with its flat floor and 7ft. cockpit were caught in a blow a mile or two from harbor it would founder. Hatches won't do the work, and an apron cannot be managed on so large a cockpit. The early boats, designed only for cruising, had small cockpits, and in racing the necessity for driving has led again to small cockpits. To be sure, it has already passed reasonable limits and should be restrained, but it ought to furnish a hint to the cruiser. E. M.

YONKERS, N. Y., Jan. 26.

Editor Forest and Stream:

It strikes me that the recent attacks on racing canoes are attempts to abolish one branch of the sport of canoeing. If my neighbor prefers racing to cruising, why should I force him to give up appliances that he finds suitable to his ends merely because they are unsuited to mine. One might just as well prohibit the use of outriggers and paper shells and compel all oarsmen to use tholepins and whaleboats, because you cannot use the former for fishing. Cruising and racing are two separate sports, and are so recognized by yachtsmen, and the sooner we imitate our elder brethren in this respect the better. In my humble opinion the attempt to make the racing men use cruising canoes is a monstrous piece of selfishness and laziness combined.

Selfishness—because the cruiser, not content with all the many pleasures and delights of his cruising tours, wishes to grab the one ewe lamb of his poorer brother, the pleasure of having one of the flyers. It may be retorted that this is not true, that what is wanted is a series of rules that will oblige all canoes to be suitable for both sports. You might just as well interbreed carthorses and trotters with the hope of getting thereby a perfect animal.

Laziness—because instead of leveling up they want to level down; instead of looking round for means by which the cruising canoe can be improved they want to compel the racing man to use their appliances in the hope that the canoe may be improved—by whom? by their more energetic and inventive brethern of course.

There is no problem I think so difficult to solve as what means can be adopted to impel cruisers to improve their craft. That great cause of improvement, emulation, is wanting.

Cruises are usually made alone; if there happens to be a party they generally wait for one another at the cross roads; if one canoe is cramped his friend's canoe takes part of the dunnage, while among the several outfits they can generally scrape together the necessities of life. How can emulation be supplied? Give the cruisers separate races at the A. C. A. Last year the would not be congenial enough to make a decent race. It would be worth trying though, and as the Thousand Islands is a lovely cruising ground, the probable presence of a large number of cruisers at the next meet would perhaps facilitate the experiment. But the cruisers must rely upon their individual efforts for progress. Let the cruisers show that they are in earnest in their wish for the improvement and encouragement of their branch of the sport by trying to improve their outfits, cruising rigs, etc., and the publication of their inventions for the benefit of their less successful brethren. If a member from each club in the country would even once a year report the inventions of his club, a healthy spirit of rivalry would soon spring up. Take the FOREST AND STREAM for the last year and then consider whether in the matter of progress the cruisers have kept up their end of the log. As a cruiser myself, I for my part feel ashamed. Above all, when the racers ungrudgingly give their time and money for the common weal of paddledom, do not criticise them harshly. Let us follow their example—be diligent, courteous and helpful. ASTICOU.

OTTAWA, Jan. 26.

["Asticou" will find our opinion of the lazy cruiser in the FOREST AND STREAM of Feb. 16, 1887. We have nothing to argue in his behalf, but there are few of his kind in proportion to the many good canoeists who must either give up cruising, own two or three canoes, or keep out of the races.]

Editor Forest and Stream:

I see that the old process of constructing a public opinion in the A. C. A.—by the persistent reiterations of two or three individuals—is once more going on in your columns. You have invited a full expression of opinion, and though I do not have any arguments to advance, and do not suppose the mere statement of my view likely to change any other man's notions, I will unburden myself.

First as to my point of view, I am a conservative; I was one of those who saw no good reason for abandoning the Thousand Islands as a place of meeting, and I rejoice afresh each time I remember we are to be back there next August; I have always believed in leaving well enough alone, and after racing at the last five A. C. A. meets I can not say that I find those sailing regulations such a bad lot after all. There seem to be three especial points of objection; let us take them in order. First the board projecting above the coaming. There is no trouble in getting ample area for windward work in a board housing entirely within the canoe; hence no one is put at disadvantage by one which sticks up, except the owner thereof, so if any other poor devil can't find an available piece of metal except a spare circular saw, I for one am entirely content that he be permitted to follow the example of our friend from Brockville without let or hindrance. Second the standing rig. Here also I consider the user is the sufferer; for though "Mac" generally relieves us all and sundry of any further need of thought or worry over the question of the relative speed of standing as compared with lowering rigs, I can't think of shouldering on to him my responsibility in the matter, and still go on thinking that a lowering rig properly built and handled will win its full share of the races, and that the presence of the standing abomination—so far as my own use goes, I cordially detest it, and wouldn't have one at any price—will act as a spur to draw out all the possibilities of reefing sails, to the permanent benefit of all canoeists. Third the sliding seat. Not being a member of the Lowell Club, I have never used one, and for lack of the requisite nerve, never expect to; but I have used a seat projecting considerably beyond the beam of the canoe. I have proven by experiment that I can hold up all the sail I dare carry, without a deck-seat, but the exertion of so doing is, in my present physical condition, greater than I care to endure, so long as I am not compelled to, so I use a seat running out just far enough to take my weight off my leg-muscles. I am well aware that the Lowell men get out considerably further than would be possible without the use of their seat, but I have not the nerve to demand that they shall give up a practice which I don't follow simply because I am afraid to do so. It amounts to just this. If I can win without adopting practices which some consider questionable, how much sweeter is my victory if some of my competitors have availed themselves of these possible advantages. On the other hand, should new limitations and restrictions be adopted, would it not be a dubious satisfaction to win, with the haunting thought, Would I have been the first, had not some of those other chaps been slowed down to my way of sailing? In the old days, before the Trophy was dreamed of, the great race of the meet was the "Unlimited Class B Sailing," the cruising rig and no ballast races had to take a back seat, but the winner of the unlimited had the proud satisfaction of knowing that each of his competitors was absolutely unfettered, and free to get the last second of speed out of his craft in any way his ingenuity could devise. So it is now with the Trophy race, and I don't believe I am the only one for whom some part of its charm will be lost if it ever becomes possible for a loser to say "If it hadn't been for those new rules—" In conclusion let me say, to prevent any possible mistake, that I am not advocating these devices, and have no sympathy with any one of them; but I am a believer in letting evils work their own cure. The "one rig" idea, not badly set forth by "Mac" in your last, has this in its favor, that it would in some measure equalize racers in the matter of pocket—truly a desirable thing. KATRINA.

1889—YACHTING—1889.

AS evidence of what we propose to do in the future, it is only necessary to point to what has been done in the past. It is now ten years since the FOREST AND STREAM, realizing the backward condition, as well as the grand possibilities of

AMERICAN YACHTING,

shaped for itself a new and clearly defined course, whose ends were the radical improvement of the pleasure fleet, the extension of the interest in yachting, the encouragement of Corinthian seamanship, and the systematic organization of the sport throughout the United States and Canada. As all yachtsmen know, this course has been steered successfully, in spite of strong opposition and many formidable obstacles; and the full measure of its success is shown by the advanced position of yachting to-day.

As such a course involved at its very outset a condemnation of models, methods and theories that were fairly established by long usage, and universally accepted as correct, appealing strongly to national prejudice, it is no wonder that it at once aroused a powerful spirit of opposition, not only among our rivals of the daily and weekly press, but among yachtsmen at large; and that the result was the largest and most important controversy that the yachting world has ever taken part in. The result is of so decisive a nature as to have impressed itself indelibly and beyond question on our national yachting. The once universal national type, the shoal, wide sloop with inside ballast, has disappeared forever, and with it has gone the paid racing hand and the old, faulty method of measurement. The leaders of the old fleet, but a few years since regarded as peerless, have been relegated to little better than houseboat duty, while their places have been filled by a new and immeasurably superior class of yacht, in which is embodied those principles of

DESIGN, BALLASTING AND RIG

that the FOREST AND STREAM was the first to advocate. We can claim with pride to have taken the lead from the very first, as well as having borne the brunt or the battle that has given to American yachtsmen a fleet of *Safer, Faster and Handsomer Yachts* than they ever before possessed. The many and varied developments of the past five years have brought some surprises that even the wisest and ablest yachtsmen and designers have not foreseen, but whatever changes have been shown to be necessary in minor matters, the broad principles first laid down in the FOREST AND STREAM of *Depth, Low Ballast, Cutter Rig and Corinthian Handling*, have been universally accepted throughout the country.

We need not allude further to the journals which at one time opposed our course than to call attention to the fact that those which still survive keep up but a dead semblance of yachting news during the height of the season, disappearing before the first frost, while the FOREST AND STREAM is

IN COMMISSION ALL THE YEAR AROUND,

freighted each week with a seasonable cargo of full and accurate *Reports of Races*, descriptions and illustrations of *New Yachts and Inventions*, lively and interesting *Cruises, Practical Information* in all technical matters. *Timely Discussion* of current events, and best of all, with the continuation of the series of *Designs* which has proved of such great value to all its readers. The collection which has appeared in the past in the columns of the FOREST AND STREAM is unequalled in the whole bibliography of yachting, including as it does working drawings of the best examples of pleasure craft of all types and sizes, both racing and cruising. Of these designs we need only mention Sea Fox and Alert, each the special feature of the racing in her class; Clara, with her unequalled record on both sides of the Atlantic, whose lines, sail and interior plans were given in full; Thetis, the first of her type; Shadow, the fastest of the 35ft. cabin yachts; Wona, one of Mr. Burgess's best efforts among the small craft, Cruiser, the fastest for years of the open boats of her class; Vanduara, Mr. Watson's famous iron racer. The two challengers, Genesta and Galatea, designed by Mr. J. Beavor Webb, whose interiors and details of construction, one composite and the other steel, were fully illustrated; Carmelita, the cruising schooner; together with a whole fleet of smaller craft, cutters, sloops, yawls, luggers, catboats, including Neva, Gem, Indra, Rondina, Fad, Yolande, Gipsy, Windward, Pilgrim, Aneto, Vayu, Gannet, Empress, Orinda, Carmita and Guinevere, together with *Sharpies, Fishing Craft, Houseboats, Hunting Boats* and other special types. These designs have been prepared for publication with the greatest possible accuracy, so as to serve as a guide and instructor for the amateur, and also to be of value to the professional designer and builder. A strong testimony to their value is found in the fact that nearly every one in turn has been reproduced in the leading yachting journals of France and Germany.

While the FOREST AND STREAM has led in yachting proper, it has gone still further in a new and popular branch of the sport, and has given a name and brought into prominence

SINGLEHAND CRUISING.

This department of yachting, so well suited to young men, has been steadily encouraged in our columns, and scores of special

designs and details for the use of the single-hand sailor, from the deep little sea-going cutter down to the sharpie or sneakbox for Florida and Great South Bay, have been fully described and illustrated. In close connection with this department, as well as in its application to larger craft, the cause of

CORINTHIAN SEAMANSHIP

has received special attention at the hands of the FOREST AND STREAM, and to it more than to any other factor is due the present most encouraging interest in *Amateur Handling* among Amer can yachtsmen.

While the sailing fleet naturally claims the first place, the fast-growing importance of

STEAM

entitles it to more attention each year, and we shall strive to give it more space than in the past. The steam yacht, in all its forms, from the grand and imposing ocean cruiser to the little naphtha launch, has become a permanent and successful institution. While there is every ground for pride and satisfaction on the part of the American yachtsman, not only in the great advance made, but in the generally prosperous condition of yachting throughout the country, at the same time there is much that is capable of improvement, and until the time comes when men are ready to admit that they at la t have found the

PERFECT YACHT AND PERFECT CANOE,

it will be the aim of the FOREST AND STREAM to lead the way toward better things in the future as it has in the past.

NEW YORK YACHT RACING ASSOCIATION.

ABOUT fifty yachtsmen met at the Gilsey House on Jan. 31, pursuant to the call issued some time since, and the organization of a union of most of the smaller clubs about New York was finally concluded. The following clubs were represented: Albany—J. G. Sanders, J. S. Hassel and M. L. Bowe. Columbia—C. M. Armstrong, Geo. Parkhill and O. Dietz. Jersey City—Com. Pierson and "Joe" Ilsworth. Knickerbocker—C. Caughtry, E. P. Mowton and F. J. Miller. Newark—Chas. Carmen, E. Grover and T. J. Rache. Newark Bay—J. Vreeland and H. Van Bussirk. New Rochelle—Com. Pryor, Lt. Z. Lewis and Geo. C. Foster. New Jersey—G. E. Garland and Richard Outwater. Sing Sing—F. B. Sherwood, B. E. French and W. W. Washburn. Tappan Zee—Capt. J. Styles, E. E. Weeks and C. A. Preston. Williamsburgh—H. Dusche and C. W. Voty. Yonkers—T. M. Taylor, C. T. Mercer and A. D. Petersen. Yonkers Corinthian—Com. Prime, F. A. Rigby and A. F. Rose. Staten Island Athletic Club, yachting department, J. C. Uhler.

Mr. Petersen, of the Yonkers Y. C., was called to the chair, with Mr. Parkhill, Columbia Y. C., as secretary. The chairman stated that the immediate object of the present meeting was to decide whether such an organization as had been proposed was desirable, leaving all matters of detail to be arranged at a subsequent meeting should the answer be in the affirmative. Com. Prime, Yonkers Cor. Y. C., one of the originators of the movement, then spoke of the necessity of some organization among the clubs racing small yachts about New York, the Hudson River and the sound, that should secure a uniform classification, measurement and sailing rules for all union regattas, leaving each club at liberty as far as its club races were concerned." He also stated that the subject of measurement would not be discussed until a later meeting, the main question being the organization in a general way. The next speaker, Capt. Joe Ellsworth, spoke strongly in favor of the proposed organization, but at the same time he suggested a mean length rule as the best possible one.

The opinions of a representative of each club in succession were then called for by the chairman, with a request that the question of organization only be addressed to, and that measurement question in particular should be omitted. Unfortunately his request was not adhered to, but after saying in a few words that he favored the proposed organization, each speaker in turn branched off at length into a defense of his favorite rule of measurement. Some wanted mean length, some length plus ½ or 1-5 overhanging, some length and sail area. One rule was objected to because it had "plus" in it, and nobody could be expected to know what plus meant. After a time order was restored and some questions of detail were discussed, preparatory to a second meeting, set for March 8, at which the association will be formally organized. The constitution of the New England Y. R. A. was discussed in detail and its main features indorsed. The name of the new organization will be the New York Yacht Racing Association, it will be open to all clubs in New York, New Jersey and Connecticut, with a membership of not less than 25 members, and a fleet of not less than 10 yachts. The final work of organization will be done at the March meeting, when a constitution and by-laws will be adopted.

The new organization has a wide field of labor before it, and if it is successful as it now promises to be, it may do a great deal of good for yachting in the smaller classes. The great difficulty will naturally be the measurement question. Many of the clubs which race open boats are firmly wedded to the measurement by length alone, and will not accept a length and sail area rule; while other clubs which have tried the latter will not go back to a length rule. However unsuitable for plumb stem and square stern, no owner of a cabin yacht to-day will consent to chop off both ends and make her look like a dry goods box in order to race under a length rule. All American yachtsmen are proud of the handsome Burgess yachts, from Volunteer down to the 15ft. cats, and yet not one of these yachts could be raced to advantage under the length rule. There is one simple and practical way out of the difficulty which we would recommend to the framers of a rule at the next meeting; to adopt a length rule, say length plus one-fifth overhang, as in the New England Y. R. A., for all open boats; and a length and sail area rule, that for instance of the Knickerbocker Y. C., the largest club that will join the Association, for all cabin yachts. Such a course would be fair to both parties, and if coupled with a definition of what shall constitute a cabin yacht, will cover the whole question.

With the measurement question satisfactorily settled and a good classification and sailing rules, the New York Y. R. A. is likely to become a permanent and useful part of American yachting.

BUILDING NOTES.

AT Ayers's yard, Bay Ridge, Mr. Mayfield's steam launch is nearly completed. She is 50ft. long, plumb stem and square stern, with a beam of 7ft. 9in. and a draft of 3ft. 6in. The hull is diagonal planked, with a thin inner skin of pine and an outer one of mahogany, the two fastened with brass screws and copper rivets. The boat is open save a deck at each end and narrow waterways. Riley & Cowley will build the engines. In the shop is a 45ft. launch for the steam yacht Oneida, to be fitted with the Otelit engine and boiler. She is also double skinned, but of white cedar. A seed has been built outside and beneath it the frame of Mr. Whitlock's cutter is rapidly taking shape. This boat, designed by Mr. Wm. Gardiner, will be 30ft. on l.w.l., with 10ft. beam and 7ft. draft. The ends have the fashionable amount of overhang, the copper stem being carried out further than usual in a very graceful sweep, while the stern is equally long, but very clean cut in its outlines and fined away at the end. The yacht will be used by her owner for cruising and life aboard throughout the season, but as the sails she will have speed enough to face anything in the 30ft. class. The deck is flush and below it is an abundance of room, a main cabin with two large locker berths, and an after cabin with four berths. The forecastle will have two hammock berths and room to swing a third man in a hammock if necessary when a racing crew is carried. This makes nine berths, if needed, on 30ft. l.w.l., an amount that should satisfy any one. The rig will be somewhat under the rest of the class. The boat will be ready in good season, the frame being already completed. She will be sailed by Captain Parker, of Itchen Ferry, formerly mate of the Irex.

At Mumm's yard Mr. Lawton's cutter is painted outside, and her mast has been stepped. We understand that the length, deck to bounds, is 55ft. The following measurements have been given as correct, the places of those published two weeks since: Length over all, 51ft. 7in.; l.w.l., 39ft. 4½in.; beam, extreme, 13ft. 8½in.; draft, 9ft. 1in. She will be named Chispa. Mr. Mumm has the planking and deck on the new compromise boat. His joiners are now busy with the interior of Sachem, which will be rentted with white mahogany.

At Frasple's yard, Salem, the McVey 40-footer is in frame, and the 30 will soon be started. The former will be completely fitted up below with cabin, after stateroom and galley, with all pantries, etc., for cruising.

Lawley has Col. Forbes's schooner in frame, Mr. Beebe's 40 is about timbered up, Mr. Lline's 40-footer is finished outside and cabin work begun, and the keel keel of Mr. Belmont's 40 will be run this week. Mr. Owen's 45-footer will be 57ft. 6in. over all, 45ft. 6in. l.w.l., 16ft. 6in. beam.

At Monument Beach Mr. Dunn has finished a new catboat, the Kiowa, for Mr. Lloyd Jeffries, Secretary of the Beverly Y. C. She is 24ft. 2½in. over all, 19ft. 11in. l.w.l., beam 9ft. 10¾in., draft 2ft. 2in.

At Osterville, Mr. Crosby is building a 24ft. 4in. boat for Bassett Brothers, of Chathamport; one 19ft. 6in. for Burrell Rotch, of Cuttyhunk; one 22ft. 5in. for F. Bloomer, of Chatham; one 23ft. 6in. for Almy Mayo, of Chatham; one 23ft. 10in. for B. F. Eldridge, of North Chatham; one each for F. W. Nickerson, North Chatham, and Macbeth Barton, 21ft.; two 13ft. sprit-sail conterboards for Alfred Nickerson and brother, of Wood's Holl.

At Harwich Mr. Jenkins is building a catboat 29ft. 6in. l.w.l., by 11ft. 3in. beam for Mr. Walter Lubau.

At South Boston Mr. Williams will build a second boat for the Mosquito Fleet, 21ft. over all, 15ft. 9½in. l.w.l., 3ft. 2½in. overhang aft, 5ft. 8in. beam and 3ft. 8in. draft, with 1,000lbs. of lead outside and 200 inside.

At Cleveland Mr. Wm. J. Munson is building from his own design a keel cutter 22ft. over all, 20ft. l.w.l., 6ft. 8in. beam, 4ft. draft.

At Poillon's yard, South Brooklyn, the sloop Wizard, lately purchased by Ernest Staples from Vice-Com. Colr, is out for replanking and 6in. more keel, including three tons of outside lead.

At City Island, Mr. Piepgrass has plated up the 53ft. yawl and laid the planksheer. The steel bulwarks will extend up to the rail. The lead keel has not yet been cast. This yacht is set up where Titania and Katrina were built. Next to her heavy keel blocks for the Morgan schooner have been laid, but the keel is not ready yet. South of the latter is Mr. Grinnell's schooner, now in frame and with her garboards fitted. She will be a deep centerboard craft, with an S section and considerable hollow to her floors. The centerboard trunk extends to the top of the house. The latter will cover the whole of the cabins and is necessary to gain headroom. The forecastle floor will be dropped a little below the cabin floor, giving headroom forward. The spars and ironwork for this boat and the yawl are now well under way. Banshee has had more lead added below her keel, making the bottom semicircular in section instead of flat. The basin is now being dredged out, so Wenonah has been hauled up on the railway between Titania and Katrina.

At Hawkins's yard the steam yacht Adelaide is being practically rebuilt under the supervision of Mr. Neils Olsen. The bow, that was damaged in the collision with the Providence, has been lengthened 5ft., while the round stern will be replaced by a long overhang. The joiner work is entirely new. The old wheel will be replaced by a Bartlett wheel. The old sloop Richmond, built in 1885, is now hauled out beside the Adelaide for some minor repairs.

BUILDING TO LENGTH.

WE have heard that some of the new boats of last year were actually over their class length, but were admitted as a matter of courtesy into the classes which they had overrun. This is a thing that should be very promptly dealt with, as there must be a hard and fast limit somewhere, beyond which neither designer nor builder should go, under penalty of being disqualified. In making a new rule it is only fair that old craft should be considered and allowed a little latitude in the matter of length for classification, but after the limits are fixed and publicly announced, no new yacht should be allowed to exceed them. It is the designer's place to see that she does not do so, and he or the builder must answer to the owner for any excess of length; but no owner has the right to bring a boat to the line which is built in defiance of the rules and to demand an entry for her. In cases of this kind the exact letter of the rule must be rigidly adhered to, and no leeway allowed beyond the exact limit. If an excess of an inch is winked at by regatta committees, there is no good reason why two inches excess should be ruled out, and it practically amounts to either an enlargement or abandonment of the class limit. The tendency now is to crowd the rule as hard as possible, to gain the last fraction of an inch in length, and this is all right if the designer is sufficiently sure of his weights to take the risk; but if he slips up and the boat goes below her designed draft and beyond her waterline allowed by the rule, neither he nor the owner can fairly ask that the latter be disregarded or changed. There are now many new boats on the ways or on paper, and we wish to call attention to this important matter in good season.

MY LAST SAIL.

TAKING in the surroundings, I queried aloud, "What if this old boat house could talk?" Not that any one would be sent to the look-up, unless aquatic lying is a penal offense; in that case not one would escape—no, not one. The Deacon roosted high in a canvas hammock; he had been reading "Spirit Land and Heavenly Bodies" in an old number of the *Living Age*, and at that moment his spirit was sailing through space. Rather paradoxical, but the Deacon is solid on spirits. Jimmy's go-as-you-please legs were affectionately embracing a red-hot stove, his clean-shaven chin nestled contentedly in tender palms, "in sweet meditation fancy free." An occasional grunt was all that told that he was of this earth. Jerry (the cat) sat up licking his forepaws; he had vainly been trying to fish out a piece of lemon peel that floated in a tumbler, essayed to stand on his head on the leg of a capsized stool, danced a jig on the stove and attempted to climb the pipe, anchoring at last in Jimmy's back hair. "What's the matter with that cat?" voiced the Commodore. "Whisky skins don't seem to agree with cats. Come, Cap let's be off" And leave the cat? "W-u-d-n't you tell me you sailed a race away back in the 40's to Chester buoy and return during a severe snow storm, with floating ice in the river, and didn't you invite me to take our last sail of the season to-day?" That settled it. In five minutes we were under way. Presently a wind hustler struck the ship a point or two off, and came very near dumping the whole business into the river. After that we put on our nursing caps. The water in the N.E. reach was rather eccentric in its wave making, throwing it up in chunks, as it were. The snow flew by in blinding scuds, and the wind just got into a fret and waltzed around like a dancing master; still the ship kept on top and made pretty good weather. Not a word was said for fifteen or twenty minutes, when the Com. (for short) jerked his head to port to avoid the sn w and flying spray, and abruptly said, "Cap, that fellow that struck us 'while ago was a masher. What ——" Just what he would have said will never be known; a "white cap" hit him square in the back, taking a round turn in the palaver and washing him into the bottom of the boat. He said afterwards he thought he meant to say, "What's the matter with the cat?"

Rounded the eastern point and took a long leg to port in smoother water. Passed a flock of ducks not 50ft. to leeward, huddled close together in the long grass and store debris. They did not get up. The water on the shoal off the willows broke in every direction and looked cross eyed for a jibe, which was inoperative. Topped boom, slacked peak and threw the boom over to starboard, all stand ng like a trooper's horse, and without accident.

Then the little ship, with about 8ft. between her sheet blocks, dashed off down the western channel like a singed cat. It was now snowing and blowing very hard, and we could scarcely see three boats' length ahead. "Cap, don't you think the ducks we saw to the east'd was drift stuff?" This was said with a cold-blooded, sardonic leer. We were both so far out on the weather quarter that every sea struck us in the back of the neck, the life lines keeping us from going overboard. Our limbs were numb with cold; in short, our situation was very precarious. With desperate energy I shook myself together, and with a stern demeanor, jutting the gravity of the occasion, replied: "Didn't you see the flock of ducks you spoke of this moment pass, just clearing the gaff? Had a double rest not been used in, the whole bunch would have went clean through the sail like a cannon ball. No, drift stuff don't fly that fast." It being impossible to locate the ship to a nicety, it was thought prudent to sheet home, and haul up for the weather shore. "Tapped Jo" for the first time, and while doing so shot under a three-masted schooner's bowsprit, and was out of sight in a moment, in the driving snow. "Close shave," coolly remarked the Com., with the same old barbarous haul down of his port optic, peculiar to him. "The big fellow boomed up so, I thought we had run into the public buildings." "Hark! Isn't that the paddle of a steamer? But what is she doing away up there in the air? Look sharp Com., we must be close under the land; bring the news as soon as you can see any thing." "See any thing, why I can't see the end of my nose." While yet speaking, the well known and now gladly seen wharf loomed right up ahead. To bout ship, pick up moorings and tap Jo was a joyful task, and quickly done. The Will Cook is 15ft. over all, and is a good sea boat, having many peculiarities of her namesake. Delights to romp about in rough water, and lug whole sail when decent boats are reefed; has a penchant for the fair sex, which appears to be reciprocal; amiable when treated right, but as vicious as an old he goat in March, if any one attempt to cut capers with her. Yes, she has many of the commodore's ways. As we walked up the ship some one seemed to say, "What's the matter with that cat?" but it was probably only the soughing of the wind around the gables of the boat house. This gem of boat literature originated with brother Bagley, after winding his opponent in a closely contested boat race, which he won. R. G. WILKINS.

BEVERLY Y. C.—A special meeting was held on Feb. 2, at which a committee was appointed to confer with the committee of the Corinthian Y. C. on the subject of a uniform classification and racing rules.

YACHT AND CANOE CRUISES.—*Editor Forest and Stream:* I have been very much interested in your correspondent Henry K. Wicksteed's account of his cruise on Lake Superior in the FOREST AND STREAM of Jan. 3 and 10. I have no doubt there are a good many more of your readers who, like myself, are passionately fond of boating and kindred amusements, but on account of business arrangements or other things over which they have no control, are located so far away from places where such amusement can be enjoyed, that it is only occasionally they can get away and indulge in the reality. To these the next best consolation is to do it in imagination with the hero of the trip, just the same as I did with your correspondent in his account of his cruise. With map by my side, completely absorbed and oblivious to all surroundings, I was with him from the time he lifted his anchor and trimmed his main and jib sheets at Port Arthur, and I followed him in his travels and adventures around Nipegon Bay and the lake of same name, then to the extreme N. E. corner of the lake, and back to the place he started from, and the pleasure I derived was only secondary to that of being there in person, for in imagination I was skipper and at the helm guarding the craft through the treacherous waters, not that I would wish to supersede him in this position, for I would be ever willing to ship before the mast rather than miss such a cruise. The description of your correspondent Ralph W. King, "Canoeing on a Fresh-Water Ocean," Nov. 8, "Cruise of the Sylvia," Dec. 13 and 20, also descriptions of Georgian Bay and Collingwood fishing boats by "Retaw," Jan. 10, have all given me, and I have no doubt a great many others, unalloyed pleasure in their perusal, and I trust for the benefit of those of your readers who like myself are less fortunately situated, we shall have many articles of a similar character from that portion of your correspondents who are more blessed with time and opportunity.—T. CHADWICK (Des Moines, Ia., Jan. 24).

AGRICULTURAL METHODS IN YACHT BUILDING.—Over among the Jersey and Long Island truck farms, where celery is grown by the acre in long pits, as soon as the plant is well rooted and some six inches above ground the earth is banked in about it, this process being continued from time to time, until what was at first a trench becomes a high ridge. A similar plan has been adopted in the construction of one of the new flyers of the season, now well under way. As soon as the keel was cast and the bolts driven, earth was piled in about it, so that it is most effectually screened from the vulgar gaze, and no one can tell whether it is one foot or four feet deep. We cannot say how much further the process will be carried, but it looks as if the intention was to fill in successively after the garboards and planking, so that when completed the boat will have to be dug up for launching. This plan would be cheaper and more effective than the closed shed method employed in Thistle.

QUINCY Y. C.—The annual meeting was held on Feb. 2, with Mr. Geo. M. Saville in the chair. The following officers were elected: Com., John Shaw; Vice-Com., George G. Saville; Meas., W. M. Maybury; Sec. and Treas., Henry M. Faxon; Regatta Committee, John W. Sanborn, Paul R. Blackmer, E. B. Glover, Harry L. Rice, Harry H. Sheen; House Committee, W. H. Shaw, H. M. Faxon, William A. Dewson, Fred L. Rice, Warren F. Page; Delegates to N. E. Y. R. Association, commodore, secretary and one member to be selected by them.

TORONTO AND ROYAL CANADIAN Y. C.—The union of these two clubs was formally carried out on Jan. 25, each club meeting and electing certain officers, after which a joint meeting was held. The officers are: Com., A. R. Boswell; Vice-Com., T. McGaw; Capt., Hume Blake; Hon. Sec., S. Bruce Harman; Committee, Messrs. C. C. Dalton, Beverley Jones, Dr. F. Lesslie, C. Ryerson, R. F. Stupart (of the R. C. Y. C.), and Douglas Armour, F. B. Polson, L. V. Percival, J. Wilton Morse and W. S. Jackson (of the T. Y. C.).

CRUISING.—Gitana, schr., Com. Weld, completed her repairs and sailed on Feb. 2 for Gibraltar, where her owner will join her. Dr. Thatcher Goddard will make the trip out on her, returning at once by steamer. Capt. Sherlock will drop over a bottle every day, giving position of the yacht... Narod, steam yacht, was at Brunswick, Ga., on Jan. 30... Coronet, schr., Mr. R. I. Bush, arrived at Aden on Jan. 30, on her cruise around the world.

KNICKERBOCKER Y. C.—At a special meeting on Jan. 30 the vacancies in the board of officers were filled, making the full list as follows: Com., L. Lefferts; Vice-Com., R. Oelsner; Rear-Com., C. Doughty; Sec., A. Varian; Treas., J. Harris; Meas., C. Coughtry, and Fleet Surgeon, Dr. E. Ringer. Board of Directors, G. K. Roseupest, A. Christie, Jr.; J. S. Harris, A. Steen and J. A. Morrison.

A SUCCESSOR TO PETRONILLA.—It is now known that the new 60-rater building from Watson's designs at Fay's is for Lord Dunraven, owner of Petronilla, designed last year by Richardson, but not a success thus far. The new yacht will meet Yarana this season, but there is no prospect of either coming to America.

ALVA.—On Feb. 1 Mr. Vanderbilt and his party reached Baltimore, where the Alva was in waiting, and went aboard the yacht, but she did not sail until Feb. 5. The party included Mr. and Mrs. W. K. Vanderbilt and their three children, Messrs. W. S. Hoyt, Gould Redmond, O. H. P. Belmont and Dr. Keyes.

ICE YACHTING.—On Feb. 1 the first challenge race of the season was sailed on Orange Lake in a brisk N. W. wind, the winner being Esquimau, H. S. Ramsdell, in 27m.; with Cold Wave second and Get There third. A second race was started, but did not finish for lack of wind.

ENCHANTRESS.—We call attention to the advertisement on another page of this famous schooner, built in New York, but owned for some years past in England, where she is now offered for sale.

CHANGES OF OWNERSHIP.—Adrienne, schr., has been sold by Mr. Lancaster to Mr. Buck.... Agnes, sloop, has been sold by Dr. R. Van Nostrand to Trenor W. Park for $2,500.

SARACEN.—Mr. Fowle's cutter is out at Lawley's to have her lead keel recast in deeper and thinner form. She will also have a larger rig next season.

GLIMPSE, schr., Mr. Benoni Lockwood, that struck on a reef last fall, has been repaired at Hawkins's yard, City Island.

MARIQUITA.—This name has been given to the new Belmont 40.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

M., Mahanoy City, Pa.—Vanne to (A.K.R. 2303) was by Count Dick (Dan—Countess) and out of Petrel (Prince—Lille II.).

R. J., Newburgh, N. Y.—"Standards and Points of Judging for all Breeds of Dogs" contains the information you ask for. For sale at this office, price 50 cents.

H., Cortez, Colorado.—In your issue of Jan. 17 you make mention of the Boone and Crockett Club. Will you kindly inform me the address of the secretary? Ans. Archibald Rogers, Hyde Park, Dutchess county, New York.

WANTED TO KNOW from the hunters of Pennsylania and West Virginia where is the best place for black bear. What time in the spring would be the best time for one to take a hunt for them? Any one who knows the above questions will please write at once, and oblige one anxious to know.—LEVY DWYER, M.D., New Petersburg, Highland county, O.

INTER NOS, Manchester, England.—A young naturalist, thoroughly skilled in all branches of the profession, who could and would make a specialty of big game and fish, asks your valuable advice as to whether he would do right in leaving England to go to some town in Florida and start a business there. Is there sufficient work done to warrant my doing so? Ans. Should decidedly question the wisdom of such a step as you propose. There are already more taxidermists in Florida than the State can support.

NEW YORK, May 17, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—It affords us much pleasure to report upon your latest Climax shells with strong primers received this morning. We have tested them with Schultze powder, and find them simply excellent in every particular and practically equal to the best adapted English primer. Two and a half drams to 3½grs. of Schultze powder in 12-bores and 3⅛ to 4drs. in 10-gauge worked to perfection in your shells, loaded simply like black powder and without ramming. Very truly yours (Signed), VON LENGERKE & DETMOLD.—*Adv.*

HUNTER'S PATENT
Safe & Rapid Loader.

Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr. Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

FOREST AND STREAM.

Among the series and papers which will appear in the FOREST AND STREAM in 1889 may be named these:

Sketches of Frontier Life,
Indian Folk Lore and Life,
North American Mammals,
Hunting in the Himalayas,
Hibernation of Reptiles and on Snakes' Weapons,
The Summer Hunt of the Pawnees,
Special Correspondence from the West,
Shooting on Mount Olympus,
Lost in the Forests of Acadia,
Five Days a Savage,
Domestication of Game.
The Sunset Club,
The White Goat,
The Forest and Stream Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps* and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abija Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, FEBRUARY 14, 1889.

VOL. XXXII.—No. 4. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

DUCK SHOOTING SUPPLEMENT.

The next number of the FOREST AND STREAM *will contain a four-page supplement containing papers on wildfowl shooting.*

ADVANCE.—II.

AN English nobleman who was hunting in Newfoundland made it a practice to measure off with a foot rule the salt pork which he gave to his Indian guides for the camp meals; and one day having seen a huge chunk of pork put into the pot to come out again much reduced in size, as pork has a way of doing when boiled, his lordship asked the cook, "What has become of all the pork that was put into that pot."

During the past fifteen years much effort has been made in the cause of game protection and fishculture, but the result has not been a commensurate reward for the endeavor. The pork that has come out of the pot has been shrivelled and altogether disproportional to what was put in. The discouraging reflection is, that while it is the nature of pork to shrink in cooking, as our English friend no doubt found out before he emerged to civilization, there are no known natural laws to diminish the results of game and fish conservation efforts. Perverse human nature and ignorance alone are to be credited with setting at nought the intelligent and public-spirited movements which look to the restocking of our waters with fish and the permanent possession of a game supply in our fields and forests.

There are encouraging indications that these elements of moral and mental hindrance are being overcome. Last week we noted the new order of things in Michigan where, thanks to the persistent efforts of the Michigan Sportsmen's Association, a game and fish warden system has been put into active and effective operation. The long debated question of protection in Michigan may now be considered as settled; public opinion is making in the right direction.

The report of the Wisconsin Commissioners of Fisheries, now at hand, gives abundant testimony of a change of public sentiment, which is to be taken as an evidence of the sound basis of fishculture in that State. More significant than the tabulated exhibit of fish eggs distributed by the Commissioners is their showing of the friendly attitude of the fishermen toward their work. When Wisconsin and the other States bordering on the Great Lakes set about the enterprise of restocking those waters with food fish, the fishermen looked upon the work with distrust and skepticism. They disbelieved in the practicability of the effort, they were strongly prejudiced against the Commission, and they resented any interference with their business. Like fishermen the world over—taking all the fish they could net whenever and wherever they could find them—they looked upon restriction as interfering with rights established by usage. This was their attitude in the beginning. The work of stocking went on; laws were enforced; time did its work. To-day has come the fruition. "The fish merchants," says the report, "who are as intelligent as any class of business men, are strong in the belief that without the aid that has been extended to the industry by our State, the business of taking fish would not and could not be made to pay." They have been converted by the logic of time, as demonstrated by figures. It is a simple sum in arithmetic! Catch of food fish in the Great Lakes:

For 1886, 4,924,149 pounds.
For 1887, 5,541,744 pounds.
For 1888, 8,780,780 pounds.

The gain of 1888 over 1887 was 3,239,036 pounds; over 1886, 3,756,631 pounds. With such magnificent demonstration of the result of intelligent fishculture, public support could not be withheld from the workers in the field; prejudice cannot maintain its ground in the face of such statistics. The question of fishculture in Wisconsin is settled.

AN INDEX OF CIRCULATION.

THE index of Volume XXXI., which is printed to-day, is more than an ordinary catalogue of what has been published in the twenty-six numbers of the FOREST AND STREAM from August to January. It is an index of the circulation of the paper, as shown by the correspondence contained in its columns. Take that snake-swallowing snake topic, for an example. A Connecticut surveyor wrote to us about the ways of snakes and expressed a disbelief of the habit of mothers swallowing their young, whereupon there poured in the testimony of twenty-three correspondents, in Pennsylvania, Nevada, New York, Iowa, Connecticut, Massachusetts, Tennessee, New Hampshire, California, Illinois and Mississippi, many of them testifying to the fact that they had themselves observed the snake swallowing. Here then was a fact in natural history upon which the FOREST AND STREAM collected and has preserved in its pages a store of valuable testimony. Without its wide circulation the paper could not have done this, nor without a circulation among intelligent readers.

Just here is one characteristic and peculiar element of interest which FOREST AND STREAM possesses in a degree, we may say, without parallel among other journals. It goes everywhere; what it prints is read and commented on; and in this interchange of experience, observation and opinion is supplied an element of value and interest which sets this journal apart from all others. We have often said that what the FOREST AND STREAM is to-day must be in generous measure credited to its reader-contributors. Judicious advertisers take into account both the extent of a paper's circulation and the character of that circulation; these elements are not less worthy of note in making up the estimate of value attached to our reading columns.

SNAP SHOTS.

THE menhaden pirates are making their best fight at Augusta to get the seining law repealed. If they do, farewell to food fishes in Maine rivers and small bays; farewell to shad, alewives, bass and salmon in the rivers and mackerel on the coast. We know just enough about them to know that they don't care a farthing what they scoop up in their seines. Maine has had sufficient experience with the menhaden fleet to know better than to yield to their demands; at least there are people on the Kennebec who can enlighten the Legislature, for it was not so many years ago that the menhaden fleet was scooping the Kennebec, and along with the porgies took in barrels upon barrels of shad, and as a "tub to the whale" gave away many shad to the people of the neighborhood who went on board their boats.

Newfoundland is considering an ironclad deer law. The proposition is to require from non-residents of the island a license fee of $100 for deer hunting, and to limit the number of deer killed by each party (not each individual) to five in a season; sportsman and guide are to be required to make oath to the number killed; and the fine for violating the law will be very heavy. Talk of such vigorous measures has been prompted by the exploit of an Englishman, who is reported to have killed something like a hundred deer in one campaign, leaving them to rot. If this law goes through it will cut off many American sportsmen who are looking forward to Newfoundland hunting excursions. It will also circumvent the project of starting a venison cannery in the Province.

Several correspondents send us the suggestion that the sale of game should be stopped entirely; and one, more aggressive than the rest, proposes a boycott of transportation companies which bring game to market. The sale of game will go on for hundreds of years yet, if there shall be any game left then to sell; it is a waste of ink to advocate the entire abolition of game vending; and as to boycotting, even if that were a legitimate method, it would never be done, for where one person has any thought or care for game protection, there are thousands who know and care nothing about it.

It is reported from Montana that the Rocky Fork Railway, whose route as laid out extends from the Northern Pacific R. R. near Billings to the mining camp known as Cook City, has at last laid its rails across the southern boundary of the Crow reservation, thus removing all doubt about the completion of the work before March 4, 1889, when the bill granting right of way across the reservation would have become void by expiration of time. The road will tap the coal banks at a point six miles from the Rock Creek Mines.

Nevada's mountain sheep having been diminished by hunting in season and out of season, the Virginia City *Enterprise* suggests that Angora goats be turned out to revert to wildness and take the place of the indigenous mountain game. It is said that some goats which have escaped from the ranches have thrived and demonstrated that the breed can maintain itself; and an Eureka hunter has brought one of them down with his rifle. Some might take kindly to the pursuit of this "mountain mutton," but they are not to be found in this generation of American sportsmen.

Mr. Geo. S. Marsh, late General Passenger Agent of the Milwaukee, Lake Shore and Western Railway, has gone into the Milwaukee and St. Paul Railway as Assistant General Passenger Agent, where he will no doubt interest himself as actively as ever in putting sportsmen on the right track to shooting and fishing grounds. The passenger agent is one of those public-spirited, universal-aid officials who cannot hope for a full reward of their work in this world; and they never perform any service for which more thoroughly grateful appreciation is felt than when they tell one where to go fishing.

If State legislatures were composed exclusively of men with an average gift of common sense, we never should hear of such bills as that which has been introduced into the New Jersey Legislature by a member named West, authorizing land owners to shoot on sight dogs found on their lands in pursuit of game. New Jersey has some cranky game laws on her books, but surely no one except Mr. West can treat this measure seriously.

We hope that the series of papers describing the Chicago shooting clubs are given the careful reading they deserve, for they touch on many subjects of wide interest and application.

Supposed to have been settled for all time, but now disputed—That sawdust is injurious to fish; that snaring cleans out the grouse; that trout and bass cannot live together.

As reported in our trap columns, the American Shooting Association is now fairly launched upon what, let us hope, will be a long career of usefulness and prosperity.

Maine canoes go to England for use on the Thames, where they are growing in popularity.

The Sportsman Tourist.

A MONTH IN THE ROCKY MOUNTAINS.

"WHY spend your vacation loitering about the piazza of some summer resort hotel, probably not fifty miles from the place where for fifty weeks in the year you do your regular work, tiring yourself out planning what to do next, and working yourself into a fine frenzy by making and listening to remarks about the hot weather, rendered ten degrees hotter at least by your anxiety about it? Better stay at home and attend to your business. When I get a month's leisure ahead, I intend to put myself into a new climate, with all my surroundings, mode of living, and habits as regards food, raiment and shelter, as different as possible from that of every-day life at home. What a country man needs is a visit to the city, but what a city man needs is a trip to the country, and when I go it shall be to the remotest part of Uncle Sam's dominions, as far from railroads and civilization as it is possible to get; in fact, in the most distant part of the Rocky Mountains. If there is one part more distant and isolated than another, there I expect to pitch my tent; if there is a place where the elk and the grizzly and the bighorn can be found at home, there I intend to visit them; in short, if there is a spot within the limits of the United States where the foot of white man has never and Indian seldom trod, there is where I shall set my foot."

This is a sample of an annual speech which, with slight variations, the writer has made for about eight summers when the subject of vacations came up for discussion. My remarks were usually received with favor as to the ideas expressed, but with more or less doubt as to whether they would ever be carried out, and with still more doubt as to the practical results in the capture of any of the aforesaid animals.

At last, however, my time had come. A month's leisure ahead—the month of September—with the certain prospect of spending it in the Rocky Mountains. It was a time of high anticipations. My friend Joe Moore, who had left a year before to engage in sheep raising in Wyoming Territory, had furnished encouraging accounts of the abundance of game and fish, and of the beauties and healthfulness of camp life. I had obtained everything needful in the way of hunting and camping outfit, and many things not absolutely necessary as later experience proved, and on the first day of September was ready for the start.

The first thing to be considered in a hunter's outfit is his rifle. Mine was a .40-60 Marlin, half magazine, pistol grip, handsome, checked rifle stock. It had been made to order and was a thing of beauty, this last quality, however, not essential on the plains. Its weight was about 7lbs., and with a sling strap for convenience in carrying, there never was a more convenient and effective weapon of its size. Of course a heavier barrel might on occasions be held steadier, and be subject to less shock and consequent variation of the ball on account of recoil, and by a hunter willing to carry the extra weight, might be preferred, but the .40cal. ball, driven by 62grs. of powder, is large enough for all game under ordinary circumstances, and, unless the hunter is gifted with unusual powers of endurance, 7lbs. will be found quite heavy enough toward the afternoon of a long day's tramp, in a country too rough to travel on horseback, and when added to the weight of the other necessary accoutrements of cartridges, revolver, hunting knife, etc. And here let me add my testimony to that of the majority of hunters whom I met in the Rocky Mountains, that there is no hunting rifle yet made that is equal to the Marlin. I could use in mine either the express solid head or patched ball with equal facility through the magazine, although it is better to use but one kind of ball, as the different kinds will vary somewhat in their flight, and the sportsman had better accustom himself to the use of one.

But I could not be content on so grand a trip as I had before me with carrying a rifle alone. My respected uncle, a veteran deer hunter of western New York, had suggested to me that I was not going to the Rocky Mountains to shoot birds, could do that at home, and better not be encumbered with a shotgun. "You can't carry both at once, and when you want one, you are sure to have the other." But I urged that while the rifle was certainly the proper weapon for the expert woodsman on the large game I expected to meet, still I might not always find the large game, and that a shotgun in a country where one is dependent on his gun for his meat, might be the more useful weapon in the hands of a hungry amateur, and so it happened, for on one or two occasions our camp would have had less for supper and breakfast had it not been for my shotgun. And now a word in description of my shotgun. Like the rifle, it was a beauty—a Baker three-barreled gun. This gun has a rifle under the two shot barrels, and is so arranged as regards its use that the rifle adds very little weight, and nothing to interfere with the independent use of the shot barrels. As a shotgun it is as good as the best, and as a rifle it is accurate enough for ordinary hunting purposes at short or medium range. It takes the old Winchester .44-40 cartridge, which has probably killed more large game in the West than any other. I had the right hand shot barrel bored out to a cylinder and was prepared with solid balls to fit, and with the variety of cartridges that could be used in this gun, I was prepared to bring down a hummingbird without injuring its skin for the taxidermist, or to slay the grizzlies if they should swarm around me. Along with this gun, as with the Marlin, I had a set of loading implements, and a stock of powder, lead, etc., much larger than necessary, as the greater part of it was given away to hunters and Indians to save bringing it home, after being carried around by every means of conveyance known on the frontier. To the above armanent I added a .44cal., 11in. Colt's revolver and a good, strong hunting knife. The knife and belt proved useful articles, but the revolver was of no use whatever, was very heavy to carry, and after the first few days was left in the tent, and its place filled with a hatchet, a much more useful implement. It is not to be denied that a good revolver is often a convenience on the plains and in the mountains, and a smaller and lighter one might be well enough to carry on a hunt. For cowboys and ranchmen, who cannot conveniently carry a rifle, the large Colt's revolver is the very thing; they are nearly as effective as a rifle at short range when large game is accidentally met with.

From any modern hunter's outfit should never be omitted the camera. A small light affair can be had for a few dollars, and the field manupulation of it can be learned in as many minutes. The hunter is not expected to be an artist, but he wishes to bring home remembrances of camp views, and the scenes of his exploits in the wild region he may never visit again, and then, better than all—the camera never lies.

And now, by way of explanation and warning to the reader, let me say that hunting in real hunter's life does not always mean killing, and if the reader hankers after hair-breadth escapes and blood-curdling encounters he had better throw aside this paper and save himself the disappointment; but, gentle and indulgent reader, if you will be interested in a faithful record of the little incidents of a hunting trip such as one might meet with in the best hunting grounds now left within the boundaries of the United States, a truthful recital of its hardships and its pleasures, its good and bad luck, its hits and misses, and if you are willing to indulge the writer in his observations upon the natural history of the region visited—its animals and birds so far as we met with them, the climate, the scenery and the people, then—come along. Our "way back" ancestors were hunters from necessity, and although the long lapse of intervening civilization has superseded the necessity or desirability of getting a living by the chase, there still remains in most of us a vestige of the blood-thirsty instinct, tempered it may be and ennobled by a love of nature and a desire to escape the drudgery of business for a while and get into the woods again, yet we all feel the fascination of being "in at the death," and often, alas, whether the game be large or small.

On the morning of Sept. 6 I arrived at Rawlins, Wyo., and remained over one day to make some final preparations. I cannot refrain from mentioning the courteous treatment and many favors here received from the Rev. Dr. Huntington, of the Episcopal Church, and his entertaining family, both at this time and later on my return home.

The next morning came bright and sunny, as in fact nearly every morning does, for it seldom rains here. The cool dry atmosphere of this elevated region—6,000ft. above the sea—has a wonderfully beneficial effect on one from a southern climate, and I already feel the good effects of it very decidedly. My enthusiasm takes a new start at the sight of "antelope steak," printed on the bill of fare at the hotel. Here is conclusive evidence that there are antelope at least somewhere in the country, and if any one can find an antelope we can. Our course from here lies due north. Our vehicle is a heavy compact structure of the Western stage coach type, well built and intended to stand long and hard service. I climb up on the outside and take a seat with the driver. We have four splendid high-spirited horses, and with the light load, for there is only one passenger besides myself, they start out at a good fast gait, which is quite encouraging when we think of the one hundred miles of this kind of travel before us. We are soon beyond the sight of houses, and spinning along over the smooth sandy road. To an Eastern eye the landscape is new, strange and interesting. What impresses one first is the utter unproductiveness of the country. We are on the borders of what is known as the Great American Desert, and for miles and miles in every direction stretches a vast sandy treeless plain. Toward the middle of the day as we get further north the country becomes more uneven and broken. Fifty miles to the west we can see the outlines of Elk Mountain, covered with dark green pines, and here and there abrupt rock ridges break the even circle of the horizon.

We seldom meet a vehicle or traveler, and pass no houses except the little log huts where we stop to change horses, twenty miles apart. The country is practically uninhabited and uninhabitable, and to an Eastern eye presents a scene of utter lonesomeness, even desolation. A hawk is occasionally seen circling in the air, a prairie dog may dodge into his burrow at the approach of the stage, or a number of little prairie birds, somewhat in appearance like our English sparrows, may flit out of our way, but aside from these all is barren and lifeless. There is not a tree in sight. Some thin blades of dry parched grass seem to be trying hard to exist among the drifting sand, and a stunted yellow-blossomed weed, with the ever-present cactus, constitute about the only plant life, except the sage bush. The sage bush is the only thing that makes anything like a show of flourishing. This is found everywhere, the most abundant growth in all the country. Clear up to the foot of the Rocky Mountains the great plains are covered with it. The plant is very much in appearance like the common garden sage, except that it is much larger, spreading out on good land to several feet in circuit and four or five feet high. Its large bunches of roots, lying on top of the ground, form the only impediment to driving a buggy anywhere on the plains. It is said that sheep and cattle will browse upon the sage plant when deep snows prevent them from getting to the grass. The herders make use of the root for fuel when camped away from timber, but its most useful office is to retain the snow during the strong winter winds and hold it for irrigation in the spring. We pass a number of prairie dog villages, and hundreds of the little varmint are running about from one burrow to another, or sitting up on their haunches, giving the appearance at a little distance of so many posts stuck in the ground. They seem to increase and multiply where no other animal could possibly live, and in fact to thrive best in the sand-hill country, where even the sage bush looks sickly and discouraged. What they eat and especially what they drink is past my finding out. Their skins are of no value and their flesh is not eaten by a dog.

Our driver, a typical Western stage driver, a hero no doubt in his way, managed his four horses with excellent skill. He assumed a sullen, independent air, like many Western characters I met. He was disinclined to talk, and seemed to regard my questions about the country, the game, etc., as evidence of weakness or curiosity on my part scarcely worth his while to gratify. He gave strict attention to the business in hand—I might say the four-in-hand—seldom looking either way; in fact, he seemed to wish to convey to me the idea that the driving of the four horses required every exertion of mind and muscle, and that he could not be annoyed by any small outside matters. But I do not want to say anything in disparagement of the stage driver; he has certainly acted an important part in the development of the West, and a difficult part it has been. Those I met seemed faithful and competent, if they were unsociable. Everybody here seems to trust them. The stage company does an express and money order business, and it is usual to have valuable mail and packages aboard. His surly, swaggering manner, together with his big Colt's swung to his belt and another one usually in a convenient place on the box, somehow give one an impression that he would be a good man to have around in case of an attack.

The wind, an ever-present factor on the plains, blew to-day steadily from the west, and the cloud of dust we raised was drifted to one side; but when the wind "follows," that is, blows in the same direction the stage is going, it becomes uncomfortable, the strong alkali in the soil filling the nose, mouth and eyes. The pursuit of game, of course, being uppermost in my thoughts, and recollecting the antelope steak for breakfast, I inquire of the driver whether he ever sees any when passing through the country, and he replies that he sees them often, and glances around to a level stretch of prairie on the right, remarking that the vicinity is a good place for them. At this remark I suggest that perhaps I had better get my rifle ready, but his sarcastic smile leads me to think that he does not consider my chances very good for shooting antelope from the stage.

In summer the sun pours down upon these gray sandy plains, destitute of verdure to allay its fierceness, hotter than upon any Southern plantation, and in winter the wind and cold are actually cruel. Just one month later, on Oct. 7, I came over this same road, and, although I was dressed warmly as possible in woolens and furs, it took lively kicking inside the stage to keep from freezing. How the driver managed to exist on the outside, exposed to a gale that threatened to overturn the stage, with the snow drifting from one to two feet in depth, leaving no traces of the road, I cannot understand. This was in October. What must it be in January? I can think of no occupation that imposes a severer test of a man's endurance than that of a stage driver on the night run from Rawlins north, in winter.

We had seen no signs of game all day, but just at sundown, as we approached a little way station where the stage stops to change horses, a flock of five or six sage hens started out from nearly under the horses' feet. They were great large birds, nearly the size of common turkeys and about as tame. I made an excited grab for my three-barrel, but the driver interfered by saying that the firing would frighten the horses, and so the first game was allowed to walk off unharmed. And this reminds me that we have been a good while getting this far on our hunting trip and nothing killed yet. Be patient, kind reader, a while longer.

At one place where we stopped to change horses, a little incident occurred which might be mentioned as illustrative of the "manners and customs" of this section. This station consisted of one log shanty that did service both as house and barn. That is to say one end of the stable was devoted to housekeeping by the man who had care of the horses. For some time all the refuse from the stable, straw, sawdust, manure, etc., had been thrown in a heap just outside the door on the west side. By some means or other fire had got into and through this heap of rubbish. It would not blaze, but the smoke it sent out was simply immense, and a good strong, steady western wind sent the dense ill-smelling smudge through house and barn, literally smoking out horses and man. The man, a fat old Dutchman, had been hard at work all the morning carrying water from the little feeble spring in a vain effort to put out the fire, or rather to stop the smoke. Now, we must and do obey the command to "swear not at all," but in all deference, be it said that there are times when, places where, and circumstances under which, thoughts and feelings come to us which tempt expression in "cuss words." As we halted in front of the stable we could hear a mumbling of muttered oaths coming out from the volume of smoke. The sounds grew louder, and finally out came the waddling form of the old Dutchman, and from his mouth was pouring a stream of profanity that fairly made the air turn blue. We have all heard of the man who could not do justice to the occasion when the tail-board of his wagon load of pumpkins came out on the top of a hill, but here was a case of equal provocation and a man equal to the emergency. I afterward heard a great deal of the "picturesque language of the West," high and low, but I never heard such a variegated jumbling of unmixed cussing, as if every language had been drawn upon for a supply, as the old Dutchman made use of to give relief to his feelings. The imprecations were directed against the person that caused the fire, who of course was not present. He presented such a comical sight as he waddled out through the smoke with the perspiration running down his face, his broad-brimmed hat on the back of his head, and the one suspender scarcely sufficient to support the only other garment besides the woolen shirt, that myself and fellow traveler were overcome by the situation and lay down on a sage bush and laughed. The habit of profanity is universal in this region. Herdsmen, miners, Indians, everybody seem to try to compete with each other in the volume and variety of their vocabulary. It has become a habit in ordinary conversation, when you might say there is no provocation or necessity for emphatic language even. One hears it at the ranch, around the camp-fire, in friendly conversation, wherever and whenever men talk, it forms the bulk of their conversation.

After an uncomfortable night in the stage, we arrived at four in the morning at the end of our stage journey, Beaver Crossing. Beaver Crossing, where the stage road crosses Beaver Creek, is a feeding place for man and beast, kept by Frank Coffey, a jolly, good-natured Frenchman, well-known and popular all over this country. In an "annex" to his ranch house he keeps a good stock of beer, whisky, tobacco and other Western necessities and luxuries, and there are very few in all this region who have not heard his cheery voice inviting to "come up gentlemen and take a drink," and it is scarcely necessary to add that about an equal number have at one time or another availed themselves of the opportunity. As was a frequent custom in this country not many years ago, Mr. Coffey married an Indian woman of the Sioux tribe, and has a large and bright looking family of half-breed children. As we walked up to the ranch house, we were greeted by a lot of Indian dogs, but as they are always harmless, we paid no attention to them, and took seats on the porch. It was yet quite dark. A row of children lay stretched out under blankets on the porch. One or two of them rose up on our approach, fixed their black beady eyes upon us for a moment and then rolled over and went to sleep again. Soon the eldest of the sleepers, a

tough, wiry lad of eighteen, got up and bade us good morning. The only toilet he had to perform was to pull on his boots, to the heels of which were attached a pair of heavy Mexican spurs. As I afterward saw, this boy was an adept on horseback. He was literally at home in the saddle. He was employed by the stockmen during the annual round-up, and was said to excel in the business, a fact of which he and his father were quite proud. Finally one of the younger children woke up, and dug his fists into the ribs of his brother next to him, who would whine and fight back, and at last all got up and commenced their regular amusement of throwing the lasso over the chickens and dogs, playing cards, and other Indian games. One little mink-eyed imp slipped up behind me, and with considerable skill threw a slip-noosed rope over my head, pulled it tight, and quickly wound the other end around the porch post. At my efforts to get the rope off my head his joy seemed unbounded. It was not long before our host appeared and asked us to take a drink. Two shepherds were stretched out on the floor, and they got up and joined my host and my fellow passenger at the counter. I let myself down in their estimation by declining all invitations. You cannot insult a Western man by refusing to drink with him, but you can excite the deepest contempt for yourself by so doing, and at the same time convince him that you are an anomaly in human nature.

Equally universal, although not especially confined to the West to be sure, is the drinking habit. Throughout the North and East the man who never takes a drink is not uncommon, but in the cowboy country the man who under any circumstances declines, is a curiosity. At every stage stopping place and at remote points where a pretense for a store could be had, beer at fifty cents per bottle is a staple article of commerce. I was repeatedly invited and urged by everybody, for Western people are generous even when beer is twenty-five cents per glass, but I persistently declined on every occasion, and although I ran the risk of incurring their displeasure at times, I imagined I was growing somewhat in their favor by my steady adherence to principle, as I was beginning to be looked upon as resolute in that particular. On one occasion, however, I resolved to make an exception to my temperance principles. On my arrival at Rawlins after the night in the stage before referred to, I naturally felt somewhat grateful to the driver who had brought me safely through the fearful storm. If there ever was a time when "something to warm a fellow up" seemed fitting and appropriate, the morning after an all night's stage ride with the thermometer near zero seemed the proper occasion, and why should I not show my appreciation to the driver in the generous Western style? In this state of mind when we arrived at the hotel, I expressed to him my gratitude and, leading the way to the bar asked him, "what he would have." To my utter astonishment and everlasting shame he remarked politely, "I am very much obliged to you, but I never drink." What an astonishing surprise, and what a stunning rebuke! A stage driver on the plains of Wyoming who never takes a drink. Pass the chromo! C. L. S.

CHATTANOOGA, Tenn.

Natural History.

HABITS OF THE OTTER.

THE otter subsists almost entirely on fish, and its haunts are often discovered by its excrements, which consist chiefly of fish bones and scales.

They winter in the lakes and large ponds, and we often see where they come out on to the ice through a rock hole, or where there is a current which keeps the ice thin or open, and bring a fish out and eat their meal in the open air; then roll and play awhile and return to the water. These spells of coming out on the surface of lake or pond are more frequent in stormy weather, while it is snowing or soon after. They seem to know the state of the atmosphere as well as a man.

They breed in bogs far inland, or at the head of streams away up among the mountains, in the most secluded and unfrequented places in the deep forest. I have more than once run on to these breeding places, or summer homes, of the otter, while following the bear and other animals through the mountains; and have sometimes seen them with their young, but could never accurately count them. The little fellows were always so lively, and rolled and tumbled over each other in such a promiscuous way, that I could not tell whether there were four or five of them, but certainly as many as four. They are beautiful little creatures, shiny black, and active as concentrated life.

In the early days of September, the mother otter, accompanied by her young, who have then become two-thirds grown, starts down the brook, at the headwaters of which they have spent their summer, toward the pond or lake into which it flows. On this journey they do not hurry, but stop for days together at the best fish pools and spawning places, to regale themselves and feast on the delicious trout in their native waters. It is also on these journeys that new slides are made, and old ones worked over. An "otter slide" is where they dig the moss over on the bank of a brook or other water, descending to the water's edge, and in one or more places slide straight down into the water, sometimes climbing up and sliding down the same path, and at other times going up one way and down another. These slides are usually near fish pools, where they bring their fish to land to eat. They often remain for days at these places, and here the practiced hunter sets his traps and secures his game. The fall is usually spent by the otter on these streams, working down into larger waters to winter; and when the lakes and ponds clear of ice in the spring, they visit every slide around the shores, then return to their inland summer retreats.

The track an otter makes in the snow is different from that of any other animal. They make several jumps, then slide on their stomachs quite a distance if down hill or on a level, but if up hill, a short distance. They seldom, if ever, walk or run, except as I have described. They sometimes make long journeys from one lake or pond or river to another, crossing mountains or highlands, but always going the shortest cut, and taking advantage of any natural formation of the earth which may present itself, as if they were well acquainted with the lay of the land.

When approached by man on these occasions, and away from their native element, they will dig into the snow and go some distance under it, and it is a smart job to find and kill them, and when they find themselves cornered they will fight savagely. I kept one in confinement one winter, but did not succeed in learning much of their habits. He used to make a grunting noise when he felt on good terms with himself, and at other times a barking sound.

The Indians called them the "shining ones," I suppose because they present such a glossy appearance. They appear to be a migratory animal, not stopping long in a place, or making any certain home, but making a tour of certain ponds, rivers and lakes, and returning, going these rounds from year to year. They can live a long time under water, and in winter, when crossing a lake under the ice, occasionally put their nose against the ice to get breath.

In the fall of 1848 I was trapping and shooting around Metalluk Pond, and had several traps set for otter on the brooks running through the upper bog into the pond. Tending my traps one day I discovered that some animal had got caught in one of them which was set on an otter slide, and had broken the chain and gone off with the trap. I tended all my traps in that section, and started around the pond for home, and when crossing another inlet of the pond, about a mile distant from the missing trap, I discovered otter signs, which I immediately followed along, up the brook. These signs consisted of tearing up the moss near the water, etc. I continued a long way up through the bog, which was interspersed with occasional hackmatack trees, and small shrubs, ferns, etc., the signs growing fresher and more frequent. Presently, in a small pool of clear water, which seemed to be a boiling spring ten or twelve yards in diameter, I saw an otter rise from the bottom, and swim a few yards, and then dive back. I hid behind some brush, and waited, but did not have to wait long, for in a few moments up came the otter again, and I let go at him a charge of large shot. He immediately sank down, and I cocked the other barrel, and waited again a long time, and, as he did not appear, I got a long pole, dragged the bottom of the pool and soon hooked up a nice large otter—dead, and attached to my trap I had lost.

One morning while camping on C. Bluff, near C. Pond, I arose at daylight, stepped into my canoe and paddled down the pond on a trip of discovery. I had not gone far when I saw a line of bubbles about ten rods from the shore and parallel to it; this I followed, and not far ahead saw an otter come up. I immediately drew a bead on him and pulled; a roar that resounded many times among the near-by and far-off mountains and shook my frail skiff told the story, and the otter sank out of sight. In less than five minutes, and while I was trying to look down to see where I shot at the otter, another, or the same one came up a few yards away and crawled out upon a sunken log, one end of which lay above water.

My first charge was large shot, but my remaining charge was No. 6 for partridge; my gun was a muzzle-loader, I had then never seen a breechloader.

I unhooked at once and took my chance, as I was in the habit of doing. The otter floundered about in the water, and I paddled with all possible haste and took him into the boat while he was actively alive. This was a fine large specimen and I felt well paid for my morning hunt, as the pelt brought me ten dollars.

By observations since I am convinced that they always send up those bubbles while swimming under water. Another fact is that under certain conditions they always sink when shot, but never until they are dead.

On a certain day one fall, I think near the year 1850, as I was standing on the shore of Cranberry Bog Pond, I saw a large flock of ducks near the middle of the pond, and soon after discovered three otters in front of me, but not near enough to shoot. While watching the maneuvers of these otters, and scanning the pond for other discoveries, the otters started down the pond, in a straight line for the ducks. The old leader struck out lively, leaving his mates far behind, and as he neared the ducks he dove, and presently I saw one of the ducks disappear beneath the surface, after considerable of a struggle; the remainder of the flock rising and flying away in great commotion. The otter had gone under the flock and selected a certain duck and pulled him under. A few minutes later the otter made his appearance near the south shore of the pond, with the duck in his mouth. I concluded from this that they are not entirely fish eaters. They will likewise prey on the muskrat—I suppose as a change of diet—or when driven to it by a scarcity of fish and pangs of hunger. J. G. R.

BETHEL, Maine.

BLACK ROBIN.—*Editor Forest and Stream:* A friend of mine last summer on returning from the country brought a nest of four young robins and divided them among his friends, one of whom was unfortunate enough to get one that in a short time turned black as a crow. He accused us of playing a joke on him, and will not believe that he got a robin. I myself have never heard of nor seen such a thing before. Will you please state whether it is a common occurrence with them and what is the cause of it.—SUBSCRIBER. [This black condition of plumage of birds normally varicolored is called melanism. It is not nearly so common as albinism, but seems to occur more often in the robin than in other birds. We have known of several instances of it in this species. The condition arises from an excess of coloring matter in the pigment cells of the skin.]

NATURAL HISTORY SPECIMENS.—Directions for sending specimens from abroad. Mark the package as follows: "Natural History Specimens. Smithsonian Institution, Washington, D. C., U. S. A., Care Collector of Customs, New York City, N. Y." For the National Museum mark it: "Natural History Specimens. U. S. National Museum, Washington, D. C., U. S. A., Care Collector of Customs, New York City, N. Y." Send a bill of lading either to the Smithsonian or the National Museum.

SPARROWS AND BARB WIRE.—San Francisco, Cal.—Coming home to-day I noticed something hanging from one of the barbs on my barb wire fence. I found that a sparrow had, while trying to fly between the strands of wire, struck its shoulder against one of the sharp barbs and become transfixed. The bird was dead.—A. W. D.

BIOLOGICAL SOCIETY OF WASHINGTON.—The 136th regular meeting was held on Saturday evening, Jan. 9. Mr. B. F. Galloway described one of the diseases of the sycamore, known as leaf blight, which is due to a parasitic fungus of widespread distribution, very destructive effects, and unknown method of propagation. Dr. Thos. Taylor exhibited a new freezing microtome. Mr. A. A. Crozier gave a very interesting account of foreign pollen on fruit, with particular reference to the effects of cross-fertilization in the squash, apple and orange. Mr. J. N. Rose sketched the geographical destribution of the *Umbelliferæ* in a paper which showed evidence of patient and exhaustive study. Dr. C. Hart Merriam described a new and remarkable vole from British Columbia. This little animal would usually be styled a meadow mouse, but as these are not closely related to the mice, Dr. Merriam prefers to designate them by a name current in Europe, though scarcely known in the United States at present. The new vole was obtained by Dr. Geo. Dawson at Kamloops. Externally it is not distinguishable from the common *Arvicola*; but the dentition is so peculiar that a new subgenus, *Phenacomys*, has been created to receive it. The species is called *Phenacomys intermedius*. The last under molar tooth is very large, and shaped like a broad horseshoe with an emargination in front and a supplemental arm midway between the other two.

GOLDEN-WINGED WOODPECKER IN MASSACHUSETTS.—*Editor Forest and Stream:* In reply to Mr. George Hughes Coues, I would say that the golden-winged woodpecker is a winter resident in Massachusetts. I see large flocks of these birds during October and November, and then the food supply is ants and other insects. Later the flocks go south, leaving a few birds to try the winter. I have taken much pains to ascertain their food in winter months, or when the ground is covered with snow, and find it to consist largely of berries. The chokeberry (*Pyrus arbutifolia*), black alder (*Ilex verticillata*), and the barberry retain their berries through the winter. These berries, together with borers hammered from dead trees, make up the winter food of the golden-wing.—HERMIT.

WINTER WOODPECKERS OF MICHIGAN.—*Editor Forest and Stream:* A flock of six or eight golden-winged woodpeckers (*Colaptes auratus*) were seen twelve miles south of this city about Jan. 30. They had probably been in this State all winter; one was seen Dec. 10. The red-headed and red-bellied woodpeckers are occasionally seen in this vicinity in winter, though I know of none this winter. The hairy and downy and pileated are as common in winter as in summer. I obtained a fine specimen of the last at the market Dec. 12, where I have seen them before. The farmers call them woodcock, and this accounts in part for their finding a place among the game. —E. L. MOSELEY (Grand Rapids, Mich., Feb. 9).

ROBINS IN WINTER.—Perth Amboy, N. J., Feb. 11.—I observed a flock of about twenty robins this morning, flying southward. Have seen song sparrows all winter. Hawks scarcer than usual.—J. L. K.

DUCK SHOOTING SUPPLEMENT.

The next number of the FOREST AND STREAM *will contain a four-page supplement containing papers on wildfowl shooting.*

PUGET SOUND GAME.

LA CONNER, W. T., Jan. 15.—The close season for deer began here on Jan. 1. During the season just past fewer deer than usual have been taken, though on some of the islands of the Sound they have been more plentiful than ever. For the past few years these animals have apparently been on the increase, owing, probably, to the fact that the cougars have mostly been exterminated; but deer hunting in this section will soon be a thing of the past, as the settlement of the islands has begun in earnest. As the onward march of civilization drives the large game to the wall those who have spent so many pleasant days with their dogs in the dense tangles of undergrowth cannot but feel a tinge of sadness. On the mainland there are yet many bear and some deer, but the mainland does not afford the sport that we found on the islands. In the foothills of the Cascades, and in the mountains south of the Straits of Juan de Fuca there are still some elk. However, if the present rate of immigration continues the large game in the Puget Sound Basin will soon all be driven to the almost inaccessible fastnesses of the mountains.

As far back as the oldest settler can remember, or the traditions of the Indians can be traced, there has never been such a scarcity of waterfowl as there is this winter. Usually in the fall ducks of all kinds settle down on the bays and sloughs in the vicinity of the Swinomish flats in countless myriads. No explanation has been offered for the scarcity this year. The Indians and professional white hunters bring in some ducks, but there have been no large bags made by those who hunt for sport. Instead of from 40 to 100 ducks this year, a paltry dozen constitutes the average day's work. The weather has been too fine for good sport. For the past four weeks the weather has been clear and bright, freezing slightly at night and thawing during the day. As long as the northerly winds prevail we may expect such weather, and as long as the weather continues fine we must not look for good duck hunting, for the ducks all flock to the middle of the bays, out of reach from the shores, and will not allow the approach of boats. When the southeast or northeast winds spring up, bringing with it snow or rain, the ducks come in and settle down in the sloughs and oat fields.

The Indians secure ducks when they are out in open water by covering their canoes with brush and drifting with the tide, or working their paddles quietly under cover of the brush until within range.

There are many geese here now, but they are hunted so much that they become wilder with each succeeding year. JUNE.

GROUSE SNARING.

UTICA, N. Y., Feb. 11.—*Editor Forest and Stream:* The interesting communication of "Hermit" in your issue of 7th inst., on grouse shooters and snarers, is noticed and is concurred in as respects danger of extermination of this bird, and it may be added of woodcock also. The destruction by bird dogs among the young broods is also concurred in, and it may be added that foxes and skunks are equally or more destructive than the dogs in the same line, as these pests are always rambling in partridge haunts. What is most surprising is "Hermit's" defense of snaring on the alleged ground that it is comparatively not destructive. That the Cape Ann fisherman, with "forty snares well tended for three months," only got two birds, is very remarkable. Such stories in print are not calculated to benefit the cause of protection. If this remarkable story is true, one of two conditions must have prevailed, viz: Either there was a dearth of birds in the vicinity, or else he was a bungler at the business. If such was not the existing condition, then it is more probable the "fisherman" suppressed the truth. Those who violate laws seldom boast of their exploits.

As an example of destructive snaring here is one actually occurring. Within a few years over 500 snared birds were caught and sold by one man at one leading hotel in this city in one season. They were taken in a locality where thirty years of gunning had not reduced the supply, yet the snares did it in the short space of four years, leaving scarce a bird. With much effort and expense this man was arrested and convicted upon testimoney of eye witnesses, and in his defense he swore he never caught but three birds in two years, first swearing he caught none. The actual statistics were obtained from the steward of the hotel.

The proprietor of this hotel professes to be a sportsman and it is reported that he has supplied his hotel with snared birds the past season. Another party in another locality boasted that he made $500 snaring birds last year. He paid $100 fine and costs for one catch this year. It may be that these birds learn the ways of the snares, but it may be doubted if one gets into a snare once that he ever survives to warn the rest of the flock. If any one thing is needed it is a law against the sale of snared birds. Such a law cannot be enacted too soon.

U. F. & G. P. A.

A HUNT IN JAVA.

WE started out from Paraka Salah in the early morning to go up Mt. Parah to shoot monkeys, of which there are four kinds, one very large gray baboon and three smaller kinds, one jet black. The monkeys live on the mountain, making their houses in the tops of the trees, which are mostly fruit-bearing ones, on which they live except when they make their raids in the fields and destroy more than they eat, and they are hunted more or less by European visitors with the view of thinning them out. It is a comical sight to see them scud across a field, the female usually carrying one young one clasped in one arm while she runs with the other and her feet, and very often having an older one hanging to her tail. Once in the woods, they are at home. The large gray ones are ugly customers for a man alone to meet, as they often attack a single man and bite him to death.

My friend and I had guns with buckshot, and four coolies to carry the guns, etc., and cut the way through the jungle, which is almost impenetrable, being a matted mass of vines, bamboo and thorny bushes. We rode up through the tea plantation and left our horses at the edge of the jungle, skirting along the edge of a large, deep, shady pool or small lake, in which we could see the noses and horns of several wild buffalo sticking out. They go into the water for comfort, leaving only the tips of their noses and ends of their horns out, and spend the heat of the day, coming out to feed in the evening. We saw two rhinoceros, but they were ugly brutes, charging at the very slightest noise, and were it not that they are so near-sighted that they can see but a little way it would be almost impossible to escape them, but by jumping quickly to one side one can avoid them. They were on the alert, as they could hear but not see us, we being above them, and the small bird which always seems to be near them to give them the alarm was chirping and jumping on them as if to say, "Look out, there is danger!" The buffaloes are also dangerous. An old bull will sometimes charge at you, and when they do they are much harder to escape than the rhinoceros, so we gave them all a wide berth.

Arriving at the edge of the jungle we started in, the coolies clearing the way for us as well as they could, cutting some of the vines and picking the way through. It was frightfully hot down in the thicket, and we soon began to wish we were out, as it is anything but easy to pick your way through an almost impenetrable mass that you cannot see out of in any direction, with the thermometer up in the hundreds, and not a breath of air. We passed the nests of several hornbills. When they are ready to lay, the nest is made in a hollow tree, the female goes within, leaving her whole immense beak sticking out, and the male plasters the hole around it up with mud, that hardens at once; she lays her eggs and sits on them until they are hatched, the male feeding her all the time. The monkeys and snakes looking for eggs see this formidable-looking beak sticking out of the hole and are afraid to tackle it, so she hatches in peace. The poor male in feeding her gets so poor he can hardly fly.

After about an hour of crawling and pushing through, our men suddenly stopped and began to point ahead, chattering and gesticulating. Looking the way they pointed, we saw in a tree an immense boa constrictor waving his head to and fro, with his scales glittering in the sun. My friend said, "Get back, quick, he is preparing to jump!" and we did so as fast as possible. After consulting a few moments the Malays cautiously advanced with a lasso, which by a dexterous throw caught the snake around the neck, and jumping behind a tree tightened it on him. He thrashed and pulled, and it was all the four Malays could do to keep from being drawn near enough for him to crush them, and once or twice it seemed as though he would get them. We could have shot him at first, but they wanted to capture him alive. After a while, by pulling and choking him, he gave up and they pulled him down from the tree. He was a big fellow, 20ft. long and very large around. They have great strength, and this one I was assured could swallow a goat or calf. He was looking probably for leopards that are plenty there, living principally on monkeys, and the snakes also catch them when they can, but usually the monkey is cleverer than the snake. They sometimes gather in big bands and club them to death.

By this time we were so hot and tired that we concluded to let the monkeys rest, although we could hear them chattering and jumping not so very far ahead of us, so we turned back to our horses with our coolies carrying our trophy. The Malays made a cage very quickly, cutting lengths of bamboo and notching them together, into which they put the snake, and swinging it on two poles marched off with it on their shoulders. There were plenty of jungle fowl, the parent of our domestic hen. It looks exactly like a game cock, and is equally pugnacious. The natives when they catch a cock put him down when near the jungle in a cage with a swinging door, and when he crows the wild ones come out to fight, and jumping against the door that only swings one way get caught. A great many are captured in this way. They are very shy, strong flyers and fast runners. There are also pheasants, parrots, coffee pigeons, etc., but we only had buckshot, so did not molest them.

Java would be the paradise of hunters if it were not so hot and the jungle so thick that it is hard work to get at big game; still, this day, if I had had a rifle with me, I could have killed two rhinoceros and several buffalo, but was afraid to try it with buckshot. I saw any amount of small game.

W.

CHICAGO, Illinois.

ADIRONDACK DEER.

Editor Forest and Stream:

The resolution of S. R. Fuller, submitted to and adopted by the Black River Fish and Game Association, as set forth in No. 26 of your valuable journal, sounded the key note and should stir to action every association of this State. How the intelligent and enlightened sportsmen throughout the country have sat so unconcerned, with ears closed to all appeals, while our noble game animals and birds were being so ruthlessly butchered, is the query.

The sportsmen of Maine only came to realize the true situation and apply an effective remedy after the game had become nearly extinct. Have we, of this State, to follow their example before the game of bluff has been played and a suitable and conservative game law been enacted? Let our sportsmen from every county within the State wake up to this important subject. Talk it over with your neighbors and friends of all classes and occupations. Instruct your Senators and Assemblymen that suitable enactments may be made.

The resolution above referred to, so far as it relates to the shortening of the open season for hounding deer, in cutting off the latter half of August and the first half of September, and adding on the month of November for still-hunting, is a step in the right direction, not that I believe in hounding deer into lakes and ponds to entrap them at any season of the year, as I do not. But the idea of ending the open season for hunting them in this latitude on the first day of November, just at the only time when the does that have suckled fawns all summer have recuperated sufficient to be in edible condition, and at the only time after which we may expect or look for cool weather for keeping game, is as inconsistent as it is disgraceful.

The law makers of no other State in the Union, I believe, ever thought of enacting such a game law. In fact our open season ends at precisely the period when it should commence. It gives a still-hunter the privilege of bagging three deer in warm weather upon dry leaves, which feat, in being accomplished, usually costs the death of five or six deer, owing to the difficulty of following up and securing wounded game without the aid of snow; and in connection therewith it gives us the right, as it seems, that in case the deer we have bagged are not spoiled by the time of our arrival at the cars, we can, by becoming market-hunters and disposing of two of our catch, express one carcass home—by accompanying the same. How the fulfillment of this clause acts to bring deer back to life or enhance the future stock or keep the disposer of his legally killed game from being classed as a market-hunter is another query. If it would be any greater sin or a more revolting crime for a sportsman, who, having bagged three deer at Big Moose Lake, comes out, gets aboard the cars at Boonville, and on his way home disposes of one carcass at Utica, another at Rochester and takes the third on through to Buffalo and uses it up there, or in fact to take all three carcasses home and use them up or dispose of them there, than it would to sell two carcasses at Boonville and take the third one home, I for one cannot see it. If the intention was to prevent those living at a distance from bagging but one deer or of becoming a market-hunter by disposing of two of the number or even of all three, in case they should feel so inclined, it is still a decided failure. If one carcass is sufficient for sportsmen occupying certain portions of this State the same should suffice for all, no matter where domiciled.

Limit the number to two, or even one carcass, but serve all sections alike and there can be no just complaints.

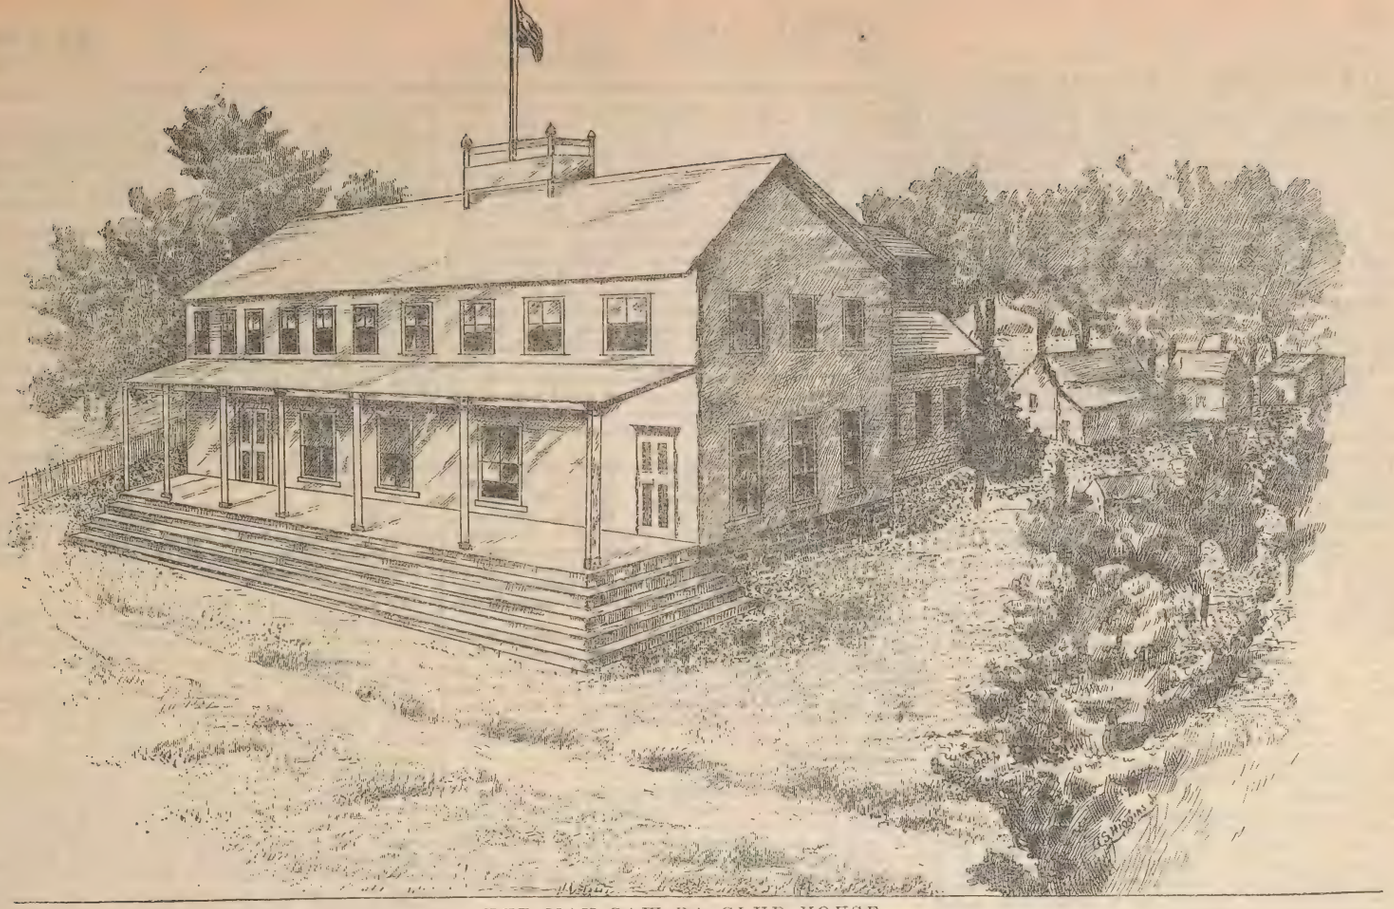
CAP LOCK.

DOVER, Del.—The weather this winter has been so mild and pleasant that many of our summer songsters have wintered with us. Numerous blackbirds and robins and occasionally a bluebird can be seen in sheltered nooks in the woods. Owing to the almost entire absence of snow and to the great quantities of loose grain left in the fields, the birds have a plentiful supply of food. Our game birds have been hard hit and often this year, the weather enabling continuous hunting, and as the condition of the birds was fine, they were pursued relentlessly. It is doubtful if there will be one-half as many birds to breed from the coming season as last. Our gunning season, as allowed by law, is entirely too long, being from Nov. 15 to Feb. 1. The Delaware State Game Society is doing good work in waging war against illegal trapping of game. It is stated that an appropriation for the buying of game birds to be loosed through the State is to be asked of our Legislature during this session. One of the several pairs of pheasants that were loosed in this county two years ago bred here this season.—DEL. A. WARE.

SAM LOVEL'S CAMPS, a sequel to "Uncle Lisha Shop," is meeting with great succes. It is as full of good things as was Mr. Robinson's first volume.

THE SHOOTING CLUBS OF CHICAGO.

VII.—THE MAK-SAW-BA CLUB.



THE Chicago clubs, which are more properly to be called duck clubs, divide themselves roughly into two classes, the lake clubs and the river clubs, always with more or less interlocking membership. The lake clubs cluster about the Fox Lake district, to which has already been given such mention as space allowed; the river clubs lie to the south of Chicago, and may again be loosely divided into those of the Kankakee River and those of the Illinois. The former clubs are organized under the laws of Indiana, and the latter under the laws of Illinois. The membership is practically all from Chicago; and here again there are some members who hold shares in clubs of both sections.

The Mak-saw-ba Club, chosen for this week's mention, is a Kankakee River club, and its grounds are located in Indiana, subject, therefore, to all the fearful and wonderful legislative enactments of that most lawless of all States, so far as any respect for actual game protection is concerned. The great and good politicians of Indiana, willing to promise anything or to do anything to get a vote, have put upon the statute books some very pretty examples of politico-granger wisdom. It is trespass of rank sort to walk with gun in hand across a dry field where there is not any game, nor any possibility of any; but when a body of men have by purchase acquired a quantity of overflowed land, and have endeavored to set apart for their own use a preserve for wildfowl where the presence of the trespasser with the gun does create an actual injury and convey an actual damage, the good Janus spirit of Indiana institutions takes a look over its other shoulder, and solemnly declares that trespass on wet ground don't count. 'Cause why, Indiana people are so constructed that they always want to go out walking where the mud is waist deep, always want to leave the roads and take to the marshes, and are always consumed with a mad desire to meander around over meandered grounds. This being the estimate the politico-granger puts upon his fellow citizen, it at once becomes the duty of said politico-granger to make it an act of public policy to throw open the duck marshes to public travel, they being overflowed and unsurveyed lands. Indiana would resent the imputation that she had legislated against alien capital, which sought to preserve for its own wise use a privilege which the people of the State were not using wisely but were abusing; and yet every member of an Indiana duck club knows that the overflowed lands act is a slap in the face of Chicago clubs, and therefore in the face of intelligent game preservation; nor can such a member disguise from himself that back of all this lies the greedy and lawless selfishness of a mass of people who live in a wonderfully good game country, but who cannot rise above the old ruthless, thoughtless, merciless and murderous instinct of killing so long as there is anything left to kill. Against this well-known sentiment there is no real local current. It is common talk that it is impossible for a club to get a conviction against a resident trespasser for an act the most obviously contraventive of clear rights. The evidence falls through. The judges cannot see it. The clubs have about come to the conclusion that the best way to do is to catch the trespasser, drown him, take his gun, break up his boat, wipe up the earth with his belongings, and then let him do the prosecuting if he wants to. Certainly nothing herein should for a moment be construed as indicating any hesitancy on the part of any of the clubs, or any disposition to yield for an instant any of the rights to which they feel they have a perfect claim. There is no relaxation of vigilance; to the contrary, there is now more than at any previous time a disposition to use prompt measures in putting an end to trespassing, and a determination to keep up the fight till opposition is done away with entirely. The Mak-saw-bas mean business in this matter; and so well is this known that the actual trouble on their marshes does not now amount to much, and is growing yearly less and less. In this, as in other planes of life, the higher and sterner moral fibre is destined to ultimate victory.

In years gone by, the site of the present club house was the favorite camping ground of an old Indian chief, I believe of the Pottawattomie tribe, whose name was Mak-saw-ba. This wise old red man had seen the vast swamps of that locality years long blackened by rushing wings of wildfowl, and had scorned to notice them while he could so easily kill a deer in any of the grassy draws that ran down to the gentle stream of the Kankakee upon the higher side. Old Mak-saw-ba saw the sweeping tide of the white men flow over the country, and even take possession of the sandy marsh ground which could scarce produce more than a healthy ague. Old Mak saw-ba was a sage in his way, a friend to the white man, and yet wise enough to see that the day of the red men was done. "White man come!" said old Mak-saw-ba one day, and he folded his blanket over his face, and was gathered to his fathers, in a country, I do trust, where he may have fair hunting all his life.

The camp ground of old Mak-saw-ba became the farm of an old settler, who put up a log hut, with all the architectural trimmings of his time. This log hut stood for forty years, and was the first club house of the Mak-saw-ba Club, being purchased, with the more modern farm house, by the first of those enterprising men who foresaw that the ducks were disappearing, and were in need of some protection, and who realized that the vast marshes of the Kankakee, almost interminable in extent, and usually supplied with abundance of the natural food of the wildfowl, constituted the best possible choice for a wildfowl preserve. In those days geese fed upon the Kankakee marshes in acres, and the flight of ducks often filled the air in a passing stream as far as the eye could reach. There is no exaggeration in this, nor is it possible to exaggerate in stating these numbers. Within two or three years almost the same abundance has been visible. There was no question about the wisdom of the choice made by these first members of the club, eleven years ago.

The first complete organization of the club consisted of fifty members. The membership fee was placed at fifty dollars, and the annual dues at five dollars. Then the membership was raised to seventy-five, the fee to seventy-five dollars, and the annual dues were made ten dollars. The farmhouse was remodeled and enlarged, and made more suitable to the requirements of a club building. Boat houses were erected, the club began to reach out for land, and entered rapidly upon that vigorous and

THE MAK-SAW-BA CLUB HOUSE.

healthy growth which has warranted its prominence among the clubs of this region. As the need for more and more land became apparent, and as one good point after another was coveted by the club, the purchases ran up until now nearly 3,000 acres are owned, wisely selected, and running up and down the river for five or six miles. To secure easily the balance of the necessary moneys, the club was bonded for $5,000; the bonds, bearing 6 per cent. interest, were all taken up by members of the club. In ten years the bonds will take themselves up by the accretion of the annual dues paid in. Special assessments are forbidden by the by-laws. It may be seen that the financial standing of the club is in a very simple condition, and so arranged that no member is in the least distressed, or troubled over a possible special call to meet some emergency.

The Mak-saw-ba Club building, as now constructed, is 78×24ft. in size, with a wing 30×40ft., used as the home of the club superintendent and his family, who live there the year round and have the privilege of farming the very considerable acreage of good ground owned by the club. Mr. Ira A. Pease, the club keeper, has been in his place for five years, and the club think he has not an equal for his post. The duties of the superintendent require that everything be kept neat about the premises, that all property be guarded, and the general interests of the club protected. Mr. Pease is careful in his work, and under his care no boat ever goes into the boat house uncleaned, nor any decoy upon the shelves until it is neatly washed and wound. Mr. Pease is notably assisted in satisfactorily filling his position by his good wife, who, any club member is willing to testify, allows no hungry man to escape, no matter what the size and general comprehensiveness of his appetite. A salary is paid the keeper, and also compensation for such meals as are furnished.

The Mak-saw-bas are primarily a duck club, but they don't object to taking in a little of the occasional excellent fishing which the Kankakee affords; they have frequent and hotly contested trap-shoots; they take their wives and families on picnics and general excursions, and they are, first, last and all the time, in for a general good time. They are good workers in the city and good players when they are down at the club. One feature they do possess in a degree which I do not think can be duplicated anywhere, and that is, an absolute jollity and perfect congeniality in their membership. They claim to have "killed the last crank two seasons ago," as one member expressed it. There is not a dyspeptic in the club, not a kicker, not a misanthrope, not a cynic. "Loathed melancholy" cannot abide among them, and the megrims fly away when the conductor calls out "Davis Station, Mak-saw-ba Club house!" The impression carried away from the club is that it is one of a perfectly cosy and homelike character. The members are men of means and business cares, but at their resting place you cannot hear a word of business. Nobody talks shop. Everybody is easy and at home, and tries to make everybody else so. I do not think it is possible to imagine an atmosphere of more perfect quiet *camaraderie*. There is no drunkenness and no drinking, no uproariousness and no exaggeration of good-fellowship, but a dignified and pleasant conduct which certainly warrants the naïve remark made to the writer one evening in the club house by Mrs. F. P. Taylor, wife of one of the charter members of the club: "The Mak-saw-bas are the best men, and the most gentlemanly men you ever met."

The local station for the club house is reached by the Pittsburgh & Ft. Wayne Railway, whose evening train leaves in time to get the shooter to the club house in season for a warm supper and a good night's sleep. The distance from the little railway siding is only a few hundred yards, over a soft and sandy road through a wooded swamp, which they do say is about knee-deep under water in the spring. A big moon, perhaps, throws the low swamp trees into shadows and half shades as you wind along toward the club house, and a shepherd dog, erstwhile employed in gazing pensively upon aforesaid moon, bays sharp-mouthed welcome as you step upon the wide veranda. The next memory to be borne away is that of a large and well-lighted reception room, which is also gun room, and which is well fitted with racks containing the best makes of guns now in the market. Neat lockers, numbered plainly, and fastened with the keys which hang on a rack under the keeper's care, stand in cases about the room; a vast box stove, large enough for a whole log, and surrounded with a strong iron frame, whereon one may rest a tired foot, or dry a wet pair of corduroys, occupies the center of the room, while above the stove, and, in fact, all over the ceiling are hooks from which depend so formidable a collection of rubber boots that one cannot escape the feeling that a great army of duck shooters has been destroyed and annihilated all but their boots. Cleaning rods, shell-cases and other impedimenta are bestowed upon appropriate shelves, and there are some comic drawings upon the walls, including one of two Mak-saw-ba men whose boat got afire in their absence, and one of a certain other Mak-saw-ba man of Teutonic persuasion, who couldn't tell "vich vay vas nort." These pictures are the work of Mr. Wiggins, the club artist, who very kindly furnished the sketch for the club house cut shown herewith. I can remember all these things plainly enough as seen in my late visit to the club, and, of course, I couldn't forget the pleasant talk around the stove with Mr. and Mrs. H. A. Sloan, Mr. L. R. Brown and wife, Mrs. F. P. Taylor, Messrs. Joel A. Kinney, Geo. Randall and T. H. Miller, Jr., who composed the pleasant party who were down at that time. After that I have a general recollection of a wild effort to break the record on a square meal, and of a long and dreamless sleep in a cosy little room, furnished, like its forty odd fellows, in democratic equality and hunter-like simplicity.

There are in the boat houses one hundred and fifty-six boats, of different patterns, some members owning three or four each. The favorite boat seems to be the Monitor, of the Wisconsin model. This boat is large and long, and of good lines for the long run up and down the river which is necessitated by a visit to Rat Island, Winchell's or some of the upper stands, but the roundness of the bottom makes it a trifle unsteady for shooting, it seemed to me; at least, I missed out of one of them a number of shots which I most certainly ought to have killed, and I can't think of anything else to blame it to except the boat. The Mak saw-bas have usually excellent cover, either for their marsh or timber shooting, and they are therefore not so much concerned in the matter of blinds as must be the shooters in a less favored locality. Mr. Kinney's big overcoat of coffee sacking was about as ingenious a device as I noticed.

Each member of the club, of course, has his favorite point or bend on the river, and equally, of course, the question of desirability is one of daily shift and change, as the flight follows its whims in regard to feed or bedding ground. Hailstorm Slough, Winchell's, the mouth of Winchell Creek, Rat Island, and a dozen other localities, are all names on the end of every Mak-saw-ba tongue. The marsh is almost illimitable, and as far as one can "look or listen," presents the appearance of a sea of rice, flags and rushes. The usual marsh feed is abundant, namely, the wild rice, smart-weed, "marsh potato," spiral grass, etc. Acorns and other timber feed also abound. This fall large sections of the marsh were burned over. The natives often make trouble in that way, and often the fires are set out by men who have been most directly benefitted by the club. The scarcity of ducks which was last fall felt all over this section, was shared by the Mak-saw-bas. It is difficult to say that this was due to the low water, or to scarcity of feed; or indeed to determine its real cause in any way. Ordinarily the Mak-saw-ba feed has been good. Mr. R. B. Organ once shipped to a friend five mallard ducks which weighed 20lbs. in the aggregate. Those who know mallards will know that is heavy.

The Mak-saw-ba marsh has its full share of big scores. Mr. Charles Mears once killed 125 teal before 9 A. M., and ran out of shells. Mr. R. B. Organ once killed 50 mallards and stopped. It was the latter gentleman who has the largest score for last fall, 19 mallards; not very much like old times. The records of the club show plenty of heavy shooting. There is a tendency now not to encourage unlimited butchery, and many of the shooters would follow the example of the president, Mr. Organ, and stop when enough had been killed.

The Mak-saw-bas have been much interested in the question of artificial feed. It is very probable they will put in a quantity of feed this coming season. They do not propose to leave untried any measure which will help them. During the coming year they will still further push their work of putting in cut-offs and dams, and thus further facilitate the getting around through the marsh. They have a number of cut-offs in now on the main river, which shorten by two miles, probably, the long pull up to the "Two Trees" and other up stream points.

The rules of conduct laid down by the club are observed rigidly, and are models in their way. The tendency is not to relax, but to make them stricter. At the annual meeting last December the rules were so amended that hereafter only one gun will be allowed to go out in any one boat. This will lessen the danger of accident, and will put each shooter on his own merits when it comes to unloading the boats at night. Under the amendments, also, there will be no shooting allowed after dark. This will be a great boon to the ducks, for very often the great body of a flight will not come into a favorite bit of water until after dark; and if not disturbed at night they become much more attached to a locality, as is very well known to all shooters. Hereafter the Mak-saw-ba shooters will draw lots for choice of pushers, so that there cannot be any imputation of unfairness arising from a too frequent retention of a pusher of exceptional experience and skill. The pusher's fee is fixed at $2 per day. There are plenty of pushers available, who are good hunters and thoroughly familiar with every channel in the labyrinthine marsh. The Mak-saw-bas have never had a fatal accident. The Pittsburg Club, whose house stands only a short distance away, lately lost two members by drowning. In high water the Kankakee, usually quiet, is a wild stream, and a boat must be handled carefully. Before the cut-off was made, the sharp bend known as the Devil's Elbow was a dangerous passage, and the scene of many ugly accidents.

Under the club rules, dogs are not allowed to be brought into the club house, a place being provided elsewhere for them. A $5 fine is imposed upon any member who brings a loaded gun into the house, under any circumstances whatever, and no excuse can be offered in extenuation by the offender.

The Pittsburg Club, above mentioned, is an organization largely resident in Pittsburg, Pa. They own about 600 acres of marsh, and their holding embraces the famous Wolf slough. I have been told that certain members of the Mak-saw-ba Club have gone in and shot upon this slough since the Pittsburgs got possession of it, and that the latter have had trouble to keep them off. I can not believe that the Mak-saw-ba men would do anything of the kind. They wish others to respect their right, and I am quite sure that they are always eager to respect the rights of others.

The membership of the Mak-saw-ba Club embraces many of the best-known shooters of Chicago, and it is especially rich in men who are thoroughly practical and experienced in the field. It prides itself upon being a club of strictly practical and democratic methods. It is one of the best-known and most popular clubs of Chicago, and its membership and character as a club are such that it is never mentioned except with respect. Among the well-known names are those of "Roll" Organ, "Billy" Mussey, "Charley" Petrie, "Jo" Kinny, "Ed" Flint, and a lot others who are old enough to be called by longer names;

Mr. L. R. Brown, of the "Q" offices, is a frequent visitor to the club grounds; Mr. H. A. Sloan, of South Water street, is prized by many men outside the Mak-saw-bas; Mr. G. W. Randle, one of the heaviest game handlers in this market, is also one of the ardents; Chas. P. McAvoy, of the McAvoy Brewing Co., and J. J. Gore, of the big firm of Chapin & Gore, ought to pretty nearly be able to liquidate matters, and Fire-Marshall D. J. Swenie certainly can if they can't; John Watson comes pretty nearly being a household word, and so does Charlie Kern; Chas. Wilcox, T. Benton Leiter, J. W. C. Haskell, W. L. Shepard, T. W. Wilmarth—all these are names you hear about both in the city and around the clubs. It is useless to begin singling out names, for there would be about seventy-five singles. It is better to take a pot-shot at the flock, as below:

Officers—President, R. B. Organ; Vice-President, W. P. Mussey; Secretary, C. S. Petrie; Treasurer, J. A. Kinney. Board of Managers: R. B. Organ, W. P. Mussey, T. Benton Leiter, W. H. Haskell, C. S. Petrie.

List of Members—W. A. Barton, A. J. Baxter, Dixon Bean, Matt. Benner, L. R. Brown, H. C. Buechner, C. Bentham, W. J. Campbell, G. S. Chapin, H. P. Crane, C. A. Crane, F. F. Croxton, Joseph P. Card, A. E. Dyer, W. C. Dyer, C. Ben. Dicks, E. E. Flint, W. H. Gleason, E. H. Goodrich, J. J. Gore, W. H. Haskell, H. C. Hoyt, J. W. C. Haskell, Charles Husche, Fred Henrotin, J. T. Hasting, H. P. Isham, J. A. Kinney, S. S. Kimball, Chas. Kern, C. C. Lamos, W. H. Leckie, T. Benton Leiter, Jos. Leiter, W. H. Lees, John Matter, Chas. P. McAvoy, Chas. H. Mears, H. J. Milligan, G. F. Morcum, Wm. P. Mussey, T. H. Miller, Geo. G. Newberry, J. Milton Oliver, R. B. Organ, Chas. S. Petrie, Michael Petrie, J. W. Parmlee, F. W. Pond, C. E. Rollins, G. W. Rumble, G. W. Randle, J. A. Sharp, H. A. Sloan, P. E. Stanley, L. P. Sutter, Jacob Sutter, Jesse Sherwood, D. J. Swenie, W. C. Stone, W. L. Shepard, W. R. Smith, F. P. Taylor, J. E. Tilt, J. Thompson, John Watson, John F. Whiting, John B. Wiggins, T. W. Wilmarth, J. W. Woodward, Chas. S. Wilcox, L. K. Waldron, J. H. Wall, Everett Wilson, F. S. Waters.

The membership is always full and applicants are always waiting for a vacancy. There is a good deal of comment in that.

The Mak-saw-ba Club has put down a great many quail annually on their grounds. It is an understood rule of the club that a member shall put down two quail for every one he kills. If it were not for marauding natives, it would be easy to make many bags of 38 as one shooter did this fall. This club surely emulates the man who makes two blades of grass grow where but one grew before.

CHICAGO, Ill., Feb. 4.—The reports of shooters lately in from the South will serve to give some light on the question, where do the ducks go? Mr. Jesse Cummings, who was one of the Chicago party who went to Galveston after canvasbacks, says they found a brackish lake near the Gulf about fifty miles from Galveston, known as Stevenson's Lake, where the canvasbacks swarmed in thousands. Other bays and creeks along the coast, clear on down to the Mexican coast, were fairly alive with mallards and other ducks, and their numbers surpassed anything he had dreamed. The birds, however, showed more than their Northern cunning, they being hunted all the way along their flight. Market hunters were among them even there, and one Chicago commission man was sending two or three barrels of canvasbacks to Chicago every day, packed on ice. The shipping required daily trips of a sailing vessel to Galveston.

In sleepy old Mexico, however, there seems to be found a section where the ducks are not harassed so continually, and where they are found in wonderful abundance. Mr. Wilfrid N. Lowe, president of the Illinois State Sportsmen's Association, is just back from a trip which extended as far south as the City of Mexico. He says that along the Casa Grande River the railway train passed within forty yards of great banks of ducks and geese, who did not stir, or at most only lazily flopped away to alight a little further on. At the lakes known as Las Palomas, Mr. Lowe and his friends had all the jack snipe and duck shooting they wanted, and they found the birds astonishingly fat. The laguna country near Chihuahua is also a tremendously stocked wildfowl country; indeed, great portions of interior Mexico swarm with waterfowl, contrary to popular belief.

Gen. Pacheco invited Mr. Lowe and his friends to visit his ranch in Mexico, west of the railway, and assured him that every man of the party should kill a deer every day, and see bear and other big furred game as often as they liked. Mr. Lowe had a most enjoyable trip, and like everybody else who visits that wonderful old country, he returns infatuated with it.

Mr. F. P. Taylor says that he saw more quail in the Indian Territory than he thought there were in the world. Other game also is abundant. The numbers of greyhounds kept by ranchmen is increasing. The Burt, Barnett outfit has a pack of over twenty. The Indians are all in earnest hopes that the Springer bill will never be passed by both houses of Congress. They know it would be the worst thing for them that ever happened.

The Fox River Association is still growing. The officers wish it generally published that they desire communications from other clubs and sportsmen's associations relative to this work in hand, and that they wish all such organizations to join in one great organization, so that all opposition may be at once crushed and overcome. The Rock River Association is a good one and a strong one, and in practically the same work. Do the Rock River men know the size and importance of the Fox River Association? Would it not be well for the two to join forces and membership? There promises to be a good membership from the Sandwich Club.

The following papers descriptive of the shooting clubs of Chicago, with illustrations, have been printed in the FOREST AND STREAM:

Fox Lake District, Dec. 27.
Mineola Club, Jan. 10.
Fox Lake Shooting and Fishing Club, Jan. 24.
Odd Corners About Fox Lake, Jan. 31.
Fox River Association, Jan. 31.
Waltonian Club, Jan. 31 and Feb. 7.
Tolleston Club, Feb. 7.

Others are in preparation. Next week will be given the English Lake Club.

It is again impressed upon me that FOREST AND STREAM goes even unto the uttermost ends of the earth. Since beginning the duck club articles which have lately been running in the paper I have had all sorts of letters drop in on me, though not any sort I was not glad to get, for such letters from unknown friends are among the most prized treasures of any writer's collection. I have tried to answer some questions about Western duck shooting methods in work already published or to follow, and to private letters have replied as best I could. A few weeks ago a gentleman of Chelmsford, England, wrote in regard to work he was preparing for the London *Field*, to-day I got a letter from a manufacturer of artificial flies in county Tyrone, Ireland, wanting to know if Chicago duck clubs could supply him with certain varieties of duck plumage that he needed. Can they? Why, of course they can. Chicago can do anything. All this only satisfies me even more that people read even the very poorest part of this journal; and I believe if I wanted the earth I should advertise for it in FOREST AND STREAM with a pretty good show of getting what I was after.

Mention was made some weeks ago of a big ducking trip undertaken by some Chicago shooters. The party was finally made up, I believe, of Messrs. W. B. Chatfield, Jesse N. Cummings and R. W. Cox, who were accompanied by John Taylor, the keeper of English Lake Club House, and Tim and Frank Wood, keepers of the Swan Lake Club. The party have returned after an absence of about a month. They went to Galveston Bay, Texas, and they actually got among the canvasbacks and had big shooting.

Mr. Fred Taylor has been back from his Indian Territory trip for some weeks. I have been unable to find him, and should be afraid to approach him, anyhow, on account of the largeness of the time he must have had, I want him to talk to somebody else a good while first, because they say he is not always safe when loaded with a turkey story. E. HOUGH.

175 MONROE STREET.

NEW YORK SOCIETY FOR THE PROTECTION OF GAME.—At the meeting of this society last Monday night a check for $2,000 was turned over to Secretary T. N. Cuthbert, to be used for the prosecution of game dealers who have been selling quail and grouse out of season. Fish Commissioner Eugene G. Blackford and Mr. E. P. Rogers were elected members.

FRED A. ALLEN of Monmouth, Ill., sends us a price list of his excellent duck and goose callers. He is doing a big business in calls, and his success is a new instance of the truth that it pays to advertise a good thing.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Sea and River Fishing.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

THE HAGFISH.

MOST of us doubtless have looked upon the hagfish, or slime eel, as a curiosity chiefly on account of its blind, lipless, and parasitic existence; its dentition adapted to burrowing into the flesh of its prey; its large eggs provided with a horny case and polar threads for adhesion, and its wonderful capacity for giving off slime. We learn something still more singular, however, from the writings of Wilhelm Müller, J. T. Cunningham, and Fridtjof Nansen concerning the life history of *Myxine*, namely that it nearly always combines two sexes in one individual. As the studies of Nansen, the curator of Bergen Museum, Norway, and recent explorer of the interior of Greeland, are the latest and most satisfactory on this interesting subject, we cannot do better than quote from his paper in the annual report of his museum, Bergen, 1888:

"On opening large specimens of *Myxine* we generally find well developed ova in their sexual organs. If we, however, take smaller specimens, of about 28 to 32 centimeters in length, and examine their sexual organs, we generally find that the anterior portion is but slightly prominent, and contains very small and young ova, while the posterior portion is often very broad and prominent, is lobate, and has a distinct whitish color along its margin, and has, in all respects, the appearance that we would expect to find in a testis; and this it really is. If we take a piece of the margin of this portion of the generative organ, tease it, and examine it in the fresh state under the microscope, we generally find abundance of spermatozoa in various stages of development. There can thus be no doubt that that portion of the generative organ is a real male organ. * * * Those young specimens of 28 to 30 centimeters in length are consequently hermaphrodites, with quite immature ovaries, but well developed testes, and they must be able to perform male functions. If we now examine somewhat more minutely the generative organ of the large specimens, which generally contains a number of large and well developed ova, we find that those ova occur only in the anterior portion of the generative organ and that the mesoarium of this portion is very broad and prominent, while the membrane corresponding to the mesoarium of the posterior portion of the generative organ is very narrow and carries no reproductive elements, neither ova nor spermatozoa.

"If we examine specimens of *Myxine* of sizes between that of these large females and that of the hermaphrodite previously mentioned, we will often find specimens in which the anterior portion of the generative organ is rather prominent and contains oblong young ova, while the posterior portion is of testicular nature and not very prominent. These specimens seem consequently just to be in a transitory stage between male and female state. Indeed, on examining a sufficient number of specimens, we will easily be able to find every transition stage from hermaphrodite males to fully developed females, and the rule seems to be that, the larger the specimen is, the more are the female organs developed, and the more do the male organs disappear.

"From what has been stated above we seem already entitled to conclude that *Myxine* is generally, or always (?) in its young state a male; while at a more advanced age it becomes transformed into a female. Indeed, I have not yet found a single female that did not show traces of the early male stage.

"*Myxine glutinosa* is a protandric hermaphrodite. Up to a body length of about 32 or 33 centimeters it is a male, after that time it produces ova. The proportion between the posterior male portion of the reproductive organ and the anterior female portion is not constant; the male portion is generally about one-third of the whole length of the organ. The few true males of *Myxine* observed are probably transformed hermaphrodites. The young testicular follicles, or capsules, have a structure quite similar to that of the young ovarian follicles. * * * Nearly ripe spermatozoa may be found in specimens of *Myxine* at every season of the year. *Myxine* deposits its ova at every season of the year."

Deposited eggs of the hagfish are excessively rare. The few specimens existing in museums have been obtained by dredging, but the actual places of deposit remain to be discovered. Perhaps we must seek them in deeper water than that in which the fish itself is habitually taken. A slime eel of a related genus was trawled by the Albatross in upward of 400 fathoms off the coast of California, containing many mature eggs.

We are indebted to Mr. Thomas Lee, one of the naturalists aboard the Fish Commission steamer Albatross during her voyage to the Pacific, for the following interesting communication about the southern hagfish, or slime eel, *Myxine australis:*

"While running through the Straits of Magellan in February, 1888, I was much surprised by the slime-producing powers of the hagfish. We took these fish at a number of anchorages; but at Boija Bay the supply seemed inexhaustible. At night we were skinning and skeletonizing a number of gulls and cormorants, and put all the refuse from the laboratory tables into our fish baskets. This bait proved most attractive, and the baskets came up with large quantities of hags and entirely covered with a mass of slime. I then tried holding a hag with stout forceps, to see how much more of this slime it could produce. The fish tied itself into a ball about the point of the forceps and almost immediately covered itself with slime. Repeatedly removing the slime I think I collected a pint before the supply seemed to slacken, and even then it seemed a hopeless job to get the fish free from it. I could not discover how it was produced, and can only testify to the fact of its very rapid production and in great quantities."

Couch describes a slime eel (*Myxine glutinosa*) that was placed in a receptacle holding three or four cubic feet of water and filled it so entirely with slime that the whole mass could be lifted out with a stick in a single sheet. The lateral line at the sides of the belly contains 108 large glands, or mucous sacs, each with an open pore on the upper surface, from which the slime is poured out. Capt. J. W. Collins states that he has seen trawls which were in the water three hours come up with cod and haddock weighing from ten to fifteen pounds, having their intestines wholly eaten out by slime eels. Sometimes when the trawls have been down from one to three days certain fish will have all their flesh eaten under the skin; this applies to fish hooked in the gills that die very soon after hooking.

The pug nose eel (*Simenchelys parasiticus*) burrows into the flesh of halibut and sometimes eats its way along the whole length of the vertebræ.

Lampreys attach themselves to anything they can reach, but they are found in mid depths or at the surface and not on the bottom. Capt. Collins knows of one that came up on a patent log that was towing at the rate of eight or ten knots an hour.

A species of *Ophichthys* has been taken out of cod, but was probably swallowed and, perforating the abdominal wall in its effort to escape, became encysted and hardened in the flesh, just as frequently happens in the case of the lant (*Ammodytes americanus*). The latter even gets into the liver of its captor occasionally, but, strangely enough, does not interfere with the health of the swallower.

THE TROUT OF STERLING LAKE.

Editor Forest and Stream:

I have just perused the article in your last issue on the trout in Sterling Lake. For many years in the past I was very familiar with that beautiful sheet of water and spent a number of summers camped on its shores, when its surroundings were wild and primitive, and almost unknown to the outer world. It was a grand pond, with waters as clear as crystal, cold and of great depth. During the summer of 1865 I put in most of the season there and made a special effort to capture some of the salmon trout, which an old friend long resident in that section had many years before assured me were denizens of its waters. I tried deep trolling and every method I could think of, but with a single exception without success. One morning when I had about given up, I found a trout of 2lbs. weight on a line which had been set in water 150ft. deep. In many respects it resembled the fish described in the article just read. It bore little resemblance to a brook trout—head and tail as noted in your article and a few small black and red spots on its sides. The flesh was of a deep salmon color. I learned from old Hiram Garrison, who was in the employ of the Sterling Iron Co. and had charge of the outlet of the lake, that some years before he had picked up a dead fish of the same kind in the outlet, which he found to weigh 15lbs. He also informed me that he had several times observed pairs of these fish lying off the rocks, on the edge of very deep water.

Garrison had lived there for many years, and although not a sportsman, had made the lake a special study. He knew of but one man who succeeded in capturing these fish and he visited the lake alone during November, and permitted no one to witness his methods.

But there are other trout in the lake, which differ from brook trout, although not so greatly as the fish I caught in 1865.

Several friends, during the winter of 1878-79, went with me to Munroe, Orange county, to relieve the care and worry of city toil, by having a tramp with guns and dogs through the woods. Birds being scarce one day I

suggested the advisability of trying our hand at pickerel fishing through the ice, and it was agreed that we should go to Sterling Lake. By taking an early train to Sterling Junction we were on the lake soon after sunrise. We had hardly got to work when we became the victims of a most atrocious sleet and wind storm and were speedily routed. We, however, caught several fish, and among them a trout of over ½lb., and the most beautiful one I ever saw; head like a Beaverkill trout, tail slightly forked (the other one's tail was indented almost as deeply as a mackerel's), the back and upper part of the sides thickly dotted with orange and vermilion spots, while the belly and lower sides were free from spots, but presented a sheen of gold and vermilion, which was indescribably beautiful. It certainly could not have belonged to the same species as the fish of 1865, unless it may be that increasing age entirely changed their characteristics. I had intended having this fish identified, but an accident prevented its getting to the city till too late. I feel assured, however, that the first fish belonged to a family whose habitat has been in those waters for many a generation. A VETERAN READER.

BROOKLYN, Jan. 28.

[There is some difficulty in determining the black and red spotted trout caught by "A Veteran Reader." Was not this a landlocked salmon rather than a trout? The coloration, and still more the size, would seem to indicate that; but nothing is so difficult as to identify the *Salmonidæ* without specimens of the fish.– The trout caught in the winter of 1878–79 should not have been a saibling unless this species was introduced earlier than we suppose. If the back and tail fin were spotted and banded with black, we should say this was one of the many color varieties of brook trout. If, on the contrary, these fins were uniform dusky, it should have been one of the many species like the Sunapee, blueback and Greenland trout.]

A BOYHOOD REMINISCENCE.

Editor Forest and Stream:

I have read some very pleasant tales where persons have joyously related their unbounded pleasure and bewildering sensations on capturing their first salmon, trout or big bass. My first experience with these fish is kin to Samivel's wision, "Limited, me lud, limited," but I never can, never will forget my first trouble with an eel.

At that time—forty-five years ago—I was a lad of eleven, and was living in the little village of Pine Meadow, New Hartford, Conn. There was nothing peculiar nor phenomenal in my make-up, inwardly nor outwardly, to distinguish me from the average factory boy, if the one point of size be left out of the consideration. The regular tattered, one-sided, crushed palmleaf hat was at times on my head; it was used to corral 'hoppers and catch butterflies, just the same as other boys did. The historic list suspender and sub-post office could also have been inventoried among my assets. Yes, I was small, little—that disagreeable littleness between a speck and a blotch—too small to notice, but old enough to hanker for attention.

I was fishing in the river just below what was then known as the "Kellogg mill," where the stream in one of its angry moods had dug a deep hole in the high bank, then changed its mind and turned sharp off to the left, leaving plenty of water and a very strong eddy. My pole had been cut for garden purposes, but was diverted from its manifest destiny by a little boy's strategy applied after sundown. The line was a piece of wrapping twine decoyed from the "finishing room." The tackle's first, last and only merit was strength.

I can recollect the exact hour, the direction of the wind up stream, and how the clouds were dark and lowering. The second that cork went under there was an instantaneous yank at each end of that pole, and for some time it was an even toss-up whether the thing came up or the fisher went in. I pulled and tugged, and strained as hard as possible; but the best that could be done was to get the cork about one foot out of water, as the pesky thing went gyrating round and round that whirling eddy. I hollered for help, the only result was a loss of wind. I tried to stick the end of the pole in the bank and roll a stone on it, but one hand was not equal to the emergency, the other was very seriously engaged hanging on to the butt end. I pulled up straight, one side, then the other, it was no go; that pole was hung on a pivot in the exact center, my end went down, the other up, then reversed to a dot; my strength was failing, wind was getting low, mad rising fast. The butt end came over my shoulder somehow; leaning my weight on it I felt a faint yielding; I stuck my toes in the earth and started up the bank; desperation and temper gave me strength, I scratched, clawed and crawled my way to the top, then looked back. Hokey pokey! jewsharps and jumping jacks! what was that hideous, twisting, writhing black monster I beheld? Its mouth was wide open, and if not as big as a barn door it certainly did look deep as a well, and it was squirming toward me up the bank. I knew no more about eels than I did of the Concord School of Philosophy or the Keely motor; but I did think it was some dreadful hobgoblin of the river after me for daring to fish in his hole. I grabbed the pole and yelled "'Twan't me, s'm'other boy," and started for home on as hard a run as possible. My hat flew off, it was left; had it been filled with fish hooks, toy pistols and pennies, the result would have been the same, nothing but a superior brute force could have delayed me an instant. I ran for every bit there was in me, and hollered equal to a second mate in a reefing gale.

Two men who were taking cloth from the tenter bars came to my assistance. I dropped the pole, gained the top rail of the nearest fence and howled louder that ever, "I didn't do it, I ain't done nuthing, I ain't." "Shut up, you little wretch," shouted one of my rescuers, "or I will choke you: it's nothing but a big eel." As he quickly drew his knife across the creature's back close to its head, the writhing, twisting, horrid thing was as limp and docile as a piece of rope.

I have caught various kinds of fish since then, have had numerous close shaves on land and sea, none have made so deep and lasting impression on my memory as that black, writhing, twisting mass of contortion, nothing short of a total eclipse of my mental faculties will ever wipe it out.

How large was it? Well, according to my impressions at the time it was about 25ft. long, as black and big as a locomotive boiler. A. W.

GRAND RAPIDS, Mich.

THE STEEL ROD.

Editor Forest and Stream:

When I gave my views about the steel rod I hardly expected to say anything more on the subject; but the remarks of "Black Bass" in your issue of Jan. 31 induce me to add that I am glad to learn the rod has already been improved, and that such improvements as are desirable will continue to be made. In my opinion the rod as heretofore constructed would meet the approval of a very large proportion of those who fish, and possibly also for certain kinds of angling it is well adapted; but as there are wooden rods of all descriptions, so should there be various kinds of steel rods. The strength and durability of the metal rod was next questioned; these are the qualities which, combined with other essentials, are finally to establish its superiority, but there are other properties without which the strongest rod would be worthless. Elasticity, pliability, balance, weight, strength and durability are the considerations. I wrote more from the standpoint of one who requires such flexibility in a rod as enables them to use the most delicate tackle, make the longest cast of fly or bait, and handle with the greatest promise of success the very slightly hooked fish. More especially, however, I had in view such qualities as are required in a first-class fly-rod; and when the steel rod is so made as to equal the cost of the best split-bamboo and compare favorably in weight and balance with first-class rods of other material, it will have attained the highest success. That it can eventually accomplish all these things, if in recent improvements it has not already done so, I firmly believe and desire.

In attaching guides to his rod, "Black Bass" recognized one of the requirements for bait-casting to which I referred. As he wound the guides on, I infer that he let the rod remain in position for use, and consequently did not give the surface coating the amount of wear that it would have received from frequent extension and closing of the several parts. In that case, the coating being intact, no rust would occur. I do not, however, think that to prevent the outside of this rod from rusting need be regarded as a serious thing; for, should the coating wear off, it can easily be replaced.

Should "Black Bass" ever succeed, as he suggests, in casting a frog and landing it on Fuller's door step, I hope he will not fasten to anything that will try his skill and tackle, as a very lively setter dog once did mine.

SPLASHER.

Editor Forest and Stream:

The comments of "Splasher" on the Morton steel rod are to the point, and show some of the bad features in this rod, and some of them, I think, might be partially, if not wholly, remedied.

I should like to see the rod made of aluminum bronze. I understand that this metal is made with all the elasticity and strength of steel, much lighter, and does not rust and corrode as steel or brass will. If the butt-end of each section of this rod was fitted with a porcelain ring the friction on the line would be greatly lessened. The butt or hand-piece should be reversible, with a capped plug to put in the ferrule not in use; the reel could then be used below or above the hand. I think that a porcelain eye where the line enters the rod from the reel would tend greatly to lessen the friction. RITO.

TARPON FISHING.

Editor Forest and Stream:

It seems rather like a pleasing revenge on some of the angling fraternity to note the interest now taken in tarpon angling; for when I modestly suggested, in 1879, that angling for the tarpon would be proven to be one of the finest of sports, if the lovers of striped bass fishing would only try them, the idea was pooh-poohed at. Some of the Southern anglers tried to make fun of it; and a Philadelphia gentleman, evidently anxious to get at the facts regarding necessary tackle, etc., offered to defray the expense of a three months' trip to Florida of any one who should send him a tarpon caught with rod and reel. Now the anglers seem to vie with each other to see who shall get there first and take a hand.

I have seen more than 100 of these fish in a day when in Florida, previous to 1879. Unfortunately for me (as far as sport is concerned), I have had to stay at home since that time, otherwise I should have tried my hand at a few of the "silver kings."

Time changes many things, and in the reports from tarpon fishing grounds of to-day we hear that it often takes all day to strike a fish, whereas ten years ago the cry of the anglers who knew it all was, that there was no use trying for them, as such a thing as saving a tarpon on rod and reel would be impossible, although they were thought to be quite readily hooked. None could be saved, they said, except with hand line, and rarely then.

I shall hope on for the winter when I can have a leisure month, then I shall look over my old haunts and see if there are not a few tarpon left for me to try for. There were plenty there when I last saw the clear spring waters of those rivers, and I have not heard of any angling being done at that place; so I shall rest content that there will be some left for a long time yet. A. B. DODGE.

FLORIDA FISHING.—The Hon. A. M. Spangler, editor of the Philadelphia *Evening Star*, formerly one of the Fish Commissioners of Pennsylvania, is now writing very interesting letters from Florida for his paper. The series promises to be as entertaining as the widely read and highly appreciated articles on similar subjects written by him from Nova Scotia during the summer of 1886. Mr. Spangler tried the fishing at New Smyrna under unfavorable circumstances, the weather being cold and stormy, yet on the first day's fishing he caught a channel bass, eight very large sheepshead, besides a number of kingfish, pigfish, sea bass and spots. On the second day, in Halifax and Hillsborough rivers, he took 24 sheepshead, several drum and a lot of kingfish or whiting (*Menticirrus*). The sheepshead averaged about 4½lbs. The third day's sport yielded 13 large sheepshead and a 20lb. drum, the sheepshead having been caught with a Henshall bass rod and light tackle. For bait the anglers used clams, mullet, crabs and fiddlers, the first two preferred. Surf fishing for channel bass will soon be in its prime. Bluefish and cavalla have not yet made their appearance.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

THE PARADISE FIN AND FEATHER CLUB enjoyed an elegant dinner on Feb. 5, at the Union League Club, New York, at the invitation of the club's president, Hon. Henry A. Gildersleeve. The courses extended through six hours, and the jolly anglers revelled in terrapin and canvasback duck served in the consummate manner for which the most aristocratic of America's club *chefs* is famous. The members present were Dr. W. F. Duncan, J. Chas. Davis, E. R. Lewis, John Wood, H. C. Miner, J. K. Emmet, Jr., H. S. Taylor, Chas. B. Jefferson, Chas. A. Thomas, Kit Clarke, James T. Davis, Leander Richardson, J. F. Graham, Allan Foreman. President Cleveland, who is a member of the club, was unavoidably absent, but sent a letter of regret, and stated that he would devote some time during June at the club's summer house worrying the trout. The evening's festivities were greatly enhanced by the presence of the Blossom Banjo Quartett, who discoursed sweet music during the courses and between the speeches. Nearly every member "spoke a piece," but the gem of the evening was the address by Judge Gildersleeve, which not only delighted the anglers, but filled the banquet room with eager listeners of the Union League Club, who joined heartily in "three cheers for the Judge" at his finish. Among the emphatic "hits" of the banquet was a charming song, beautifully rendered in a sweet tenor voice by Mr. J. F. Graham, city editor of the N. Y. *World*, and an original humorous poem by J. Chas. Davis, entitled, "That Little Flat Bottle, so Dear." The regular annual banquet of the club, commemorating the opening of the trout season, will occur on April 1, and will probably be given in the blue room at Delmonico's.

Fisheulture.

COLORADO FISH COMMISSION.

THE report of Mr. G. F. Whitehead, Commissioner, for 1888 recapitulates the distribution of Eastern brook trout fry to public waters, showing the disposition of 326,500 young, besides the sale of 17,000 to citizens: 20,000 fry of the rainbow trout were placed in Platte Cañon. In 1888 Platte Cañon received 20,000 fry of the same species and the number of brook trout deposited in waters of the State was 304,000. Besides these 10,000 fry of *fontinalis* were sold to residents. The first lot of eggs of native black-spotted trout were obtained by exchange for rainbow trout fry from Dr. John Law, of Leadville. These were hatched and the young are thriving. Previous efforts to furnish the hatchery with natives from public waters were unsuccessful. About 13,000 trout, including brook, rainbow and native, were kept in the hatchery for breeding purposes.

Carp culture proved a failure, and the Commissioner congratulates the people on this result, which he attributes to the low temperature of the water in the pond, preventing their breeding.

For the lakes Mr. Whitehead recommends black bass, pickerel, channel, or blue catfish, and yellow catfish. The blue catfish he considers nearly equal to trout and it reaches 10 or 12lbs. in weight. The yellow catfish grows to 3½lbs. in three years in the prairie lakes. In some of the high mountain lakes like Echo Lake, which has no apparent inlet or outlet and contains myriads of fresh-water shrimp, the Eastern brook trout flourishes wonderfully. This lake was stocked for the first time in July, 1886, and in October, 1887, a trout 21 months old weighing 3lbs. 6oz., was taken from it and sent to the Commissioner. Two other lakes in that vicinity have been stocked since. Rainbow trout planted in Platte Cañon, near Denver, have grown rapidly and are becoming great favorites with anglers on account of their game qualities.

The popular belief that the eggs of *fontinalis* are destroyed by ice in the mountain streams is shown to be erroneous because the trout are increasing in those streams. "In the Republican River, on the plains, at an altitude of 5,000 feet above sea level, a stream made from springs, the brook trout is breeding rapidly." This would correspond pretty closely with the greatest elevation of this species in western North Carolina. It is claimed that this trout grows in Colorado to double its size in Eastern streams.

Colorado has 5063 miles of water adapted to trout, besides innumerable mountain lakes suited for breeding and rearing ground. All of these waters at one time teemed with black-spotted trout, but dynamite and giant powder in the hands of unscrupulous men have nearly depopulated the waters.

The appropriation for 1888 was only $2,000 and the cost of distributing the fish was met by interested parties and by the railroads. The Commissioner calls attention to the urgent need of laws to protect the fry placed in the streams. At present many of them are caught and appropriated by boys and even adults. The law prohibiting the marketing of trout has served a useful purpose. Suckers are very destructive to trout eggs in the lakes and streams and their extermination by netting at certain seasons is strongly recommended. In the agricultural regions the irrigating ditches destroy millions of trout annually. Sometimes, when the water is turned off suddenly, the fish die or are left to be captured in the dry ditches. The appointment of fish wardens by the Boards of Commissioners of the several counties has not produced very good results, owing to the fact that most of the men dislike to inform on their neighbors. The Commissioner praises the ability as a fisheulturist of the superintendent of the State hatchery, Mr. E. V. Bogart, and it is wonderful how with the small sum of $1,500 for all expenses, including salaries of two men, the superintendent succeeded in producing about 400,000 trout.

FLORIDA AND CUBAN FISHERMEN.—Capt. D. E. Collins, of the United States Fish Commission, completed his statistics of the fisheries at Key West Jan. 31, and sailed for Punta Gorda in Charlotte Harbor, Florida. He is now at Tampa. In alluding to his investigations at Key West a prominent newspaper referred to the dissatisfaction of the fishermen with the present fishery relations with Cuba. The duty on fresh fish carried under the American flag to Havana is prohibitory, but Cuban fishermen often fish within the three-mile limit in Florida waters and land them in Havana free of duty.

INCREASE OF SHAD.—The U. S. Fish Commission has continued the artificial propagation of this species regularly from 1880 to 1888, and the supply has nearly doubled. In 1880 the catch from Connecticut to North Carolina was found to be declining; the total number taken was 4,140,986. In 1885 there was an increase of 25 per cent. over 1880; in 1886 the gain was 34 per cent.; in 1887, 62 per cent., and in 1888 it advanced to 85 per cent.; the money value of the increased catch of 1888 compared with that of 1880 being $704,500. The number of shad taken in 1888 was 7,000,474.

CARP FOR MEXICO.—Señor Estévan Cházari, Fish Commissioner of Mexico, came to Washington recently for the express purpose of obtaining carp and other fishes for acclimatization in his country. Jan. 3 a U. S. Fish Commission car took him as far as El Paso with 5,000 carp; from thence he transported them to Mexico, arriving there on the 12th with very small loss of fish. The climate of Mexico promises to be admirably adapted to carp culture.

NEW HAMPSHIRE FISH COMMISSION.

THE report of the Fish and Game Commissioners for the year ending June 1, 1888, shows the following distribution of young fish from the Plymouth hatchery: Brook trout, 452,000; saibling, 3,000; Penobscot salmon, 500,000; landlocked salmon, 145,060; brown trout, 5,000; Loch Leven trout, 30,000; from Sunapee Lake station, 335,000. Total 1,470,000.

From Sunapee Lake station were planted in Sunapee Lake: Brook trout, 150,000; golden trout, 100,000; landlocked salmon, 45,000; Loch Leven trout, 30,000; rainbow trout, 10,000. Total 335,000.

The Penobscot salmon eggs were hatched with a loss of less than two per cent, and the fry were placed in the Pemigewasset River. Young salmon have been unusually plenty in this river. There were more large salmon in the river in 1887 than any year since the Lawrence Dam was built. Forty salmon were taken in the fish ponds, and from these about 100,000 eggs were obtained. The heavy July rains prevented the use of the nets during the height of the run, or many more salmon would have been caught. The salmon that went over the falls at that time passed up to their old spawning grounds near the headwaters of the river. The largest fish was a female 40 inches long, weighing 24 pounds; the smallest, a grilse of 4½ pounds, this being the first grilse taken in the nets since the station was established.

As the water was unusually high most of the brook trout were taken in pound nets set in the mouths of the brooks. The eggs were obtained from large wild trout weighing from one to seven pounds and produced very large and healthy fry.

Col. Hodge pays the following tribute to the black bass: "Previous to the introduction of the black bass into Sunapee Lake it was not known as a trout lake except to a few, and the catch of trout, with the exception of those netted and speared during the spawning season, was very small. The lake at that time was infested with small yellow perch, which destroyed the young trout as soon as hatched. Especially is this true of the *aureolus*, they being lake spawners. The black bass have destroyed the perch and in their place are now taken hundreds of the finest trout in the world. Here we have a lake noted for its excellent bass fishing and at the same time one of the finest trout and salmon lakes in New England; and no fisherman on the lake has ever made complaint that the bass interfered with the trout in any way."

The destruction of Plymouth hatchery by fire, Feb. 29, 1888, involved the loss of over 1,500,000 eggs and fry, all of which would have been distributed in the next two months. The building was owned jointly by the States of Massachusetts and New Hampshire. At a meeting of the Commissioners in Boston soon after it was decided to rebuild and enlarge the hatchery at once.

BOSTON FISH BUREAU.

THE 14th annual report of this Bureau for 1888 contains a list of 30 American vessels that obtained licenses to carry on fishing from Canadian ports, at a cost of $3,831. The losses during the year were 27 vessels, valued at $145,500, and 83 lives; 19 additional lives were lost in dory fishing. There has been a continued scarcity of cod and mackerel, as in 1886 and 1887, and higher prices have resulted. Boston's trade with Hayti has been greatly interfered with by the unsettled condition of affairs in that island. The value of the fish importations into Boston was $1,263,741. For the eleven months ended Nov. 30, 1888, the total value of fish imported into the United States, as determined by the Chief of the Bureau of Statistics, was $4,539,375.

The entire catch of mackerel by New England vessels was 48,205 bbls., the smallest for 71 years. This scarcity has led to importation from England of mackerel caught on the Irish coast; 10,245 bbls. were received. This species schools on the coast of Ireland from March to June, after which there is no schooling until autumn, when there are some large catches of smaller mackerel. As a substitute for mackerel a Boston firm introduced bonito from Turkey under the name of Bosphorus mackerel; 69 casks arrived in April from Constantinople. The same species occurs in vast schools at certain seasons in Vineyard Sound and Buzzard's Bay and it is a very fine food fish. The only source of wonder is that dealers have made so little of it. A great many people have tried pickled bonito and consider it equal to mackerel. The catch of mackerel at the Magdalen Islands was 4,000 bbls., the largest for fifteen years. The fishing is done entirely by boats. Early in June at Block Island and south of Long Island there were almost nothing but small mackerel and these generally in small schools. Vessels saved about 30 bbls. at a time out of a catch of 100 bbls., and it took from 1,200 to 1,500 fish to make a sea packed barrel. There was, consequently, an enormous waste of fish. The first arrival of salt mackerel from the fleet was the steamer Novelty, June 11, with 160 bbls. caught off Canso; she had about 100 bbls. fresh also. The high line of the mackerel fleet was the schooner Edith Rowe, of Gloucester, with a stock of $14,000.

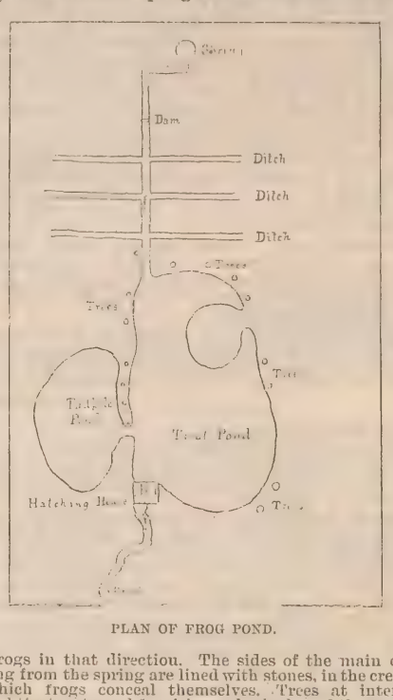
The total catch of cod for New England was 585,581 quintals, a decrease of 91,142 quintals from 1887. The schooner Nellie M. Davis, of Gloucester, landed about 4,400 quintals valued at $18,125. Two Provincetown vessels fished in the Gulf of St. Lawrence.

Menhaden were very abundant in 1888 north of Cape Cod. From June to October they were more plentiful from Fire Island to the Penobscot than ever before. After Oct. 1 they were found in abundance from Sandy Hook to Cape Hatteras, disappearing about the middle of November.

Shad made their appearance in Chatham Bay in June, and about 400 bbls. were split and salted and landed at Boston. The southern Cape Cod ports received about 1,000 bbls. additional. The total catch of shad from Connecticut to North Carolina, contrary to what is implied in this report, was much greater than in 1887, the excess amounting to nearly one million fish.

SALMON AND TROUT IN ECUADOR.

DECEMBER, 1, 1888, Mr. E. G. Blackford furnished to Mr. Victor G. Gangotena, of Quito, Ecuador, 5,000 salmon eggs and 5,000 brook trout eggs, with two completely equipped hatching troughs. The eggs were packed in boxes made by Mr. James Annin, Jr., of Caledonia, N. Y. Mr. Gangotena left New York by steamer City of Para. The eggs were placed in the refrigerating room and ice was renewed daily; they reached Aspinwall Dec. 9; three hours took them to Panama, where they remained 3 days. The voyage to Guayaguil ended Dec. 15; here they were stored in an ice house 2 days. From Guayaquil to the last railroad station up to the Andes the run was 3½ hours; thence the journey was continued by mules six days up and down the mountains, with great variations of pressure and temperature. During all the time, of course, ice was constantly supplied in the packing boxes. Dec. 24 they arrived in Quito and were kept there two days while a suitable location was sought. Dec. 26 the eggs were placed in water of 57 degrees Fahrenheit. From 200 to 400 trout eggs showed signs of spoiling when deposited, but there was no loss of salmon eggs. The trout eggs were put under a pressure of 2in. of water and began to hatch Jan. 1. On the next day they continued to develop in small numbers and some of them were coated with fungus. Jan. 4, there were already 400 or 500 trout. The salmon eggs were under a pressure of 5in. of running water at 50 degrees Fahrenheit. They began to hatch Jan. 4 and on the 10th 3,000 to 4,000 were hatched. A good many of the salmon died daily without any discoverable cause.



Mr. Gangotena will perhaps order from Mr. Blackford 500,000 or 1,000,000 eggs. He wants to introduce into the fishless rivers and lakes of the interior of Ecuador salmon, trout, carp, tench, goldfish and crayfish. Quito is 2,850 meters (9,348ft) above the sea level and the country has elevations ranging from 0 to 4,075 meters.

A SUCCESSFUL FROG POND.

WE are not aware that artifical frog culture has been successful anywhere, but if so FOREST AND STREAM would be glad to know it.

There is a pond in Massachusetts which deserves to be famous for the number and size of its frogs, but no attempt is made to aid nature in the care and multiplication of the species. The natural conditions, merely aided by excavating the pond and introducing a system of lateral ditches to drain a piece of marshy ground, have accomplished what perhaps no amount of skill could have brought to pass under less favorable circumstances.

The accompanying diagram will almost explain itself. The pond is an artificial one and receives spring water from the source indicated. Surface water drains into it also through the ditches made in marshy ground near at hand. A slight dam near the spring obstructs the movements of

PLAN OF FROG POND.

the frogs in that direction. The sides of the main ditch leading from the spring are lined with stones, in the crevices of which frogs conceal themselves. Trees at intervals around the trout pond furnish ample shade and the greatest depth of water in this pond is about 8ft. On the right of this deep pond the ground rises gradually to form a hill; the remaining ground is low.

The main ditch carries clear water and has water weeds in it. The bottom of the trout pond is light, sandy; the water is clear and excellent for drinking.

The tadpole pond is very shallow, scarcely a foot deep in some parts; the bottom is very muddy and full of aquatic plants.

The water escapes in a small brook after passing through a small hatching house, in which eggs of trout are developed. Trout, suckers and some other fish live in the deep pond. The distance from the spring to the hatching house is about 500ft.

The owner of this pond supplies his table with all the frogs desired. As many as two dozen, each weighing a half pound or upward, have been caught in a few minutes. Tadpoles by thousands may be seen around the leaves of the water plants. Three hundred and twenty were caught at one scoop of a butterfly net. One thousand two hundred tadpoles without legs and 1,200 with two legs were caught in one day, and many more could have been captured. Only 100 with four legs were taken during the same day. The tadpoles are all uniform in size and very big and fat. There would be no limit to the frogs if the big ones did not eat up the little ones and the tadpoles.

PENNSYLVANIA FISH COMMISSION.—Two important measures are now pending in the State Legislature at Harrisburg. One of these provides for the appointment of two commissioners annually, thereby securing the presence of four experienced members of the board at all times The second relates to the preparation of a new code of fish laws for the State. The Allentown hatchery has recently shipped over 300,000 brook trout fry, 10,000 of which were deposited near the establishment in the Little Lehigh. Mr. J. P. Creveling, the superintendent, sees hundreds of these fish every few days, and says they are about twice as large as those in the house. He believes in early planting. The establishment is crowded, and needs twice its present capacity. Orders for trout are coming in rapidly, and supplying them will make room for eggs not yet developed.

PREPARING PONDS FOR TROUT.—Brattleboro, Vt., Jan. 31.—*Editor Forest and Stream:* I have a pond in which are black bass, trout, eels and chub. I want to stock it with trout, build a hatchery, etc. Can you tell me of any way in which I can get rid of all the fish now in the pond? It is a natural pond of 250 acres, fed entirely by springs, with no way to draw off the water; some parts are very deep. Can it be fired with any explosive? And if so, how near together would the cartridges need to be in order to make a clean sweep; or can it be done in any other way? What work have you on fishculture, describing hatchery construction and operation, etc., and what is the cost?—E. S. B. [The first thing to be done to secure freedom from eels is to see that they do not have access to the pond by means of its outlet. The young will enter if there is the slightest opportunity to do so. It is pretty firmly believed by naturalists that eels reproduce in the sea and will not breed in fresh waters; if this be true there is nothing to be done but to kill those that are now in the pond and to keep out the ascending army. Eels have been killed in immense numbers by the following method: Bait the killing place for a few days or a week with beef bones having a little meat upon them. The eels will soon collect around the bait from every quarter. Then some night, when it is thought that a sufficient number has collected, put in several dynamite cartridges, and their effect upon the eels will be startling. It is not probable that the other fishes will suffer much from the explosion, because they are not scavengers like the eels. The chubs, bass and trout can remain in the pond together, for it is well known to many prominent fishculturists that they will thrive and harmonize in the same inclosure. Useful works on fishculture are the following: Stone, "Domesticated Trout; How to Breed and Grow Them;" Green & Roosevelt, "Fish Hatching and Fish Catching." A pamphlet on pond culture, by Carl Nicklas, is distributed free by the U. S. Fish Commission. The best German treatise is von dem Borne's "Fischzucht."]

SHAD AND STURGEON IN ALASKA.—The U. S. Commissioner of Fish and Fisheries has received information dated Jan. 25, 1889, from Mr. W. H. Woodcock, of Fort Wrangel, Alaska, to the effect that three shad were caught in the Stikine River by fishermen netting for salmon. The Columbia River is the nearest stream in which shad were planted. One sturgeon was also caught, which is the first taken in the river so far as known. In 1880 we had a sturgeon which was supposed to have come from Alaska, but this was afterward discovered to be a mistake, and we erased it from the catalogue of Alaskan species. Now we shall probably be able to add it definitely, for the Commissioner has asked Mr. Woodcock to secure specimens of both fishes if possible during the coming season.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Masoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6923**

DOG ARTISTS.

CHICAGO, Feb. 11.—Mr. L. C. Earle, Chicago's favorite painter of animal and outdoor life, has just finished a beautiful water color of jack snipe, there being three birds shown in the foreground, life-size. In coloring, action and pose the birds are—well, they are snipe. Mr. Earle is one of the very, very few artists who have any right at all to handle sporting subjects. He is a sportsman himself, as well as a painter. That is why his field pictures have the spirit in them which appeals to the sportsman, while their artistic qualities disarm criticism of the non sporting sort. As a painter of the setter, I do not believe Mr. Earle has an equal. He shows some delightful studies of the red Irish—although I believe his own favorite is a Gordon. Mr. Earle has read FOREST AND STREAM from the start of the paper, and showed me bound volumes beginning at Vol. I., No. 1, back in the days when FOREST AND STREAM had poetry on the first page. He keeps them up in his studio along with the rest of the furniture.

Speaking of drawing dogs reminds me of a little experience in which Mr. J. M. Tracy, the New York artist and well-known delineator of the pointer dog, figured to some extent. At the time of the first meet of the American Coursing Club at Great Bend, Kansas, Mr. J. A. Ricker, an artist friend, and myself thought we would win a little glory by sending a report and sketch to *Harper's Weekly*. Mr. Ricker did the sketch, and I did the rest of the trouble. The editor wrote us that Mr. Tracy would make a painting of the sketch, and Mr. somebody else would make an engraving of the painting. There were two greyhounds in the foreground of the sketch, and these greyhounds were in the act of swallowing a pretty good likeness of a plains jack rabbit. The greyhounds were just plain, unvarnished greyhounds, without very much style about them, but the jack rabbit was all right. Well, when the article finally came out, there were two big pointers chasing an abnormally fat and chunky cottontail, and instead of buffalo grass there were pretty flowers. I presume the engraver who copied the painting had monkeyed with Mr. Tracy's dogs. Mr. Ricker on seeing this at once retired to private life. I wrote the editor, and told him that to chase so singularly large and fat a rabbit in that way was neither humane nor decent, and I thought he ought to be ashamed of himself; but he replied only by a large and clammy silence that fell like a pall on all of western Kansas. I don't believe Mr. Tracy will mind my mentioning this, since it happened so long ago, and since, after all, it is only a tribute to his acknowledged skill in his chosen line. E. HOUGH.

A FISHING PARALLEL.—Grand Rapids, Michigan.—*Editor Forest and Stream:* I was up in the northern part of this State last January, and while in a friend's store something was said about fishing. The proprietor asked me if I liked to go fishing. The reply was most emphatically in the affirmative. "Well, if you have time, I will go out with you this morning," was the rejoinder. "What kind of fish can you catch at this season?" "Pickerel, all you want." "Fish through the ice?" "Oh, no. There is an old fellow out here a way who nets lots of them and keeps them in a large box made for the purpose, and you can spear all you want at so much per pound." "Tin horns and horn spoons! Call you this fishing? The idea of jabbing a piece of cold steel into a fish in a box! Why the thought of it is enough to give one the blind staggers." And yet this was of the same spirit that would confine a puny rabbit in a small box until half starved, then let it out and set two strong, healthy dogs on it. Dear old FOREST AND STREAM, there are degrees which are not conferred in your lodge nor mentioned in your geometry.—A. W.

MASSACHUSETTS KENNEL CLUB.

LYNN, Mass., Feb. 11.—*Editor Forest and Stream:* In your last issue you publish an article from the secretary of the New England Kennel Club, wherein he states that "there is danger of confusion in the public mind in regard to the bench show to be held at Lynn next March;" that "Lynn has infringed on the Boston title;" that "we have requested Lynn to select some other name;" that "on Jan. 18, 1889, the Boston Massachusetts K. C. met and elected officers," and that "the Massachusetts K. C. of Boston and the New England K. C. of Boston are now under one control."

In order to place this subject in its true light before the public, perhaps it would be well to submit the following: The Massachusetts K. C., Lynn, Mass., was organized May 17, 1887 under the name "Essex County Kennel Club," and until the first Monday in May, 1888, it lived under that name, but since has existed under its present title, *i. e.*, "Massachusetts Kennel Club, Lynn, Mass."

This name was adopted at the suggestion of members of this club and also at the suggestion of the secretary of the A. K. C. Association (to which association this club belongs), and on inquiry concerning the old Massachusetts K. C. of Boston, finding it to be a defunct concern (nothing having been heard of it since 1882 until a few days ago), we proceeded to adopt our present name, and it was published in the sporting papers.

Later on we sent to the leading sporting papers the announcement that Lynn would hold a dog show in March under the auspices of the Massachusetts Kennel Club, and this announcement has appeared in like manner each successive week for months past.

Now, if the old Massachusetts K. C., of Boston, was not a defunct concern, why did they not notify us of their existence nearly a year ago? If they had notified us any time previous to Dec. 1, 1888, that they were "not dead, but sleeping," we certainly would have adopted a different name. If the old Boston Massachusetts K. C. was not a defunct concern why did they not meet and elect officers Jan. 18, 1888, as they claim to have done on Jan. 18, 1889? And now, just prior to our forthcoming bench show, when we have completed all our arrangements for the same, comes our first intimation of their existence, in the shape of a communication from the secretary of the New England K. C., "forbidding us the use of our name in any shape or manner," and "if we do not select another name they will take proper recourse to defend their rights."

It is extremely unfortunate that this trouble has arisen between Boston and Lynn, having been of the opinion that Lynn would be a help to Boston in giving a bench show here, but it is quite evident that Boston does not look at it in that light. However, as the "Massachusetts Kennel Club, Lynn, Mass.," is a regularly incorporated body, chartered under the laws of this State, we will positively hold our bench show in Lynn next March under our title. The New England K. C., of Boston, and the Massachusetts K. C., of Boston, are now under one control. This statement is sufficient.

ERNEST C. TARR,
Secretary Massachusetts Kennel Club, Lynn, Mass.

THE PITTSBURGH SHOW.

Editor Forest and Stream:

Your little drama with the scene laid at Pittsburgh show rivals Macbeth, hardly in literary composition or fervor of diction, but in historical accuracy they are much of a muchness. Mr. Wixom certainly did not carry things with the high hand that would be supposed from this modern drama, although he did stand firmly on his rights under his agreement with the superintendent and president that he should be allowed to take his dogs away in time to catch the 9 P. M. train, but before he left the show he secured the concurrence of Mr. Gregg a second time. I believe the preparatory scene of "Go in, Juno," is about correct, and my hired man (the "Bob" referred to) gave a most amusing account of the affair. I don't think my friends will believe that I behaved in such style as to deserve the epithet of "rearing round." I was exceedingly angry at finding the agreement made by Mr. Krueger and concurred in by Mr. Gregg, that Mr. Dole's dogs should go at 8:15 P. M., was set aside by the vice-president, but it would not do for me to raise a quarrel after my former breezes with the show authorities. Mr. Krueger may have been white with rage, but if so, it must have been at the shameful attempt of the vice president to frustrate so reasonable an agreement as was made in the case of Mr. Wixom's and Mr. Dole's dogs. These dogs were the only ones in the show that would not reach home by Saturday night if they remained in the show until it closed, but if they missed the 9 P. M. trains they could not get home before Monday, lying over all day Sunday. Mr. Dole's dogs staid over at Myers's kennel until Monday, as I was running the entire N. D. C.

I had a very pleasing incident, showing how real mastiff men (not "clique clubbers") stick together. My driver was taking my bitch Emma out of the show, when Mr. Probert, the superintendent of Mr. Cook's kennels, ran across him and raised Cain with him, declaring, "You ain't Mr. Wade's man; he had a colored man looking after his dogs;" and actually wouldn't let the man go on until he had produced the gateman who had taken up his identification card. While he was mistaken in his idea, Mr. Probert did just what all real mastiff men do for each other.

I very much regret to have seen in the Pittsburgh papers most shameful attempts of parties connected with the show to make a scapegoat of Mr. Krueger for their own utter incapacity and wretched muddling. That charge that he showed favoritism is utterly false. He showed the strictest impartiality to everybody. The show was the dirtiest, most stinking one I ever saw, with the smallest quantity of the most miserable bedding. Many exhibitors went out and bought bedding for their dogs. All filth, refuse meat, etc., was just poked under the benches, not any being taken out of the show, and the stink resulting can be imagined. But this was none of Mr. Krueger's fault. The show was gotten up to recoup the managers the money they lost at previous shows, and was run strictly from this point of view. (It was that phantasmal "speculative show" we used to hear of.) To this end every item of expense was cut down (except feeding, that was very good). Krueger was forbidden to buy any more straw. He was allowed five attendants in all, and as each judging ring required a steward and at least two handlers, they started one man short of absolute requirements. Then the men were not the right stuff; lacking in nerve and decision. Of course there was nobody to do the cleaning while the judging was going on, and when that was finished, the various stinks had fixed themselves so that Hercules couldn't have purified it. If it had not been for Klocke, Krueger and I showing dogs for absent exhibitors, I don't know whether Mr. Naylor would have got through yet. I saw Mr. Wixom showing a dog for a competitor.

Even the force he had was not under Mr. Krueger's control. He would issue orders, when an "officer" would come and contradict them within five minutes, and all his authority was lost. That he was able to do anything was much to the credit of his patience. A striking feature of the show was the complete lack of common attention to exhibitors from a distance. Several told me that not a person connected with the show manifested the least interest in them or showed them the commonest courtesy. "Your money is all we want" seemed the ruling idea. I must make an exception in favor of Mr. Gregg and Mr. Krueger in this respect. The latter did the little he had time to spare for, and Mr. Gregg really seemed to do his best.

The mastiff judging was all right. Mr. Naylor put Duke too far back on account of his knuckled legs and light thighs, but he did not know that the dog was only a thirteen months' puppy, and supposing him a grown dog set him down as "gone to pices." Where this puppy got his fair type of head and immense substance from I can't imagine; I bred his sire, owned his grandsire, and saw his granddam, and this puppy is worth the lot. 173lbs. for a thirteen months' puppy, with about the head of Hero II., isn't bad by any means.

The fact of the matter is that the leading owners of the Western Pennsylvania Poultry Society are not fit to run a show. They are not dog men. I don't believe that president, secretary or treasurer knows a smooth St. Bernard from a mastiff, and they neither read the kennel papers nor go to other shows. They have got into a rut and cannot get out of it. I was informed by several parties that, after this show, they propose to retire from the business and let somebody else try. It is said that they cleared $2,000 by the venture. Let us hope that they will be satisfied and quit.

The result of the show is a bit of a study. I don't see how a thing could be more suicidally mismanaged for securing entries. The resignation from the A. K. C. cut off certain entries of the bootlicks of "the gang," which were more than made up by increased entries from local exhibitors, who would not have paid the "bulldoze" 50 cents, but they lost the hurrahing support of the A. K. C. creatures, the puffing and wind work that is so liberally heaped on "gentlemen" (meaning fellows who "stand in with us"). To compensate for this, they struck the two most popular men they could have picked in Krueger and Naylor, but with supreme ignorance of their opportunity, never took a single step to make this widely known. In fact, it was never mentioned in the kennel press that Mr. Naylor was to judge non-sporting dogs. I know of over 30 entries that came entirely on account of the connection of these two gentlemen with the show, and had it been properly published two months in advance, this 30 would have been quadrupled; and these 30 were no scrubs, but carried off the majority of the prizes in the non-sporting division. The Columbus show was belauded to the skies, there was to be a great affair of it, it was under the sacred shadow of "the American Kennel Club, sir;" yet it had 206 entries against 288 at Pittsburg, again teaching the lesson that Buffalo first taught, that membership of the A. K. C. has but little to do with the entries at a show. Rage as you will, gentlemen, this has been proved.

An overlooked feature at the show was the Russian wolfhound puppy of Mr. Hacke's, an immense dog, a thoroughly typical greyhound, with the coat that should come from a cross of setter and greyhound, and by all odds the handsomest dog ever seen in an American show. W. WADE.

HULTON, Pa., Feb. 9.

COLUMBUS DOG SHOW.

Editor Forest and Stream:

The first annual dog show of the Columbus Fanciers' Club was held at the City Hall, Feb. 5 to 8. There were 206 entries, of which number 23 were absent. The quality of the dogs was of a higher average than the list of awards will show, as there were a number of recent importations with many English wins to their credit that were not shown for competition. The judges were Messrs. John Davidson and H. Goodman; Mr. Geo. H. Hill was superintendent. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—St. Joe Kennels' Wacouta Nap.—OPEN—*Dogs:* 1st and special, C. C. Cook's Moses; 2d, C. E. Thompson's Tiger Royal. High com., J. Grant's Leo III. and E. Probert's Jumbo. Com., L. P. Bailey's Blusco. *Bitches:* 1st and special, C. C. Cook's Menglada; 2d, R. M. Conway's Ilford Margory. Very high com., L. P. Bailey's Lady Stoughton.—PUPPIES—*Dogs:* 1st and special, J. F. Stone's Philammon; 2d, J. Grant's Leo III. *Bitches:* 1st, T. W. Coon's Grace; 2d, C. C. Cook's April Queen.

ST. BERNARDS.—CHALLENGE—Alta Kennels' Victor Joseph, (also special),—OPEN—ROUGH AND SMOOTH-COATED—*Dogs:* 1st, and special, Acme Kennels' Valens; 2d, B. R. Geddes's Caleb. Very high com., J. B. Lewis's Knight. High com., H. R. Wood's Tom. Com., A. W. Albright's General Scott. *Bitches:* 1st and special, Keystone Kennels' Madchen; 2d, Geo. Gillivan's Lady of the Alps. Very high com., Alta Kennels' Princess Louise, Acme Kennels' Empress and J. B. Lewis's Ursula III. *Puppies:* 1st, Geo. Gillivan's Lady of the Alps.

DEERHOUNDS.—CHALLENGE—S. W. Skinner, Jr.'s Mac.—OPEN—*Dogs:* 1st and special and very high com., S. W. Skinner, Jr.'s Fergus and Cuthac; 2d, C. E. Rowland's Ranald. *Puppies:* 1st, C. E. Rowland's Monteith.

GREYHOUNDS.—1st and special and 2d, Rockwood Greyhound Kennels' Master Rich and Rich and Rare.

FOXHOUNDS.—1st, withheld; 2d, L. Tolliver's Mohawk, Jr.

POINTERS.—CHALLENGE—*Dog:* No entry. *Bitch:* Columbus Kennels' Queen Bow.—OPEN—LARGE—*Dogs:* 1st and special, J. R. Daniels's Lord Graphic; 2d, B. F. Scitner's Patterson. Very high com., C. G. Stoddard's Trinket's Cash. High com., Cannonsburg Kennels' Master McGrath. *Bitches:* 1st and very high com., B. F. Seitner's Nell of Idstone and Pride of Idstone; 2d, Columbus Kennels' Larnock Elsa. High com., S. S. Seibert's Jingle.—SMALL—*Dogs:* 1st, H. T. Schmidt's Robert Spring; 2d, Dr. J. G. F. Holston's Wakatonka. Very high com., G. C. Urlin's Count D. U. *Bitches:* 1st, B. F. Seitner's Phantom; 2d, Columbus Kennels' Idstone's Fancy. Very high com., Toledo Kennel Club's Polka. Com., J. O'H. Denny's My Queen. *Puppies:* 1st and special, F. Seibert's Guy; 2d, Dr. J. G. F. Holston's Wakatonka. Very high com., D. H. Moore's Vera Bang. High com., J. O'H. Denny's Nellie's Bert.

ENGLISH SETTERS.—*Dogs:* 1st and special and very high com., Maumee Kennels' Cincinnatus and Toledo Blade; 2d, Mt. Washington Kennels' Lindo. High com., J. J. Kinnane's Jan Gladstone. Com., J. O'H. Denny's Brandon. *Bitches:* 1st and special and com., Columbus Kennels' Pearl Bondhu and Lady Change; 2d, Mt. Washington Kennels' Zoua. Very high com., Toledo Kennels' Suen C. High com., P. H. Gotzian's Countess Amelia. *Puppies:* 1st and special, F. Tallmadge's Count Druidstone; 2d, Dr. G. B. Bunn's Count Rocket's Rake.

IRISH SETTERS.—*Dogs:* 1st and special, W. N. Kulms's Mack N.; 2d, P. Cambias's Dick Swiveller. Very high com., G. C. Urlin's Don G. U. *Bitches:* 1st and special, Columbus Kennels' Lou II.; 2d, H. Schubert's Nellie H. Very high com., J. L. Maxwell's Nancy. Com., J. C. Chorpenaing's Tony the Maid. *Puppies:* 1st, J. L. Maxwell's Sidan. Very high com., J. C. Chorpenning's Tony the Maid.

BLACK AND TAN SETTERS.—CHALLENGE—W. E. Rothermel's Don.—OPEN—1st, H. C. Biddle's Leo B.; 2d, J. A. Durringer's Grace. High com., J. W. Graham's Graham Duke. Com., A. Mason's Shot. *Puppies:* Absent.

COCKER SPANIELS.—*Dogs:* 1st, A. Laidlaw's Giffec. *Bitches:* 1st and special, Columbus Kennels' Lady Babcock; 2d, A. Laidlaw's Laidlaw's Queen.

IRISH WATER SPANIELS.—*Dogs:* 1st and special, Excelsior Irish Water Spaniel Kennels' The O'Donoghue; 2d, J. R. Daniels's Patsy O'Connor. Very high com., J. W. Considine's Barney O'Connor. High com., P. H. Gotzian's The Kerry Gow. *Bitches:* 1st and special, Excelsior Irish Water Spaniel Kennels' Chippewa Belle; 2d, J. W. Considine's Lilly Pad. Very high com., L. G. Hunt's Maggie O'Connor. *Puppies:* 1st, L. G. Hunt's Maggie O'Connor.

COLLIES.—CHALLENGE and special, Chestnut Hill Kennels' Dublin Scot.—OPEN—*Dogs:* 1st and special, E. A. Ferguson's Guelph; 2d and high com., Chestnut Hill Kennels' Strephon and Roslyn Bruin. Com. J. D. Shotwell's Nelson III. *Bitches:* 1st and special, Chestnut Hill Kennels' Cora II.; 2d, J. L. Lincoln, Jr.'s Marvel. *Puppies:* 1st and special, J. L. Lincoln, Jr.'s Marvel.

BEAGLES.—1st and 2d, Lewis Bros.' Racket II. and Cricket.

BULLDOGS.—1st, Geo. Raper's Rabagas.

BULL-TERRIERS.—1st and 2d, J. Wren's Imperial Prince and Jubilee Puss.

FOX-TERRIERS.—CHALLENGE—Blemton Kennels' Marguerite.—OPEN—*Dogs:* 1st and special, A. E. Pitts's Baby Signal; 2d, Blemton Kennels' Blemton Corouet. Very high com., J. H. Shepherd's Shepherd Lad. High com., J. Wren's Richmond Crack. Com., Dr. W. Meyer's Richmond Tyrant and R. Butler's Jack. *Bitches:* 1st and special, Blemton Kennels' Tiara; 2d, Lewis Bros.' Lert. Very high com., A. E. Pitts's Gretchen. High com., J. Wren's Richmond Flash.—PUPPIES—*Dogs:* 1st and special, Lewis Bros.' Dusky Mark. *Bitches:* 1st, J. Wren's Richmond Flash.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, A. W. Smith's Buffalo General; 2d, R. Stuckey's Sir Wallace. *Bitches:* 1st, Bott Bros.'s Kid; 2d, F. F. Damsel's Lotta. High com., J. Schriner's Dade.

PUGS.—CHALLENGE and special, A. E. Pitts's Kash.—OPEN—*Dogs:* 1st, Acme Kennels' Lord Nelson; 2d, Eberhart Pug Kennels' Douglass II. Very high com., Geo. Gillivan's East Lake Curtis. *Bitches:* 1st and special, Geo. Gillivan's Peggie II.; 2d, A. E. Pitts's Dazzy. Very high com., Howard Bros.' Fairy II. and Eberhart Pug Kennels' Thora. Com., W. B. Newhall's Judy.—PUPPIES—*Dogs:* 1st, Eberhart Pug Kennels' Bradford Ruby II. *Bitches:* 1st, Mrs. Sohl's Flora; 2d, Mrs. A. G. Eberhart's East Lake Virgie. High com., R. M. Conway's Miss Wrinkle.

KING CHARLES SPANIELS.—1st, withheld; 2d, E. Probert's Charley.

ITALIAN GREYHOUNDS.—1st, withheld; 2d, W. M. Graham's Dawn.

MISCELLANEOUS.—1st, Chestnut Hill Kennels' smooth collie Lady Bird; 2d, G. E. Williams's Maltese terrier Dan.

COL. UMBUS.

NEWBURGH DOG SHOW.

Editor Forest and Stream:

The first annual exhibition of the Hudson River Poultry, Dog and Pet Stock Association was held at the Columbia Rink, Newburgh, N. Y., Feb. 7 to 12. There were sixty-one entries in the department devoted to dogs, nearly all of them from Newburgh and vicinity. Mr. H. Clay Glover very acceptably judged all classes. I send you a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, C. E. Leicht's Nero; 2d, G. C. Hall's Fritz. *Bitches:* 1st, J. L. Hope's Wanda; 2d, J. Clark's Delia.—PUPPIES—*Dogs:* 1st and special, J. L. Hope's Rex; 2d and 3d, J. Clark's two unnamed.

ST. BERNARDS.—1st and special, Hon. Peter Wood's Folka.

NEWFOUNDLANDS.—1st and 2d withheld; 3d A. Shafer's Pedro.

POINTERS.—1st, G. E. Trimble's Jim; 2d, W. M. Patton's Punch.

IRISH SETTERS.—*Dogs:* 1st and special, W. H. Hawes's Sachem; 2d, Mrs. G. W. Purdy's Fritz; 3d, D. A. Shafer's Pete. *Bitches:* 1st and 2d, withheld; 3d F. Glover's May. *Puppies:* G. W. Sherman's Mag.

ENGLISH SETTERS.—*Dogs:* 1st and special, R. Johnston's Dan; 2d, Warwick Kennels' Warwick Albert. *Puppies:* 1st, J. W. Wood's Lady Foreman.

GORDON SETTERS.—1st, withheld; 2d, C. F. Kerr's Ned.

ITALIAN GREYHOUNDS.—1st and 2d, J. H. Doubleday's Flora and Gyp.

FOXHOUNDS.—Withheld.

BEAGLES.—1st, withheld; 2d and special, J. A. Sneed's Goodwood Leader.

DACHSHUNDE.—1st, H. A. Waldron's Comtesse.

MEXICAN.—1st, 2d and 3d; J. Hyde's Romeo, Beauty and Juliet.

COLLIES.—*Bitches:* 1st and 2d, withheld; 3d, W. C. Brewster's Trix.—PUPPIES—*Dogs:* 1st and special, E. Van Wagner's Jake; 2d, Mrs. T. F. Ball's Glen. *Bitches:* 2d, J. H. Drevenstedt's Nellie; 3d, J. H. Drevenstedt's Daisy Clyde.

BLACK AND TAN TERRIERS.—1st, Mrs. C. F. Brown's Toff.

YORKSHIRE TERRIERS.—1st, withheld; 2d and special, C. V. Fowler's Tiny.

IRISH TERRIERS.—1st, W. P. Booth's Shamrock.

SKYE TERRIERS.—1st and president's cup, W. L. Morgan's Lochiel.

PUGS.—1st and special, Miss May Moore's Boodles; 2d, T. Stapleton's Puggie.—PUPPIES—*Dogs:* 1st, T. K. Waring's Floyd; 2d, H. J. Mayell's Punch; 3d, J. H. Thompson, Jr.'s Ben Harrison. *Bitches:* 1st, J. H. Thompson, Jr.'s Lady Harrison; 2d, H. J. Mayell's Judy; 3d, Mrs. L. H. Andrews' Ruffles.

FIELD SPANIELS.—1st, A. F. Lindley's Pepper.

COCKER SPANIELS.—*Bitches:* 1st, withheld; 2d, B. Warrington's Nellie; 3d, E. W. Deyo's Daisy.—PUPPIES—*Dogs:* 1st, withheld; 2d, M. Quinlan's Rex. *Bitches:* 1st and special, H. S. Reynolds's Black Meg; 2d, M. Quinlan's Browney.

FOX-TERRIERS.—1st, withheld; 2d and special, A. M. Cook's Tug; 3d, C. F. Kerr's Zig.

NEWBURGH.

COLLIES AT PITTSBURGH.—Pittsburgh, Feb. 9.—*Editor Forest and Stream:* I desire to enter a protest through your valuable paper against the directors of the Western Pennsylvania Poultry Society. I entered my collie dog Prince in the open class for collie dogs, expecting to get fair and square treatment from the directors of the bench show, but through gross negligence on the part of said directors in not having sufficient attendents on hand my dog was not taken to the judging stand when this class was judged Tuesday evening. Upon my arrival at the show Wednesday morning I was much surprised to find that my dog had not been even noticed. As he is a very fine imported dog, and a splendid specimen of his kind, I asked the judge for an explanation. In a very pleasant manner he stated that the best dog, Rob Roy, had received the first honor, the others not being sufficiently good to take a prize. He courteously agreed to look at my dog in his kennel, and was surprised to find that he had not seen the dog before. Upon consulting with the superintendent they decided that as the dog had been in the show all the time, and by a mistake of the society had not been judged, to re-open the class. This they did, and the judge decided to give my dog Prince the first prize, placing Rob Roy second, which decision seemed to meet with the approval of collie dog judges. On the last day of the show some of the directors met together, and, against the protests of their superintendent, Mr. A. C. Krueger, who was inclined to act justly, they decided to reject the decision of the judge, Mr. Naylor, and place Rob Roy first, and Prince second. I am an amateur with dogs, Prince being my first entry at a bench show, and if my dog had been judged and found wanting I would have remained mum, as I am not a kicker, but to be deliberately jockeyed out of an honor due my dog is very hard to bear. While I do not include all the managers of the bench show in my protest, as I am inclined to think that some of them were angry at the hasty action of their fellows, I think it justly due, both myself and Judge Naylor, that they explain their action, and disperse the clouds that hover over this as well as former actions of the society.—H. L. SHAFFER.

ROCHESTER DOG SHOW.—Rochester, N. Y., Feb. 1.—*Editor Forest and Stream:* The first annual bench show of the Rochester Kennel Club will be held in the Washington Rink, at Rochester, N. Y., March 19 to 22. As Rochester is a city of nearly 150,000 inhabitants, and this being the first regular kennel club show ever given in the vicinity, older breeders and the public are of the impression that this show will afford facilities for exhibitions not only in the way of exhibiting their dogs to the best possible advantage, but will afford a rich field for those desirous of disposing of their pets at private sale. A very competent list of judges has been secured, as follows: Miss Anna H. Whitney, of Lancaster, Mass., St. Bernards, Newfoundlands, Great Danes and pugs; Mr. A. Clinton Wilmerding, New York, spaniels, all classes; Dr. H. Clay Glover, all sporting dogs, and Mr. Jas. Mortimer, Babylon, N. Y., the remaining classes. The premium list figures up $1,700, all of which is guaranteed to be paid up in full. Mr. Wm. Tallman is superintendent, and Spratts Patent will bench and feed. It is predicted that Rochester's will be one of the greatest shows of the season. Send immediately to the secretary, Rochester, N. Y., Box 466, for premium list and make your entries.—HARRY YATES, Secretary.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the January number of the *American Kennel Register:*

BEAGLES.

6851. Goodwood Flora, J. Hoge.
6852. Jennette, E. L. Bryant.
6853. Music II., G. M. Gibbs.
6854. Ranger, G. M. Gibbs.

BULLDOGS.

6855. Murrax, H. Schloetzer.

COLLIES.

6856. Beauty VIII., S. L. Dawes.
6857. Berry, Levi P. Morton.
6858. Flora VII., Levi P. Morton.
6859. Laddie Rab, R. Wadhams.
6860. Lassie Jean, Curry & Parkes
6861. Lothair of Baltimore, E. V. Harrison.
6862. Malcolm, W. H. Rogers.
6863. Ray II., H. Potberry.

GREAT DANES.

6864. Faust, G. W. Chandler.

MASTIFFS.

6865. Ashmont Tiny, W. Webster
6866. Boz, S. O'Connor.
6867. Captain Jack, A. L. Day.
6868. Dassie, M. H. Raulett.
6869. Dot, M. H. Raulett.
6870. Gippic, M. H. Raulett.
6871. Harner's Maude, J. Decker
6872. Iuana Neville, J. Chaplin.
6873. Leo W., J. Wentworth.
6874. Monitor Neville, J. Chaplin
6875. Psyche Neville, J. Chaplin.
6876. Rowena Neville, J. Chaplin.
6877. Yoc's Rex, W. A. Brown.

NEWFOUNDLANDS.

6878. Meadowthorpe Prince George, John Marshall.

POINTERS.

6879. Flirt P., Joseph L. Preble.
6880. Neptune, F. C. Hand.
6881. Pete III., M. H. Sterling.

PUGS.

6882. Gip, W. C. Hamilton.

ST. BERNARDS—ROUGH-COATED.

6883. Berna II., Dr. Bergman.
6884. Brutus, John D. Kuser.
6885. Bueno, Daniel Robinson.
6886. Cassius, John D. Kuser.
6887. Duchess of Heathfield, C. H. Spring.
6888. Gretchen II., H. Barnhill.
6889. Kinglimmon, C. A. Houck.
6890. Ladylimmon, Half-way Brook Kennels.
6891. Leo IV., Mrs. N. Beasley.
6892. Lord Barry III., A. J. Phillips.
6893. Mark, Thomas Brennan.
6894. Myra, N. Myers.
6895. Princelimmon, Half-way Brook Kennels.
6896. Sir Nord, A. F. Young.
6897. Tariff, Greenbrier & Carroll.
6898. Vida, J. M. Gallaher.
6899. Zora, D. Driscoll.

SMOOTH-COATED.

6900. Meg Merrilies, Edward Murphy, Jr.

SETTERS.—ENGLISH SETTERS.

6901. Count Blue, H. M. Cutting.
6902. Floss P., T. L. Patterson.
6903. Glendale, G. W. Stockley.
6904. Leah III., H. M. Cutting.
6905. Snipe, D. H. McKee.

GORDON SETTERS.

6906. Iron Duke, F. P Snowden.
6907. Sanborn's Dash, W. E. Sanborn.

IRISH SETTERS.

6908. Ben II., H. M. Cutting.
6909. Creole, H. M. Cutting.
6910. Don IV., Lewis R. Adams.
6911. Jeff, James A. Shortal.
6912. Tempest, Ed. Aarenburg.
6913. Typo, C. A. Lane.

TERRIERS.—BLACK AND TAN TERRIERS.

6914. Bessie King, A. W. Smith.
6915. Roseleaf, A. G. Adams.

BULL-TERRIERS.

6916. Queen Lashtie, W. F. Barlow.
6917. Royal Tyrant, H. F. Church
6918. Winks, Wm. F. Barlow.

FOX-TERRIERS.

6919. Hoosier Tom, H. T. Williams.

WIRE-HAIRED TERRIERS.

6920. Midala, B. B. McGregor.
6921. Petite, Chas. H. Coon.
6922. Trophy II., W. P. Cowan.

YORKSHIRE TERRIERS.

6923. Lady Dido, W. D. Reid.

FOX AND HOUNDS AGAIN.

Editor Forest and Stream:

Several very entertaining articles have appeared lately in the FOREST AND STREAM regarding the New England mode of fox chasing. It is also a noticeable fact that several of the Eastern correspondents hold the same views on the question, and favor hunting foxes with dog and gun, while the Western enthusiasts invariably do away with firearms of every description on such occasions, and participate in fox chases for pleasure alone, and for the sole purpose of enjoying riding after a pack of dogs, giving good tongue as well as seeing them trail, and if fleet enough run reynard to earth or kill him.

In this vicinity it is not necessary for dogs to kill a fox to make a chase a perfect success; but to see and hear the hounds, and occasionally, by good stiff riding, and cutting across country, be stationed at a point and see reynard pass, with the hounds close up, is as much genuine sport as a Western man gets, or ever expects.

For parties to go fox chasing here with dogs and guns, their motive would seem more one of pecuniary gain by shooting foxes for their skins than for the excitement of the chase. Foxes are run here as they are the world over, for pleasure, health and excitement alone, and not as one would hunt game for the table or the market. Any party in this vicinity or in the South (which is, I believe, the greatest resort in the world for this sport) who would wilfully shoot a fox during a chase, or carry firearms for such a purpose, would be censured by every true lover of this grand sport. The views of others in the West and South, interested in this subject, would be appreciated by a number of your readers residing in southwestern Ohio. BUCKEYE.

Editor Forest and Stream:

The fascination of fox hunting nearly all of us are acquainted with, likewise the ethics of it. At any rate we ought to be after having seen the principles involved exhaustively illustrated in recent numbers of FOREST AND STREAM, along with an unmerciful trouncing for "Tallyho." As one of a numerous company I don't care a rap what the Denver denizen, or any other fellow with a cockney accent, has to say concerning my manner of fox chasing. If he gloatingly jumps on my back for going in pursuit of reynard, on foot, through a strip of country that would afford a young and ambitious mountain goat lots of opportunities for developing its climbing propensities, I shall not passionately chew the wrong end of my cigar during the excitement.

Up to a comparatively recent period the dogs employed in fox hunting in this portion of central New York were of the large, big-boned, big-limbed breeds, occasionally of English blood, but often crossed with that strain, and still oftener of pure native steck. Most of them were cold nose starters, stayers from away back, and every mother's son of them fully warranted to drive the game to almost any point this side of the Canadian border and return, inside of a dozen hours. However, nearly all the old dogs and a majority of the muscular, great-souled fellows who followed them, have dropped out of sight. Younger men and the frisky beagle have come to the front. The constantly lessening snow fall each year, in this county, has brought this tireless little trailer into quite general use. Rabbits have grown notably scarce, while the supply of red-racers has been, during the past two years at least, something unprecedented. As a result of this fox hunters have taken unanimously to the beagles, with highly satisfactory results. Dogs running in size from the standard along up to full 17in. and even more, are used. The fox not being close pressed, indulges very little in wide casts. His pace in passing choice runways is more favorable to the hunter, and he is not infrequently caught repassing the same runway in surprisingly brief periods of time. Fox hunting with beagles, therefore, is entirely the proper thing among a large majority of those who are deeply attached to the sport here. Nearly all the brushes taken this year and last by Ithacans have been secured ahead of beagles. A friend of mine who owns a spanking brace, not much, if any, above the standard in size, shot a fox ahead of the pair recently, which, during a lively chase of over an hour, ran inside of a circle that measured less than a mile in diameter.

Isn't that getting a lot of glorious sport within limited measurements? M. CHILL.

ITHACA, N. Y.

Editor Forest and Stream:

I am a New England fox hunter. Many and many a time after a hard day of it after the game have I dragged myself home and literally gone to bed with my boots on, too tired to pull them off. But I don't recollect ever in all my life—and I'm gray—having been so weary and tired as I am made by your correspondents whom you permit to have their fling at us because we do save the skins of foxes, and who on that ground charge us with fox hunting for profit. In the name of St. Hubert and the one-eyed fox of Shanty Hollow, what sort of men do your correspondents take us for? Do they imagine that the New England fox hunters are a set of poverty-stricken fellows out of a job, who take to fox hunting because there is money in it?

Now, just see here. Our club is composed of six men, and these are their occupations: A runs a grist mill, B deals in drugs, C is an express agent, D "lives on his money," E is the village grocer, F is a school teacher. Of these six I am one. We all think that we live comfortably. We have enough to eat, manage to keep warm, do not work too hard; have little worry—and go fox hunting. Mr. "Tallyho" actually believes that we leave our respective homes before light and undergo all the hardship—I mean fun—of a day with the dogs, in the hope that we may capture a fox skin to sell for the good of the six! In other words, are "Tallyho" and those who talk as he does fools? Fools or no fools, their pretext that we hunt for lucre is foolishness. I don't know what the prevailing prices may be for fox skins, but I do know that I have one skin of a fox that "Tallyho" could not buy of me for one hundred dollars. It is worth more than that to me as a trophy and memento of a two days' chase; but this is something that "Tallyho" cannot understand.

ROCKY HILL.

DOG TALK.

SOME dogs make friends of everybody in town, and departing leave a host to mourn their loss. M. Chill writes from Ithaca, N. Y., of such a dog, which has been transferred to a new owner in another town: "The sudden disappearance of the beautiful pointer Don (Mack—Gipsey) whose work in the field the past season has been of a high order, from this city, brings to the surface another striking instance of man's affection for a dog. The regretful tone and tear-dimmed eye revealed the gentle attachment that existed between Don and the good fellows who loved his companionship. The highways and byways of the city that Don didn't know are not worth worrying about. And his friends—why, everybody was his friend. His headquarters at a prominent grocery house was supplied with a chair which he invariably occupied during the earlier part of business hours. He was always on intimate terms with the butcher and baker and the other characters of the rhyme. Don was both plebian and aristocratic. At a dozen firesides he was daily welcomed. In the presence of wealth or among the common people he was equally lavish in manifesting his appreciation of the delicacies regularly tendered him. And after his morning's tramp about town Don was serenely content to return to the warmth of his kennel and dream of bright days afield. Don was only a dog, but he cleverly won a lot of friends who join with his late owner in wishing that his new home in a neighboring township may reach close to the retreat of those feathered beauties so dear to a pointer's heart—the grouse, the woodcock and the piping quail."

The following touching epistle indicates what woes may sometimes overtake the novice who rashly enters the threshold of the dog world: "BREAKABEEN, Jan. 23, 1889.—*Forest & Streams*, you sent one forest & Streams to me last Jan I read it, I bought one of gorden setter pupies last March at ——— he sent the pupy to me, I found that he was diseased as same day as he sent him to me, when he was 3 months old, after 2 weeks he was manged, I spent $30 at the doctors of the city of N. Y. but he is never cured since last March 8. I lost $50 now because he cheated me. I think that I will shoot the dog tomorrow or next week. I will fight with him of ——— I troubled much which is costed $200 since last March. The people are afraid of my dog's mange that they could not come to my hotel. My sister & mother are sick now from the diseased dog. Mother is dying. I was eczemed from the manged dog to be cured last April. I dont want you to put ——— in your Forest & Stream to sell his dogs. I will never buy one of his dogs because they are diseased. I am very Reveng to him. 4 or 6 dogs of here are manged now this fall, but my dog is manged since last March. Will you please to tell me where is ——— I dont know where is he. I sent 2 letters to him to buy one of his pupies 2 weeks ago but the post officer sent the letters back to me. Will you please to send one forest & stream to me for sample. Where can I buy one of gorden setter pupies if they are no diseases if the kennel are good. I dont want any disease pupy. Answer me.—PROF. WM. B. B." On the back of the letter was pasted the dealer's advertisement with the following terse comment: "This is the devil in the world. I cant buy one pupy for 1 ct."

The Troy dog show is sure to be a successful one if good management and care for the needs of exhibitors counts. The managers appear to be alive to their own interests and they seem to believe that the best way to further their interests is to do all that lays in their power to serve those upon whom they are dependent for support. One of the arrangements that they have made for the convenience of exhibitors we are sure will be received with favor. A large vacant barn has been secured and fitted up with a stove and a competent man placed in charge, where dogs will be received and properly taken care of, free of charge, on Friday night preceding the show. The owners of dogs, from distant points, that exhibit at New York the previous week, will appreciate this arrangement, as in many cases it will save a journey by rail as well as much trouble in looking up in a strange city a proper place to keep their dogs over intervening days. We are assured that the managers will do anything in reason that will add to the comfort of the dogs or that may be thought to be of benefit to the exhibitors. We have no doubt that the efforts of the managers will meet with the reward justly their due in a rousing list of entries. Intending exhibitors should not forget that the entries close on Saturday, Feb. 16. The address of the secretary is Alba M. Ide, Troy, N. Y.

The "poison fiend" has been at work at Haddonfield, N. J., and a number of valuable dogs have been killed. There are strong suspicions of the villain's identity and detectives are on his trail. Should proof be found sufficient to convict the fiend he will find that he has paid dearly for his dogs.

Malignant distemper is raging in Jersey City, N. J., and quite a number of valuable dogs have died from its effects

Mr. A. C. Wilmerding indignantly denies that his team of Clumbers was imported from Wall street. We have carefully investigated the matter and find that he is correct. The invoice bears the imprint of 12 Maiden Lane. We understand that it was Mr. Wilmerding's intention to have kept the news of his importation private until the closing of the entries for the New York show as he did not wish to discourage entries, and he is now greatly chagrined that he will have no competition, and is looking for the fellow who gave the news away.

There was a "round up" at Hardin, Ill., Feb. 2, for foxes and wolves. One account states that thousands of men and a large number of ladies took part in the surround which covered the entire township. When the circle was complete there were 21 foxes and 2 wolves inclosed, and dogs and men made a break for the victims; but owing to the excitement the wolves and eight of the foxes escaped. There was no end of fun and it is probable that another drive will soon take place.

It appears that the Philadelphia Kennel Club intended to change the dates for their show to the week left vacant by the withdrawal of Baltimore, but as they could not obtain the building for that week the dates remain unchanged. The premium list is not yet ready; we understand that liberal prizes will be offered, and that the managers will spare no pains to make the show first-class in every respect. The address of the secretary is Francis S. Brown, 608 Chestnut street, Philadelphia, Pa.

The judges for Rochester dog show are Miss A. H. Whitney, St. Bernards, Great Danes, Newfoundlands and pugs. Mr. H. C. Glover, pointers, setters, foxhounds, beagles and basset hounds. Mr. A. C. Wilmerding, spaniels. Mr. James Mortimer the remaining classes. Mr. W. Tallman is the superintendent.

We have received a lot more predictions as to winners at the coming dog shows, all marked confidential except one from Tom Aldrich, who has several dark ones in his string. This bit of news will not injuriously affect the New York entries, as they have already closed.

Our correspondent "Clumber" writes that a dog-stealing epidemic has broken out at Ottawa, Can., and that several cocker spaniels are missing. He adds that there are strong suspicions as to the identity of the thief, but unfortunately no positive proof.

Mr. E. B. Sears, Melrose, Mass., received from England on Saturday last the St. Bernard bitch Aveline, own sister to the celebrated youngster Sir Bedivere. We understand that she will be at the New York show next week.

We have received from Dr. Cryer an excellent photograph of his champion pug dog Dude. The picture is by Schreiber, of Philadelphia, and it shows up Dude just as he is, a good one.

Mr. Paul Gotzian, Forest Lake, Minn., has sent his English setter bitch Countess Amelia to be bred to F. Windholz's Count Howard. She is by Lug Dhu and out of Pickles II.

The managers of the Philadelphia dog show have adopted the American Spaniel Club classification No. 2, and Mr. S. R. Hemingway of New Haven will judge the classes.

Rochester adopts classification No. 1, and Albany classification No. 2. Mr. A. C. Wilmerding will judge the classes at both shows.

There will be a meeting of the Pointer Club at Madison Square Garden Feb. 20 for the purpose of permanent organization. All interested are invited to attend.

The Troy dog show will have a class for field spaniels other than black if the entries warrant it. Dr. C. E. Nichols will judge beagles.

Mr. J. Shelley Hudson, of Covington, Ky., has purchased the well-known English setter dog Sportsman from Major J. W. Murnan.

If you are a Chesapeake Bay dog man, read that note about Cleaver in report of Mak-saw-ba Club shoot in our trap columns.

A prominent member of one of the American Pet Dog clubs makes the claim that of the two evils his is the least.

An exhibitor at the last Buffalo show is very anxious to know what has become of the special prizes that were won there.

The annual meeting of the American Spaniel Club will be held at Philadelphia April 16, the first day of the dog show.

The National Coursing Club meet at Hutchinson, Kan., announced for March 3, has been postponed four weeks.

Mr. J. H. Phelan will judge pointers at Philadelphia.

ALBANY DOG SHOW.—Albany, N. Y., Feb. 8.—*Editor Forest and Stream:* The premium lists of our second annual show have been somewhat delayed. They will be sent out Monday. The first prizes in all but a few classes are $10, second prize $5, third prize, diploma. First prize, puppy classes, $5; second prize, silver medal. Kennel prizes in principal classes, silver cup or $15 at the option of the winner. A number of other club prizes are announced in the premium lists, and lists of special prizes will be published later on in the sporting papers. The entries close Feb. 23. Mr. A. C. Wilmerding has been secured to judge the spaniel classes, the club having adopted specification No. 2 of the American Spaniel Club. Mr. William H. Tallman will judge setters, pointers and other sporting dogs with the exception of greyhounds and deerhounds. These will go to Mr. Mortimer.—G. B. GALLUP, Secretary.

BEAGLES AT PITTSBURGH.—Philadelphia, Feb. 8.—*Editor Forest and Stream:* Please state in your next issue that the name of the female beagle winning vhc. at the Pittsburgh show was Fay, and not Elf. It was not a case of substitution, as Elf has not been our property for some months. Elf and Fay are litter sisters, and as the entries were made at the last minute, the name of Elf was inadvertently written for Fay. Elf, by the way, is a much better female than her sister Fay, and, undoubtedly, would have won a much higher place had her owner shown her.—H. T. IRELAND, Manager Associated Fanciers.

COLLIE CLUB MEETING.—Rahway, N. J., Feb. 9.—*Editor Forest and Stream:* Please announce that members of the Collie Club are requested to attend a meeting of the club in the committee room at Madison Square Garden, Wednesday, Feb. 20, at 3 o'clock P. M. By order executive committee.—J. D. SHOTWELL, Sec'y.

CANADIAN KENNEL CLUB.—London, Ont., Feb. 9.—*Editor Forest and Stream:* At the last meeting of the executive committee of the Canadian Kennel Club, held in this city, the rules for the government of bench shows were passed and the secretary requested to send a copy as soon as printed to all members. The appointment of judges was left over until the next meeting. It was decided to send a delegation to New York to attend the next general meeting of the A. K. C. to make arrangements for the mutual recognition of both clubs and other business. It is also intended to make arrangements with some paper to be known as the official organ of the club. Members are coming in fast, and already there are a large number of dogs entered in the club register.—C. A. STONE, Sec'y.

TROY DOG SHOW.—Troy, N. Y., Feb. 11.—*Editor Forest and Stream:* We have made arrangements to care for all dogs sent us after the New York show and before the opening of our show. Quarters have been engaged and they will receive every attention. A watchman will be in attendance day and night, to feed and exercise the dogs, so that they will be in good shape when the show begins. We have had several inquiries about the special premium offered for St. Bernards of $15. This means $15 for each, smooth-coated and rough-coated.—BENCH SHOW COMMITTEE R. K. C.

AMERICAN ENGLISH BEAGLE CLUB.—February' 1889.—The following officers have been duly elected: President, Herman F. Schellhass; Secretary and Treasurer, Frank D. Hallett; Executive Committee, Geo. Laick, Geo. H. Hill, John Davidson. The proposed amendment to the constitution has been carried. Members who have not yet paid their dues will please remit to Mr. Hallett, Winsted, Conn.—W. H. ASHBURNER, Ex-Secretary and Treasurer.

GORDON SETTER CLUB.—Baltimore, Feb. 11.—A special meeting of the American Gordon Setter Club will be held at the Madison Square Garden on Wednesday, Feb. 20, at 8 P. M. Members only admitted. By order of the President.—ISAAC T. NORRIS, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Margery. Bv Oakview Kennels, Philadelphia, Pa., for white and black beagle bitch, whelped Nov. 5, 1888, by Tony Weller (Kino—Fly) out of Merrybell (Victor—Veta).

Florence. By C. H. Bates, Manistee Junction, Mich., for liver and white pointer bitch, whelped Nov. 6, 1888, by Bang (Price's champion Bang—Salter's Luna) out of Verona (Day's Prince—Vandalia).

Jolly Jet. By Chas. York, Bangor, Me., for blue belton English setter bitch, whelped July 4, 1888, by Young Gath (Dan—True Blue) out of Jolly Flirt (Dick Noble—Jolly Fan).

Torwood, Krado, Oi, Ve and Kishough. By P. Lorillard, Jr., Jersey City, N. J., for two black, white and tan English setter dogs and three orange and white bitches, whelped Aug. 31, 1888, by Count Noble out of Lavalette (A.K.R. 2353).

Valentine, Clochette and Quadroon. By P. Lorillard, Jr., Jersey City, N. J., for black, white and tan English setter dog and bitch and liver and white bitch, whelped Feb. 3, 1888, by Roderigo out of Lavalette (A.K.R. 2353).

Jaca, Alce, D. Jinn, Lath. Lat and Amoret. By P. Lorillard, Jr., Jersey City, N. J., for two orange and white, one black and white and one black, white and tan English setter dogs and orange and white and black and white bitches, whelped Aug. 7, 1888, by Cassio out of Allie James.

Bedlam and Kesover. By P. Lorillard, Jr., Jersey City, N. J., for orange and white English setter dog and bitch, whelped June 28, 1888, by Bob Gates out of Belle of Stanton.

Médoc and St. Julien. By St. Cloud Kennels, Mott Haven, N. Y., for red Irish setter dogs, whelped Dec. 1, 1888, by Royal Ruby (champion Glencho—Lady Edith) out of Bessie Glencho (champion Glencho—Flame).

Tramp. By St. Cloud Kennels, Mott Haven, N. Y., for red Irish setter dog, whelped Sept. 6, 1888, by St. Cloud (champion Elcho—champion Noreen) out of Zephyr (St. Cloud—Princess Ida).

Vida. By St. Cloud Kennels, Mott Haven, N. Y., for red Irish setter bitch, whelped July 11, 1888, by Delano's Jack out of Ray's Della.

Flossie T. By Geo. L. V. Tyler, West Newton, Mass., for liver and white cocker spaniel bitch, whelped November, 1884, by Col. Stubbs out of Pet (imported Grip—imported Flirt).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Bank—Tony Weller. A. H. Gillingham's (Philadelphia, Pa.) beagle bitch Bank to Oakview Kennels' Tony Weller (Kino—Fly), Jan. 3.

Melody—Trailer. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Melody (Trailer—Music) to his champion Trailer (Racket—Fly), Feb. 6.

Daisy R.—Nick of Naso. L. Neibank's pointer bitch Bell N. (Tony—Jessie) to C. J. Peshall's Nick of Naso, Feb. 8.

Daisy R.—Nick of Naso. Geo. Wilms's (Jersey City, N. J.) pointer bitch Daisy R. to C. J. Peshall's Nick of Naso, Jan. 25.

Nebela—Nick of Naso. Dr. Wise's (Williamsburg, Va.) pointer bitch Nebela (Meteor—Beulah) to C. J. Peshall's Nick of Naso, Feb. 2.

——*—Nick of Naso.* Mr. Goodwin's (Newburyport, Mass.) pointer bitch —— to C. J. Peshall's Nick of Naso, Jan. 10.

Bell—Nick of Naso. Mr. Sherman's (Jersey City, N. J.) pointer bitch Bell (Duke of Bergen—Lass) to C. J. Peshall's Nick of Naso, Jan. 5.

May Flower—Tory White. Geo. Wilms's (Jersey City, N. J.) pointer bitch May Flower (Nick of Naso—Temptation) to Clifton Kennels' Tory White (Tammany—Miss Wooster's Juno), Feb. 8.

Nan of Naso—Tory White. Geo. McNeil's (Jersey City, N. J.) pointer bitch Nan of Naso (Nick of Naso—Temptation) to Clifton Kennels' Tory White (Tammany—Miss Wooster's Juno), Jan. 24.

Phantom—Trinket's Coin. B. F. Seitner's (Dayton, O.) pointer bitch Phantom (Planet—Lilly Bang) to R. C. Anderson's Trinket's Coin (champion Crosteth—Trinket), Jan. 19.

Spinaway II.—Trinket's Coin. B. F. Seitner's (Dayton, O.) pointer bitch Spinaway II. (Bang—champion Spinaway) to R. C. Anderson's Trinket's Coin (champion Crosteth—Trinket), Jan. 15.

Sylph—Clyde Bondhu. Chas. Glidden's (Lynn, Mass.) English setter bitch Sylph (Rock—Nesbitt's Belle) to W. H. Beed's Clyde Bondhu (Gus Bondhu—Lady Dixie), Feb. 10.

Killarney II.—Tim. R. Q. Taylor's (Baltimore, Md.) Irish setter bitch Killarney II. (A.K.R. 1850) to Max Wenzel's Tim (Biz—Hazel), Jan. 30.

Lady—Tim. Ray Tompkins's (Elmira, N. Y.) Irish setter bitch Lady (Rory O'Moore—Gay) to Max Wenzel's Tim (Bix—Hazel), Jan. 5.

Nellie H.—Tim. Henry Schubert's (Kaukauna, Wis.) Irish setter bitch Nellie H. to Max Wenzel's Tim (Biz—Hazel), Jan. 7.

Kate II.—Chief. W. R. Hearst's (San Francisco, Cal.) Irish setter bitch Kate II. (Sandy—champion Kat) to Max Wenzel's Chief (Berkley—Duck), Feb. 8.

Red Belle—Tim. J. H. Hitchcock's (Sing Sing, N. Y.) Irish setter bitch Red Belle (Glencho—Tara) to Max Wenzel's Tim (champion Biz—Hazel), Feb. 7.

Lady Flora—Tim. Oakview Kennels' (Philadelphia, Pa.) Irish setter bitch Lady Flora (Begorrah—Leigh Doane) to Max Wenzel's Tim (Biz—Hazel), Nov. 16.

Zephyr—Kelso. St. Cloud Kennels' (Mott Haven, N.Y.) Irish setter bitch Zephyr (St. Cloud—Princess Ida) to J. B. Blossom's Kelso (champion Glencho—Sweetheart), Jan. 28.

Zylla—Royal Ruby. St. Cloud Kennels' (Mott Haven, N. Y.) Irish setter bitch Zylla (St. Cloud—Princess Ida) to L. Braive's Royal Ruby (Glencho—Lady Edith), Jan. 26.

Gilt—Sir John. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Gilt (Col. Stubbs—Diamond) to his Sir John (Obo, Jr.—Dido), Jan. 12.

Nellie—Sancho G. H. C. Bronsdon's (Boston, Mass.) cocker spaniel bitch Nellie (Newton Abbot Laddie—Roxie) to Mount Waite Kennels' Sancho G. (A.K.R. 6506), Feb. 6.

Sandycroft Vim—Dennis. V. M. Haldeman's (Milford, Del.) Irish terrier bitch Sandycroft Vim (Benedict—Geesala) to J. F. McFadden's Dennis (champion Bachelor—Jilt), Jan. 27.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Rose. E. E. Stine's (West Philadelphia, P.) beagle bitch Rose, Jan. 22, six (three dogs), by Oakview Kennels' Tony Weller (Kino—Fly).

Rosa Croxteth. Geo. T. Corman's (Cochituate, Mass.) pointer bitch Rosa Croxteth (Royal Croxteth—Maggie V.), Jan. 24, ten (three dogs), by C. A. Parker's Wm. Tell (A.K.R. 2640).

Duchess of Heathfield. C. H. Spring's (Newton Lower Falls, Mass.) rough St. Bernard bitch Duchess of Heathfield (Rip Van Winkle—Heclusa), Jan. 30, twelve (four dogs), by Geo. Booth's (Hull, Eng.) St. Gothard III. (champion Valentine—Lady Nell).

Victoria Laverack. Chas. York's (Bangor, Me.) English setter bitch Victoria Laverack (Tempest—Lilly), Jan. 14, eight (six dogs), by his Gun (champion Gladstone—May B.).

Lady Flora. Oakview Kennels' (Philadelphia, Pa.) Irish setter bitch Lady Flora (Begorrah—Leigh Doane), Jan. 17, eight (five dogs), by Max Wenzel's Tim (Biz—Hazel).

Currer Bell III. G. G. Davis's (Philadelphia, Pa.) Irish setter bitch Currer Bell III. (Sarsfield—Maud II.), Jan. 12, twelve (nine dogs), by Max Wenzel's Tim (Biz—Hazel).

Peg. M. W. Costello's (Boston, Mass.) Irish setter bitch Peg (Prince—Peg), Oct. 8, seven (five dogs), by Max Wenzel's Tim (Biz—Hazel).

Dream. St. Cloud Kennels' (Mott Haven, N. Y.) Irish setter bitch Dream (St. Cloud—Princess Ida), Jan. 25, six (five dogs), by their St. Cloud (champion Elcho—champion Noreen).

Daisy G. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Daisy G. (Jet—Beauty), Jan. 31, three (two dogs), by their Sancho G. (A.K.R. 6506).

Natlia. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Natlia, Feb. 3, seven (two dogs), by H. C. Bronsdon's Pealer (champion Black Pete—Fannie Obo).

Frantic. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Frantic (A.K.R. 6281), Feb. 6, five (two dogs), by their Sancho G. (A.K.R. 6506).

Flossie T. Geo. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Flossie T. (Col. Stubbs—Pet), Dec. 28, six (two dogs), by Dr. Jas. E. Hair's Warwick Obo (imported Obo, Jr.—Blackie); three black and tan, white frill; three black, white frill.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Tony Weller—Merrybell whelp. White, black and tan beagle dog, whelped Nov. 5, 1888, by Oakview Kennels, Philadelphia, Pa., to Wm. West, Camden, N. J.

Harlequin. White, with red spot on side, bulldog, whelped Aug. 6, 1888, by Lion out of Thespian, by E. S. Porter, New Haven, Conn., to R. B. Sawyer, Birmingham, Conn.

Wacouta Donna. Stone fawn, black points, mastiff bitch, whelped Jan. 31, 1888, by champion Ilford Chancellor out of Ilford Comedy, by Dr. Geo. B. Ayres, Omaha, Neb., to Clinton N. Powell, same place.

Bang—Verona whelp. Liver and white pointer bitch, whelped Nov. 6, 1888, by Bryn Mawr Kennels, Philadelphia, Pa., to C. H. Bates, Manistee Junction, Mich.

Midgett. Fawn, with black points, pug bitch, age not given, by Dude out of Twinkle, by C. T. Brownell, New Bedford, Mass., to E. E. Parnell, Spencer, Ia.

Novice. Black and white English setter bitch, whelped March 9, 1888, by Royal Albert out of Nellie Laverack (A.K.R. 2764), by Jos. H. Brady, Pawtucket, R. I., to T. H. Adams, same place.

Novel L. Lemon and white English setter bitch, whelped March 9, 1888, by Royal Albert out of Nellie Laverack (A.K.R. 2764), by Jos. H. Brady, Pawtucket, R. I., to Daniel McNally, same place.

Ned and Nellie P. Black and white English setter dog and black, white and tan bitch, whelped March 9, 1888, by Royal Albert out of Nellie Laverack (A.K.R. 2671), by Jos. H. Brady, Pawtucket, R. I., to C. B. Parker, same place.

Nat B. and Nobby L. Blue belton and black and white English setter dogs, whelped Aug. 8, 1887, by Prince Napoleon II. (A.K.R. 6365) out of Nellie Laverack (A.K.R. 2764), by Jos. H. Brady, Pawtucket, R. I., to H. A. Stafford, Central Falls, R. I.

Dan. Black and tan Gordon setter dog, whelped Jan. 12, 1887, by Ben Butler out of Maud, by C. T. Brownell, New Bedford, Mass., to Henry Bull, Jr., Newport, R. I.

Dan—Quail whelp. Black and tan Gordon setter dog, whelped Oct. 25, 1888, by C. T. Brownell, New Bedford, Mass., to Joseph P. Davis, Utica, N. Y.

Royal Ruby—Bessie Glencho whelps. Red Irish setter dogs, whelped Dec. 1, 1888, by St. Cloud Kennels, Mott Haven, N. Y., one each to Newberry D. Thorne, Davenport's Neck, New Rochelle, N. Y., and Moses T. Campbell, New York.

St. Cloud—Zephyr whelp. Red Irish setter dog, whelped Sept. 6, 1888, by St. Cloud Kennels, Mott Haven, N. Y., to E. B. Kingsbury, Providence, R. I.

Little Nell. Red Irish setter bitch, whelped Aug. 4, 1883, by Elcho out of Rose, by Oakview Kennels, Philadelphia, Pa., to Pierre Cambios, same place.

Sir John—Renah W. whelps. Black cocker spaniels, whelped Nov. 1, 1888, by J. E. Weston, Utica, N. Y., a dog to Dr. J. H. Glass, same place, and a bitch to Geo. Hoyt, Jr., Williamstown, Mass.

Koko—Phyllis D. whelp. Black and tan cocker spaniel dog, whelped Oct. 25, 1888, by J. E. Weston, Utica, N. Y., to Hon. J. H. Kent, same place.

Flossie. Liver and white ticked cocker spaniel dog, whelped November, 1884, by Col. Stubbs out of Pet, by A. A. Savage, Newtonville, Mass., to Geo. L. V. Tyler, West Newton, Mass.

Ben—Nellie whelps. White bull-terrier dog and bitch, age not given, by C. T. Brownell, New Bedford, Mass., to E. E. Parnell, Spencer, Ia.

Rose. White bull-terrier bitch, whelped March 10, 1886, by Ned out of Maud, by C. T. Brownell, New Bedford, Mass., to George Hall, same place.

Sandycroft Bachelor. Wheaten Irish terrier dog, whelped Aug. 23, 1888, by Dennis out of Sandycroft Vim, by V. M. Haldeman, Milford, Del., to Geo. H. Ellwanger, Rochester, N. Y.

Moonshine on Taters. Wheaten Irish terrier bitch, whelped Aug. 23, 1888, by Dennis out of Sandycroft Vim, by V. M. Haldeman, Milford, Del., to Amory R. Starr, Marshall, Tex.

PRESENTATIONS.

Skip. Black and tan cocker spaniel dog, whelped Oct. 25, 1888, by Koko out of Phyllis D., by Hon. Jos. H. Kent, Utica, N. Y., to Hon. Fremont Cole, Watkins, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

K., Middletown, Conn.—My Skye terrier bitch has a cough which troubles her a great deal; every time she coughs she seems to try and vomit; her eyes run a great deal. Ans. Give 6grs. of quinine in pill form morning and evening for three days. Keep the bowels in good order with teaspoon doses of syrup of buckthorn.

Rifle and Trap Shooting.

RANGE AND GALLERY.

"TRIBUNE" MATCH OF 1889.

AS mentioned in the FOREST AND STREAM of several issues past, the New York *Tribune* has resolved to throw open another rifle match to public competition. This time, however, careful aim has been taken to avoid the annoying conclusions of the previous match, and it is hoped that this time at least the best man may win, and win without leaving a big cloud of doubt over the record.

It is proposed on this occasion to have two matches. One of them will be confined to amateurs who have had only a desultory or limited experience with the rifle, or who have never been members of any shooting organization of any kind—rifle club, gun club, the army, or the militia—or who have not made a score of 45 or over in any match out of a possible 50. While there may be, and doubtless are, many good shots in the country who have never joined a club of marksmen or a military organization, we think the young men who are just learning the rifle or the older men who shoot simply for recreation will compete on more nearly equal terms with the field by arranging a class of this sort for them. This will give the farm boys particularly an excellent chance.

The other match is proposed for the benefit of marksmen who have had military experience or who have been members of rifle or gun clubs, or who have made scores of 45 or more out of a possible 50.

Merely for convenience in designation the class first above named will be called "amateurs" and the second class "marksmen."

All who take part in these matches must be readers of the *Tribune*.

Upon one point the *Tribune* wishes to make a few comments. If all the competitors could be gathered for the May matches upon one broad plain, like that at any of the official rifle ranges in the country, they would all shoot under exactly the same conditions of the weather, and with the same force of inspectors, scorers and markers to record their scores. They would also stand in the presence of all the other competitors, whose oversight of the proceedings would serve as a safeguard against any of the pranks and tricks of impulsive youth, or any unallowable expedients for obtaining advantages on the part of earnest competitors of mature years. The gathering of the competitors at one point is, however entirely out of the question. How then can the matches be made perfectly fair, so far as weather conditions are concerned, and how shall compliance with the terms be made so complete that, when the shoot is over, every competitor shall not only have the honest pleasure of worthy and wholesome entertainment, but shall feel the satisfaction of having had fair play in an honorable competition with honorable gentlemen? The first point will be covered by allowing each marksman to choose for his record shooting any day within a given week. There ought to be at least one tranquil day in a week in the middle of May. That should be considered fair play, so far as weather is concerned. On the point of strict compliance with the terms by every competitor, the *Tribune* proposes to reserve the right of private inquiry and a full investigation in every case; but, after all, its main reliance is on the gentlemanly honor and spirit of fair play of every reader. Willful violations of the terms, in order to gain advantage, would necessarily result in the publication and disqualification of the offender, that being the practice of all clubs and military organizations, and publication in the *Tribune* will be severe; but the *Tribune* has no fear that there will be any such violations, and the matter is only discussed as an answer to a few inquiries.

MATCH FOR AMATEURS.

TERMS.—Competitors must be actual subscribers to the *Tribune* for one year, and not now, or at any time in the past, a member of any rifle or gun club or military organization; and further, they must not have a record at 200yds. of 45 or more out of a possible 50 in ten shots at an 8in. bullseye. Competitors must pay 50 cents for privilege of shooting in this match, and must enter regularly by letter addressed to "Publishers of the *Tribune*, New York." Distance 200yds. Position standing, any position of the arms, but no artificial rest allowed. Rifle, any, except that the trigger must have the usual hunting pull of about 3lbs.; hair-triggers barred; globe or Lyman front sights may be used, but rear sight must be open; peep sights not allowed, the object being to keep as near the ordinary hunting rifle as possible. Number of shots 10. Date Wednesday, May 15, 1889, or the first fair day thereafter, not later than May 22. Referee to be chosen by the *Tribune*, and both he and the competitor to be prepared to verify before a justice of the peace, if required, that the distance was accurately measured and the terms honorably complied with in every respect. Target, the Creedmoor short range; but when ties are shot off the American Hinman paper target to be employed, having 8in. bullseye and 23in. center, but with intermediate circles, enabling closer calculation of the accuracy of the shooting than the Creedmoor target; in case of ties a second time, string measurement to decide. Each competitor, on the day of the shoot, to have the privilege of shooting two targets, 10 shots each, the better target to be sent to the *Tribune* by mail, as the record. Every competitor is expected to send a short account of his shooting and record, good or bad. The *Tribune* will supply targets and score-books.

First Prize.—Remington match rifle, made expressly for fine shooting at 200 to 500yds., perfected from the suggestions of Bodine and the best long range shots, and supplied with all the latest improvements. Half octagon barrel, rebounding hammer, pistol grip, checkered grip and fore end, nickel-plated Swiss butt plate, case-hardened frame, vernier peep and globe sights with wind gauge and spirit level; reloading tools to accompany. Value, $45. The winner can have choice of .32-40, .38-40, .38-50 and .40-65. With this trophy the winner will receive a solid silver badge, suitably inscribed.

Second Prize.—Ballard Union Hill rifle for hunting and target purposes. Half octagon barrel, pistol grip, checkered grip and fore end, off-hand nickeled butt plate, graduated peep and globe sights, .32-40 or .38-55, weight 9¼lbs., with reloading tools. Value, $32.

Third Prize.—Winchester new repeating sporting rifle, model of 1886, eight or nine shots, the winner to have choice of .38-56-255, .40-65-260, .40-82-260, .45-70-405 or 500, or .45-90-300; weight 9¼lbs.; Sharp's breech block, case-hardened frame, sporting sights and reloading tools. Value, $23. A strong shooter, with safe breech action, and a valuable weapon.

Fourth Prize.—Remington single-shot sporting rifle; 30in. octagon barrel, case-hardened frame, .38-cal., open sights, with reloading tools, weight 8¼lbs. Value, $18. Winner can have choice of .22 or .32cal.

Fifth Prize.—Whitney's new improved hunting and target rifle, breechloading, with Remington action, but ejecting the shell; octagon barrel, open sights, caliber .22, .32, .38 or .44, as winner may prefer; reloading tools. Value, $14.

Sixth Prize.—Single barrel, breechloading shotgun.

Seventh Prize.—Heavy revolver, 44cal.

Eighth Prize.—Sunday *Tribune*, one year.

Ninth Prize.—"Tribune Book of Open-Air Sports."

Tenth Prize.—For the man making next to the worst score, a copy of Butler's "Anatomy of Melancholy."

Eleventh Prize.—For the man making positively the worst score, "Mother Goose's Melodies," quarto, illustrated.

To all who score 40 out of the possible 50, a marksman's badge, with honorable mention.

To all scoring 35, honorable mention.

MATCH FOR MARKSMEN.

TERMS.—Competitors must be actual subscribers to the *Tribune* for one year, and pay 50 cents entrance fee, and must enter regularly for the match by letter addressed to "Publisher of the *Tribune*, New York." This match is open to all; but it is especially intended for experienced riflemen, and men who are or have been members of rifle, hunting or gun clubs, or of military organizations, or who have made at 200yds. a score of 45 or more, in 10 shots out of a possible 50, Creedmoor count, or 90 out of a possible 100, American target count. Distance, 300yds. Position, standing, kneeling or sitting, as the marksman may prefer; any position of the arms; no artificial rests allowed. Rifle, any, except that trigger must not have less than the ordinary hunting pull of about 3lbs.; hair triggers barred; globe or Lyman front sights may be used, but rear sight must be open; peep sights not allowed. Number of shots, 10. Date, Wednesday, May 15, 1889, or the first fair day thereafter, not later than May 22. Referee to be chosen by the *Tribune*; and both he and the marksman to be prepared to verify before a Justice of the Peace, if required, that the distance was accurately measured and the terms honorably complied with in every respect. Target, the Creedmoor short range, but when ties are shot off the American Hinman target to be employed, string measurement to be employed in case of second ties. Each competitor on the day of the shoot to have the privilege of shooting two targets, the better one to be sent the *Tribune* by mail as the record. Every competitor must send a short account of the record of his shooting, good or bad. The *Tribune* will supply score books and targets.

Prizes for marksmen's match to be the same in number and description as for amateurs' match above.

In each match the target will be the Creedmoor military short-range pattern, bullseye 8in. in diameter; "center" circle, 23in. in diameter; "inner" circle, 46in.; "outer" space, rest of target, which is 6ft. high by 4ft. wide. Shots to score as follows: Bullseye 5, center 4, inner 3, outer 2, miss 0.

AGINCOURT, Ont., Feb. 5.—A rifle match was shot to-day between the Newton Brook and Scarboro' Rifle associations on the grounds of the former, and owing to the very heavy side wind that was blowing, the score was low. The following is the score out of a possible 50 at each range:

Newton Brook.	100	200	Scarboro'.	100	200
R McCague	38	29—67	S Rennie	44	28—72
St Humberstone	45	18—63	J Davison	43	29—72
J Morgan	23	9—32	J W Kennedy	41	42—83
J Gilzart	34	24—58	R Canning	39	37—76
G Goulding	34	27—61	F Hood	38	41—79
J Smith	40	19—59	J Clark	33	14—47
A Mitchell	38	28—66	G Chesters	37	24—61
W A Clark	42	29—71	J Walton	35	14—49
W Clark	39	30—69—546	J Elliott	35	33—68—607

GARDNER, Mass., Feb. 7.—The last regular meet of the members of the Gardner Rifle Club at Hackmatack range was not well attended, and the only event of which a record was made was the work with a military rifle of Mr. A. E. Knowlton. The scores were the largest of the kind ever made at this range. The work in detail follows:

A E Knowlton	7	8	10	9	10	6	4	10	10	6—80
	5	9	8	9	7	4	9	8	9	8—76
	9	8	8	6	7	8	8	9	6	5—75

ESTIMATING TRAJECTORY CURVES.

Editor Forest and Stream:

In your issue of Feb 16 of last year, I gave an easy method of determining the trajectory of a rifle by means of intermediate screens, similar in general procedure to that followed in making the well known FOREST AND STREAM tests, divested, however, of much of the minuteness of accuracy which characterized them, though sufficiently close for practical purposes. Another expeditions method recently suggested itself, and having tried it with good results, I bring it to the attention of your readers.

It depends upon the principle of similar triangles. A graduated peep sight is a necessity, and a vernier better. Find by trial what it reads to hit the target at such points as it is desired to find the ordinates to the curve, say every 50yds. If it does not give readings in decimal parts of an inch, the reduction should be made by counting the number of divisions to the inch or part thereof. For example, if twenty divisions on a sight equal .7in., one division equals .035in. Then the readings taken to whole divisions and tenths, multiplied by .035, give parts of an inch. Measure carefully the distance between front and rear sights, and reduce to decimal part of a yard.

Let us suppose it is desired to obtain the ordinate at 100yds., from curve to line of sight to 200yds. The base of one triangle is the distance between sights; its perpendicular is the difference between readings for 100yds. and 200yds. The base of the other triangle is 100y s.; its perpendicular is the ordinate we wish to find. Since these are right angle triangles and each has an angle equal to the other at the front sight, they are similar and their sides are proportional. We may therefore say, distance between sights in yards is to 100yds. as difference of readings in inches is to ordinate in inches. The ordinates at the quarter points may be found by subtracting their readings from that of the line to which they are referred, and making proportions as above. If for practical use, the ordinates from line of sight as found above are just what is wanted, but if for comparison they should be corrected for distance between front sight and center of bore, in inverse proportion to distance from muzzle. The correction for first quarter would be three-quarters, for the middle one-half, and the last quarter, one-quarter of this distance.

To illustrate more fully, I give test of a .32-cal. rifle, using 35grs. powder and 153grs. grooved bullet. To find ordinates at 50yds., 100yds. and 150yds., referred to line of sight to 200yds.:

81yds.	50yds.	=	.142in. : 8.7in.
81yds.	100yds.	=	.103in. : 12.7in.
81yds.	150yds.	=	.054in. : 10.0in.

Correcting to reduce to center of bore we have 9.2in., 13in. and 10.2in. respectively for 50yds., 100yds. and 150yds. From the same data we may compute the ordinates for 150yds. range at the 50 and 100yds. points, obtaining 5.4 and 6.0in. respectively to line of sight, or 5.9 and 6.3in. to center of bore; and at 50yds. for 100yds. range 2.4in. to line of sight, or 2.7in. to center of bore.

It would seem that with a fine vernier sight and taking great care throughout, close work may be done by this method. Even using a Lyman sight as I did and spending perhaps an hour or two in getting the correct readings for the various distances, it gives you very satisfactory results.

It is so simple that it must be well known to riflemen, though I have never seen it mentioned in your columns or elsewhere.

T. H. G.

ELIZABETH, N. J., Jan. 9.

BOSTON, Feb. 9.—The weather conditions were good to-day at the range for rifle shooting and some high scores resulted. Mr. Munroe won the gold medal in the 20-shot match, and Mr. Lee the championship medal. Following are the best score to-day:

Twenty Shot Rest Match, 200yds.

J R Munroe	10	11	11	9	12	10	9	11	8	12										
	12	9	10	10	12	11	11	11	12	9	—210

G C Ames	8	9	11	7	9	10	7	7	6	6	— 80

SAN FRANCISCO, Feb. 3.—The target ranges at Shell Mound Park were well patronized to-day. The air was clear and the wind low. It was a perfect day for target practice. Company B of the Third Regiment held their monthly shoot. They shoot with the regulation Springfield rifle, and their scores, considering their practice and the style of gun, are as good as the larger made by other teams; 10 shots:

F B Young	40	P Sweeney	34
J Neberbacher	37	A P Bailey	26
F Ostrich	40	W J Kennedy	25
F Prichard	34	W Brasher	26

The old competitors representing the Nationals were on their stands. The scores of the three representatives are improving every week:

F Young	5444445444—42	A Johnson	5555551454—47
A H Biod	4555554555—43		

Battery A of the Second Artillery held its monthly pistol practice at 100ft. range; 10 shots:

Captain Smythe	48	J Mosser	45
O'Arcy	47	C Forters	43
G Muller	46	A Behmemann	45
J Folkers	46	D Beatty	45

Monthly medal shoot Independent Rifles:

George Muller	4454544453—41	H Goetjen	3244443523—35
P Eickhoff	4344344344—37	L Beversen	2420453434—29
C L West	4405543844—36	C Moeller	3454343203—28

Monthly medal shoot of the City Guard: First class—L. R. Townsend, 44; second class—Irving B. Cook, 39; third class—P. J. Clifford, 34.

ST. LOUIS, Mo., Feb. 9.—The members of the St. Louis Pistol Club were away off in their shooting at the last meet of the club, and the only reason to be assigned for it is lack of practice on their part, and that 77 should ever win the medal was a grand surprise to all. But it will never occur again if practice will prevent it, because the members are going to buckle down, and they are determined that no score under 85 shall win it in the future. Mr. O. Andrews proved the fortunate individual at the last shoot, and he of course will have possession of the medal until the next meeting of the club on next Wednesday night. For all shooting the club uses a 20yds. standard American target and a .22cal. gallery pistol. The following are the scores:

O Neuhaus	9	7	10	6	6	8	7	7	10	7—77
F A Fodde	10	9	7	7	8	10	6	7	7	7—76
L V D Perret	10	10	8	9	7	6	7	6	7	6—76
E Mohrstadt	9	6	6	9	8	9	7	7	8	7—76
M Billmeyer	7	10	8	7	8	6	7	7	6	9—75
M Summerfield	7	5	9	6	6	8	5	7	10	10—73
W Hettel	7	8	7	10	7	6	7	6	7	6—68
M Mackwitz	7	5	5	4	5	6	9	8	6	7—62
A E Bengel	10	8	9	8	0	4	7	6	6	5—60
A J Lee	5	8	0	7	8	5	5	7	7	6—58

UNSER FRITZ.

CREEDMOOR.—Dr. Bush introduced a bill in the Assembly similar to Gen. Husted's bill of last year, providing that the State shall take charge of the Creedmoor rifle range. It gives certain privileges to the old association not contained in the Husted bill.

LOS ANGELES, Cal., Feb. 3.—The following scores were made to-day at the regular monthly shoot of the Turn Verein Rifle Club at the 200yds. range, German target, 25 center:

F Harris	21	19	15	19	11	17	23	13	18	9	—167
C Platt	15	20	13	16	23	17	23	6	18	17	—168
W Ginther	23	8	22	22	19	14	11	19	0	13	—141
J Singer	13	17	19	14	13	14	14	13	22	15	—159
L Odermatt	13	17	13	12	21	18	16	11	14	12	—148
C Golmer	20	9	0	7	7	7	2	0	20	22	— 94
L Tagg	18	0	24	2	6	0	0	4	25	0	— 82
J Hanerwass	18	0	23	22	13	14	12	0	12	10	—124
Krimple	0	13	0	8	20	8	0	1	0	16	— 66
L Winter	18	16	18	22	12	22	8	11	10	16	—153

NATIONAL RIFLE ASSOCIATION.—Gen. Wingate having declined to serve another year as president of the National Rifle Association, a committee has been appointed to select a suitable candidate for the office. Other officers elected Tuesday for the ensuing year are: Vice-President, Gen. John B. Woodward; Treasurer, Gen. R. C. Ward; Secretary, Capt. John S. Shepherd. The committee which presented to the Legislature the bill providing for the extension of the Creedmoor Range reported that an amendment had been inserted giving the members of the Association the use of one-quarter of the ranges every Saturday during the shooting season.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Middlesex Gun Club, Dunellen, N. J., Friday, Feb. 22.
New York Suburban Shooting Grounds Association, Friday and Saturday, Feb. 22 and 23.

MAK-SAW-BA MEDAL MEET.

CHICAGO, Feb. 4.—The Mak-saw-ba Club met in force at their grounds in Davis, Ind., Friday and Saturday last, Feb. 1 and 2, to contest the races for the Wilcox live bird and the Organ blackbird club medals, and smash a few hundred targets on other accounts. A Mak-saw-ba Club meet means something more than a trap shoot. It is an unique sort of a family gathering, in which ladies as well as gentlemen join, which is a synonym for a large-sized good time, and which absolutely must be seen to be fully understood. Free from the license which too often marks a tournament, distinguished by courtesy and consideration, and yet above all, full of a spirit of irresistible jollity, a Mak-saw-ba meet is something of a puzzler to the reporter of average trap shoots. There isn't anything like it. It lies in a high plane of sportsmen's recreation, and as such an event cannot be too highly recommended.

The club house is about three hours distant from Chicago, and the Friday night delegations were a little late in arriving. The big reception room was full, and from the sounds that arose in the general Babel it might be inferred that the members were indulging in one of the permitted luxuries of the club, a little game of "red, white and blue," whose dimensions are never allowed to exceed ten cents. "I stood a raise of ten cents on a pair of fours," exclaimed one feminine voice triumphantly, "and got another four and two queens in a draw, and didn't I make Mr. Kinney put down his hand!" From this it might be inferred that there are ladies in the Mak-saw-ba Club who know a thing or two when they are down in Indiana where nobody can overhear them.

The club register bore the following rather startling record of members and guests present:

Mr. and Mrs. R. B. Organ, Bombay; Mr. and Mrs. F. P. Taylor, Ireland; Mr. and Mrs. H. A. Sloan, Germany; Miss Mattie Hull, Cork; Mr. T. Benton Leiter, Dublin; D. McCranor, Butte, Mont.; W. H. Haskell, Peoria; Joel A. Kinney, Paris; John Watson, Turkey; J. F. Whitney, Spain; W. A. Barton, China; Dr. Hutchinson, New York; G. W. Randall, Persia; Slick Sharp, Poland; Thos. McNeill, Kilkenny; John J. Kleinman, Gad's Hill, Mo.; J. E. Price, Vienna; G. F. Morcum, Rome; Dr. H. C. Buechner, Stuttgart (Bismarck's right bower); C. S. Petrie, Popocatapetl; J. P. Hayt, Cork; C. S. Burton, Berlin; F. H. Lord, Oshkosh; Chas. E. Willard, Shot Tower; F. C. Donald, Pullman; Jack Wiggins, Hyde Park; John Gillespie, State street; Geo. W. Andrews, Lisbon; W. P. Mussey, Joliet; W. N. Lowe, Mexico; Messrs. W. L. Shepard, G. W. Barstow, T. H. Miller, W. L. Welles, G. B. Reed and L. K. Waldron, who got down either at midnight or on Saturday morning, are supposed to have come from just plain Chicago.

Consultation of the score book showed that the above cosmopolitan assemblage had been doing a little shooting already, and it was confidently predicted that Mr. Kinney's score of 14 out of 15 would win the live bird medal over anything that the late comers could do. Following are the scores of Friday, Feb. 1:

Match No. 1, 10 live birds, sweepstakes, Tucker system:

R B Organ	1111101111— 9	G W Randall	0110111101—7
John Watson	0011110101— 6	H R Sloan	1100011111—7
J A Sharp	1100000101— 4	T McNeill	1111101111—9
W H Haskell	0111100010—5	J F Whiting	1111100010—7
T B Leiter	1110111111—8		

Haskell won first, Organ and McNeill divided second, Leiter won third.

Match No. 2, 10 live birds, sweepstakes, Tucker system:

R B Organ	1110101101—7	T McNeill	1000001111—5
John Watson	1110000110—5	J Kleinman	1111011111—9
J A Sharp	1100011001—5	J E Price	1010011111—7
W H Haskell	0111100010—5	H C Buechner	1011011000—5
T B Leiter	1111011010—7	Joel A. Kinney	1110101101—7
G W Randall	1101101111—8	C S Petrie	0001110001—4
W A Sloan	1101001101—6	G F Morcum	1011111111—9

Kleinman and Morcum divided first, Randall won second, Price third.

Match No 3, Wilcox live bird medal shoot, 15 singles, 30yds:

R B Organ	111111101101111—13
T B Leiter	111111111011010—12
C S Petrie	100011110000011— 7
Dr H C Buechner	011110011111001—10
G W Randall	110101111111110—12
J A Sharp	000010110011001— 6
H A Sloan	011111111110110—12
G F Morcum	001101000010000— 5
Joel A. Kinney	011111111111111—14
W H Haskell	101111111100000—10
J E Price	011111111111000—11
J F Whiting	111111111001111—13
J Kleinman	111111111001111—13
John Watson	111110010101111—11

There were two or three entries of non-members in this shoot and these competed for a $5 sweepstakes which was added. Not all the medal competitors joined this sweepstakes. Mr. Kinney did not, and therefore won nothing, although his score was highest at date of shooting. The sweepstakes was decided as follows: Organ and Kleinman divided first on 13 (best two of those qualified); ties for second were shot miss and out, and Randall won second with 5 straight; Watson won third, with 5 straight on miss and out.

Feb. 2.—The remaining competitors for the live bird medal being now on hand, shooting on Saturday morning began with the continuance of that match as follows:

W L Shepard	111111111111111—15
W P Mussey	111011111111110—13
L K Waldron	011w
T H Miller	1111110w

Mr. Shepard had on the garments of shooting, and was too much for the boys with his 15 straight. Mr. Kinney was obliged to relinquish his prospective hold upon the medal, and Mrs. Organ, wife of the president, handed the tastv little trophy over to Mr. Shepard, who blushed and said he didn't mean to win it. Mr. Organ, whose score in this shoot is nearly always 13 or 14, and Mr. Mussey, one of the very best live bird shots in Chicago, take it the year through, were obliged to sigh and sit down.

Match No. 4, sweepstakes, 5 live birds, $2 entrance:

W P Mussey	11110—4	W N Lowe	11010—3
F H "Hollister"	11110—4	W L Welles	11100—3
J C Price	11101—4	Chas E Willard	11111—5
F C Donald	11011—4	L K Waldron	10101—3
Geo Andrews	10001—2	C S Burton	11001—3
J H Miller	11001—3	W L Shepard	11111—5
Dr Hutchinson	10111—4	Thos McNeill	11000—2
John Gillespie	11010—3		

The three moneys were divided and not shot out.

Match No. 5, sweepstakes, 5 live birds, $2 entrance:

W P Mussey	11101—4	Chas E Willard	11101—4
F H "Hollister"	10111—4	L K Waldron	11101—4
J E Price	11111—5	C S Burton	11110—4
F C Donald	11101—4	W L Shepard	01111—4
Geo Andrews	11111—5	Thos McNeill	10101—3
T H Miller	11110—4	E Hough	11110—4
Dr Hutchinson	11111—5	R B Organ	11101—4
John Gillespie	11111—5	G W Randall	01011—3
W N Lowe	11110—4	John Watson	11111—5
W L Welles	11111—5		

Ties on 5 divided. On 4, Mussey, "Hollister," Willard, Burton, Shepard and Hough divided second, with 4 each. The birds being now exhausted, McNeill and Randall divided third.

The blackbird traps were now put in, and after a few side matches, the first shoot after dinner was begun, this being the race for the blackbird championship.

Match No. 6, Organ medal shoot, 20 Peoria blackbirds, two traps; sweepstakes added for members and non-members:

T B Leiter	11111011111101111111—18
C S Burton	0.0101111010111101101—12
F H "Hollister"	11101101111111011111—17
D C Hutchinson	10011011001011000100—8
Geo Andrews	11100000001111001101—10
J E Price	11110111011011101101—15
J Gillespie	00000011010w
F C Donald	10110111111010111111—16
W L Welles	11111111111111111111—20
L K Waldron	01000100010001110010—7
C E Willard	11111001111111111111—18
T S Miller	11001010000000000010—6
W L Shepard	10101011011111111111—15
R B Organ	11111111111111111111—20
J F Whiting	01101111011111110001—14

Organ and Welles divided first in the sweep. Leiter and Willard second, "Hollister" won third. Mr. Leiter having the highest score of any qualified competitor, won the medal in this shoot. He having won it at the two preceding medal shoots, it was now awarded to him for permanent possession. Mr. Leiter will probably present the club with another medal for competition. His scores in the two former matches were 17 and 19 out of 20. Mr. Leiter shoots a 6¾lbs. special Edinburgh made gun, 12 gauge; in appearance he is slight, erect and quick; a confident and rapid shot.

Match No. 7, sweepstakes, 20 Peoria blackbird, 2 traps:

G B Leiter	11111101110111000100—13
C S Burton	10110111010111101110—14
F H "Hollister"	11111111101111101111—18
J E Brown	00000001010001111001—7
F C Donald	11110110101111101111—16
W L Welles	10110111101110111111—16
C E Willard	11111111101011011101—17
W L Shepard	11111111101001011111—16
R B Organ	10111110111111110111—17

Hollister won first, Organ and Willard divided second, Donald, Welles and Shepard third.

Match No. 8, sweepstakes, 12 Peoria blackbirds, Tucker system, last five for ties:

F H "Hollister"	111111111111—12	C E Willard	011010011101— 7
F C Donald	111001111011— 9	W L Shepard	111111101110—10
W L Welles	111111110111—11	R B Organ	111111010101— 9

Hollister won first, Welles second and Shepard third.

The Tucker system, of allowing the last four or five shots of each score decide the ties, is not liked by the Mak-saw-bas, who think it better adapted to large tournament shoots.

There is a growing tendency toward lighter weights and smaller gauges for guns in this club. I saw but three or four hammer guns in the racks, and of these most were 12s. The day of the 10-gauges is past, especially if it has ears on it. Tidy little 7¾lb. Dalys are favorites. The president of the club, Mr. "Roll" Organ, shoots a light Daly, and could not now be persuaded to use a 10-gauge. At the score Mr. Organ is a model of presence and style, and hits his birds apparently harder than anybody else, so strong is his control of the gun. His wife, who sat through the shoot, is undisguisedly proud of her husband, and nobody blames her. The Mak-saw-bas could not have a better president. Mrs. Organ herself shoots. Last summer she bagged 36 rail in one afternoon. She killed two pigeons straight from the trap on Friday, but desisted because she had not her own gun with her. Mrs. Organ won the short-range gold medal at Lincoln Park in archery days. It would not do to close mention of a Mak-saw-ba Club shoot without naming Cleaver, Mr. Organ's Chesapeake and Gordon dog, who acts as retriever-in-general at the live-bird matches, and in the evening sits on a chair and shakes hands with everybody, and offers to go bring in the wood, or get a pair of slippers, or get the newspaper, as he does at home in the city. Nothing is too good for him at home. His master has a life-size oil painting of him in the parlor, and he says, "When Cleaver wears out one carpet, we go and get another. It's easier to get a good carpet than a good dog." It may be supposed, therefore, that Cleaver, petted by men and women alike, only jerks his thumb contemptuously over his shoulder toward the sign which says "No dogs allowed in the club house."

Another popular member of the Mak-saw-bas is Dr. Hutchinson, who is fat, short-haired and forty or so. It is said of Dr. Hutchinson that one day, being a trifle exhilarated by the bracing air, he shot all day at a single pigeon, and only learned toward evening that it was a bug sitting on his eyelash.

At the shoot in question there were 41 persons present. This is not quite so many as upon one previous occasion in warm weather, when there were 92 shooters present one night. The club house has beds for only 40. The president skirmished around a while, and as midnight came in with the announcement, "I've got beds for all o'em but fifty, and the rest will just have to amuse themselves the best they can." There were enough members and guests present this time, however, to have a mighty good time.

AMERICAN SHOOTING ASSOCIATION.

A MEETING of the above association was held on Monday, Feb. 11, at the office of Elliot & S. Sidney Smith, 59 Wall st., New York, and the following officers were elected: President, C. W. Dimick, Boston, of the U. S. Cartridge Co.; Vice-President and Auditor, J. A. H. Dressel, New York, of the Union Metallic Cartridge Co.; Secretary, Elliot Smith, New York, president of the American Wood Powder Co.; Treasurer, Solomon Turck, New York, president of Laflin & Rand Powder Co. Added to the above, the following directors were elected: P. G. Sanford, New York, of Winchester Repeating Arms Co.; Geo. T. Haring, New York, Leroy Shot and Lead Manufacturing Co.; W. T. Harvey, Baltimore, of Merchants Shot Tower Co.; Chas. Tatham, New York, of Tatham Bros., and L. C. Smith, of Syracuse, N. Y. An advisory board was also chosen, composed as follows: S. A. Tucker, Delavan, Ill.; Ed. Taylor, Cincinnati, O.; H. McMurchy, Syracuse, N. Y.; Lieut. Geo. E. Albee, New Haven, Conn.; G. E. Willard, Chicago, Ill.; W. Fred Quimby, New York, E. S. Mills, Washington, D. C.; S. J. Kellogg, San Francisco, Cal.; Dr. W. G. Cross, Tuscaloosa, Ala., and W. A. DuBray, Walla Walla, Washington Territory. Maj. Taylor was unanimously elected general manager and will at once set about organizing matches for the year's campaign.

Those represented at the meeting were: Union Metallic Cartridge Co., Charles W. Dimick, LeRoy Shot & Lead Manufacturing Co., Merchants Shot Tower Co., Bailey, Farrell & Co., Elliot Smith, Laflin & Rand Powder Co., Bandle Arms Co., Kings Great Western Powder Co., Peters Cartridge Co., Oriental Powder Co., and Philip G. Samford, representing the Winchester Repeating Arms Co.

The offices are in the Stewart Building, Broadway, New York. A meeting of the advisory board has been called at Cincinnati, O., Monday, the 18th inst., as many of its members will be in that vicinity at the time. It is expected that they will formulate standard rules for both live bird and inanimate target shooting, map out a plan of operations for this year and decide on other matters which may be brought to their attention. In all probability the plan of giving five tournaments, as suggested in our last issue, will be adopted, and in addition to this the Association will no doubt pursue the policy of guaranteeing tournaments, given under their rules, but not directly under their management. This plan will more than anything else, we believe, tend to increase the number of shooters all over the country, and thus attain one of the chief aims of the Association. Due notice of the advisory board's action will be given in our columns.

ST. CATHARINES, Feb. 4.—The Peninsular Gun and Game Club was organized this evening, when the following officers were elected: Honorary President, S. D. Woodruff; Honorary Vice-President, J. A. Hammon; President, Dr. J. H. Comfort; Vice-President, Dr. C. O. Beam; Secretary, James A. Keyes; Treasurer, F. St. John. Committee of Management—Frank E. Cov, George Rogers, H. Cluttenbuck, H. K. Woodruff, E. Dorr, E. Dicer and J. S. Carlisle. The principal objects of the club are: To encourage all legitimate sport with the gun; to encourage the destruction of hawks, weasels and other game-destroying birds and animals, and to encourage preservation of game and close season.

ORGAN—KLEINMAN.

CHICAGO, Ill., Feb. 6.—There will be shot at Watson's Park at Grand Crossing, the chief trap grounds of this city, on Saturday, Feb. 16, an individual match in which as much interest centers as in any event of late occurrence here, the Organ—Kleinman match, in which Mr. K. B. Organ (known all over this section as "Roll" Organ) challenges Mr. John J. Kleinman, the best trapshot of all the thirty or forty "Kleinman boys," to a hundred-bird match at $150 a side. The full terms of the match are as follows: 100 live birds, $150 a side, winner to pay for the birds; shooting under Illinois State rules, Mr. Organ to use a 12-gauge gun at 30yds., and Mr. Kleinman a 10-gauge at 32yds.; the shooting to begin at 2 P. M. Forfeits of $30 are already paid into the hands of Mr. W. P. Mussey, who will hold the final amounts, soon to be added.

This match has been pending for three years, and each shooter has warm supporters. It is a peculiarity of Mr. Kleinman that he always wants some one to back him in a match, and rarely will shoot where he is to lose or win it all. I understand that in this match he has two backers at $50 each. Mr. Organ puts up his own money. In person Mr. Kleinman is a tremendously large and strong man, with much the look of a Methodist preacher. He is said not to have any nerves at all, and is called the most reliable shooter for money there is around here. He is a trifle slow with his first barrel, since he shoots under the old rules, gun held below elbow, but he has a truly wicked second barrel, and his shots are almost simultaneous. Mr. Organ is also a large man and of fine physique, and is never beaten till the last bird is killed. He shoots a 12-gauge, but will give his opponent plenty to do. I asked Mr. Organ who was going to win, and he said he had a notion that he would win himself, or he wouldn't have hunted up the match.

The posting of this match has called up a lot of reminiscences among the old-timers here, and several of Mr. Kleinman's odd matches are brought to mind. He is known as the luckiest man on earth at the trap. Once he bet a shooter $100 that he could not kill 15 out of 20 Guinea hens thrown from a plunge trap, at 30yds., (I believe that to have been the distance). The shooter lost inside of the first 12 birds. He knocked down the first bird all right, but it was challenged, and when he went to gather it, it got up and ran off for a hole in the fence where Mr. Kleinman had, in view of the match, trained all of them to go whenever frightened. The shooter in question thought he had a picnic, but as matter of fact he only killed 4 Guinea hens dead out of the lot. The rest ran off. At another time Mr. Kleinman backed himself for $50 to kill 60 out of 100 snowbirds, 21yds. rise, with No. 1 shot. This looks like a preposterous wager but he won it inside of 80 shots. He stuck his shot together with tallow.

Whatever the result of this shoot may be, it is the talk of trapshooters here to-day, as both gentlemen are so well-known here. The birds will be picked ones, and the race will go a great pace for both shooters or for either. E. HOUGH.

BOSTON, Feb. 6.—The attendance at to-day's meet was large. Besides many members of the association there were present a number of visiting sportsmen, among others: Col. J. H. Ames, of New London; L. H. Haughton, of Chepachet, R. I.; Dr. C. H. Gerrish, of Exeter, N. H.; Corydon Wilbur, of the Brockton Gun Club; I. N. Dodge, of Gardner; S. Bowker, of Natick; H. K. Stone, of Waltham; the Bennetts, of pistol shooting fame, and C. F. Packard, of San Francisco. The weather conditions were the most severe and disagreeable this season, a howling wind—cold and piercing—prevailing throughout the entire day. The main features of the day were the ninth competition for the Climax diamond badge, which was held by Mr. Wardwell, and won to-day by Mr. Dickey, and the 100-bird challenge contest between Messrs. G. H. Wheeler, of Marlboro, and O. R. Dickey, of Boston. The latter contest was extremely close and interesting, the contestants being nip and tuck until the ninetieth bird, when the competitors tied, with 76 each—Mr. Wheeler breaking 7 of his last 10 birds, and Mr. Dickey 9, thus winning the race. The next shotgun shoot will be held at Walnut Hill, March 6, when the tenth competition for the Climax diamond badge will occur, followed by the usual sweepstake shooting. The summary of the 13 events to-day are as follows:

First, 6 standard targets, 3 traps—Wheeler 6, Chase 4, Nichols 3.

Second, 5 clay-pigeons, 5 traps—Wilbur 4, Dickey 3, Bowker and Wheeler 2.

Third, 7 standard targets, 24yds, straightaway—Stanton 6, Knowles and Nichols 5, Bowker and Wheeler 4.

Fourth, 3 pairs clay-pigeons—Houghton and Wilbur 5, Wheeler, Stanton, Perry and Chase 4, Choate and Dickey 3, Bowker and Nichols 2.

Fifth, 10 standard targets, 3 traps—Stanton and Bowker 9, Houghton, Perry and Dodge 8, Wilbur and Knowles 7, Chase 6.

Sixth, 10 clay-pigeons, five traps—Nichols and Packard 9, Wilbur 8, Knowles and Choate 7, Stanton 6.

Seventh, 15 standard targets, 3 traps—Stanton 14, Charles and Nichols 12, Choate, Knowles and Bowker 11, Houghton, Wild, Wheeler and Chase 10.

Eighth, 15 clay-pigeons, 4 traps—Stanton, Dickey, Wilbur and Bowker 12, Houghton and Charles 11, Choate 10, Wheeler and Packard 9.

Ninth, Climax diamond badge match, 20 clay-pigeons, 5 traps, and 20 standard targets, 3 traps:

	Clays.	Standards.
Dickey	11111111111111110110—17	11111101111111011111—18—35

Stanton	11111111100101110111—16	10101011101011101111—14—30
Choate	11101110101110001010—13	11101001111111111111—17—30
Chase	01110111010101010110—12	10111111111110101010—15—27
Charles	01001110001011111111—13	11001101010111111111—14—27
Wilbur	10101011111010111 00—13	11101111001111100011—14—27
Perry	10101111111010111110—15	11011010001111110110—12—27
Houghton	01100111100101011011—12	11101011011010100111—13—25
Bowker	01101101001011011100—11	00111101101101011100—11—25
Packard	11110010100100100010—10	11100110101110101110—13—23
Johnson	01011011000111000000— 8	11111000111011111111—16—24

A half dozen other competitors started in the race, but finding it difficult to connect with the erratic targets as they sailed away at a terrific rate of speed before the strong wind, withdrew from the contest.

In the optional sweepstake attached to this event the winners were as follows:

Twenty clay-pigeons, five traps—Dickey 18, Weeler 17, Stanton 16, Knowles and Perry 15.

Twenty standard targets, three traps—Coates and Dickey 17, Knowles and Johnson 16. Chase 15, Wheeler and Wilbur 11.

Eleventh challenge match, Wheeler vs. Dickey, 100 standard targets, three traps:

Wheeler..01101101111111111111—17	Dickey....11100111101111101111—16
11100111111111110101—16	10110111111111010111—16
11111111111111111111—19	11111111011111111111—19
11110111101111111010—16	11010111101111111111—17
11110111101100110111—15	01011111111111111011—17
83	85

Twelfth, 7 clay-pigeons, 24yds., Hurlingham rules—Chase 6, Stanton 5, Bowker 4, Hammond, Ames and Knowles 3.

Thirteenth, 15 standard targets, three traps—Dickey 14, Stanton and Choate 12, Chase 11.

TORONTO, Feb. 9.—The second competition for the medals presented to this club took place at McDowall & Co.'s grounds this afternoon, when a goodly number of sports assembled. There were also several sweepstakes in which the scores totalled fairly. Mr. W. Felstead carried off the honors with 54 out of 63, with Messrs. Bennett and Winchell in close proximity. Following are the scores:

First shoot (club shoot), at 20 blackbirds:

C Morley..11110111111111111111—19	Heathg'tn00110101100110111011—11
Felstead..11111111111111111101 19	J Rice..11000001111000111101—11
T Bennett11111111101110111111—18	F Morley..01110011001111010010—10
McClure..00101111011111001111—14	Sawden,sr11001010001100111000—10
Sawden,jr10010110111101111001—13	

At Double String.

C Charles..10101010110100101011001011110100101101110—23	

Second shoot at 10 blackbirds, three money prizes:

Felstead..1011111111—9	Bennett..0011101101—6
Smith..1111010101—7	Heatherington..1111000100—5
Morley..1111011001—7	

Felstead first, and Smith and Morley divide second and third.

Third shoot at 12 blackbirds, three money prizes:

Felstead..101011111111—10	Winchell..1111111010 11—10
Smith..0111111011111—10	Bennett..0011110101111— 8

Ties: Felstead, 111—3; Winchell, 103—2; Smith, 101—1.

Fourth shoot at 15 blackbirds, one prize:

Bennett..010111110111010—11	Felstead..111111011110000—10
Winchell..110111111011110—11	Smith..001111101011100—10

Ties: Bennett, 100, 111, 110—6; Winchell, 010, 011, 100—5.

Fifth shoot, individual match for $15:

Winchell..011111110110110 1—13	Smith..1001110111111111000—12

There was also a team match captained by McClure and Smith, McClure's side winning.

CLAREMONT, Jersey City, Feb. 9.—The following are the principal sweeps shot on the New York Suburban Grounds on the above date. Ties divided unless noted. Sweep No. 1, entry twenty-five cents, three moneys:

Jones	0101111011—6	Daly	0100000000—1
Hammond	0100110000—3	Simpson	1110011110—7
Hathaway	1100001011—5	Miller	1101111011—8
Lindsey	1110111111—9	Collins	1001111111—7
Mont	0010100111—5		

No. 2, same:

Jones	1101110010—6	Miller	1111111111—10
Hammond	1011106010—5	Simpson	1110011111—8
Hathaway	0001101001—4	Collins	1010111011—7
Lindsey	1000111111—7	Daly	1100000101—4
Mont	1011011010—6		

No. 3, entry twenty-five cents, four moneys:

Lindsey	0010111111—6	Collins	1111011101—8
Jones	1100101110—6	Simpson	1110010110—6
Daly	0011110011—6	Miller	1111111111—10
Jersey	1011110111—8	Stiff	1010001100—4
Hammond	0000010100—2	Walton	0001011100—4
Hathaway	0101001111—6	Enright	0101000000—6
Mont	1001110001—5	Sheriff	1100110010—5

Lindsey won third.

No. 4, same:

Hathaway	1011110100—6	Miller	1111111111—10
Mont	1110101110—7	Simpson	0011110000—4

Hathaway	1111011111—9	Enright	1100011101—6
Collins	1110011110—7		

ST. LOUIS, Mo., Feb. 9.—The Compton Hill Gun Club had a most delightful day, a very high wind was blowing directly across the traps, from right to left. All the shooting was at Peoria blackbirds and they were thrown from three traps, otherwise National Association rules prevailed. Following are the total scores of the shoot:

First match, at 25 blackbirds:

W F. Field	1111101111101000111101111—18
E Mohrstadt	1111110111111111111111011—23

Second match, at 20 blackbirds:

Mohrstadt	11111101101111111110—17
Field	10101111111111101110—15

Third match, 20 blackbirds:

Mohrstadt	11101010111111111110—16
Field	11101100111100111111—15

Sweep No. 1, at 10 blackbirds:

Sieminskie	0101011111—7	Hemphill	0001111011—6
Homer	1111001110—7	Flynn	1000100101—4
Hettel	0110010011—5	Drayer	1010010111—6
Meyer	1111111110—9	Dick	0101111111—8

Meyer first, Dick second and Sieminskie third.

Sweep No. 2, at 10 blackbirds:

Sieminskie	9	Meyer	9
Horner	7	Flynn	4
Dick	6	Rawlings	2
Drayer	10	Hettel	4
Hagerty	6	Hemphill	4

Drayer won first, Roy second and Williams third.

Sweep No. 3, at 10 blackbirds:

Sieminskie	0111110111—8	Hemphill	0101110011—6
Horner	1111111110—10	Hettel	0101111001—6
Hagerty	1111011011—8	Drayer	1100111111—8
Meyer	1010011111—7	Rawlings	1011110001—6
Dick	0101011110—6		

Horner first; ties on 8 div. second, and Meyer third.

Sweep No. 4, at 6 blackbirds:

Sieminskie	110111—5	Hagerty	001111—4
Horner	111111—6	Rawlings	010010—2
Meyer	100111—4	Drayer	110100—3
Field	110100—3	Hettel	011100—3

Two moneys, all ties were div.

OTTAWA, Feb. 9.—The St. Hubert's Gun Club this afternoon met for the sixth competition for the Thompson Cup, and the shoot virtually settled who becomes the owner of the handsome cup presented by President Phil. Thompson. Mr. Geo. White now stands so far ahead of his rivals that the remaining two shoots cannot deprive him of the cup, in which his best five scores are: 17, 17, 17, 18 and 19, out of shoots at 20 each. This makes a total of 88 out of a possible 100—by no means poor shooting. For a start two sweeps were shot at 10 birds each, the following being the score:

Sweep No. 1, 10 Peorias, 18yds.:

Geo White	10	E White	7
A Throop	9	E King	6
W J Johnstone	9	Dr Martin	5
P Trudeau	7	S White	3
R Dalton	7		

Sweep No. 2, same conditions:

A Throop	8	P Trudeau	6
R Dalton	8	W Lett	5
Dr Martin	7	Dr McPhee	5
W Johnstone	7	E King	4

Sixth competition, 20 Peorias each, 18yds.:

Geo White	20	W J Johnstone	14
P Trudeau	16	Dr Martin	14
A Throop	15	E White	10
E King (4 start)	15	A Lett (3 start)	10
R Dalton	15	W Lett (4 start)	10
J Deslauriers	15		

CORRY, Pa., Feb. 8.—The Corry Gun Club held their regular weekly shoot yesterday afternoon, although the mercury was below zero and the weather very stormy. In the evening the monthly meeting of the Gun Club was held. Seven more were admitted as members. A committee was appointed to select grounds for a shooting park and club house which is to be built on a grand scale. It is to have a parlor, smoking room and general gun room. The following is the score of yesterday's shoot:

Lewis	1001111111101111111110—15
Howard	0111100710100100011110—13
Berliner	0000000010 0000110000000—3
Blydenburg	1001010100010001011111—14
Wilson	1000001100000110110000—9
Laurie	0101100000010010100100—9
Austin	1000010101000000000110—8
Newman	1111100001001110310001161—13
Oliver	0101111103001111111101—18
Wetmore	1011111111111111111111101—23
Ward	0100100001000000000110101— 7
Penrose	1111111111111111111111111—25

KEYSTONE.

ST. LOUIS, Mo., Feb. 9.—A few members of the St. Louis Gun Club met at Compton Avenue Park to-day. A gale blew directly from the shooting score, and the Keystone birds went down wind at a sharp pace. The live birds used were an exceptionally strong lot. The following are the scores:

First sweepstakes, 10 Keystone birds.—Coolidge 2, Smith 6, Tiffany 2, Stole 4. Smith first and Stole second.

Second sweepstakes, 10 Keystone birds.—Shepley 6, Coolidge 4, Smith 6, Tiffany 4, Stole 5. Shepley first and Stole second.

Third sweepstakes, 10 Keystone birds.—Coolidge 4, Tiffany 6, Stole 7. Shepley 7, Smith 8. Smith first and Shepley second.

Fourth sweepstakes, 10 Keystone birds.—Coolidge 6, Tiffany 8, Stole 9, Shepley 4, Smith 6. Stole first and Tiffany second.

Fifth sweepstakes, 5 live pigeons from ground traps, 30yds. rise, use of both barrels:

Shepley	21102—4	Tiffany	01000—1
Coolidge	21112—5	Stole	01111—4
Smith	01000—1	Trescher	00001—1

Coolidge first and Stole and Shepley divided second.

Sixth sweepstakes, 5 live pigeons, ground trap, 30yds. rise, use of both barrels:

Shepley	00200—1	Stole	11011—4
Coolidge	01100—2	Trescher	12010—3
Smith	11200—3		

Stole first and Smith second.—UNSER FRITZ.

WATSON'S PARK.—Grand Crossing, Ill., Feb. 9.—The Gun Club of Chicago vs. the Lake George Sportsmen's Association of Chicago, teams of 10 men, 10 live pigeons, 5 ground traps, 30yds. rise, 80yds. bound. Illinois State rules:

Chicago Gun Club.		Lake George Club.	
Hutchinson	1101000 01—4	Hamline	0000101001—3
Willard	0111111100—7	Foss, Billy	1110010101—6
Foss, Hank	0111111111—9	Still	1000101100—4
Lord	1010001001—4	Wood	0111111101—8
Wilcox	0000101110—4	Phillips	1001110001—5
Barton	1101000111—6	Turtle	1101100111—7
Mussy	0110101111—7	Lewis	1010010101—5
Stone	0001111110—6	Orvis	1011110110—7
Dingee	1110001101—6	Place	0100111111—7
Wadsworth	1110101110—7—60	Booth, Sam	1001111011—7—59

The boys are always hankering after hard birds. They got them this time to their entire satisfaction.—RAVELRIGG.

HUTCHINSON, Kas., Feb. 3.—The Hutchinson Gun Club held their medal shoot Thursday, Jan 31. The day was fine, but the shooting done by the boys was below the average. Will Allen succeeded in winning the medal. He won it in January and will carry it during the month of February. He used a Lefevre 10-gauge gun in both contests. He has improved wonderfully in his shooting and is setting a pace which will keep the veterans in the rear if they do not improve their scores. First match, at 3 singles and 1 pair:

Allen	101 11—4	Young	011 10—3
Taylor	011 11—4	Chamberlain	001 10—2
George	001 11—3		

Second match, at 12 single bluerocks:

Chamberlain	111111111000—9	Jones	110101001110—7
Young	110001111110—8	Burslem	100100111111—8
Taylor	101001111011—8		

Medal shoot, at 15 singles and 5 pairs:

Allen	101111111011111 10 11 11 10 10—20
George	110111110001111 11 11 11 11 10—20
Young	101111011111101 01 01 11 11 11—20
Burslem	011111010111011 10 01 11 11 11—19
Jones	111111111011101 10 00 10 10 11—18
Taylor	111001101011111 11 11 10 00 10—17
Chamberlain	001111001010010 11 11 10 10 11—15
"Scott"	011010100011100 10 11 10 10 10—13

Allen, Young and George tied for the medal and in the shoot-off at 3 singles and 1 pair, Allen got 4, George 3 and Young 2, which gave Allen the medal. Burslem won the cup on a score of 19.—SHADY.

DAYTON, O., Feb. 6.—Match at standard targets:

C Whealan	1110111—6	Kiefer	1111110—6
Pratchet	1010111—5	Rike	0101011—4
Ed Cain	1110011—5	Wm Lyman	1001010—3
Annie Oakley	1111111—7	Smith	0000101—2
Geo Makley	1110101—5	Dave Johnson	0101010—3

Miss Oakley took first money, Whealan and Kiefer divided second, Cain, Pratchet and Makley third. Second match:

Miss Oakley	11111—5	Chas Whealan	11111—5
Ed Cain	01111—4	A Sauder	00000—0
Geo Makley	10111—4	A Webb	00001—1
Wm Kiefer	01110—3	J Meehan	10101—3
Pratchet	11011—4	T Simson	01010—2
Wm Lyman	11100—3		

Whealan divided first money, second went to Pratchet in the shoot-off, Kiefer won third. Third match:

Wm Kiefer	11101 01 10 11— 8	Wm Pease	01101 11 01 11—8
Ed Cain	01011 11 10 11— 8	John Klee	10111 00 10 01—6
Geo Makley	10110 11 11 11— 9	A Johnson	00010 10 00 00—2
Rike	10001 11 01 10— 6	S Lemon	10101 00 00 00—3
W McConnell	01010 10 10 01— 5	J Turner	10010 10 10 00—4
Lou Baker	11111 11 11 10—10	D Furgeson	00000 10 00 00—1

WORCESTER, Mass., Feb. 6.—The series of classification prize shoots under the auspices of the Worcester Sportsmen's Club, at Coal Mine Brook Range, were continued yesterday. The attendance was very large. In the classification there were four strings of bluerocks, with a possible total of 24; in the prize score there was a possible 10, and in the tie a possible 3. The ties were shot off or the prize divided. In Class A the first, $4.50, was divided by E. P. Smith and L. G. Houghton. The second, $2.50, was divided by A. R. Burdick and E. F. Swan, while the third, $1.80, was taken by Dr. Bowers. In Class B the first, $5, was taken by J. B. Tongas, the second, $1 80, by George Sampson, and the third, $1.20, by Dr. Frank. The work more in detail of each man follows:

Class A.

	Classification.	Prize.		Classification.	Prize.
E T Smith	20	9	V D Keuerson	17	9
L G Houghton	18	9	A R Bowdish	22	8
M D Gilman	19	9	E F Swan	18	8
W R Dean	18	9	Dr Bowers	20	7
G J Rugg	18	9	E C Griffith	18	3
C B Holden	17	9			

Class B.

J B Tongas	15	7	C A Parker	12	6
Geo Sampson	13	6	Dr Frank	13	5
E S Knowles	16	6	A B Franklin	14	4

TORONTO, Feb. 5.—The second shoot of the West Toronto Junction Gun Club, for the two gold medals, took place at D. Riley's grounds to-day. The very cold weather made the shooting difficult, which accounts for the low scores as follows; 15 sparrows each; handicap:

W Davidge (3)	110100101111111—14
N Good, scratch	011111110011111—12
C Hinton (2)	001111010101111—12
D C Walton (2)	010101001101111—11
W Blea (3)	001010101101101—11
A Purse, scratch	111110010101 1—11
P Wakefield, scratch	000101111101111— 9
H Jackson, scratch	100111001110001— 8
W McDowell, scratch	001011100111001— 8

NEWARK, N. J., Feb. 6.—To-day the Union Gun Club, of Springfield, came up to Newark and met the South Side Gun Club. The men shot in squads of four. There were five traps, and the shooting distance was 18 to 28yds., according to the guns used. Each man shot at 25 flying targets. The weather was unfavorable to big scores. The result of the day's shooting was as follows:

Union.		South Side.	
Miller	25	Breintnall	21
Siegler	23	Brellman	22
Williams	23	O. von Lengerke	20
Conover	19	Dukes	16
Wolstencroft	25	Hobart	15
Lindsley	19	Quad	20
A Sickley	18	Thomas	18
Collins	23	Heritage	19
Johnson	20	Geoffry	21
Haines	15	Manitz	20
Apgar	24	Beam	21
Breninghan	23—253	J von Lengerke	24—237

NEW YORK STATE SHOOT.—Albany, N. Y., Feb. 11.—*Editor Forest and Stream:* At the annual convention of the New York State Association for the Protection of Fish and Game, held at Auburn, N. Y., May 28 to June 3, 1888, it was resolved to hold the next convention at Albany, N. Y. The Elm Grove Gun Club of that city having been admitted to membership in the State Association, the above resolution of the convention placed the control and direction of the tournament of '89 in the hands of the Albany club. At the annual meeting of the Elm Grove Club, held Feb. 5, it was resolved to recommend to the State Association that the next annual convention be held in June, the first business meeting to take place on Monday, June 3, and the tournament to be opened on Tuesday, June 4, and continue through the 5th, 6th and 7th. Committees have been formed for the formulating of a programme, and for the securing of guaranteed purses and merchandise prizes.—H. B. DERBY.

THE MIDDLESEX GUN CLUB announces a shoot on their grounds at Dunellen, N. J., on Friday, Feb. 22, Washington's birthday. General sweepstakes will be shot during the day at inanimate targets and live birds. The big event is a guaranteed purse of $75, at 25 inanimate targets, $10 entrance (birds included), commencing at 2 P. M. The Keystone system of shooting will be in force.

OTTAWA, Feb. 5.—The Ottawa Gun Club have re-organized and elected the following officers: President, Dr. McPhee; First Vice-President, W. H. Tracey; Second Vice-President, Ben Rathwell; Secretary, L. C. Labelle; Treasurer, W. H. Baldwin; Field Captain, John Stewart.

NEWARK, N. J.—The Tenth Ward Gun Club was recently organized at Joseph Fischer's, 137 Delancey steet, with the following officers: President, James H. Hampton; Vice-President, Louis Hohweiler; Secretary, Wm. Ivey; Treasurer, Wm. Fischer; Sergeant-at-Arms, Joseph Fischer. They will have a live pigeon shoot on Washington's Birthday.

OAKLEY—DALY.—A match between Annie Oakley and Phil Daly, Jr., will be shot at Elkwood Park, Long Branch, Feb. 22, 75 live birds each.

OTTAWA, Feb. 5.—The St. Hubert Gun Club held their annual meeting this evening at Mr. E. King's office, Sparks street. The secretary's and treasurer's reports show that the club has made grand progress during the past year, both in members and financially. The Secretary, Mr. A. H. Throop, in his report specially refers to the effective work of the new Game and Fish Inspector for this city and district, Mr. J. B. Moreau, and expresses hope that a thorough test case will shortly be made for the express purpose of straightening out the legal kinks. The present law seems defective in many points, or at least so framed as to bear of wide constructions. After routine the election of officers resulted as follows: President (by acclamation) Philip N. Thompson; First Vice-President, George White; Second Vice-President, Ed. King; Secretary, A. H. Throop; Treasurer, John Deslaurier; Field Captain, R. G. Dalton; Committee, Alex. Jacques, R. W. Stevens, L. A. Desrosiers, W. McL. Mabey and C. J. Locke. Taxidermist, Ed. White; Auditors, R. W. Stevenson and W. P. Lett, Jr.

LAFAYETTE, Ind., July 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* DEAR SIRS—I find your Climax paper shot shells excellent and quite equal to Eley's. There is no hang fire or tendency to do so. I intend using your shells in a match next week. I will give them a good boom, as they deserve it.

Yours truly,

—*Adv.* (Signed) W. GRAHAM, Champion English Shot.

Canoeing.

SOME CRUISING EXPERIENCES.

Editor Forest and Stream:

"Carl Fuller's" and "Retaw's" descriptions of their canoes and outfits have set me thinking that if canoeists generally will follow their example we may all get some good points, so here goes for mine.

My craft is a smooth skin 15×31½, fitted with a plate centerboard 12×30×$^{3}/_{16}$, and combination sails of 50ft. for the main and 22ft. for the dandy.

The centerboard is set far enough forward to give me clear sleeping space of a little over 5ft. Cockpit is 7ft. long with two hatches, that reduce the length to a little over 4ft. In the bow is a dry stowage compartment that *is* dry. Sliding bulkhead in rear end of cockpit. The sails go under the side deck with straps that hold them up out of the way. The latest acquisition is a foot steering gear that goes under the bottom boards. The foot part is a frame of oak with two pieces arranged to slide back and forth in it. These have a brace for the heel, and two posts fastened to it. One of the posts is fastened to the extreme front end and his other about 7in. back of it. Under the bottom boards is a 6in. wheel with a shaft fastened to it that comes up through the middle of the foot gear. The first post or the sliding piece has a rope through it, and the rope then comes around the shaft and is fastened to the second post. Now any motion given to the sliding pieces turns the shaft and wheel. The deck gear has a rod which runs down through the deck to the keel, and on the lower edge has a 4in. wheel. Both wheels have a groove cut in them large enough to take a safety chain. This runs around and connects the two wheels under the bottom boards.

Any motion which is now given to the sliding pieces turns the first wheel, then the second deck gear and rudder. By using a 6in. wheel in front and a 4in. behind it gears up so that a very small motion of the foot will throw the rudder as far as it is necessary for it to go. On the one I have just completed a motion of 1in. will throw the rudder at an angle of 60°. The advantages are that it will not tire your foot as a hinged pedal gear does, as the motion is given by the whole foot instead of at the toe alone. Another is that you get a gain in speed and do not have to stretch as far. On the bottom of the gear are two brass pins that engage in holes in the bottom boards. A spring catch, which can be released in a second, holds it in place.

My dry stowage hatch which I used last year is the only one I have ever had that was perfectly tight. This year I am going to make a light wooden box and cover it with No. 26 brass. In the top will be a hole 12in. in diameter and a brass pipe the same size soldered to it, reaching up to the deck and turned over on it like the old style mast tubes. The hatch is of oak, the lower side curved to fit the camber of the deck. It is turned in a lathe and the top made perfectly flat. It then has a hole 10in. in diameter cut in it, commencing ¾in. from the outside, leaving an easy curve. On the curve is a half-round groove cut deep enough to hold a piece of soft rubber tubing, which is fastened permanently in it with bicycle cement. The hatch is screwed to the deck and well varnished to make it perfectly tight. The removable part is turned with as smooth a face as possible, and fastened to the other with screws instead of the usual hatch screws. It is a great deal better to use the rubber tubing than the regular rubber packing, as it is softer and will close up any opening that might let in water. By using a piece of ebonite and turning the face accurately the rubber might be dispensed with, but it is absolutely necessary with the wooden hatch.

Of my sails I shall say nothing. For the last two seasons I have used them a very little and on cruises not at all. I have a cork mattress, but think of having an inflatable rubber one next year. I wish some one who has used them would express their opinions about them.

In a personal letter which I received a few days ago from the champion cruising crank he said, "When you write to the FOREST AND STREAM again please describe exactly what your kit is, where you put it, what you do with it and all about it. Don't generalize too much." Well, I carry in the way of clothing, a coat, hat, two pair stockings, knee breeches two handkerchiefs, two woolen shirts and a pair of shoes. I think next year I'll have an extra pair, for last summer when we broke camp one morning the only pair I had was left to do the Robinson Crusoe, and for two whole days I was without any, there not being a pair in any of the small villages we stopped at that would anywhere near fit me. All my clothing goes in dry stowage, together with blanket, dry plates and mattress.

On each side of the centerboard trunk are two boxes made of ½in. whitewood. These carry the provisions. All that I can I put in air-tight tin boxes. In one corner is carefully packed a China cup. I can't come down to drinking anything but water out of a tin one. The lower part of the seat is filled with what "Retaw" calls three parts rubbish and one part tools, tin cup, fishing tackle, etc. Some canvas bags along the side carry miscellaneous articles. In the rear of the cockpit under hatch goes rubber coat, camp axe, stove, cooking utensils, tent and tripod. The sliding bulkhead and hatch are fastened with spring catch which cannot be opened until you press on the right place. I thought of that idea at a cost of $8.50 in this way. One afternoon at Pittston I left the canoe in charge of a very good Sunday-school-looking kind of a boy. He greatly admired a rubber automatic reel which lay in the bottom of the boat. When I had occasion to use it again it was gone, so I surmise his admiration got the best of him. On my return home I devised the scheme for locking the hatch and bulkhead together. A detective camera, which lies near my seat, completes my outfit.

Speaking of the Pittston boy reminds me, I want to pay tribute to the boys, and also to the ladies of Lacyville. One night we camped on the island just opposite the village. Having occasion to go over, I piled everything in the cockpit and fastened down the tent. Four of us crossed the river in a 14×28 canoe. I returned to where we landed, and as there was nothing to come back in except the canoe, I called a boy who was rowing on the river, and asked him if he would take me across. He said, "Yes," and on reaching the island tendered him the customary "nickle." To my great surprise he refused it, and no amount of urging would make him accept it. The only thing he said was, "I don't like to be paid for something that isn't worth it." I made his heart glad, however, with some spare fish hooks.

Around the canoes were at least twenty boys looking over our things. Nothing had been disturbed, and as my tent was fastened down they could not see inside. One bright-eyed little fellow said, "Mister, won't you please let me look in your boat?" One of the larger boys asked me if I cared if he brought over his mother to see our things? On my answering that I would be glad to see them they started off, and in a short time returned with a number of ladies. They did not come empty-handed, and for several days after we had a substantial remembrance of their visit. It is such kindnesses as these that we think of when other incidents of the cruise have faded from our minds. GRACIE L.

THAT PROJECTING CENTERBOARD.

Editor Forest and Stream:

As a good deal of discussion is being carried on through your columns concerning my centerboard, in connection with standing sails and sliding seats, it will perhaps help matters a little if I explain what led me to adopt that form of board, and the advantages and disadvantages I have found it to possess.

As far as placing the trunk in the center of the canoe goes, I maintain that there is the proper and natural place for it, unless one intends to spread a mizen as absurdly small as Charm's. However, let that pass. A canoeist can surely place his board where he chooses to balance the canvas he proposes to carry.

In designing that board my object was to get a good underwater shape when lowered, and firm hold in the box. I kept the drop under 18in., but could see no objection to its projecting 4 or 5in. above the coaming when raised. Surely when we limit the length and drop of centerboards, that is sufficient. I do not see that because the board projects above the coaming the canoe is necessarily a racing machine. Is Ramona more so than Dimple or half a dozen other canoes that were at the last meet? Is not a board shaped like mine better in every respect than an old-fashioned dagger board? We can pass all the rules we like against standing rigs, sliding seats and projecting boards, but still racing machines pure and simple will be built, all cut away under water, like Dimple, and will be brought to the meet for the sole purpose of winning as many races as possible.

I have used that board for two seasons, and consider it the best I have ever seen. Owing to its semi-circular shape when down, the canoe is very quick in stays, and it holds well to windward. The disadvantages it has are that when raised it brings the center of gravity higher than usual, and is often in the way. But friend Mac need not be afraid. If I build a new craft, as I hope to, she will not be fitted with this style of board.

As for standing rigs, in a suit of 75 sq. ft. or under they are very convenient, and I would have nothing else. When the skipper cannot carry 75 sq. ft. on a Class B canoe he had better stay ashore and not prate about reefing or stowing. Of course when it comes to large areas, it must be admitted that they are a nuisance ashore and a risk afloat. But if a man is willing to start in a race with a large area of sail that he can neither reef nor stow, go in against him and trust to his coming to grief, but to not whine over it if he does not. If the wind pipes up your reefing rig wins; if not, his standing one gets there. He is willing to take the chances and should be allowed to.

It seems to me that there is more ground for complaint against sliding seats than against standing sails. Who ever heard of a yacht's being allowed to "plank out" in a race? Practically, it is nothing less than increasing the beam of the craft. "Lowell" comes out pretty strongly about the sliding seat, and alludes to my canoe skating on her side. I do not profess to be a "crack Canadian sailor." Perhaps if I had been the Ramona would not have made such a mess of the Lake George races. However, I am not ashamed of her performance since she was built, even though she does skate on her side, and only hope she will do as well this year. While I cannot but admire the Vesper verse, still I fail to see how "Butler got there." The Vesper Club have good reason to be proud of Fly, but is it not rather bad taste to crow as though Fly had the right to hoist the '88 broom, and not Eclipse?

There is clearly good ground for ruling out sliding seats, though that would come very hard on Fly's owner, who has done as much, or more, for canoeing than any other member of the A.C.A.

But all we ask is to know what will be done in this direction. Let standing rigs, sliding seats, even areas over 50sq. ft. be ruled out, and I will cheerfully adapt my canoe to the rules, but I do not want to build a craft that will promptly be disqualified. If I build it will be for fast sailing only, call it a "racing machine" if you like. I cannot appreciate cruising in a sailing canoe, when for 25 per cent of her price I can get a Canadian canoe much better adapted for it.

By all means let some decision be reached about these matters, so that those who wish to build can do so before the season opens.

TRINITY COLLEGE, Toronto. RAMONA.

THE MERRIMAC CIRCUIT.

"BUDGY! Oh, Budgy! Five o'clock! Starbowline!" These exclamations burst upon a sleepy canoeist with anything but a pleasing sensation. However, he stretches his arms two inches beyond their natural limit and arises, giving vent to a prolonged and startling yawn. The aroma of chocolate fills the atmosphere of the Puritan's home, and soon a cup of that pleasing beverage is standing before both caller and callee. A lunch is partaken of, which, though light, seems to raise their spirits a point or two. By 5:30 A. M. all is ready, and each paddler takes his seat for a brisk thrash to windward. From City Point a straight course is made for Charles River, and after tacking, turning and sheering to avoid tugs and steamers, and paddling in the teeth of a brisk northwest wind, the Navy Yard is reached. A short rest is taken, which respite brings back wind and muscle, so the regular dip of the blades does not again cease until the Harvard boathouse is reached. After waiting an hour and a half the Peterborough is joined by the Doctor and Bob in a Racine canoe. The more the merrier, so up through the marshes of the Charles push the voyagers until the dam at Watertown causes shallow water. Anything for variety, so the canoes are shouldered and manfully struggled with through the streets of the town. The dams are finally passed and dropped all along the streets, when upon rounding a corner a group of urchins sends forth the shrill cry: "Tippecanoe!" More dams not on the map are left behind.

Next comes Waltham, a busy place—that is, if obstructions in the river signify anything. Here Bob, who has raided a pie wagon, is suddenly in need of brandy, and in a temperance town; but luckily the Doctor is along, so a prescription is forthcoming, and soon Robert is himself again.

Three P. M. finds the boats at Riverside, where the Major and the Blink are impatiently awaiting their arrival. A short rest is enjoyed and a chat with the new companions, then more paddling.

The crew of the Peterborough are tired, having already paddled twenty-five miles, hence they do not overwork themselves, but take it leisurely. Newton Falls and its dams are carried around, then a short run and the Upper Falls are treated in a like manner, after which a sigh of relief breaks from all, for there are no more carries between them and their night's haven—Dedham.

The sun has hidden his face behind the clouds which hang heavily upon the horizon, the stars twinkle faintly and the cool evening air braces up the tired ones, so that at 8 P. M. Dedham is made and a good supper at Bob's house is disposed of.

The Skipper and Budgy having paddled forty-five miles in thirteen hours are ready to turn in, and their motion being seconded by the other crews, there is soon to be heard nothing but the sullen roar of the sleepers.

Sore and weary on the morrow, the cruisers grip their paddles and push on, gradually warming up to their work and forgetting pain. A carry is made at Charles River Village, and early in the afternoon South Natick is reached. A meal is eaten at the Bailey House, the team is harnessed, and the canoes, four in number now, having been joined there by the Artist and B., are packed into the wagon; for here the Charles is to be left, and Lake Cochituate is the objective point. Many songs and canoeing choruses fill the air, making heads pop out of the houses as the wagon with eight men on it, their legs dangling over horses and wheels, goes merrily along the three miles to the lake. Camp is soon made and foraging for supper is in order. Corn, butter, milk, bread and eggs reward the hunters. There were many unbidden guests at that meal, since those nocturnal birds that fly into one's ears with a biz-z-z-z are out in force to welcome the newcomers. A hot night and plenty of the aforesaid birds, and one can imagine that the tempers shown the next morning are not so sweet as they might have been under other circumstances.

Camp is soon broken, and photographs by the "special artist" are taken. A bold strike is made for the Sudbury River. There are five basins to Lake Cochituate, and as one after another is entered men say, "The outlet is just around the corner." Finally it is found, and, after carrying around two dams, the canoes and crews find themselves afloat in Cochituate Brook, with the current for the first time. A couple of miles down comes another dam, with but little water below it; but, nothing daunted, the Peterborough and Adirondack are put through what little water there is, and paddled, poled and towed about three miles into the Sudbury, at Saxonville. While going down the brook the canoeists are subjected to the scrutiny of several gentleman cows, through whose domain the stream wends its way.

The Racine and B., having carried by team, are in consequence somewhat in the lead. They are soon found resting, which is quite characteristic of the Artist and B.; lunch is eaten and we proceed, making camp on an island in the marshes above Wayland. A swim is enjoyed, and the Maj. and Doc., with their customary agility and luck, procure milk, butter, bread, etc. Pleasing manners with the farmer's daughter bring forth the largest loaves, the fattest pies and the greasiest doughnuts, for stomachs that can now digest rocks.

For once the mosquitoes are foiled, for black fly cream turns those who use it into regular greasers, and the open mouth is the only vulnerable point; so in self-defense that is kept shut, and snoring for the time quieted.

The next day is pleasant, and Fairhaven Bay is reached without incident. Below the bay lunch is eaten and a swim indulged in. Numerous parties of young men and women are rowing up the river from Concord, and are electrified to see 14 feet, out of water, projecting from beneath a boat, and a singularly active bucket on the water bottom up. It is only our travelers hiding behind the boat in shallow water and Bob swimming around with the waterbucket on his head. At Concord, Mass., the Sudbury and the Assabet join to form the Concord River. At this junction is a high rocky point, which the Indian used to inhabit before the advent of the paleface, and there is an inscription chiseled upon its rocky brow to that effect. Up the Assabet go the cruisers, bent upon tasting the water of all the streams in their way. Camp is made near a couple of farmhouses, one of which is rendered particularly interesting on account of a pretty girl. Oh! these rustic damsels.

Sunday dawns clear and warm, and as all days are alike when cruising, the start is made, and down the Concord we go, The Artist and B. leave the party at Concord. At Billerica a short carry is made and soon after Waumsit is reached. Here a carry is to be made to the Merrimac below Lowell. A drunken teamster is hired, and after vainly trying to drive down a 20ft. boat with three 16ft. canoes on the wagon, he is finally dismissed and a large team telephoned for. In the new conveyance the portage is very comfortably made, and late in the afternoon the canoes are launched upon the placid bosom of the Merrimac, below Hunt's Falls. A few miles are covered and camp is made on a high bluff near the Narrows. A rousing camp-fire is made, and soon the aroma of boiling coffee and frying bacon is wafted to the nose, causing the eating utensils to be quickly brought forward. What a relief, with "Tippecanoe" still ringing in one's ears from the Lowell gamins, to sit in perfect quiet and eat hot toast, bacon and eggs, and drink good hot coffee. As the steam rises one's thoughts go up with it into space, one sees the hot and crowded city with all its noise and bustle, and the tired faces of overworked men, then it is that one says, like the Pharisee, "I am glad that I am not as other men are." in other words, I am glad I'm a canoeist. Supper over, the pipe and fragrant Virginia are brought forth, and its quieting effects make all ready to turn in.

After a cool and refreshing night's sleep camp is broken, and the cruisers swiftly glide down the river to Lawrence, carrying into the Essex Company's canal, to be locked out at the lower end, and continue down the stream as far as Ward Hill. In 1886 some of the party stopped at this place, and they were greatly surprised at being remembered by the natives.

Ward Hill is not a hard place to leave; so without a tear it is left the next morning, and the canoeists are ready for the quick water below. The rapids, which do not amount to much, are soon left far behind, and Haverhill with its humming shoe factories is passed. After a long run Newburyport heaves in sight, is soon reached, and after provisioning is quickly left. With wind and tide, for we are now on salt water, Plum Island River is run through and camp made in a half-a-dollar-a-night cottage on Grape Island.

Grape Island is a sort of third-rate summer resort, and there being strangers in the place, the event was celebrated by the men of the place by more than looking upon the wine that is red. They rolled the chariot along in song, and also in reality by rolling boulders across the apology for a piazza which extended along the front of the house. It does not take much to shake a 20×20 house, and as they kept it up until 2 o'clock in the morning, our rest was in consequence somewhat broken.

Not being in an amiable mood after a broken rest, the canoeists started early, and glad to be rid of such an element, it did not take long to leave Grape Island far astern. "Yes," says a fisherman, upon being asked where Ipswich is, "it's about two miles from that house over there." On dip the paddles, and the canoes shoot forward in answer, but that house still looms up in the cold, cold distance. Ipswich may be two miles from that house, but it is ten to the house. The next man says, "O! it's just around that bend there." A dozen are rounded, yet no town; and the opinion that all men are liars is beginning to form in our minds, when the old town suddenly permits its dazzling beauty to be gazed upon by strange eyes. Here a carry is made around the mill dam, and a much dyed old fossil takes tintypes of the travelers. A few miles up the Ipswich River, Miles River enters it; so following the map the canoes are nosed into Miles River. Oh, that name! Imagine if you can a city gutter in a heavy shower, and you have Miles River vividly portrayed. Still, up it must the boats go, and by dint of hard tugging, poling, wading (to lessen the beam and make them narrow enough to fit the stream) they are finally brought to the third bridge.

Scene on Miles River, the Maj. standing in his canoe; the Blink up to his knees in water and mud; a fence across the stream, an axe in his hand. "Gentlemen, this is a fence across Miles River, an obstruction to a navigable stream. Genis, it is a four-rail fence (whack!). Strange metamorphosis, it has but three rails, (whack! cut! crash!). All a dream, gentlemen, there is no fence. Old Jo Horton and his team are pressed into service for a carry to Chebaco Lake, where camp is soon made, and a day spent in washing the clothes, and so forth.

It rains for the first time in ten days, and yet, on, on, for there is an end to all things, and vacations do not last forever. Down the lake run the canoes, and another brook is tackled, leading into the Essex River. "Ah! here is a bridge across the stream; what a pretty bridge it is, and so light, too," murmurs the Skipper. So saying he lifts a small rustic bridge across on to one side of the stream, allowing the canoes to proceed. Strangely enough he forgets to replace the bridge, too.

At last navigation is completely blocked; there is no water to float the canoes; so in a driving rain they are shouldered and carried half a mile to the Essex River, where they are again launched. Passing the shipyards where so many fishing vessels are built, we are again in salt water and the course is shaped for the mouth of the river.

While passing Canova Point, three shots ring out as a salute, dousing the last canoe with bird shot. As the canoeists lift their hats in recognition of this courtesy, a hearty voice sings out, "Come in, we're just going to take something." Wet and cold (please mark the excuse), it is not long before our cruisers are responding in the most approved manner to the hospitalities offered by Messrs. G. and T., the inhabitants of Coot Cottage, and a jolly cottage it is, with an exceptionally finely stocked larder. Such a welcome makes a bright spot in our remembrance of the trip, and a warm spot in our stomachs.

With the rain falling gently the course is resumed and Annisquam and Squam River are passed, letting Gloucester Harbor loom up out of the mist. The steamer Chaffee is taken, and after paying the most exorbitant freight charges on record, the party separates, the Racine and Peterborough paddling to City Point. Thus had the party made a circuit of nearly 300 miles, at all times within fifty miles of Boston, having traveled upon twelve streams, two lakes and the ocean, and having made thirteen carries.

With nothing to think of but to-morrow's cook and to-morrow's run, canoeists ought to be jolly fellows, and indeed they are. If you are inclined to doubt it, try it. ILEX, THE SKIPPER.

RUSHTON'S BOATS AND CANOES.—We have received from Mr. J. H. Rushton his new catalogue for 1889, uniform with the edition of last year, but very much fuller and more complete, to meet the growing demands of boating men and canoeists. The list includes all kinds of small pleasure craft, for oars, paddles, sail, steam and electricity, from the 20lb. canoe up to the steam launch large enough for such cruises as have lately been described in FOREST AND STREAM. During the past season the models of nearly all of Mr. Rushton's boats and canoes have been very carefully redrawn and improved, the many good features of design and build which have made these boats so deservedly popular being retained, while many new ones have been added. Among other novelties for canoes are a movable trunk for a centerboard, a self-locking deck tiller, a special racing drop rudder and fastening, and a new form of rudder brace, and also a new boom fastening. The catalogue contains a new and complete list of all requisites for boats, canoes and launches, and is a most useful guide to all boat owners.

INNITOU C. C., Woburn, Mass.—Com., Homer B. Grant; Vice-Com., Stillman B. Shaw; Sec'y, Arthur C. Wyer; Treas., Edward F. Wyer.

Yachting.

CRUISING.—Ballymena, steam yacht, Gen. Geo. S. Brown, has left Baltimore for a cruise in Florida waters.... Alva, steam yacht, has arrived at Bermuda.... Republic, schr., Mr. Thomas Hall, arrived at Bermuda on Jan. 31 after a stormy passage, on which oil bags were used successfully.

A NEW YACHT CLUB.—On Jan. 31 a new yacht club was organized at Troy, N. Y., the members being residents of Troy and Lansingburg. The officers are: Com., N. L. Weatherby; Vice-Com., Charles E. Wilson; Sec., Edward F. Powers, Lansingburg; Treas., George Kirsop, Jr., Lansingburg.

WEST INDIAN HURRICANES AND THE MARCH BLIZZARD.

ON Feb. 9 a most interesting lecture was delivered by Ensign Everett Hayden, U.S.N., in charge of the Division of Marine Meteorology of the U. S. Hydrographic Office, before the Seawanhaka Corinthian Y. C., the subject being "West Indian Hurricanes and the March Blizzard." The lecture was very fully illustrated by a series of lantern slides prepared from Mr. Hayden's diagrams and exhibited by Mr. Wm. T. Buckley, a member of the club. After the lecture Mr. Buckley also gave an exhibition of a large number of yachting views, including all the leading yachts. Through the kindness of Mr. Hayden we are enabled to give the following abstract of his lecture, its length being too great to allow its publication in full:

As a lecture, to be delivered at a future time, will be devoted to the general subject of winds and storms, a very much more comprehensive one than that now under consideration, it is to be hoped that a somewhat detailed description of the terrific tropical cyclones that devastate the West Indies and advance upon our Gulf and Atlantic seaboard will be a fitting introduction to a broad general outline of the meteorology of the globe, to which the present lecture is merely preliminary. Moreover, it was by the study of these very storms that an American, Wm. R. Redfield, won imperishable renown and the everlasting gratitude of mankind by discoveries that have proved to be the very foundation stone of the great science of meteorology as it is known and practically utilized to-day, at sea and on land, in every ocean and continent of the globe, to which the arts and sciences of civilization have access.

The first three slides, modifications of the familiar pilot charts of the North Atlantic, will serve to make clear the general distribution of barometric pressure and the circulation of the winds over the entire basin of the North Atlantic and the adjacent continents during winter and summer, together with the general paths followed by storms, and the regions where they are most prevalent and persistent. Special attention is called to the great persistent anti-cyclone, or area of high barometer, in mid-ocean to the southwest of the Azores, about which the general atmospheric circulation is in a direction with the hands of a watch, giving rise, below, to the well-known steady northeast trades, and above, or to the northward, to the prevailing westerly winds along the transatlantic steamship routes—the "brave west winds" of the north temperate zone. Another marked feature is the permanent area of low barometer about Iceland, a great stationary cyclone about which the circulation of the wind is against the hands of a watch. To the southward, about the equator, lies what Maury has called the meteorological equator, the region of equatorial rains and calms at the meeting of the southeast and northeast trades, where the warm, steady trade winds, laden with moisture from their long travel over tropic seas, rise and precipitate their moisture, returning polewards as an upper current to descend again to the surface and be felt as cool, dry, anti-cyclonic winds. The position of this great anti-cyclone in mid-Atlantic is the key to the meteorology of half the civilized world; the diagrams indicate its normal or average position, and illustrate how it follows that great monarch of climate, the sun, in his changes of declination, moving northward in summer and southward in winter. But they do not illustrate the abnormal variations in its position, due to, we know not what, though we do know that the storms of America and Europe are guided by it, and the next great step in advance will be to turn this knowledge to practical account in our forecast of weather on the British Islands and along the Atlantic and western shores.

In addition, then, to those permanent areas of high and low barometers, eddies or atmospheric whirls move along pretty well defined tracks, as indicated on the diagram; cyclones, or "lows" (in ordinary parlance, storms) sucking the air spirally inward and whirling it aloft, its moisture condensing into heavy clouds, with rain or snow; anti-cyclones, or "highs," returning the cool dry air to the surface in outward blowing spirals, with cool dry weather and high barometer. The two storm tracks of spiral interest in this connection are: first, the Great Lake storm track, from west to east over the Great Lakes and down the St. Lawrence valley; and, secondly, the West Indian hurricane track, westward in the tropics, then northward into the temperate zone and eastward again in higher latitudes. These eddies tend to move onward and unite with the permanent "low" near Iceland; and cyclonic, with the permanent anti-cyclone in mid-ocean. Upon these general laws, together with local modifications due to topographic relief ashore and the influence of the great ocean currents at sea, hang all the weather changes of the North Atlantic basin.

After this general view the lecturer said that he proposed to confine his attention to the western portion of the ocean, that portion which an eminent American scientist has well called the "Bay of North America." This term embraces all of the Atlantic west of the 50th meridian, from Newfoundland to the mouths of the Amazon, including the Caribbean Sea and the Gulf of Mexico. He did not propose, he said, to leave to a postscript what he himself regarded as by far the most important point that any thorough study of West Indian hurricanes and the March blizzard could possibly emphasize, namely, the tremendous commercial importance of this great Bay of North America. The area from the 50th to the 100th meridian west of Greenwich, and from the equator to the 50th parallel of north latitude, is destined to become, in the near future, the theater of the greatest political and commercial activity that the world has ever seen. Meteorologically speaking, it is a unit, from the slopes of the Rockies and the Cordilleras of the Isthmus to mid-ocean, and from the shores of the Hudson Bay to Venezuela. Abercromby, the distinguished English meteorologist, has well said that the weather predictor "cannot explain the weather on any day without casting his eyes over the whole northern hemisphere and around the little hills and valleys which bound his own horizon." Urging his hearers to bear this in mind during his subsequent remarks, and promising to refer to the subject again, he went on to describe Redfield's great discoveries, the methods by which his results were obtained, and their immediate and practical effect in advancing meteorological knowledge and lessening the dangers of ocean storms.

Although it is now generally recognized that Redfield had reached his fundamental conclusions regarding the rotary character of storms, together with a motion of the whole system along a definite track, as early as 1821, yet his first paper did not appear in print till 1831, and was even then unaccompanied by the diagrams so necessary in the then state of knowledge, or rather ignorance, of the subject. Nevertheless, most of his earliest papers were accompanied by such full statements of methods and facts that any one could plot the observations on a chart and thus verify his conclusions for himself. To illustrate his method, therefore, Mr. Hayden selected one of his later diagrams, entitled "Route of the Hurricane October 4-7, 1844," and projected it upon the screen. Upon this chart Redfield had charted by means of arrows, plotted each one at its proper geographic position, observations of wind direction selected for certain fixed times from a large number of reports, extracts from ship's logs, etc., collected with infinite perseverance and care from as many sources as were accessible. Thus three sets of concentric circles are seen at a glance to represent the general size and character of the storm at noon of the 5th, 6th and 7th of October respectively. Moreover, the tracks of certain vessels are plotted, in order that the experience of each may be considered with reference to the circulation of the wind about the storm center and the gradual movement of the whole system along a curved track. Thus we have here on Redfield's chart as clearly and graphically as could be indicated from the data at his command by the most able meteorologists to-day, the whole theory and practice of all our modern synchronous daily weather maps upon which predictions and forecasts are based and spread abroad by telegraph and newspapers to form part and parcel of the daily life of millions of men in every land. Oct. 5, a cyclone central off the northern coast of Cuba, easterly gales in Florida, northerly in western Cuba, westerly in Jamaica, southerly in eastern Cuba. Oct. 6, cyclone central 200 miles southeast from Hatteras, general circulation of wind about the same as before (against the hands of a watch), northeasterly gales from Sandy Hook to Hatteras, northwesterly gales from Hatteras to Cape Romaine, size of storm somewhat greater. October 7, storm central about 150 miles southeast from Halifax, increasing southeasterly gales on the Grand Banks, strong nor'wester between Cape Sable and Nantucket, storm area enlarging and intensity diminishing. How marvelously clear. What a perfect grasp of facts and what a grand practical generalization from facts to principles. It would, indeed, have been small credit to the age in which he lived had such self-evident truths failed to find ready acceptance and prompt appreciation.

The terrific violence of this hurricane was sufficiently indicated by the havoc it caused in the landlocked harbor of Havana, a port absolutely unrivaled for the security of its anchorage; in this ten hours' tragedy seventy-two ships foundered at their anchors—capsized, dismasted, driven ashore, annihilated by the fury of the hurricane. This is a splendid landlocked harbor, and in spite of all that human strength and skill could do aboard, the various vessels of a great fleet, fighting under every flag and allied against a common foe, were wrecked and shattered by the hurricane. Attention was called to a coincidence of marked importance between the date (1844) of this great storm, so fully and graphically explained by Redfield, and the very year that witnessed the completion and assured practical success of Professor Morse's telegraph line between Washington and Baltimore. Right here we have the two great practical discoveries upon which all modern telegraphic weather forecasts depend, the synchronous observations and records and the electric telegraph which transmits them.

Without attempting to follow this gigantic whirlwind in its destructive path toward Hatteras and the Grand Banks, the speaker paused a moment to refer to Redfield himself, and read an extract from a very interesting letter from Rear-Admiral Thornton A. Jenkins, U.S.N., at that time a passed midshipman, an officer whose distinguished record at home and abroad, in peace and in war, is well known to every student of American naval history. Admiral Jenkins describes Redfield as a quiet, retiring and reticent man, but always eloquent and patient in explaining the great truths of his new and—in the then ignorance of the subject—startling theories. It seems almost incredible that at that time the great majority of naval officers, even, utterly refused to believe in or even listen to any theories regarding storms at sea or on land, and regarded a barometer as more or less of a nuisance. As late as 1850, Admiral Jenkins says a naval officer, who afterward became one of the most distinguished heroes of the war, asked him if he put any faith in "that thing." "Why, when I was in the Gulf and at Vera Cruz," said he, "that d——d thing nearly set me crazy."

The next diagram shown upon the screen was one of Redfield's track charts, with the path of various hurricanes, illustrating as graphically as anything could well do the general limits of the great area already defined as the Bay of North America, the tracks along which these terrific cyclonic storms move in their majestic parabolic orbits from the tropics into the temperate zone, and the essential unity of the entire area, so far as any broad and rational scheme of telegraphic weather forcasts is concerned. This latter fact, however, was referred to and emphasized still more strongly later on, in connection with a full description of the paysical and meteorological features of the Bay of North America, and the existing and proposed telegraph lines and cables, so it need not be referred to further here. Attention was called to the fact that, while some of these storms pursued a course about west by north across the Carribean Sea and into Mexico, reaching the coast of Texas before recurving, others recurve in various latitudes, the greater number about the 30th parallel, following a path very nearly coincident with the course of the Gulf Stream, and approximately parallel to our Atlantic coast line. Again, a careful study of the dates of even the comparatively few storm tracks plotted on this chart brings out the fact that the August hurricanes recurve well to the northward, about the 30th or 33d parallel, while those of October recurve in about the latitude of Cuba. These important general laws, dependent upon the change of the sun's declination, have been strongly confirmed by subsequent investigation, and were discussed in greater detail later in the evening. One other feature of this chart that was referred to particularly was the notable irregularity in the track of the hurricane of August, 1887, which, after having already commenced to recurve in the usual manner was unexpectedly deflected to the westward, striking the coast of Georgia at Darien. This circumstance the audience was requested to bear in mind in connection with similar deflections of certain recent hurricanes, when the principles governing such deflections would be fully explained.

The next diagram was a copy of the Pilot Chart of the North Atlantic Ocean for August, 1888, on which were plotted the tracks of all the August hurricanes on record, strikingly confirming the fact brought out by Redfield's chart, that these tracks are remarkably uniform, both in their general course and in the latitude where they recurve.

Diagrams from Col. Reid's well-known book on storms served to illustrate the way in which able practical and scientific men took up Redfield's ideas and propagated his new and important theories among navigators, for their guidance at sea in avoiding altogether or maneuvering successfully in ocean storms. Col. Reid was an officer of the Royal Engineers of Great Britain, and his attention was first directed to this subject from having been employed at Barbadoes in re-establishing the Government buildings blown down in the hurricane of 1831, when 1,447 persons lost their lives in the short space of seven hours, in that little island alone; a striking commentary, in itself, of the destructive character of these gigantic tornado-like whirlwinds. The diagrams were especially graphic in clearly outlining the broad belt or swath described by a hurricane in its outward progress, the storm tracks previously referred to constituting merely the axial line of the belt. The first was a hurricane of August, 1837, and a graphic account was quoted, with illustrations, of a thrilling experience of the ship Calypso, typical of hundreds of similar cases in hurricanes in the West Indies and off our own coast in the past, and repeated every year almost before our very eyes. The Calypso was in about lat. 27° N., long. 75° W., when a rolling swell, freshening northeasterly squalls, and other signs of a hurricane, would have warned a captain posted in the law of storms to square away and make the best of his way to an anchorage at Nassau or run around along the southern edge of the approaching cyclone, as by far the better sailors knew anything about circular storms, and before the Hydrographic Office had spread broadcast over the world the marvelous results obtained by pouring oil to prevent heavy seas from breaking on board. The ship's decks were swept by the seas, her close-reefed topsail blown from its bolt ropes, hatches stove in, the vessel thrown on her beam ends, with yard arms in the water. With her crew of 15 men clinging to the weather rigging, mastheads in the water, a furious hurricane dashing the waves over them in sheets of foam, and the vessel sinking beneath their feet, it seems hard to believe that any epitaph but "missing—lost at sea" would ever have been inscribed against their names. But truth is always strange, stranger than fiction. Upon cutting away the lanyards of the lower rigging the masts went by the board and the vessel slowly righted. As the gale moderated, jury masts and sails were rigged, and in two weeks time, after the hardships and suffering incident to such a condition, the gallant ship (what was left of her) came to anchor in the harbor of Smithville, North Carolina.

Another of Reid's diagrams gave the paths of two of the memorable hurricanes of October, 1780, as indicated by extracts from the logs of the many British frigates cruising in those waters at that time. The one that destroyed the town of Savanna la Mar, Jamaica, was particularly severe, and in the vicinity of that island four frigates were lost, three of them with all on board. The Phœnix, wrecked on the south coast of Cuba, had a terrific experience, and the long account of it by Lieut. Archer, R. N., published in Reid's book, should be read in full, as no quotations could do it justice. One's feelings relative to the loss of this fine frigate, however, are somewhat tempered by the cool way in which Lieut. Archer speaks of having chased a Yankee man-of-war a short time previously, which, "unfortunately," escaped in the darkness!

Two years later (1782) occurred one of the greatest naval disasters on record, and the lecturer said that—after referring to it very briefly in order to emphasize the vast importance to navigators of a knowledge of the law of storms, rather than with any desire to appall the audience with statistics—he would be obliged to omit all further reference to the accumulated records of the succeeding hundred years and devote to the immediate present what little time remained. The disaster is described as quoted from Piddington's "Sailor's Horn Book," another of these classic manuals that have translated and made intelligible to rough practical men the great and important truths of pure science, whose lofty reasoning and diction would in themselves be as unintelligible as so much Sanscrit. Rodney's fleet and prizes, together with an immense convoy of merchantmen, in all 92 vessels, were overtaken by a hurricane off the Grand Banks in September, 1782; all preparations for bad weather were made and the fleet hove to, but on the wrong tack. Frigates, prizes and convoy were dismasted, sunk, scattered, abandoned; every man-of-war but one foundered, and upward of 3,000 lives were lost. Hove to on the wrong tack. What an epitaph, and what a lesson for posterity! Truly, "peace hath her victories no less renowned than war," and if Redfield has still no monument erected in his honor, it must be because he needs none.

Mr. Hayden then explained by means of diagrams prepared in his division and published by the Hydrographic Office, the circulation of the wind in a tropical cyclone, northern hemisphere, upon a knowledge of which the proper handling of a vessel depends. As a good illustration the experience of the U. S. steamer Juniata was cited. This vessel is now in New York Harbor, having recently returned from China, where last September she encountered a severe typhoon during her voyage from Hong Kong to Singapore. The diagrams illustrated graphically the structure of those great whirlwinds, so far as concerns the navigator, showing that while in the outer regions of the storm the wind blows spirally inward, in the central regions it rushes furiously around a calm spot called the eye of the storm, where there is a fearful pyramidal sea, the waves rising and falling in mountainous and irregular masses, oftentimes with a clear sky and bright sunlight to enhance the strange and unnatural calm in the midst of a ring where the wind is blowing a hurricane, the sea lashed into driving foam and the sky of inky blackness. The diagram indicated how aboard a vessel to the right of a storm track, the wind shifts to the right (veers), and to the left it shifts to the left (backs). Directly in front of an advancing storm the wind remains steady in direction, but increases rapidly in force, with light scud and passing squalls. By means of these and many other characteristic indications the navigator can ascertain with considerable accuracy the bearing of the storm center and the approximate track and velocity of the cyclone. He is thus enabled to take such action as may be best adapted, considering the particular circumstances of the case, to avoid the most dangerous region of the storm, and as a secondary consideration take advantage of such winds as may help him on his course. One of the most important circumstances the practical navigator has to consider in dealing with a hurricane is the lay of the land, and of course the proximity of dangerous coast must often prevent him from taking such action as would be most advantageous if there were plenty of sea room. In the case of the Juniata, Commander Wise stood away to the southward to avoid the typhoon and at the same time make headway on his course to Singapore, and finally, rather than cross the entrance to the Gulf of Tonquin, where the sea would be very heavy, hove-to in the lee of Hainan Island, and rode out the storm under a full head of steam. The fore storm-staysail, set to steady the vessel, was carried away, and four boats were torn from their davits. Hatches battened down, vessel shipped sea after sea till oil was used in bags towed from the weather bow. Weather thick and misty, with continuous heavy rain. The critical examination and analysis of the action taken by steam and sailing vessels encountering such storms under the many and constantly varying conditions that occur in actual practice, the rules that govern such action and the results that follow it, furnish the very best and, indeed, only method of impressing upon masters of vessels the vital importance of this branch of their profession. Practical men want practical information, with concrete, definite examples drawn from real life, with details familiar to their own individual experiences. The lecturer was willing, he said, to submit this proposition to his audience, and to ask if such instances, taken from the records of the Hydrographic Office, with names, dates, positions and all details given, were not infinitely more effective in impressing such facts upon the mind than some ideal imaginary situation gotten up to suit some particular line of argument, and, perhaps, never likely to occur in actual practice.

Now the records of the Hydrographic Office contain hundreds—he might almost say thousands—of such reports, more complete, probably, than similar records in any other office in the world, and he regarded it as worthy of an earnest effort on the part of all concerned to see that means were provided for their publication and circulation among the hundreds of voluntary observers who have willingly contributed their time and services in taking and recording their observations day after day, month after month, and year after year aboard vessels in every ocean of the globe.

To illustrate the special dangers of navigation in the West Indies, the birthplace and natural habitat of these terrible storms, a copy of one of the Hydrographic Office charts was projected upon the screen, and attention called to the intricate and dangerous character of navigation in these waters. Remembering the circulation of the wind in one of these cyclonic storms, it will be readily seen that every hurricane that skirts the West Indies and the Atlantic seaboard of the United States is sure to put hundreds of vessels in danger of being driven on a lee shore, and lost beyond all human power of deliverance. Just such tracks were those followed by the two hurricanes of August, 1887, which were then exhibited, plotted from more complete and reliable data, by far, than have ever been collected in connection with any hurricanes on record. The tracks of only a few of the many vessels from which reports had been received were shown upon the same chart, and served to give some idea of the completeness of the data. Of these, the first originated off the coast of Africa, about the Cape Verde Islands, Aug. 13, and moved at a high rate of speed westward, across the Atlantic, recurving east of Florida, striking Cape Hatteras with furious energy on the 20th, carrying havoc among the gallant fishermen off the Grand Banks on the 22d, and passing to the northward of the British Isles and coast of Norway on the 29th and 30th—a track more than 7,000 miles in length. What a tremendous engine of destruction!

"Let us," said the speaker, "watch its original progress. Imagine to yourself a hot, sultry August day in the tropics, off the Cape Verde Islands, at about the northern limit of the belt of equatorial rains and calms, where the northeast trades have become fitful and irregular. The uniformity of the trade sky is disappearing, and the little masses of cumulus clouds that have flecked the sky from zenith to horizon gather together here and there, as if undecided what to do, and now and then rise in tall, massive columns, that grow before the eye and mount higher and higher, till one lazily wonders how high they will rise above their broad level bases before they reach some upper current that will scatter their beautiful crests and spoil their snow-white symmetry. In the distance an occasional dark mass is seen, from which heavy rain is falling, with sometimes a broad flash of sheet lightning. In one of the tall masses of cumulus, off to the westward, taller and more majestic than its mates, a slow gyratory motion can be detected, which, gathering strength, rapidly draws in the warm air from below, saturated with moisture, and sends it aloft into cooler and cooler regions, to add rapidly to the growing and darkening mass of clouds. A new feature catches the eye; long, graceful, snow-white, feathery plumes reach out at the top of the mass, projected against the deep, clear azure sky. Beneath them the sharp rounded, upper edges of the now dark and threatening cumulus begin to grow misty and indistinct, and the inner shafts of the radiating cirrus plumes are lost to sight in this now misty veil. Gradually faint, and then sharp, dark, horizontal lines appear against the cumulus, and rapidly grow into stratus clouds, as though a fine rain were falling and settling at the level. Below, the distant horizon is now obscured by heavy rain. Off to the northeast some little tradewind clouds are moving this way; watching them a moment, as they rise toward the zenith, some mysterious force over there to the westward seems to attract them, and their paths curve that way. What does it mean, you say, and looking in that direction you see more little patches of scud moving across from left to right, and notice that a breeze is springing up from the east, while the barometer is falling slightly and the whole great mass of clouds is moving westward. A hurricane has had its birth, a great cyclonic storm has started on its westward march toward St. Thomas, Hatteras, Cape Race and Norway. One of our western tornadoes is to this monster as an electric light to the noonday sun, and all the tornadoes in the records of the Signal Office, rolled into one and added to it, would hardly add appreciably to its energy.

Whirling along its ocean pathway at an average velocity of nearly, twenty miles an hour it sends out a long rolling swell a thousand miles in advance, and is heralded by long, high feathery plumes of cirrus clouds radiating far beyond the slowly thickening cirrus veil that casts its pale halo over sun and moon, and at dawn the twilight envelops heaven and earth with an awful fiery glare like the light of some great conflagration. Soon the massive leaden-colored cloud bank heaves in sight above the horizon, a great mountain range—Ossa piled upon Pelion—and flying scud forms over head and drifts to leeward, not with the surface wind, but at a marked angle to the right, moving with the upper currents of the great whirlwind. At intervals fine misty rain seems to grow out of the air and then vanishes again, and the squalls freshen, the barometer sinks lower and lower, heavy clouds cover the whole horizon, and the low distant moan gradually changes into the shrieks of a thousand demons wrenching at the stout masts that constitute the latter half of the hurricane season, and October is specially dreaded because of the fact, already mentioned, that October hurricanes recurve in just the latitude of the island, which they cross from south to north, retaining all the furious intensity that marks their paths at sea. The very day that he sailed from New York the great September hurricane had just swept across the island from east to west, and was expected to recurve across the peninsula of Florida and reach the Gulf Stream again off Hatteras. Diagrams were given to show the remarkable deflection of this cyclone toward Vera Cruz, and the track of another one that followed close after the first but recurved about as usual. Various diagrams and illustrations were given in the effort to convey some idea of the summer climate in the city of Havana, the historic, picturesque old Spanish capital of lovely Cuba, "la Perla de las Antillas," and to describe some of the leading results of the studies of Padre Viñes, the eminent Havana meteorologist whose scientific ability, indefatigable energy, and unrivalled opportunities, have linked his name so inseparably with all recent advances in our knowledge of these storms. Indeed, the lecturer had himself suggested coining the word "Viñesa," to express for our tropical storms what the word "typhoon" does for those of China, in honor and recognition of the distinguished services of his esteemed friend, the director of the Meteorological Observatory of the "Colegio de Belen."

Regretting that his limited time did not allow him even to mention the many other incidents of his month's stay in Havana, Mr. Hayden returned to the subject of the deflection of hurricanes from their normal paths, a subject of infinite importance, both theoretically and practically. To select a case that admirably illustrated exactly what was meant, how and why the deflection took place, and the manner in which it was possible to anticipate and predict it, he illustrated by means of six synchronous weather charts, shown upon the screen together, the weather conditions at noon, G. M. T. (7 A. M., 75th meridian time) Oct. 9 to 14, inclusive, 1886, during which time one of the most severe hurricanes ever experienced in the Gulf of Mexico originated south of Cuba and west of Jamaica, recurved in the usual latitude off Cape San Antonio; but then, completely foiling Padre Viñes' published predictions, turned to the westward, swept over the entire Gulf of Mexico and up the Mississippi Valley to Lake Huron and the St. Lawrence Valley. Only the other day a report was received from Capt. José Riera, with graphic details regarding the loss of his vessel, the Spanish bark Tres Auroras, in the very vortex of this terrific storm, about 120 miles north of St. Cape San Antonio, and the marvellous escape of six of the crew, thirteen in all, after tossing about for four days on wreckage from his vessel. The charts showed that a strong anti-cyclone had prevailed over the Middle Atlantic States, and that it was this that had blocked the track of the advancing cyclone and forced it westward before allowing it to go north, so that it eventually reached the Atlantic by way of the Great Lakes and the St. Lawrence Valley.

The same considerations were shown to have held good in other cases, notably that of the great Cuban hurricane of last September, and the comparatively recent hurricane that devastated our Atlantic seaboard the last few days of November, blocked in its northward progress by an anti-cyclone over the Gulf of St. Lawrence, and venting its baffled rage upon the Samana and a dozen other vessels, sent to the bottom with all on board, almost in sight of their homes, firesides and friends. The physical explanation of this interaction between cyclone and anti-cyclone is simple enough, and lies in the fact that the fuel of the cyclonic furnace is warm, moist, ocean air, which ascends, precipitates its moisture, and is carried away in the upper atmospheric currents, to descend again in the anti-cyclone or "high" as cool, dry air. Just as a great forest fire changes its course when it meets a clearing and dies out or runs around it, so a tropical cyclone follows the lines where its fuel is most abundant, and rages with greatest intensity where the tropical sun and tepid ocean currents load the heavy atmosphere with moisture. In the words of Shakespeare, that immortal painter of the smiles and passions of nature and mankind, "The sun's a thief, and with his great attraction robs the vast sea."

Four synchronous weather charts, prepared from hundreds of reports received from vessels off our coast during the November hurricane, presented at a glance the most striking features of that great storm during the period of greatest intensity, and the progress or growth of a hurricane in the direction of heaviest rainfall was illustrated by a weather map for Aug. 21, 1888.

The March blizzard, one of the most notable storms of the century, and of a very different type from those that had just been considered, was illustrated by means of six lantern slides, in colors, showing the progress from west to east of a long line or trough of low barometer extending from Hudson Bay to the Gulf of Mexico, moving toward the Atlantic at the rate of 600 miles a day, in the form of a great arched squall, whose front was more than a thousand miles in length, in front southeasterly winds drawing supplies of warm moist ocean air from far down within the tropics, and in rear a long battalion of cold northeasterly gales, carrying temperature below the freezing point far down the line into Louisiana and Mississippi. The speaker dwelt upon the enormous increase in the energy of the storm when it reached the Atlantic, the terrific combat between Arctic and Gulf Stream forces, and the obstruction encountered by the center of the line in the form of a stationary area about Newfoundland. A track chart giving the tracks of vessels and a barometer diagram illustrating the fluctuation of the barometer at selected positions ashore and at sea were discussed and it was stated that 138 vessels were blown ashore, sunk or damaged along the coast of the United States north of Hatteras. Off the coast, west of the 40th meridian, some 20 vessels were sunk or abandoned, among them the gallant New York pilot boats Phantom and Enchantress and the yacht Cythera with all her brave crew, friends and fellow yachtsmen of his present audience and old members of the Seawanhaka Club. Among the abandoned vessels was the American schooner W. L. White, and this derelict vessel commenced a long aimless voyage across the Atlantic, at the mercy of the winds and currents, with no hand at the helm by day and no lights at night to warn navigators of their danger. Ten months and ten days later, after wandering more than 5,000 miles, she stranded on one of the little rocky islands of the Hebrides, off the northwest coast of Scotland, and has thus completed the last act of this great ocean tragedy.

The following conclusions were quoted from the speaker's monograph description of the great storm, recently published by the Hydrographic Office: "It has enforced in most unmistakable terms the importance, not only to our extensive shipping interests, but to the people of all our great sea-board cities, of the establishment of telegraphic signal stations at outlying points off the coast; at St. Johns (or Cape Race) and Sable Island, to watch the movement of areas of high barometer, upon which that of the succeeding 'low' so largely depends; and at Bermuda, Nassau, and various points in the West Indies and Windward Islands that we may be forewarned of the approach and progress of the terrific hurricanes which, summer after summer, bring devastation and destruction along our Gulf and Atlantic coast, and of whose fury this great storm is an approximate example and a timely reminder. Moreover, there are other important objects to be gained, in addition to the better forecasting of stormy weather off our coasts and along the transatlantic routes. Every edition of the Pilot Chart records the latest reported position of numerous derelict vessels and other dangers to navigation—submerged wrecks, buoys adrift, icebergs, and masses of field ice. But at present such reports are necessarily several days old, and the present positions of these dangerous obstructions must be roughly estimated, allowing for their probable drift in the interval of time that has elapsed since the report was made. There are recorded also, the probable limits of frequent fog for the ensuing month and the regions where fog was most frequently reported during the preceding month. But general averages only give the regions where fog is most likely to be encountered; they do not and cannot attempt to state whether or no there will be a fog at a given place at a given time. But scientific research and practical inventive genius, advancing hand in hand for the benefit of mankind, have discovered not only the laws governing the formation of the dense banks of fog that have made the Grand Banks dreaded by navigators, but also the means by which certain facts may be observed, telegraphed, charted, and studied a thousand miles away, and the occurrence of fog predicted with almost unfailing accuracy, even while the very elements themselves are only preparing for its formation. By means of such predictions the safety of navigation along the greatest highway of ocean traffic in the world will be vastly increased—routes traveled yearly at almost railway speed by vessels intrusted with more than a million human lives and property of an aggregate value of fully a billion dollars."

The lecturer closed his lecture by referring again to the commercial importance of the great body of water known as the Bay of North America, exhibiting diagrams that brought out very clearly to the entire audience the various features of greatest importance in connection with a comprehensive and effective system of telegraphic weather service for the benefit of the commerce of every nation frequenting these waters, as well as of the inhabitants of its coasts and islands, from Venezuela to Newfoundland. A photograph of a superb relief model, the property of E. H. Butler & Co., of Philadelphia, illustrated the general topographic relief—an essential feature in connection with meteorology; a chart of ocean currents indicated their important bearing on the subject, and a map of telegraph lines and cables, existing and proposed, showed that the shore and islands were joined by an almost perfect network, giving the most admirable facilities for an almost perfect system. The conclusion of Mr. Hayden's paper was as follows:

"In apology for having detained you so long to-night, I must plead the tremendous importance of the subject you have chosen for my remarks, the vast field it covers, the completeness of the records and data at my command, and my own absorbing interest in the subject. Here in this great bay of North America commercial interests are at stake of vastly greater importance than in any similar body of water in the world—interests involving every commercial nation. To the north are the British Provinces, already coöperating with our Signal Office, descendants of our own forefathers, and linked to ourselves by the strongest bonds of geographic position and commercial interests. Then comes this Great Republic, just growing into the full strength of manhood, and reaching out the hand of peace and friendship, not of conquest, to all mankind. To the south, the Spanish American republics and the Greater and Lesser Antilles, where almost every European flag is represented, and where the benefits of an efficient weather service, conducted by means of united efforts and well-directed co-operation, would be enormous. The completion of the Nicaragua Canal will soon change the great routes of ocean traffic, and divert into these waters half the tonnage of the world. Coincident with my recent visit to Havana, a Department of Marine Meteorology, or a Marine Observatory, has been established under the direction of my esteemed friend Capt. Luis Garcia y Carbonell, of the Spanish navy; and the French and Spanish cable companies, with a broad-minded and generous liberality, have granted free the franking privilege for his telegrams over all their lines—will it be too much to hope that our own companies will grant us the same privilege over their lines from Key West to Havana, and to Tampico, Vera Cruz, and Progreso?

"Here at home we have a superb weather service, the admiration of the world—a fact I would call to the attention of that portion of the press that racks its brains to get up cheap jokes about it—but circumstances have compelled it to devote almost its entire attention to the pressing needs of our great inland States, and to almost neglect commerce and the seaboard. I was amused the other day to read of the anxiety shown by Lieut. Maury, when in the full flush of the success of his great system of meteorological observation at sea, to have the system extended to the land: "In my humble way," said he, "I have been advocating the establishment of a similar system of weather reports and telegraphic warnings, not only for the shipping, but for the farmers also of the United States." Shades of Maury, look down upon us now, and lend the influence of your great name to help regain for your beloved shipping some small share of the benefits of the great system that you did so much toward organizing!

"I want to live to see the day when there is a first-order light at Hatteras Shoal, Matanella Reef and Hillsboro Inlet, in addition to the magnificent lights we have already, and when weather forecasts at least as good as those signalled off to shipping at Hong Kong or in the Bay of Bengal are available to navigators of every prominent lighthouse and headland of the shores of the great Bay of North America, and I expect to do it, too. I intended to have read extracts from at least a few hurricane reports from vessels of our own build, and flying the stars and stripes—the thrilling experience of the S. S. Knickerbocker, or Manhattan (two good old New York names), in these great hurricanes off our coast—but time forbids. I cannot forbear, however, from reiterating the fact that it is to an American that we owe the discovery of the law of storms in almost all the perfection and simplicity that we know it to-day—a discovery that has revolutionized meteorology and resulted in the saving of thousands of lives and millions of dollars worth of property at sea. The empirical laws of Kepler in astronomy, the great results in biology of Darwin's vast accumulation of facts, and the deduction therefrom in the hands of that great master, find their parallel in the thorough and painstaking work in collecting data, the scientific skill and insight in their consideration and comprehension, and the lifetime's devotion to this one subject, of Mr. Redfield, of New York."

MEASUREMENT QUESTION ON LAKE ONTARIO

FOR several seasons, in fact since the beginning of the International races, yachtsmen have been content to follow the racing, either through sailing their own boats or watching intently the great contests of the large craft, without any thought of the rules under which races were sailed, or of their influence on building and racing in the future. Quite recently, however, a decided change has taken place, and by no means the least promising feature of yachting for the coming season is the strong feeling that has lately manifested itself among yachtsmen in different locations in favor of improved methods of measurement. The matter is now under discussion in New York and the East, and at the same time it has been started on Lake Ontario. For some time past it has been evident that the rule in use by the Lake Y. R. A., length plus ½ sail area divided by 2, did not tax sail heavily enough, and that the yachts built under it would be by no means the best for all-round use required of them, and the yachtsmen of Toronto and Hamilton in particular have been quietly discussing the question of a change of the rule. The matter has been publicly broached by an editorial in the Toronto *Empire*, with the result that a whole shipsmith's shop has been turned loose in print, and a hot controversy is now being waged. The article in question, under the rather comprehensive and ambitious title of "How the Speed of Yachts may be Greatly Increased," reviews first the natural advantages of Toronto and the backward condition of yacht racing, continuing as follows:

"One reason for this is found simply in the fact that too little attention has been paid to model, that instead of the builders of the yachts which have been turned out during the past few years being supplied with a model from a designer of ability, they have been allowed to work their own sweet wills. Another reason for the poor showing of Toronto yachts is the present system of measurement of the Lake Y. R. A. A length and sail area rule of measurement will not tend to develop a style of craft suited to the requirements of the lake, and at the same time give a fair show to a number of the yachts which have done good work in the past. A rule should be devised that would meet these ends. That beam should not be taxed and waterline length should be taxed so heavily is unfair to the narrow cutter, of which there are a number on the lake, all of them either built here or imported for racing purposes, and it will also result in great beamy boats, unsightly and unwieldy, although, perhaps, fast through the great sail spread their excessive stability permits them to carry. It may be said that sail area is the corelative of beam and that sail area is taxed. This is true, but the tax on sail is not sufficient. A rule should be adopted by the Lake Y. R. A. that will tax the loading length about as much as the present rule does, tax sail area more, and also tax beam. This would give the narrow cutters on the lake a chance, and at the same time encourage the building of a nicely-proportioned, fast and serviceable type of yacht."

We can agree most heartily with the writer so far as the evils of the present rule, the lack of good design, and the need of a better system of measurement are concerned; but the remedy proposed is not only unnecessary but impracticable, and the arguments used to support it in this and subsequent articles can only serve to mislead and confuse. Nowhere else in the country has the work of organization been so complete and rapid as on Lake Ontario. During its brief existence the L. Y. R. A. has succeeded in uniting all the clubs on the lake in one body, governed by one system of measurement, one classification, and uniform sailing rules, with a series of annual races as part of a cruise from port to port around the whole circumference of the lake, thus insuring a pleasant cruise of two weeks with its scrub races and the livelier and more exciting competition of the regular races at each port, and a great deal of social intercourse and good feeling between all lake yachtsmen, whether sailing under the Stars and Stripes or the red ensign. This in itself is no small matter; if anything like the same progress has been made by yachtsmen in any other locality we have failed to hear of it; and taken all together, Lake Ontario stands to-day ahead in many respects of the Atlantic Coast. It is true that there are a number of serious defects, but they are all matters of detail, and as long as a wide-awake and efficient organization exists to deal with them, there need be no apprehension that they will not be speedily removed. All of these evils are only what must be encountered in the attempt to organize into one good fleet a number of boats built at various times and places and under no rules, bad rules, or rules good in themselves but unsuited to the locality; and also to create out of almost nothing a good and permanent system of measurement and classification.

The lake fleet to-day is composed of the greatest possible variety of craft, the old American skimming dish imported from New York, the many modifications of the same type turned out by local builders about the Lake; the strange nondescripts that have drifted in from Lake Erie, the Georgian Bay, the Lower St. Lawrence; the narrow Scotch cutters, imported from across the Atlantic; and the many amateur attempts at the modern type of craft. In the nautical "Happy Family" are the old McGlehan boat Cygnet, once known to New York yachtsmen; the first Verve, Watson's 5-tonner, with her younger sister, Cypris; the new Burgess compromise, Merle; the old iron cutter, Rivet, built at Glasgow in 1856; the new Smith schooner Oriole; the moderate draft cutter Aileen, designed for the lake by Watson; the famous 10-tonner Madge; the little Boston cutter Vernette, a moderately wide boat; the new Cuthbert sloop White Wings and her sister Atalanta, once a contestant for the America's Cup; and many yachts of less note built on the Lake, or imported from various places. With such a fleet of all sizes, from 20ft. to 70, it is small wonder that the classification is unsatisfactory, the entries poor in some classes, and that the one rule in general use does not satisfy all. As for the special compromise of the *Empire*, and the proposed remedy, quoted above, there is nothing to show that the fault lies with the general form of the rule, or that any radical change is necessary, but only that, as on the coast, a heavier penalty must be placed on sail. As for a rule that will make the narrow cutter, long outbuilt at home and superseded by more modern boats, win from any sort of craft, such a retrogression and clog on the development of yacht design would not be tolerated for a moment by any intelligent yachtsmen; and the type of boat that such a rule would encourage would be entirely unsuited for Lake Ontario, however well adapted for racing in British waters.

With a warm climate, smooth water, and where even the smallest boats carry a large Corinthian crew in place of a few picked professionals, the narrow 5-tonner is far inferior to a wider boat for the mixed racing, cruising and general sailing that the Lake affords, and the rule of the L. Y. R. A. should be framed to encourage the modern cutter of medium beam, and not the obsolete tonnage racer. That the present rule does not do this is very true, but the remedy, at least, as far as can be seen at present, lies in the direction of a heavier tax on sail, rather than in a resurrection of the old attempts to tax the three dimensions, length, beam and draft. The strong claim of the length and sail area rule, that through sail area both beam and depth can be effectually taxed, is quietly passed over, and the defects of the present rule are laid to its method, rather than to the details of its construction. The proposed remedy to include beam in the rule, is not only impracticable but useless, as beam can be reached directly, and to any extent that may be desirable, by taxing sail.

Though it is not very clear after reading the *Empire*'s suggestions how the speed of yachts may be greatly increased by the passage of a rule that will aid small and narrow cutters win from larger and more powerful boats; at least one good purpose has been served in arousing a discussion, and a correspondent over the nom de plume of "Shackle" disputes some of the points made, showing at the same time where there is ample room for improvement in the Lake yachting. In commenting on "Shackle's" letter the *Empire* speaks as follows of the present length and sail area rule in use in Great Britain:

"We predict a failure for the length and sail area measurement, for the following reason: Why should not a Yarana of 23½ beams, or even 3 beams, be built, and is there not reason to believe that her greatly increased size will give her an advantage which will enable her to beat with ease her narrower rival? Now, if this increase in size was equitably taxed, we think the case would be different, and that the boat of reasonable beam would prove the faster."

Certainly, the writer must know that the imaginary Yarana with more beam would not be allowed any more sail to drive the extra beam and size; or if she did take more sail, she must at the same time cut off the length. This, in fact, was done in Petronilla, the rival craft, 2ft. wider and 2ft. shorter and entitled to carry more sail; but she failed signally to beat Yarana.

The discussion has awakened much interest about the Lake, and two other writers, "Spanshackle" and "Bobstay," have joined in. We quote the following from the former's letter because it is a specially good sample of an argument which comes up whenever the measurement question is mentioned, and which has done more than anything else to hinder a correct understanding of the real points involved in every rule:

"We hear a great deal in these days about 'taxing.' None of the yacht clubs appear to be able to get along comfortably without taxing something. If it is not the length, it is the beam, or the draft, or the sail area, and now I have received a letter from a friend in Buffalo, a member of the yacht club there, saying that their club considers stability ought to be 'taxed' instead of sail area, and asking me to frame an appropriate rule for the measurement of stability. Those conversant with the labor attached to working out curves of stability can appreciate what this involves, and will be inclined to sympathize with any attempt to do away with 'taxes' altogether.

"Before a new rule is established it will be well first to settle the principle upon which the classification is to be made, whether upon the dimensions, displacement or other tonnage, sail area, stability or upon what combination of either or any of them with others. This done, let the rule be framed in such a manner that it shall be thoroughly comprehensive, and at the same time afford the designers all possible scope, and not hamper him with 'galling taxes' on either hulls, spars, sails or ballast. Let 'size' be the standard of classification for speed, and let that 'size' be arrived at in a common sense manner."

The writer attempts to make a distinction which does not really exist, between a rule of measurement as a good thing, and a tax as something in every way bad and undesirable. Every rule of measurement is simply a tax on certain dimensions or elements which enter into the rule; if a "mean length" rule, then length is taxed, overhang is taxed, appearance and utility are taxed, and beam, draft, sail and ballast are left to run wild. If stability is the standard then length is allowed to go free, while beam, ballast and draft are restricted; if sail area alone is taken then again length is free, while beam and draft are limited, in other words "taxed." The two words limit and tax are synonymous, and the recognized function of a rule is to establish just and proper limits in all desirable directions, whether of length, breadth and depth, bulk, sail area, or in some other direction.

To speak of abolishing taxes and making "size" the standard is such an obvious absurdity that one is tempted to laugh at it, and yet this same old saw has stood in the way of every proposed improvement in measurement rules for years and years. If yacht building and yacht racing are to exist, some limit must be put on size; not on any one dimension, leaving the others open to evasion, but on enough to restrain any abnormal development in draft, length, sail or some other direction. The origin of every rule will be found to lie in this idea of taxing size, and so long as a rule did this it answered perfectly well. The old length rule practically taxed size in the first instance, as all the boats racing under it were of one model, and the longer boat was at the same time proportionally larger and faster. As soon as some genius discovered that by increasing the beam he could carry more sail and travel faster on the same length, thus measuring no more, the rule ceased to measure size, and its value departed. The old tonnage rule originally measured the size, the boats being all of similar proportions, but soon the raking sternpost came in, then the fact that depth was unraxed became gone ally recognized, and finally the introduction of the lead keel opened the way to a still more extreme evasion of the rule, until a very large and powerful boat could be built to measure actually less by the rule than a small craft. It is the same with all rules thus far tested; at first they work well, competition becomes keener, men succeed in evading the rule in some way, and finally it becomes as worthless and bad as the old length or the tonnage rules. The problem of measuring "size" in a yacht is still unsolved, and unfortunately "Spanshackle" fails to show how it may be done in a common sense manner.

It is probable that no thoroughly satisfactory solution of the problem will ever be reached, but the most promising method yet devised seems to be that by length and sail area combined in some proportion yet to be determined. What these proportions must be we shall leave to a subsequent time, but as far as the L. Y. R. A. is concerned the next step forward which it must take is very plain—a considerable increase of the proportion of sail area in its present rule. Such a step will be provisional and experimental rather than final, but it will be followed by a direct improvement of the fleet and will also indicate in a short time where a further improvement may be made. One important advantage of the length and sail area rule over many others is that the influence of the rule on hull or sail may be readily changed from time to time with little disturbance, whereas any change in most other rules means a complete overturning of the established order of things, as of late in British yachting, when the old rule in its final form was abandoned prior to the building of Thistle and Yarana.

In a second letter to the *Empire* the original critic, "Shackle," offers some suggestions of such practical nature that we quote them in full.

"1. As to the question of classification, I would suggest that the various classes be called by their maximum w.l. limit; thus, if 30ft. is the largest limit for a class call it the '30ft. class.' If 35ft., 'the 35ft. class,' etc. The reason for this is, that to an outsider the present system of numbering the classes does not convey the idea of a classification according to size, but rather of condition and quality. This, to a yachtsman, may appear absurd, but it is nevertheless a fact that for this reason a large number of spectators take no interest in any other than the 'first class' yachts. The divisions might be as follows:

20ft. class (new) 20ft. on l.w.l. and under.	
25ft. class 20 to 25ft. l.w.l.	
30ft. class (new) 25 to 30ft. l.w.l.	
35ft. class 30 to 35ft. l.w.l.	
45ft. class (new) 35 to 45ft. l.w.l.	
55ft. class 45 to 55ft. l.w.l.	
75ft. class 55ft. and over.	

"This is the same classification as the Inter-Lake Yacht Racing Association up to the 45ft. class, which is their largest. Let it be understood that subsequent changes be made at the 5 or 10ft. mark. It may be objected that we cannot afford to sustain this number, but by spending less money in dinners and suppers, and devoting the funds more to the encouragement of yachting, there should be no difficulty. As before suggested, the prizes of the larger classes might be considerably reduced, and by spending no more money than we do at present a better result obtained. The prizes might be as follows:

Class.	1st.	2d.	3d.	4th.
20ft.	$15	$10	$ 5	$ 3
25ft.	25	15	10	5
30ft.	30	20	15	10
35ft.	40	25	15	10
45ft.	50	35	20	10
55ft.	50	35	20	10
75ft.	50	35	..	..

This would make a total of $568.

"2. All classes should start together and by a 'one gun start,' i.e., all timed from one gun. This will be a premium on seamanship and promptitude and reduce the work of the timekeeper. The hour of starting should be the same for all the races during the cruise, and the mode of finishing uniform.

"3. The first race of the cruise should be on a fixed date, so that our crews (who are mostly Corinthian ones) may know exactly when to arrange their holidays, and it will prevent the clashing of dates with our sister association on Lake Erie.

"4. The annual meeting of delegates should be held in the autumn, so that any alterations then made can be acted upon during the winter, and any person building will do so with the assurance that no alteration can be made for at least one season.

"5. There should be no postponement of races during the cruise. If a race cannot be finished let it be settled by the time of the last round completed by the number of yachts for which there are prizes given in their class.

"6. An association officer should be appointed to take the times of all association regattas, have charge of the numbers, and personally superintend their distribution. He should be the one to direct where the buoy shall be laid (if the course be to windward or leeward and return), so that no blame can be attached to the local club if it does not turn out dead to windward or leeward. The same numbers might be carried throughout the cruise."

The lack of a comprehensive classification has been a more serious evil on Lade Ontario than the rule itself; small cutters are compelled to stay out or enter against new boats of greater power and size; in some cases the 19ft. open skiffs, with neither depth nor ballast, are pitted against 25ft. cutters, very powerful craft with deep lead keels, while the gaps between the larger classes are very wide. This is the more unfortunate as the Lake yachtsmen are as a rule racing men, always ready to enter for the sake of sport; but, as cruising is the first requisite; building to class has hardly begun yet; and in each class there are a number of boats running all the way from the lowest to the highest limit, with one or two near the top to take all the prizes, it is rather discouraging work. A thorough revision of the classes is a pressing necessity, and the result of smaller, but more numerous prizes will be to encourage rather than to hinder entries. If it be necessary to curtail some of the entertainments on shore in order to offer more prizes, a double good will result, as the jollification which very often follows a race on the Lake Round could very well be considerably modified or dispensed with. One very good suggestion is that in regard to an officer who shall have a general supervision over all the races of the Round, thus securing a thorough uniformity of details and preventing complaint against the action of the local regatta committees. The Lake Y. R. A. is very fortunate in possessing a strong and well founded organization, with much that is good in the way of rules and methods in its races and business management. The task that now lies before it, though by no means easy, is only a matter of the improvement of various details; with this accomplished it may look for even greater success in the future than has attended this far the first and only well-managed attempt to found a yachting association in American waters.

Since the above was written we have received a later copy of the *Empire*, which pays us the compliment of reprinting at length the article on measurement from the FOREST AND STREAM of Jan. 31. What we have condemned there in the rule applies first to the New York Y. C. rule, and then, in a lesser degree, to the Seawanhaka Cor. Y. C. rule, in use by the L. Y. R. A. Even the latter, though taxing sail more heavily, allows too big a rig and too powerful boats on a given length. The *Empire* objects that the rule mentioned by us would tax depth, and also tax beam and draft equally; but we cannot admit either of these propositions, nor another to the effect that such a rule would encourage the old skimming dish. The result of an appreciably heavy tax on sail is certain to be a boat of moderate proportions, and of reasonable cost, both of building and running, in fact, the type of boat best adapted to the L. Y. R. A.

STEAM LAUNCH CRUISING.

Editor Forest and Stream:

The inquiry of "W. P. A." in your issue of Jan. 31, leads me to think that the experience I gained last year in both long and short trips might be of interest to some of your readers.

Last year the Idler was built for us, 26ft. over all, with 5ft. beam, decked 3½ft. forward and 2½ft. aft; in her we put a 2 H. P. Acme oil engine. As we intended her for some long trips and to take us regularly from camp to the train, we had a permanent awning of wood, with curtains that could be buttoned down all around making her dry in all weather. The question where to put six life-preservers without taking up all the locker room was solved by tying them to the awning with string that would break with a slight pull. This we found very satisfactory, as they took up only 2in. of the room over head and were always handy.

The next things we found needful were places for the oil cans, wrenches, waste, soap, etc., in the engine well where they would be handy and could not shift with a big roll or pitch. This is one of the many little things that boat builders do not do. We now had all our locker room under the seats and in the fantail for blankets, provisions, dishes, and cooking utensils. How to cook and what to cook in was easily settled; we always had plenty of steam when running, and when standing still it was easy to keep up a little steam. Steam being the perfect way to cook we had Wilmot, Castle & Co., of Rochester, N. Y., make for us a steam cooker and coffee pot after the general design of their cookers, but specially suited to our wants. With this compact outfit we were able to cook either meat or fish with potatoes and any other vegetables we wished, and also to have rice, oatmeal, hominy, fresh peas, beans or stewed apples to give variety to the meal. To make it complete we had hot coffee, tea or chocolate equal to any served in the best hotels, where steam is used for a large part of the cooking. We are able to cook for a party of eight, but four or five is all we can accommodate at night.

We did not find a good way to have a first-class table and sleeping arrangements till near the end of the season, but at last thought of a plan. False floors of ⅝in. pine take up little room, and when wanted for a bed are supported even with the seats by three pieces of gas pipe extending across the standing room and supported by thimbles let into the sides of the lockers. This gives a bed at the stern 7ft. long by 4½ft. wide, and at the bow 6ft. long by 4ft., tapering to 2½ft. For the table the false floor for the stern is raised on legs screwed into floor plates let into the regular floor of the standing room. This gives us first-class beds and a good table without loss of room. This is how we fit our boat for cruising; where we can go and what it costs will do for some future time. C. A.

ROCHESTER, N. Y.

QUAKER CITY Y. C.—The fourteenth annual meeting of the Quaker City Y. C. was held on Feb. 6. The constitution of the club was amended and new by-laws adopted, after which followed the election of officers for the ensuing year: Com., Charles D. Middleton; Vice-Com., Charles L. Work; Rear Com., Brereton Pratt; Pres., John H. Sloan; Sec., C. W. Glaser; Cor. Sec., Wm. S. Hoffman; Treas., E. S. Farson; Meas., S. A. Wood; Fleet Surgeon, W. G. MacConnell, M.D.; Trustees, Arthur Colburn, H. F. Smith, George de B. Keim, W. Rawlings, Jr.; Regatta Committee, A. F. Bancroft, C. L. Wilson and N. N. Wentz. The following new members were elected: C. B. Mills, W. G. Roberts and Harry Murray. At the next meeting several more new members will be elected, and at least two more yachts added to the Quaker City fleet, including Anita, an 80ft. steam yacht, at present entered in the New York Y. C., and Mr. Charles E. Ellis's Nanon, designed by Burgess and built by Lawley & Son, of Boston. An invitation was received from the yachting committee of the Centennial Celebration of the Inauguration of Washington, and it is probable that the Quaker City fleet will go to New York and participate in the ceremonies. Members to serve on the lectures and entertainments, library, lines, models and exhibits and law committees will be elected at the next meeting. After the meeting was over the annual banquet of the club took place.

BROOKLYN Y. C.—Officers for 1889: Daniel O'Reilly, Pres.; Wm. Cagger, Sec'y; W. H. Burk, Treas.; R. C. Hopkins, Com.; Sydney Grant, Vice-Com.; Geo. H. Foote, Rear-Com.; and H. R. M. Cook, Meas. Board of Trustees—Dr. E. F. Drayton, M. J. Hanley, J. C. Reilly, Wm. Waring, N. McLean, E. T. Birdsall, F. F. Chandler and A. F. Walden. Membership Committee—Harry Riley, F. Rogers and Alexander Locheod. Regatta Committee—Chas. Vaughn, Wm. Dodman and J. J. Welsh.

NEW STEAM YACHTS.—Lawley & Son have the contract for a 65ft. l.w.l. steam yacht for Mr. E. P. Boggs, from Mr. Burgess's designs. At City Point Pryor is building in a closed shed a steam launch for C. D. Mosher, of Amesbury, Mass., the builder of the fast Buzz. At East Boston Wood Bros. have a contract for a 50ft. launch, designed by Burgess.

NEW YORK Y. C.—On Feb. 7 the annual meeting of the New York Y. C. was held at the club house, with Com. Gerry in the chair. The following officers were elected: Com., Elbridge T. Gerry; Vice-Com., L. A. Fish; Rear-Com., Archibald Rogers; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Measurer, John Hyslop; Fleet Surgeon, Morris J. Asch; Regatta Committee, S. Nicholson Kane, Chester Griswold, Wm. E. Elslin; House Committee, James W. Hayward, R. P. Lounsbury, Robert S. Brown, John M. Wilson; Committee on Admissions, Edward M. Brown, Frederic Gallatin, Charles Watrous, Alexander Taylor, Jr., Frank T. Robinson. The following new members were elected: John B. McCue, Frank B. Martin, John A. Manning, Brockholst Cutting, Ronald Thomas, Alexander S. Williams, Chas. J. Tillman, H. A. C. Taylor, Ernest C. Bliss, Samuel H. Austin, J. Malcolm, H. Graham, Jr., F. W. Sharon, Wm. H. Forbes, John J. Astor Jr., Geo. C. Rand, Ashton C. Clarkson.

TITANIA AND SHAMROCK.—Both of these yachts will sail in the Larchmont regatta of May 30, the owners adding an extra purse to the regular club prize.

Answers to Correspondents.

R. E. S. H.—The shells do not injure gun barrels.

J. McN., Ogdensburg, N. Y.—Mr. Lovejoy's address is Savannah, Ga.

READER, Manchester, N. H.—"Sam Lovel's Camps" is published from this office, price $1.

G. W. R., New Haven, Conn.—The electric light is used with a reflector for search lights, in preference to the calcium light.

NIMROD, Montreal.—Are breechloading canes or walking stick guns made in the States, if so please give name and address of manufacturer. Ans. We know of none.

C. V. S., Appleton, Wis.—1. The operation of spaying is unnatural and cruel, and we advise that it be not performed. In the many cases that we have known, but very few have been successful in accomplishing the desired result, while a very large majority of them have proved disastrous. 2. Well matured, healthy bitches generally come in season when 9 to 12 months of age.

G. B., Harrisburg, Pa.—The fishermen of this city are discussing the question, Does ice form on the top or on the bottom of water? Will you be kind enough to settle the question by giving the true facts of the matter in the FOREST AND STREAM when you have space to spare, and very much oblige your numerous readers in this city? Ans. Ice forms on the surface usually, though under certain conditions it may form at the bottom.

REFEREE, Amityville.—As referee I have decided on the following shoot: 1. In shooting single birds from a trap two men tie and agree to shoot off on double birds; the first man missed both birds, the second man shoots both barrels at one bird and kills his bird. Who wins? 2. In shooting single birds from two traps, by accident both traps are pulled and the shooter takes one bird and shoots the first barrel and missed his bird; then the other bird being nearer he shoots at and kills it with his second barrel. Is it a lost bird or not? Ans. 1. No. 2 wins unless conditions forbade use of second barrel. 2. It should be scored a killed bird.

PHILADELPHIA, July 20, 1888.—*United States Cartridge Co., Lowell, Mass.:* Your new Climax paper shells with strong primers are the best shells made yet. (Signed) ANNIE OAKLEY (Little Sure Shot).—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

HUNTER'S PATENT
Safe & Rapid Loader.

Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

The Forest and Stream Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps* and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

ANSWERS TO CORRESPONDENTS.

THE MAINE DEER LAW.

IT has been reported in these columns that the Maine law relating to deer would probably be amended this year; and measures to that end have been introduced into the Legislature.

Maine owes her big-game supply to her non-hounding law and to her non-export law. These laws are excellent in their working, but they are maintained only in the face of tremendous opposition. Doggers are eager to dog game into the lakes; market-hunters are eager to ship to Boston. Take away these two laws, give the doggers and the market-hunters what they demand; and good-bye to Maine's game interests. If these interests are to be conserved, the market must be cut off; the dogs must be kept out.

Happily there is little probability that the Legislature will listen to the hungry cries of the enemies of the game; there is too much sterling good sense among the members. The law will hold good, in spite of the assaults upon it.

A hearing was given by the Committee on Fisheries and Game on Wednesday the 13th. There was a good deal of interest manifested, with a large attendance. From the course of the meeting it is plain that the deer hounders stand no chance whatever, unless they should spring a trap, of which there is little danger. Jonathan Darling was there, and appeared before the committee as an advocate of dog hunting, but if he is backed up by others, they had not the courage to appear before the committee. Darling made no impression on the committee whatever. In fact they began to cross-examine him in a way that came near making him acknowledge himself to be a law-breaker, and we have reasons for believing that if they had succeeded in making him state before the committee that he had broken the statute in regard to hounding deer, the purpose was to have arrested him before he left the town. But he hardly dared to criminate himself before the committee.

It is likely that the committee will report a bill involving the ideas of the Commissioners in regard to a "square non-export law," while at the same time the owner of a moose, deer, or caribou, legally killed in the open season, will be allowed to transport it from the State by proving that he legally killed the venison. On the other hand the new bill will doubtless put severe penalties in the way of any persons found with moose, deer or caribou not killed by themselves, or any parts thereof, in possession, even in the open season. But the law will not prevent the holder from satisfying the magistrate or arresting officer that he purchased the venison to the extent of the full allowance of the law to any one person in any season—that he purchased it for consumption within the State, and not for transportation. In short, the law is likely to be so framed as to permit the real hunter, who legally kills game in the State, to take it home; but the greatest possible restriction will be put upon the forwarding of game to market.

It is also proposed to put it within the power of the wardens to arrest law breakers on the spot. This feature is designed to do away with the former necessity that the warden should procure a warrant, no matter how far away the magistrate might happen to be. It is altogether likely that the moiety system will be restored, whereby the wardens will get half, or the whole, of the fines. This will restore the interest formerly felt by game wardens in the enforcement of the game laws. The new laws are likely to impose a very heavy fine, or even imprisonment, on the killing of a cow moose at any time. The bill will probably involve the opening of the season for shooting on September 15th and closing it on December 15th, which really gives the same length of open season as under the present law. The lumber people from the eastern part of the State may oppose the opening of any part of September to the hunters, since they fear forest fires, while on the other hand it is urged that September is a very safe month in which to permit the hunter to be abroad, and that under the present law it is already an open month for bird shooting. One of the designs of the new measure will doubtless be to bring the ruffed grouse under better protection, for it has been for some time felt by the best sportsmen that the broods are far too young to be hunted on the first day of September, especially in the northern portions of the State.

It really looks like good legislation in Maine this winter, and there is not a doubt that it will be reached, unless the lack of opposition should make the friends of game protection too easy, and hence bad legislation creep in through neglect.

OUR DUCK SHOOTING SUPPLEMENT.

LAST week we referred to our Index as an indication of the scope and character of that many-sided correspondence which keeps up the charm and value of these pages. To-day, as in further exemplification of the resources of the FOREST AND STREAM, we publish a supplement devoted to the sport of duck shooting. The sketches and communications cover a wide range of country, and experience equally wide. It is one of the curiosities of human nature, this duck hunting passion, and manifests itself in ways utterly incomprehensible to those who have no share in it. A grown man will travel further, toil harder, undergo more hardship, endure more deprivation, fatigue, physical suffering, to kill a duck than to do anything else under the sun. Whatever possesses a man of years and discretion, and average common sense to tumble out of bed at twelve o'clock midnight, make himself a hot cup of coffee—"breakfast" he calls it—row out to a point on the bay, lie down in a blanket and go to sleep, to hold that vantage ground against all intruders, until the fowl begin to fly, then blaze away, and at last row home with a half-dozen black duck—all this is something that the uninitiated cannot understand.

But you understand it well enough; and in that understanding are you more blest than they who turn up their noses at ducks and scoff at duck hunters.

And if ever you are grateful for anything, it is becoming to cherish a sense of gratitude for the possession of those traits by which you do understand the charms and reap the pleasures of the outdoor, wild, open-air life of marsh and bay, and point and bar.

OPEN TRAP WEATHER.

WHILE ice syndicates, curlers, ice yachters and purveyors of heavy overcoats may find something out of sorts in the manner of weather this land has been treated to during the winter now closing, the trap-shooters may congratulate themselves upon having had an exceptionally fortunate time of it. There has not been a week when a tournament could not have been carried through with success, and clubs have kept up practice uninterruptedly. The result has been that shooters will come to the score at the early spring shoots with nothing in the shape of a winter's rustiness to wear off. And the result of all this inviting weather has been a great impetus to the already growing boom in the trap-shooting line. Those who furnish the paraphernalia of the trap park have been pushed to their utmost in keeping pace with the demand, and the consumption of powder and shot has been enormous.

The man who buys a gun is finding out that in place of getting one week's use of it in the course of a year, he may find it an instrument of pleasure during the whole fifty odd weeks if he will but combine trap with field-shooting. One is not a substitute for the other, but rather a complement of it. The first step will be in the formation of small neighborhood clubs for mutual rivalry and enjoyment, and then in time may come trap-shooting rules which will invite honest shooting at tournaments, in place of the present cumbersome rules, fitted only to trap the unwary and assist clever, unscrupulous experts.

SNAP SHOTS.

A MEMBER of the Wisconsin Legislature named Hill has introduced his little bill. Mr. Hill asks to have it declared "unlawful to hunt any woodcock, quail, partridge, pheasant or ruffled grouse, prairie hen or prairie chicken, sharp-tailed grouse or grouse of any other variety, snipe or plover, with dog or dogs." And if any one is caught hunting with dogs, Mr. Hill wants them fined not less than $20 nor more than $100, or imprisoned in the county jail for not less than one month nor more than six months—very moderate penalties, by the way, for an offense which Mr. Hill evidently looks upon as heinous. Now won't somebody take Mr. Hill out and let him see a dog at work in the field, and so convert him, as Hyperides won over the Heliasts for his client Phryne.

They have some odd characters in Connecticut. One is an hermit who lives in an old wolf den and subsists on the game of the vicinity, as one might very well do in any of the New England States if he led a very ascetic life. But the oddest genius is a wooden-headed justice of the peace, of East Windsor Hill, who undertook the "extermination of so-called game" by advertising rewards for game birds and their eggs, from January to October. Upon the appearance of this advertisement the most natural thing in the world happened: the Connecticut Association of Farmers and Sportsmen put detectives on him, traced unlawful booty in his possession, arrested him, and the result is that the enterprising justice of the peace has been fined for his rashness. Take him all in all, he is more of a curiosity than the anchorite of the wolf den.

California shooters are at odds over the preserve question. The lands are taken up there to such an extent as to breed dissatisfaction among sportsmen who do not belong to the clubs. The same feeling prevails in many other sections. The old cry raised by "Didymus" years ago, that game preserve clubs partake of the character of monopolists is echoed and reëchoed by the outsiders. The controversy has but just begun; in years to come we shall hear more and more of it.

That enterprising individual who is going to start a frog farm is in nowise discouraged by our reports of the difficulties attending the enterprise. He bobs up serenely now in one newspaper and again in another. We also learn of a scheme for the farming of beavers.

Restocking depleted ground with quail is carried on more extensively than ever. From many quarters come reports of such effort. This is an altogether sensible method of setting about an improvement of the shooting.

Nova Scotia farmers have in convention declared the English sparrow a nuisance, and they have declared that it must go.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

A MONTH IN THE ROCKY MOUNTAINS.

[*Continued from page 62.*]

MY friend Moore, when I last heard from him, was camped on Strawberry Creek, about twenty miles distant, and my anxiety was how to get to his camp with my load of blankets and other baggage. I was assured that probably during the day some opportunity would offer to send my things in that direction. The opportunity came that afternoon. A herdsman, an old Irishman, whose sheep were in the vicinity of my friend's camp, would be going in that direction in the morning, and I could go along that far with him. So I patiently waited for the next morning to come. The hotel accommodations are not as good at Beaver Crossing as I have seen in the East, but after twenty-two hours continuous shaking up in the stage, I could sleep very well in a blanket on the floor of the annex, or bunk in with the children and dogs on the porch. The bill of fare here is not equal to what can be obtained at Delmonico's or Murray Hill—not by a good deal—in fact, the cooking partook more of the character of the Indian than the French side of the family. However, my hunger and fatigue overcame all other considerations, and at an early hour in the evening I spread my blankets by the side of the sheep herders on the annex floor.

The night was cool and comfortable, and as my eyes opened the next morning upon the dark long-necked bottles displayed about the room, I realized that I was feeling better physically than I had been for months past, and that one object of my trip was a success already. When I was ready to start, the report came that the horses could not be found. One of the most prominent peculiarities of these ponies is that they can never be found when wanted. If there is ever a time when a man, pretending to piety, cannot find words to express himself, I think it would be in a case like this. Here are all your weeks of anticipation nearly brought to a focus, when your plans suddenly come to a standstill by the straying off of a couple of worthless ponies. Here is plenty of good feed near by, but these good-for-nothing cayuses have to go straying off four or five miles and hide themselves. It is nearly noon before we get off.

From Beaver Crossing our journey takes a northwest direction, for the first three miles through a narrow valley walled in by high perpendicular rock. Emerging from this we come to the ranch house of Mr. Louis Miller. A stream of clear water flows past the house and irrigates some green meadows below. We stop before the house and are invited to dinner. It is said that the greatest blessings often come to us when least expected, and so anyway it happened this time. Looming up above the commonplace events of my month's stay on the frontier, will ever remain the happy memory of that dinner at Louis Miller's. The bread, butter, milk and apple pie that we sat down to, I thought then and think now, were fit for a king. The lady who presided at that table was neither very young nor remarkably beautiful, but she is a jewel in her way. The floor, table, the house and all the surroundings were as neat and clean as it was possible to make them, and this is all the more notable in a country where cleanliness is not considered much of a virtue; that is to say, that Indians, herders and hunters are not especially noted for their cleanliness, at least I did not see any whom I thought took a bath more than three times a day.

We continue our journey in much better spirits, the road leading up a long hill. The sun shines out hotter than I ever felt in the South, and I turn down the broad rim of my cowboy hat to save myself the scorching. I get out my Baker and slip a cartridge into each of the three barrels, as the old man says we are likely to come upon sage hens, but no sage hen or other game appears, although the old man says he always sees them on this road, and only yesterday he saw three antelope on his way down to the valley. We are getting up into a better grazing country now, and see scattering herds of cattle and horses. This, however, is the sheep herder's country, and although none are in sight, we see their numerous tracks in the sand, and the closely nipped grass that grows in thin scattering bunches between the sage bushes, tells that great bands of sheep have recently passed here. For ten miles or more our road makes a gradual ascent, and we are getting up on the great elevated plains of Wyoming, averaging 7,000ft. above the sea. Our road leads along the crest of a ridge overlooking a vast extent of country. For miles the view is unobstructed. A rough broken territory, divided by rocky ridges, finally merging into a leveler plain in the far south. A long, narrow valley extends down to the left of us, through which the winding course of Beaver Creek is handsomely marked by a thick growth of willows. Its sides are covered by a dense growth of alternate pines and quaking asp, the light yellow and scarlet of the latter, painted by the early frosts, in glowing contrast with the deep green of the pines, form a coloring to the landscape of surpassing beauty. Down we go into the valley and up on to the plains beyond. From here we get the first sight of the Oregon Buttes, three prominent peaks of the Rockies. We come to old Fort Stambough, some old log buildings where the Government once stationed soldiers to protect the settlers from Indians. A few miles further and we come into the vicinity of the old man's camp. It seemed he had left his partner in the morning with the sheep to find a good camping place near a spring in the neighborhood, the exact location of which he did not know, and we had to hunt about some, driving to the high places to try and discover the tent.

As we were driving along through the sage bushes we discovered a number of sage hens walking leisurely about not far off. The old man said he was about out of mutton, and would be glad to have a few sage hens for supper. I jumped out of the wagon with my three-barrel and crept up within easy distance of the flock. They seemed in no great hurry to get away, but were walking about among the bushes. I took, as I thought, a careful aim at one of the birds on the ground, and blazed away. The shot seem to have no effect except to make the bird quicken its pace into a run. The others continued to walk around as if nothing had happened. I fired the left barrel at the nearest one, breaking its wing. The old man left his horses and started after the wounded bird, while I followed up the flock that had now taken flight, but had relighted only a few yards away. I determined to make them fly this time before firing, and up they went with a great flapping of wings like turkeys. I banged away at the largest, and as the wind was blowing toward me could hear the sharp spat of the shot against its wings, but without any apparent effect on the bird. Still following them, I finally succeeded in bringing down two in three more shots—three birds with six shots—a pretty bad beginning. The old man looked rather astonished, evidently expecting one who had come so far and had such fine guns to do better shooting, while I concluded that the sage hen, like the Irishman's squirrel, must be pretty tough. As I found afterward, it takes hard hitting with large shot to kill these birds, and I was shooting with No. 7.

It was now getting toward night and the weather was quite cold, so that I found overcoat and gloves desirable, notwithstanding the heat in the middle of the day. We at last came in sight of the tent, a mere white spot on the plain. I gladly accepted the old man's invitation to remain with him over night. After a good supper of sage hens, mutton, biscuits, potatoes and tea, we spread out the blankets under the tent and turned in. It was my first night in a tent. The wind blew furiously, and with the constant flapping of the canvas and the old man's snores, I succeeded in getting a few hours' sleep.

We were up the next morning at daylight. The air was cold and clear. Some water left in a vessel outside the tent was frozen over with a thin coat of ice, and the ground was white with frost. The old shepherd told me that water had frozen in his tent every night during the summer except two, and yet in the middle of the day the sun shines scorching hot. The old idea that we were taught in the geography about the "slanting rays of the sun" at the north producing less heat, is in need of revision. I doubt if the sun's heat is greater at the equator than north of the forty-fifth parallel.

Our breakfast is a duplicate of the supper last night, for a herder's larder admits of but little variety. The old man wanders off with his sheep, while his partner, a lad of twenty, undertakes to pilot me to my friend's camp, which is supposed to be somewhere in the neighborhood. We start out afoot, leaving my baggage to be brought on afterward. I carry my three-barrel and my companion takes his Colt's revolver, the only weapon the camp affords. We don't go far before up jumps a jack rabbit, followed closely by a little yelping shepherd dog that came along with us. The rabbit starts off apparently on three legs, giving a novice the idea that the fourth is disabled. It is not, however, as I quickly learn, but is only a way the animal has of showing what it can do on three legs, and its contempt for the dog. When the jack rabbit thinks there is any necessity for being in a hurry down goes the other foot, and then—all that is left in that immediate vicinity is a few waving sage bushes and a streak of flying sand. Before I could get my gun ready the rabbit was out of the reach of shot, and I "turned loose" at him with the rifle barrel. The bullet struck the ground directly under the rabbit and raised the dust all around him. The way in which that animal "got up and got," was something wonderful to behold. He put down that other leg in a hurry, and the distance he put between us in the next half minute prevented all hopes of getting another chance at him during the day. We saw a number of sage hens, but as we had no use for them allowed them to walk off unharmed.

It was here that I first saw an antelope. My companion pointed it out to me a long distance off, and I only caught sight of it as it took a few light bounds and disappeared over a swell of ground. It must have been fully a mile away. After a while we met some sheep herders with their horses and wagons moving their camp equipage to new feeding grounds. Finding they knew where my friend was camped I proposed to join them, and as they were very willing, I bade good-by to my young friend, to whose kindness I was greatly indebted, and climbed up into the wagon. After a drive of four or five miles we came to the spot selected for the camp. Here at last I found my friend Joe Moore, who, hearing I was in the neighborhood, had come here to look for me. We all took supper together, and later in the evening walked over with him to his camp on Strawberry Creek, about a mile away. He and his partner had two tents, side by side, one for cooking and eating in, and the other for sleeping. They were designated as kitchen and parlor. A bright fire of pine branches blazed in front of the tent, and some visiting herdsmen from the neighborhood came in, and we all sat down on the ground in the parlor and talked.

The prospects for game in the vicinity were somewhat discouraging. Game was not very plenty in the neighborhood, but up on the Big Horn Mountains, or on the headwaters of Sandy River, seventy miles northwest, in the vicinity of Fremont's Peak, they had heard the "woods was full of 'em." I have always found that the game becomes scarcer as we get near the hunting ground. All along the road I had heard of immense numbers of antelope in this country, but now they seem to have suddenly disappeared. The antelope is a semi-migratory animal. During the summer they are scattered about singly or in companies of two and three and remain quietly in some sheltered locality; but toward fall when the young are well grown they gather in small bands of fifteen or twenty, and as the cold weather increases these unite, forming herds often reaching into the hundreds, and for greater protection seek the broadest plains, for the antelope never depends upon covert for safety, but solely upon its ability to keep its enemies at a long distance. These large herds may loiter in the same vicinity for a week or more—the time depending upon how much they are hunted, for there is feed enough anywhere for an antelope—and then all of a sudden may put themselves a hundred miles away, so that however abundant they may be in any given locality to-day, they may disappear to-morrow, nobody knows where.

"If you had only been here last week," said one of the party, "you could have killed all the antelope you wanted from our tent door, as they came down every morning to the spring to drink." "If it were only a month later," said another, "when the cold weather drives the deer down from the mountains, you could get plenty of them." And so it usually happens. There is a scarcity right here, but just ahead, "the woods are full of them." One of the party related how a cinnamon bear had attacked a herder during the last summer near the very spot where we were then encamped. It happened that the herder was out with a small shotgun hunting for sage chickens, and creeping through the willows that grow very thick along Strawberry Creek, he came unawares upon an old bear with her cubs. The old bear immediately made for the man, who was unable to get out of her way and was afraid to use his shotgun for fear of wounding the bear and making matters worse. Bruin got up on her haunches, in the regulation bear style, and came at the poor herder with open mouth and claws sawing the air. The herder defended himself the best he could by placing his shotgun crossways in the bear's mouth, and in that way held her off until fortunately his dog came up and attracted the bear in another direction. This allowed the man to get to a tree close by, which he climbed up just in time to save himself from a renewed attack. The bear not being a good climber, and the cubs by this time having gone some distance away, left the shepherd to climb down at his leisure. The flesh from the poor man's arms was stripped to the bone, his face scratched in a horrible manner, and his clothes torn in strips.

There are quite a number of black-tailed deer and a good many antelope. My friends had seen antelope every few days during August, although they had not hunted especially for them, and Joe had killed a fine one only the week before. There is some small timber along the streams, and on the sides of the ridges, and in this the deer find shelter. Antelope are always found on the open plains. Coyotes are quite frequent visitors to the sheep ranch. These animals seem to have changed their habits of late years, as we read of them being very tame, prowling around near camp in the day time, and at night carrying off provisions from the tent, and even stealing hats, boots, etc., from under the heads of sleepers. Now they are exceedingly shy, seldom come about in the day time, and are very difficult to shoot at night. I only saw one and that was a long way off and running away as fast as possible. A big gray wolf occasionally pays his respects to the shepherd, and when he does usually carries off a good stock of mutton. A neighboring herder had an adventure not long since with a mountain lion. After thoroughly frightening the herder, who had no gun, the animal disappeared without further damage. Thus the evening was spent listening to stories of adventure and incidents that had happened to these men during the summer. It must have been near midnight when our visitors left us for their own camps in the neighborhood, and the two shepherds and myself crawled under our blankets and were soon asleep.

During the night the heaviest rainfall of the season occurred. The wind fairly howled, and I expected to see the tent go over, although it was fastened with guy ropes to stakes driven into the ground. We happened to be lying in a little hollow, and were awakened by a stream of water running under the blankets and wetting through. I got up and went into the other tent to secure my cartridges and ammunition from the rain, and it is well I did so or they would have been spoiled, and no more nearer than Rawlins. I got pretty well soaked as to my under garments, but no one complains or loses his temper on account of such little inconveniences, but learns to take them as matters of course.

After the interruption of the night I slept late the next morning and woke to find myself alone in the tent, the shepherds having taken breakfast and gone out with their sheep. The sun was shining brightly through the opening in front of the tent, and the white frost still covered the ground. I go into the kitchen, stir up the fire in the little sheet-iron stove, and look around to find something for breakfast. My appetite has been getting furious for the past few days. After breakfast of mutton, potatoes, molasses, pancakes, dried apples and turnips, I set about cleaning and wiping my guns that had such a wetting during the night. I amuse myself about camp until the middle of the forenoon, when it occurs to me that the men will soon be back to dinner, and I will show them what I can do in the way of cooking. A little search discovers the hoof of a leg of mutton protruding from a box in one end of the kitchen tent. Closer examination develops that there is very little meat on the bones, in fact that the camp is nearly out of meat. In this extremity I think of the ever-convenient sage hens, and taking my three-barrel and a few loaded shells, stroll off down the creek.

Poor foolish birds! You are everybody's victim. Without sense enough often to get out of the way of a long stick, you will allow the clumsiest bungler that ever carried a shotgun to knock you down at ten paces because you are too stupid to use your wings in time. You are the last resort of every hunter, herder, or wandering immigrant whose skill fails on better game. Your bones lie in little heaps all over the prairie, the melancholy proof of defenseless contact with every prowling varmint that comes your way. Your only reliance is in your color being the same as the sage bush. It is a surprise that your tribe is as numerous as it is, and you probably owe your delayed extinction to the fact that no one wants you when anything else can be obtained.

In an hour I came back to camp with two birds dressed and ready for the pot, but my friend had come in meanwhile and so I divided with him the honor and responsibility of the fine dinner we sat down to. After dinner we strolled out a few miles from camp to see the country and replenish our stock of provisions. I took my trusty three-barrel and Joe his Sharps rifle. It was the coldest day of the season. The wind blew a gale. We climbed a high ridge overlooking some fifty miles of gray undulating landscape on the south, and on the west the bare outlines of the Rocky Mountains. We came upon a flock of four or five sage fowl, large fine-looking birds (they are the largest of the grouse family) seventy-five yards off, and for a wonder they seemed quite wild. They made no attempt to fly, but ran from us, their long necks appearing above the sage bush. I gave one of them a load of No. 4 shot from my chokebored barrel which broke its wing. As they were getting away too far for shot, I fired twice with the rifle barrel without effect. The birds still kept the ground. Thinking to try the experiment I put a load of buckshot into the cylinder barrel, and "let her go" as one of the birds came out from behind a bush. Rather to my surprise, the bird fell over dead; the distance was 110 paces. As we were going over the brow of a hill I discovered a jack rabbit crouched by the side of a rock. As I had not yet examined a specimen closely I took no risk of scaring him up or giving him any chance for his life, but fired at the crouched form. The rabbit made

one jump and keeled over dead. Soon after another one, probably the mate of the first, as two are usually found near together, jumped up near me, and as he halted about thirty yards away, I fired and killed him. As we were going home, descending a hill near camp, an immense sage cock took flight on our left, and as he was crossing in front, down wind, with wings set and tail spread out, as they do when under full headway, I dropped him in fine style, fully sixty yards.

Returning to camp early in the afternoon, I was put under additional obligations to my friends by transportation to Miner's Delight, one step further toward the Mecca of my anticipations—the Rocky Mountains. At this place I had previously employed a guide and hunter, with his horses, wagon and camping outfit, and we were to leave at once for the territory of the elk and the grizzly. It was with much regret that I bade farewell to my friends the herders, to whose kindness and hospitality I was indebted for many favors the past two days.

The sheep herder's life, to say the least, is a hard one. He lives in a tent the year round, and often for weeks at a time entirely alone. The sheep require constant attention to keep them from straying and to protect them from the wolves and coyotes. Out in the blazing sun all day, with no friendly shade trees, and returning at night to his tent, he has to do his own cooking and washing and other work of the camp. As the grass is thin and scattering, the herd has to be kept constantly on the move, which makes the additional labor of moving camp at least every ten days. The herder is a stranger to even the common comforts and conveniences of life, and is deprived of all the benefits of society and friends. His bed is on the ground. His blankets and clothing become soiled and dirty. Often water is very scarce and he is thankful if he can get enough to make his tea. He is from forty to one hundred miles from any post office. He has no knowledge of what is going on in the world, and seldom keeps the run of the day, week or month. He must get his own breakfast and be out by daylight, as that is the time the flock are on the move. Often at night he has to be out to prevent the herd from being scattered by coyotes and other enemies. When added to all this are the fierce winds and fearful cold of the Wyoming winter, when he must pitch his tent upon the open plains with no fuel but the scanty roots of the sage bush, surely his occupation is not a desirable one. If asked what compensation there is for all his hardships and privation, I should have to give it up. C. L. S.

Chattanooga, Tennessee.

Natural History.

NOTES ON THE CARIBOU.

Editor Forest and Stream:

With the permission of Mr. Fenton I place the inclosed correspondence at the service of the Forest and Stream that you may publish so much as you may deem of importance. I also inclose tuft of hair he refers to.

Chicago, Ill. J. D. Caton.

John D. Caton, Esq.: *Dear Sir*—I have a copy of your "Antelope and Deer of America," in the perusal of which I have been much interested. In fact I have read it over and over. In the appendix I notice that in speaking of the sacks in the feet of the caribou it is claimed that they seem to be formed—in part—for secreting odor of the animal, etc. Now, I have been up in the State of Maine, falls of 1887 and 1888, expressly to hunt caribou. Last fall I had the pleasure of killing a buck and doe, and saw two others after they had been bagged.

In all of these, so far as I could judge, the odor came not from the feet or legs, but from the tail. In fact the tail was saturated with a yellowish gum or odor, *i. e.*, down among the hairs of the tail seemed to be this gummy substance, which was so pungent that one could hardly hold the tail up to within six inches of his nose and take a good snuff of air. This was so in all I have examined of both sex. The hides of the two I killed I brought home with me, wrapped around the saddles, and now after being killed over two months and the hides salted and hung up, the odor contained in the tail is almost as strong as ever. In fact there never seemed to be much odor in the tubes of their feet. I find the tube in the hindfeet of those I have, but they do not seem to give off much if any scent.

We killed two bucks and two does last fall and neither of the does had any antlers; and the buck I killed, although he dressed 200lbs., and I think by the looks of his teeth (grinders) that he was four or five years old, still had no antlers. In fact I don't think he ever had any, or ever would have had any, as his head was smooth as a doe's head. He had little nubs started up about half an inch high and about half an inch in diameter, but not through the hide. There was no scar over the horns, so I judge he never had any more antlers than when killed the 1st of November. * * *

Frewsburg, New York. Thos. J. Fenton.

Thos. J. Fenton, Esq.: *Dear Sir*—Your favor of the 9th inst. reached me here this morning. I am gratified if my work has in any way interested you.

I am much interested in your statements of your observations on the caribou. I have never heard of a substance similar to that which you mention, and if it is universal or even common I am surprised that it has not been observed by others. A description of the odors you observed, whether offensive or not very repugnant, or if there be any agreeable taint in them, would be interesting to know.

The want of antlers, on both buck and doe, is certainly phenomenal, and must be very exceptional. It would be important to know if the buck had been castrated, for if that had occurred when he was a fawn it might explain the absence of antlers. The want of antlers on the female caribou might be considered as exceptional, as their presence would be on the female of any other species of deer.

If you will give me permission I will offer your communication for publication to the Forest and Stream.

J. D. Caton.

John Dean Caton, Esq.: *Dear Sir*—Yours of the 14th inst. duly received. You say "it would be interesting to know if the odors I mentioned were very offensive, or not very repugnant, or if there be any agreeable taint in them." An old hunter brought in a caribou doe's saddle the night we arrived up on Moose River, the 12th of last October. I went out and examined it, as it was the first of the kind I had ever seen. I did not think of nor take any notice of odor. The second week we were in camp my cousin, while on his way one evening back to camp, after an unsuccessful day's hunt, ran into a drove of three, a buck, doe and calf. This buck had quite a nice set of antlers, containing fourteen points. I did not examine for odor. The next one killed, about the 1st of November, was the buck with no antlers. He had never been castrated. This one I examined more particularly, and while skinning him out noticed that if we got our noses near the tail, we got a strong dose of very pungent odor, not so strong nor offensive as that of the skunk, but pungent enough so that if the tail was brought close to the nose and a strong breath inhaled, it had a tendency to shut off the breathing—like hartshorn inhaled. We then looked over the feet and legs and smelled of them, to see if they—like those of the Virginia deer—gave off any odor, but we could not discover that they did; and we made up our minds that the most of it came from the tail. The last one bagged was a doe about Nov. 6. She like the buck seemed to have the odor secreted (to the same extent) in the tail and none in the feet that we could notice. At the time I did not think anything singular or strange over the matter. If I had I would have sent you one of the tails, fresh before they had been salted. After my return home I took your work and ran through what it said on the caribou, to see if it mentioned anything concerning bucks without antlers and odors in the tails. Seeing nothing of the kind mentioned I thought I would drop you a line in regard to it. I did not think it so strange that the doe I killed had no antlers, as I asked the old hunter that came in with the saddle the day of our arrival up there if she had any horns and he said she did not have any; he also stated that he killed a doe caribou the fall before (1887), and that she also had no antlers. So of course I was not looking much for antlers upon the head of a doe, but I did expect to find antlers on the adult buck at that season of the year, or at least that he had had a set sometime. This buck's head is set up (and where it can be seen and examined at any time) at Number Four, Lewis county, N. Y., at the residence of Lyman Wetmore, Esq. The head of the doe now adorns my sitting room, to keep company with a 14-pointed buck's head that I bagged up in the Adirondack Mountains.

I salted both hides heavy after I got home, which I think had a tendency, coupled with the time that elapsed since they were killed, to subdue in a great measure the odors they then gave off. Still I think you will have no difficulty in detecting in the squib of hair inclosed, cut from the middle of the under side of the tail of the doe, enough of the odor to give you an idea of its character.

An article in Forest and Stream might be of sufficient importance to draw attention to these matters by hunters in the future. Thos. J. Fenton.

THE SOOTY GROUSE.

ITS HABITS, NESTS AND EGGS.

THE sooty grouse, better known on the Pacific coast, however, under the names of blue grouse and pine hen, has a wide range of distribution. Ridgway, in his "Manual of North American Birds," gives its habitat as "Mountains near Pacific coast from California to Sitka, Alaska." It is found, however, equally abundant in suitable localities throughout the entire interior mountain system of the Northwest, as far east at least as the western spurs of the Bitter Root Range of Montana, fully 800 miles from the sea coast, throughout the entire Blue Mountain and Cascade ranges of Oregon, as well as through the mountains of Washington and Idaho Territories, and northern Nevada. These birds from the interior, beginning from the eastern foot hills of the Cascade Range (vicinity of Fort Klamath, Oregon), and throughout the remaining localities mentioned, are, however, much lighter and paler colored than the type specimens of *D. obscurus fuliginosus* Ridgway, which were obtained in the vicinity of Sitka, Alaska, but are nevertheless referable to this form rather than to *D. obscurus* (Say).

I have met with the sooty grouse in all the above-mentioned localities in the Northwest, and have had excellent opportunities to observe their habits. As a game bird, considered from a sportsman's point of view, it has no peer, and its flesh, in gastronomic value, is of an equal order of excellence. Although a resident throughout the year, wherever found, the sooty grouse is seldom seen during the winter months, spending almost the entire time in the tops of tall, bushy fir and pine trees, which it leaves only for a short time about the middle of the day to procure water from some little mountain spring.

Their presence in a tree selected by these birds as a roosting and budding place can, however, be readily detected by a close observer, especially when the ground, as it almost invariably is at that time of the year, is covered with a foot or two of snow. The food of the sooty grouse during the entire winter consists almost exclusively of the buds and tender tops of the pine and fir branches, as well as of fully grown pine needles. In picking these off, a certain amount is usually rejected, or dropped by accident, and I have seen fully a bushel or more scattered about the base of a single tree, which I attributed first to the work of squirrels, till I found out otherwise. The use of such food imparts to the flesh of these birds at this season a strong, resinous flavor, not particularly relished by me at first. After finding such a tree used as a roosting place, it still remained to locate the birds, which generally proved to be a more difficult matter than one would anticipate. When they found themselves discovered they would usually remain perfectly motionless, and it was no easy matter to see a bird among the dense branches. If sitting on a good-sized limb, they would crouch lengthwise on it, leaving very little of their body exposed to view from below, and if one went off some little distance the foliage of the lower limbs would hide the bird equally effective. Single families only are found together during the winter, say from eight to twelve birds, and frequently but two or three. I have scarcely ever seen larger packs together at any time. They certainly do not pack in the late autumn in the manner of sage-fowl (*Centrocercus urophasianus*) and sharp-tailed grouse (*Pediocœtes phasianellus columbianus*), both of these species having been observed by me on more than one occasion in packs numbering over a hundred.

I first met with the sooty grouse on Craig's Mountain, near Fort Lapwai, Idaho, on the Nez Percé Indian Reservation, and was told by both trappers and Indians that these birds did not remain there during the winter, in which belief I consequently shared at that time. I was also told that when a covey had been located in a tree, by being careful always to shoot the bird sitting lowest, the whole lot might be secured successfully. This may be so, but somehow it always failed with me; usually after the second shot, often even after the first, and certainly at the third, the remaining birds took wing, and generally flew quite a distance before alighting again, nearly always placing a deep cañon between themselves and me.

At Fort Lapwai, Idaho, in the early fall of 1870 and of 1871, on two or three occasions I found a few of these birds mixed in and feeding with large packs of the sharp-tailed grouse. This must, however, be considered as an unusual behavior, as I never noticed it anywhere else subsequently, although both species were equally abundant in other localities where I met them frequently in after years. The favorite locations to look for the sooty grouse during the spring and summer are the sunny, upper parts of the foothills, bordering on the heavier timbered portions of the mountains, among the scattered pines and the various berry-bearing bushes found in such situations and along the sides of cañons. According to my observations these birds are scarcely ever found any distance within the really heavy timber. In the middle of the day they can usually be looked for with success among the deciduous trees and shrubbery found along the mountain streams in cañons, especially if there is an occasional pine or fir tree mixed among the former. The cocks separate from the hens after incubation has commenced, I believe, and keep in little companies, say from four to six, by themselves, joining the young broods again in the early fall. At any rate, I have more than once come on several cocks in June and July, without seeing a single hen among them. High rocky points near the edges of the main timber, among juniper and mountain mahogany thickets, are their favorite abiding places at that time of year. The young chicks are kept by the hen for the first week or two in close proximity to the place where they were hatched, and not till they have attained two weeks' growth will they be found along the willows and thickets bordering the mountain streams. Their food consists at first principally of grasshoppers, insects and tender plant tops, and later in the season of various species of berries then in abundance everywhere, as well as the seeds of a species of wild sunflower of which they seem to be very fond. It is astonishing how quick the young chicks learn to fly, and well, too, and how quickly they can hide and scatter at the first alarm note of the mother bird, which invariably tries by various devices to draw the attention of the intruder to itself and away from its young. A comparatively small leaf, a bunch of grass, anything, in fact, will answer their purpose; you will scarcely be able to notice them before they are all securely hidden, and unless you should have a well trained dog to assist you, the chances are that you would fail to find a single one, even when the immediate surroundings were open. After the young broods are about half grown, they spend the greater portion of the day, and, I believe, the night as well, among the shrubbery in the creek bottoms, feeding along the sidehills in the early hours of the morning and evening. During the heat of the day they keep close to the water, in shady trees and the heavy undergrowth. They walk to their feeding grounds, but in going to water they usually fly down from the hillsides.

The love note of the cock has a very peculiar sound, hard to describe. It can be heard at almost any hour of the day in the spring, often in the beginning of March when there is still plenty of snow to be found, and it is kept up till well into the month of May. It is known as hooting or booming. The cocks when engaged in this amusement may be found perched on horizontal limbs of large pine or fir trees, with their air-sacks inflated to the utmost, wings drooping and the tail expanded. They present then a very ludicrous appearance, especially about the head. When at rest these air-sacks, of a pale orange yellow color in the spring, are only noticeable by separating the feathers on the neck and upper parts of the breast, but when inflated they are the size of a medium orange, and somewhat resemble one cut in halves. This call is repeated several times in rapid succession, decreasing in volume gradually, but can at any time be heard at quite a distance. It appears to be produced by the sudden forcing of a portion of the air in the sack quickly through the throat, and is quite misleading as to the exact locality where uttered, the birds being expert ventriloquists. I have frequently hunted in vain to locate one while so engaged where there were but a few trees in the vicinity; and although I searched each one through carefully, and with a powerful field glass to assist me, I had to give it up, completely baffled.

It is beyond me to describe this love call accurately. Some naturalists state that it resembles the sound made by blowing into the bunghole of an empty barrel, others find a resemblance to the cooing of a pigeon, and some to the noise made by whirring a rattan cane rapidly through the air. The latter sound comes in my opinion nearer to it than anything else. The closest approach to it I can give in letters is a deep, guttural *muhum*, the first letter scarcely sounded.

The accounts of the nesting habits of the sooty grouse are somewhat vague, the number of eggs to a set being variously given as from eight to fifteen. I have personally examined quite a number of the nests of this grouse between May 6, 1871, and June 25, 1883. The largest number of eggs found by me in a set was ten, in two instances three sets contained nine each, seven sets contained eight each and five sets seven eggs or less, the latter, probably, incomplete, although some of these sets of eggs were advanced in incubation. I think that eight eggs is the ordinary number laid by these birds.

Eggs may be looked for from April 15 to the latter part of May, according to altitude. The earliest date on which I obtained eggs of this grouse was April 18, 1877, when a set was found by Lieut. G. R. Bacon, 1st Cavalry, containing seven fresh specimens. This nest was placed in a willow bush growing under a solitary pine tree, in a small ravine, five miles northwest of Camp Harney, Oregon. This nest was composed entirely of dry pine needles, picked up in the immediate vicinity.

A nest found by me April 22, 1877, about four miles west of Camp Harney, was placed under the roots of a fallen juniper tree, in a grove of the same species, growing on an elevated plateau close to the pine belt. This nest was well hidden, a mere depression in the ground, and composed of dry grasses, a few feathers from the bird's breast and dry pine needles. The nine eggs were about half way imbedded in this mass and nearly fresh.

As a rule, most of the nests found by me were placed in similar situations under old logs or the roots of fallen trees, and generally fairly well hidden from view, and among the more open pine timber along the outskirts of the forest proper. Occasionally, however, a nest may be found some little distance from timber and in the lower parts of mountain valleys. I found such a nest on April 26, 1878, among some tall rye grass bushes, in a comparatively open place and within a yard of Cow Creek, a small mountain stream about four miles east of Camp Harney. There was no timber of any size, only small willow bushes, within two miles of this nest. The nest was placed partly under one of these rye grass bushes, and the bird sat so close that I actually stepped partly on her and broke two of the eggs in doing so. This nest contained eight slightly incubated eggs. It was composed of dead grass and a few feathers.

The most exposed nest, without any attempt at concealment whatever, that came under my observation, I found on June 8, 1876, on the northern slope and near the summit of the Cañon City Mountain, in Grant county, Oregon, at an altitude of about 6,800ft. I was returning from escort duty to Cañon City and sent the party with me around by the stage road which wound in zigzag turns up the steep mountain, myself and one of my men taking a much shorter but far steeper Indian trail which intersected the wagon road again on the summit.

Near this intersecting point the trail passed through a beautiful oval-shaped mountain meadow of about an acre in extent, and near the summit of which stood a solitary young fir tree. No other trees were growing nearer than thirty yards from this one. The meadow itself was covered with a luxurious growth of short, crisp mountain grass and alpine flowers, altogether as lovely a spot to take a rest in as could well be found. Arriving at this point, and knowing that the party would not be along for more than half an hour at least, I dismounted and unsaddled my horse to let him have a roll and a good chance at the sweet mountain grass, of both of which opportunities he was not slow in taking advantage. Throwing the saddle in the shade made by the little fir, I lay down to take a rest myself. I had a fine setter dog with me, who had been ranging along both sides of the trail and who came up wagging his tail just as I had settled myself comfortably. Rock, my setter, had approached perhaps within two feet of me at a pretty brisk lope, when all of a sudden he came to an abrupt halt, fairly freezing and stiffening in his tracks, and made a dead point alongside of me. I could not understand at first what this all meant, even my horse thought it worth the while to stop eating, and with his ears pointed forward was looking in the same direction. Rock was fairly trembling with excitement, but kept to his point. Jumping up quickly, I looked to the right and rear, thinking that perhaps a rattlesnake might be coiled up in the grass, and saw at once the cause of my dog's strange behavior. It was only a poor sooty grouse sitting within three feet of me on her nest containing two chicks and seven eggs on the point of hatching. It was as touching a sight as I had ever seen, the poor bird, although nearly scared to death, with every feather pressed close to her body, and fairly within reach of the dog, still persisted in trying to hide her treasures; and her tender brown eyes looked entreatingly on us rude intruders, and if eyes can speak, hers certainly pleaded most eloquently for mercy. She let me almost touch her before she fluttered off the nest, feigning lameness, and disappeared in the neighboring undergrowth. Counting the eggs, and examining one of the young chicks which apparently had only left the shell a few minutes before, I at once vacated this vicinity and took up a position some 50yds. in an opposite direction from what the bird had taken, to watch further proceedings. The grass was so short that it did not hide the bird, which, after perhaps ten minutes' waiting, came slowly creeping and crouching toward the nest and covered the eggs again. I did not disturb her further, and hope that, although her selection of a nesting site so thoroughly exposed was not judicious, she succeeded in rearing her brood in safety. None of the eggs in the nest touched each other; they were all about half covered or imbedded in the material out of which the nest was made—dry grass, pine and fir needles, and a few of the bird's feathers, presumably plucked out by herself.

Incubation lasts about eighteen days. Females predominate in numbers. The weight of full grown cocks varies from two and a half to three pounds; I have never obtained one that weighed more. Hens weigh from one and three-quarters to two and a half pounds; the latter weight, however, is rare. Many of the young broods are fully grown by Aug. 15. They afford excellent sport, lie well to a dog, often letting you almost step on them before taking wing, and are strong and swift flyers. Their ordinary note very much resembles the cackling of a domestic hen. The Indian name of the sooty grouse on the Northwest coast is *tyhee cullaw-cullaw*, chief bird.

As stated before, according to my own observation, the usual numbers of eggs laid by the sooty grouse is about eight, and occasionally as many as ten are found in a set. Their ground color varies from a pale cream color to a creamy buff, the latter predominating; in a single set before me it is a pale cinnamon. The eggs are more or less spotted over their entire surface with fine dots of chocolate or chestnut brown; these spots vary considerably in size in different sets of eggs, ranging from the size of a No. 3 shot to that of a mustard seed. These markings are generally well rounded, regular in shape and pretty evenly distributed over the entire egg. They never run into irregular and heavy blotches, such as are frequently found in the eggs of the Canada grouse (*Dendragapus canadensis*), which approach the pattern found among the eggs of the willow ptarmigan (*Lagopus lagopus*) much nearer than the former. In the eggs of the sooty grouse all these markings, as well as the overlying ground color, can be readily washed off when the eggs are still quite fresh, leaving the shell of the egg a very pale creamy white in reality. The largest egg in the series in the National Museum collection measures 2.08×1.35in.; the smallest 1.78×1.28in. Average size about 1.86×1.31in. The shape of the majority of these eggs is ovate; some may be called short ovate and others elongate ovate. There is no perceptible difference between the eggs of the sooty grouse and those of *Dendragapus obscurus*, the dusky grouse, as well as those of *Dendragapus obscurus richardsonii*, Richardson's grouse; their habits are also essentially the same.—*Capt. Chas. E. Bendire, in the Auk.*

The Copperhead's Warning.—Williamsport, Pa.—The copperhead (*Ancistrodon contortrix*), a dangerous serpent of the rattlesnake family, is generally supposed, unlike other venomous reptiles, to give no warning before it bites. I have in captivity two fine specimens. They are confined in a glass case on the bottom of which is a thick layer of sand. When a live coal or lighted cigar is held quiet close to the glass, they immediately erect their heads and place themselves in position to strike. Before striking the rattlesnake erects the tail and sounds the warning, but the copperhead turns the end of the tail downward and vibrates it with lightning like rapidity, thus making a rustling sound which is quite distinctly heard when one listens attentively. Out of doors, however, the warning of the copperhead is likely to go unheeded.—Chas. H. Eldon, Taxidermist.

Crocodiles in Florida.—Marco, Fla., Jan. 6.—*Editor Forest and Stream:* The schooner Little Tycoon, Capt. E. V. Stephens, engaged in hunting alligators for their skins, brought in on the last trip the skins and heads of fourteen crocodiles, which proves beyond a doubt that they are native in that portion of the coast where they were captured. They are in no small numbers, as fully seventy-five were seen, but owing to heavy winds they could not be secured, the hunters being unable to strike them, the water being so muddy. No alligators were found in same section.—Marco. [It has long been known that the crocodile (*C. americanus*) is occasionally taken in Florida, but it has not been supposed that they were anywhere as numerous as here stated.]

An Excursion to Labrador in the summer of 1889 is under preparation by Prof. Geo. E. Gladwin, No. 16 Howard street, Worcester, Mass. The plan is to charter a steamer, start from Sydney, Cape Breton, July 12, and go by way of the Gulf, Straits of Belle Isle and along the coast as far north as the Savage Islands in Hudson's Straits. The expedition will afford opportunities for sport, scientific investigation, and all the charms of northern travel. Provision will be made for ladies. The expense of the trip will not exceed $250.

Game Bag and Gun.

"Sam Lovel's Camps." By R. E. Robinson. Price $1.

MICHIGAN'S NORTHERN PENINSULA.

Editor Forest and Stream:

The fact that deer, heretofore so abundant in the upper peninsula, are rapidly decreasing in numbers, has been admitted as beyond question, and the cause was mainly attributed to the number of wolves that abound in the woods, as well as to the excessive slaughter by sportsmen during the open season. A still greater enemy has just been revealed, however, by Deputy Game Warden Moriarity, of Menominee county, in the discovery that human wolves have been doing the work of extermination after the sportsmen and hunters have returned to their homes. Two men, with more enterprise than honesty, had been buying and shipping wood from a small way station about a mile south of Floodwood, Mich., on the Milwaukee & Northern Railway, to Green Bay, Wisconsin. The fact that there could be very little profit in this "wood business" gave rise to suspicions that it was only pursued as a blind, and the game warden, upon hearing of the case, decided to investigate. Upon arriving at the place he found a freight car on a side track, loaded to all appearance with wood for the market. Upon unloading the wood, however, he found in the back end of the car a tier of deer, numbering some twenty-seven carcasses, and in a condition that would find a ready market. Upon searching for the industrious Wisconsin woodsmen it was found that they had already decamped for parts unknown. They not only violated the law by shipping venison out of the State, but also for killing deer out of season, and it is to be regretted that they escaped punishment. This unlawful practice had been carried on over six weeks ere this discovery.

In the Legislature of Michigan the law-making machinery is running along smoothly, and the revision of the game laws is receiving some attention. A petition has been presented, asking that the laws be changed so that deer may be killed in the Upper Peninsula between the dates "first day of November to the fifteenth day of December," instead of between "first day of October and fifteenth day of November."

That the words "except Upper Peninsula" shall be stricken out. As the law now stands no bounty is paid by the State upon wolves in the Upper Peninsula.

If deer is permitted to be killed earlier than October first, hunters will rush into the woods and kill them for mere sport. Earlier than October first the deer are in the streams and lakes from the flies, or on the shores, and are killed easily, but the venison cannot be shipped nor used, unless used at once. Hunters will kill for mere wantonness. If the time for killing deer is to be extended at all, let the extension be while the deer are in good condition, and not when poor from fighting flies.

Speckled trout, the finest game fish in the world, are scarce enough here now; let us protect them while we can.

Wolves are numerous. Although the hunters may kill many deer, the wolves kill even more when the deer are helpless in the deep snow. Many instances can also be shown where the wolves have killed calves, and they are a complete estoppel to the raising of sheep. If a sufficient bounty were placed upon wolves, the hunters would devote their energies to kill them, and it would prove a double advantage to the protection of deer.

The enactment of the above, it appears to us, would be in the interest of all concerned, as it would protect our game. In this there is some difference of opinion, however, as a resolution of the Board of Supervisors of Chippewa county was presented to the Legislature, in which they declare that they believe that the present game law is unjust and oppressive to the settlers of the Upper Peninsula of Michigan, and recommend that it be so changed as to allow actual settlers to kill deer or catch trout for their own use only during the months of September, October, November, December and January; and that the deer season for general hunting and selling be only during the last week of the months of September, October, November and December. The same board refused to give its game warden any compensation. A member expressed himself as follows in a local paper:

> The board has no respect for the game law as it stands, or for men who make laws just for the benefit or pleasure of a favored few. We wish to see the game and fish properly protected for the proper use of mankind, not to provide sport, pastime and pleasure for the few who have money and leisure to spend in the pursuit of excitement and sport. * * * The game law was framed by the sporting men of Michigan; it would be more proper to say the sporting men of the Lower Peninsula. The settlers of the Upper Peninsula, to whom game and fish are sometimes of the utmost importance, have had no voice in the matter, and now they propose to—at least some of them are going to—have something to say about it.
>
> The law preserves the game for those who do not need it for food or seek it for use as food, but for the mere pleasure of killing it, and shuts out the inhabitant of the country—forbids him to kill it at the time when he has leisure to do so and when he needs its flesh for food. It is wrong in principle and unjust in its provisions, and we will not aid in its enforcement. * * * I believe God made the game and fish for man's proper use, and not for man to torture just for sport. I am one of the members of the board of supervisors which voted unanimously not to pay any salary to the game warden; and believe I have only mildly expressed the sentiments of the board.

A bill has been introduced which provides a bounty of $12 for full grown wolves and $10 for whelps.

Laube.

Lake Linden, Mich., Feb. 12.

MISSOURI QUAIL.

Seneca, Mo., Jan. 31.—*Editor Forest and Stream:* To-day closes the hunting season with us, and I am glad to say that the supply of birds left is greater than it has been for years. This winter has been very mild, with not enough snow to give the pot-hunters a show at their deadly work. They have brought but very few birds to market this season, although the shooting has been fine for real sportsmen. I think the supply of birds will be greatly increased by the opening of another season. There are a few hunters here who do some hunting in the close season, but they will be watched this year and dealt with according to law, for we must protect our game, as there is a very limited supply.

There are a few market-hunters here, but they are sportsmen and cannot be classed as pot-hunters, as they do their shooting for the sport, not considering the profit.

The buyers here have shipped during the open season 10,114 quail, 259 prairie chickens, and there were 300 quail damaged, not shipped. I know of some hunters who have done their own shipping, which I think would bring the number of quail shipped from this place alone near 15,000. This is several thousand less than last season; which shows plainly that the potters are the ones that keep the supply of birds down, as last season was a fine one for their work. The farmers should protect the birds, and learn that protection does not mean simply to keep men from shooting, but that they must do away with their nets and not drive whole flocks into them and pinch their heads. This I think is very cruel, not considering the rapidity with which it destroys the birds. You might put a half dozen sportsmen out with dogs and guns, and they could not destroy birds at this rate, for it is very seldom that you can kill more than five or six birds out of one covey.

We have a great protection here for birds in the way of an undergrowth of black-jack and post-oak brush. After the birds are shot at a few times in the first of the season they become wild; and then as soon as you get from two to six shots they fly into the thick brush. Then you had better go for a new covey, for you will find it hard work to get through the brush with your gun, even without trying to shoot a bird should you be lucky enough to see one. I have tried the brush a few times, and instead of seeing the birds could only hear them fly. You would think it impossible for a bird to fly through such places, but they go. Some of the farmers have forbidden hunting on their farms, and do not allow shooting on them at all, which I think will give us more birds in a few years. A great amount of shooting is done in the Territory, but the Indians are trying to have it stopped, and I think, altogether, we will soon have the supply of birds on the increase.

The prairie chickens are almost extinct in this part of the country, and it has been only a few years since the shooting was fine. I have shot them day after day with a small rifle, and could kill more than I can now with a good dog and a first-class shotgun. By going fifty miles west we can find chickens enough to have a few days' sport; and early in the season I have had good shooting only eighteen miles west of this place in the Territory; but that is growing less each year. We have not had any duck shooting this fall and winter, and I am afraid from the present outlook we will not have much this season.

F.

Game in Town.—When Custodian Allen, who has charge of the Government building at Ninth and Chestnut, walked through the basement this morning he heard an unusual slight noise and looked about for the cause. After some effort he discovered that the intruder was a plump woodcock with an extraordinarily long bill. Nobody knew where the bird came from, and some one of the clerks said they had a suspicion that it was looking for an office under Harrison's Administration. Mr. Allen took charge of the visitor and said he would keep it as a pet.—*Philadelphia Evening Bulletin, Feb. 5.*

Clinton, N. Y., Feb. 14.—The few ruffed grouse in this section left by the shooters seem to be wintering well. Shortening the season as proposed by the Coggeshall bill would in my opinion be wise, but it cuts off the wrong end. The birds should be protected during September. The killing of one full-fledged strong flying mature bird is more satisfactory than shooting half a dozen half-grown bob-tailed chickens from trees.—F. A. E.

A Large Gray Fox was recently killed by J. E. Baker, near Montgomery, Orange county, N. Y.; it is a rare prize in that region.

FOREST AND STREAM.

SUPPLEMENT NO. 1——DUCK SHOOTING.

A MASTER OF THE ART.

Editor Forest and Stream:

To the lover of the gun no branch of field sports gives more genuine pleasure than wildfowl shooting. In early spring the first flight would make me forsake my daily labor and get out my old muzzleloader and invest my scanty means in the purchase of wads, caps, powder and shot. The result very likely was scarcely more game than I had found room to put in the side pocket of my jacket, after tramping all day through mud and water, at times lying flat down on the prairie, at others crouching in a fence corner trying vainly to hide from some passing mallard.

The Illinois river bottom was my home when I made my first attempt at duck shooting. How many weary tramps I made through that black, sticky mud, tired and worn out, darkness overtaking me often before I could reach home. My game in those days usually gave me very little trouble; two ducks I usually considered a decent average, and five or six something to be carried in full view of the unfortunates who did not have any.

In 1883 Heron Lake, Minn., became my resting place, and during that fall I made the acquaintance of C. W. Hamilton, of Windom, Minn. While chicken shooting I was stopping for dinner at the house of a German farmer, when Hamilton and Sheriff Barlow, who were also out chicken shooting, came in to have their dinner. Hamilton, learning that my brother John owned one the finest duck points on Heron Lake, invited himself to be my brother's guest during the ducking season, and said he would give me some points on duck shooting I did not know.

A native of Henry, Marshall county, Ill., Hamilton is one of the best duck hunters I ever knew. He is a dead shot, and an intimate knowledge of the habits of wildfowl, gained from a life spent in their pursuit, enables him to take the advantage of every trick known to the professional duck hunter; and on the famous Senachwine Lake, a few miles above Henry, he shot many thousand wildfowl.

Hamilton made his promised visit to my brother's farm, which lies on a point projecting into the marsh that surrounds the open lake. To the north of the house is a large marsh, hundreds of acres in extent, and southward runs the marsh bordering it for about three miles. East of the house the dry land terminates in a point, forming one of the finest duck passes in the Northwest. Hamilton made his appearance about 5 o'clock. The evening flight had set in, and mallard, teal, pintail, spoonbill, gadwall, redhead, canvasback, etc., were flying past in quick succession. After unpacking his tent and taking his boat and gun out of the wagon, Hamilton proposed to go and have a shot on the pass. A shot fired by Hamilton to see if any ducks were on the marsh north of the house, had raised up an immense number of mallards and pintails, and they were settling over the marsh in all directions and settling down again. I was in advance, and on my reaching the small creek that runs past the point a mallard drake took wing. I thought it was too far away, but Hamilton, from behind me, raised his gun and knocked it stone dead. "Mark south," from Hamilton, made me crouch among the grass, and looking over the canes I saw about a dozen bluewing teal coming down on our left. Just before they reached us Hamilton rose up, and jerking gun to shoulder cut down three with his first barrel, and, taking time, brought down two more with his second, after which he quietly turned round and asked me why I did not shoot. Looking south just then I saw a half dozen mallards coming down on our left, with a fine large drake slightly in advance. It is too early in the season for the green on the head and neck to be distinguishable, but the light-colored belly showed up plainly and placed his identity beyond a doubt. "Now, show what you can do," whispers Hamilton, "and be sure to swing your gun on the head and slightly in front of the duck you shoot at, and he's your duck." On they came, unsuspicious of danger. The drake in front, catching sight of us kneeling in the grass, begins to climb upward; but too late. Hamilton, rising to his feet, throws gun to shoulder, and seemingly simultaneously with report the drake throws head back on shoulders and drops stone dead among the canes. The whole bunch are now climbing skyward for dear life, but not before two more respond to Hamilton's second barrel, and drop from midair to terra firma.

Obeying Hamilton's directions, I singled out one in the rear of the flock, and swinging my gun on his head made a clean kill with my first barrel; but neglecting to allow for the frightened ducks' upward flight, I shot under with the second barrel and made a clean miss. "I guess that's not so bad," was Hamilton's quiet rejoinder to my congratulations on his fine shooting, "if I can't kill ducks I ought to. I've been long enough at the business, and I think after a while I can make you kill them, too. Sit quite still now, and I will show you how to kill a single bluewing teal coming down wind."

The teal were now flying thick and fast, and we did not have long to wait. One was now seen coming from the north up the creek, a brisk wind was blowing, and the bluewing was flying fast but low, and going to pass on our left. Now Hamilton whispers to me: "I will kill that duck by shooting 5ft. ahead." Just before it was oppsite Hamilton rose to his feet. The teal must have seen him, but he kept straight ahead, and at the crack of the gun seemed to collapse as if struck by lightning, plunging forward an inert and lifeless mass into the sawgrass that lined the creek.

"That's the way to groundsweat 'em," was Hamilton's quiet remark as he coolly took the empty shell out of his gun. "When you go duck shooting there's nothing like knowing how," a remark I fully appreciated.

The sun was now beginning to get low, and as it was his first night in a strange place, Hamilton proposed we go to the house and have supper and make preparation for an all-day hunt on mallard, teal, widgeon, pintail and other shoal water ducks next day. An account of this I may lay before your readers, and I may give them the benefit of many valuable hints I received during a long shooting acquaintance with one of the most expert duck hunters I ever knew.

RUSTIC.

COMFORT IN DUCK SHOOTING.

THE prevailing opinion among many seems to be that in order to shoot ducks one must necessarily endure a siege of hardship and suffering similar to that of a North Pole expedition. Even old sportsmen who have for many seasons gathered in their quota of quail, grouse and woodcock, I have heard vehemently declaim against duck shooting. That there is a way of rendering this sport replete with pleasure instead of suffering I will attempt to prove.

I have had the pleasure (note I say pleasure) of being one of a ducking party for several successive years, and on each and every excursion I have been exposed to all kinds of weather—fair and wet, mild and freezing, gentle southerly breezes and roaring northwesters. Still, I live to tell the tale, and hanker for more of the same.

To shoot ducks and enjoy the sport, the very first desideratum is to be clad properly, so that no matter how severe and changeable the weather may be, one's blood can be kept in thorough circulation. Remember if the feet are kept dry and warm half the battle is won. Don't be afraid of dressing too warmly.

Our party on Barnegat Bay is ensconsed aboard the shooting scow Halcyon, owned by our host, Mr. G., a most genial and entertaining gentleman. It is one o'clock A. M. as we turn out of our wide, roomy bunks to prepare for the coming day's sport. The wind is howling from the northeast, which, together with the surge and pounding of the seas against the Halcyon's flat bow, is very suggestive of discomfort, but also of long lines of honking geese and bunches of fowl.

Through the cabin windows to the eastward Barnegat light can be seen dimly flashing through the mist and darkness. A slight odor of steaming coffee prevails in the room, while a faint sizzling is heard emanating from the kitchen forward, which betokens that we are not to go away hungry.

The cabin is warm and I strip off my woolen night shirt and in the buff I go to the wash room and sponge from head to foot with cold sea water, then back to the cabin and rub dow with a coarse towel until all aglow. Two pairs of long all wool knee hose are drawn on over a very thick pair of knit wool drawers, outside of which I wear a pair of long red flannel trunks; old heavy pantaloons complete my lower wardrobe. On my feet are seamless woolen felt slippers worn inside of rubber hip boots, purposely large in the feet so as not to impede circulation in the slightest degree.

Two heavy all wool undershirts and a woolen jersey are the next to come on, then a blue flannel shirt, and last my brown duck shooting vest and flannel-lined shooting coat, in the pocket of which is a knit woolen scull cap, which permits of being drawn down over the ears and at the same time protect the back of the neck. Lined, neatly fitting leather gloves and a soft hat completes my rig.

Of course I have a long heavy ulster for special need, but seldom worn while shooting, as it is clumsy for a gunner. The object of wearing so much underclothing is to do away with heavy overcoats, which impede rapid movements. Woolen wristlets are very comfortable, as by protecting the wrists the fingers are not so easily stiffened by wet and cold.

I also have a pair of heavy woolen blankets with one of rubber tucked away in my sneakbox, for more than once have I been forced to remain all night on a point in an open boat, the weather being too bad to permit of my returning to the scow.

Fitted out in this manner, with plenty of dry meadow hay in the bottom of my box, particularly at the stern, to stuff my feet into, I have serenely enjoyed many a cold wet day with the ducks, while my gunner, though toughened with years of such exposure, would lie there shivering and teeth chattering.

If by chance I feel that I am becoming cold, I invariably at once get out of my box and take a short run on the meadows, which soon restores the natural heat. By no means wait until you are chilled. And always avoid stepping into your box with your boots clogged with snow.

Some may think all this clothing superfluous, but it is not in the least while you are lying motionless and unprotected in an open boat. I always remove my coat and vest while rowing to and from the points, thus having additional clothing to put on upon the relaxation of exercise.

I remember well, upon my first ducking trip, how, having been warned by the many stories of the hardships a ducker was bound to encounter, I had taken with me, as one of the party claimed, enough underwear for three men, and for half a day endured many jokes cracked at my expense, and listened to much sarcasm in the way of remarks reflectingly cast. I did a little joking myself, however, the next day, when these same men of wisdom expressed a desire to borrow an extra shirt or so.

One very important item is that these garments are all made of pure wool, not merino or of any cotton mixtures. Bear in mind that wool worn next to the skin is at all times most healthful. Hoping that my hints may prove of value to some uninitiated I ask the doubters and skeptics to cease scouting the sport of duck shooting and to give my methods a fair trial.

BROADBILL.

CAMPING ON THE MISSISSIPPI.

FOR many miles along the Mississippi Basin, on either side, the river is bounded by a stretch of low swampy land, ranging in width from one to ten miles. This land in certain seasons of the year is subject to overflows when the river gets on a rampage, which, as with the Nile, generally occurs at stated seasons of the year, usually in the fall and spring, but the spring more especially, when the ice and snow melts from the northern latitudes and comes down with a rush.

Aside from these overflows, the land, being almost on a level with the river, is continually water soaked and covered with bogs, ponds, running sloughs and lakes; and though immensely fertile, it is unfit for any kind of agriculture; but over this wide range of lowland territory a luxuriant growth of wild grass grows in summer, often to the height of a man on horseback, and so thick as to make many tons of hay to the acre. Certain kinds of this spontaneous wild grass is used for hay where it can be got at by farmers and stock feeders when upland hay is scarce, but more commonly the larger part remains on the ground, and is burned off the next spring for the new crop. In summer the ponds and lakes are covered with water lilies, which spread out their broad leaves and always remain flat on the surface, no matter at what stage of water the lakes may be in. They also have a beautiful flower, rarely obtainable on account of their peculiar place of growing.

On the eastern bank of the river in Illinois, not far from Burlington, Ia., the river bottom is six or eight miles in width and is bordered by a narrow strip of timber along the river's bank. In this swamp and marshy land wild ducks and snipe in fall and spring abound. In the spring from the beginning of March until the middle of April, and from the middle of August or first of September, till the lakes freeze over in the middle of winter, duck shooting is the main sport. The fowl migrate slowly, feeding upon the surrounding country as they go, until the frosts and freezes finally drive them to the swamps of Arkansas and a more southern climate. A few summer species remain with us all summer and nest in their native swamps, but they are only the few and non-important varieties. They stay in the swamps throughout the day and feed upon the wild rice, which grows in profuse abundance along the edges of the lakes and streams, until about 4 o'clock in the afternoon, when they take their flight to neighboring cornfields, often going many miles beyond the bluffs in their search for this much loved food. They have been known in early days to create considerable shrinkage in the corn crop, but later this shrinkage has lessened with the diminished quantity of ducks, until now it is not perceptible.

Several years ago, before duck shooting came into so general practice as a sport, farmers and local sportsmen could easily supply their own tables with this game by invading their feeding grounds in the cornfields of an evening or morning; but later the ducks were driven out and ceased to haunt their old feeding grounds, until to-day duck shooting is almost entirely confined to the swamps and marshes of the Mississippi.

The boats used are usually skiffs about eighteen or twenty feet long and are made as light in weight and draft as possible, so as to be easily and quickly handled, as they must be carried where the water is too shallow to row. They are commonly made for two men and two dogs. The men sit in the center of the boat back to back, while in either end is an ammunition box or magazine where all the shooting utensils are kept. Many go into camp when the season becomes good and remain for weeks at the time engaged in this sport, from the city of Burlington and the surrounding country in Illinois. Hardly a week goes by in the duck shooting season but what numerous tents may be seen stretched here and there over this wide waste of marshy country. The camp hunt is one of the most enjoyable seasons of the sportsmen, and is looked forward to throughout the whole year with an intense longing. When the ducks have come good, as the hunter terms it, immediate preparation is begun. First of all is procured an old box stove with a few cooking utensils, and then he commences with the commissary department. Bread, coffee and other edibles are provided in bulk. On the highest ground nearest the swamps, with provision made for getting wood and fresh water, the tent is stretched, the stove set up, wood hauled, chopped and everything put in order. Generally three or four go into camp together, one acts as cook, while his companions divide up the success of the hunt with him. It often happens that the best cook is the poorest shot. The cook, however, is privileged to hunt when camp duties do not require his time, but this is not a great deal of the time, as hunting creates a huge appetite. In one of these hunting camps a person may sometimes imagine himself on the Western frontier enjoying the full benefit of the camp life of the cowboys and border settlers.

Should the weather be dry and not too cold, camp life is very pleasant and enjoyable, as the best shooting is in the early morning and in the evening just before sundown. One who is in camp can get out before daylight in the morning and can remain out as long as he can see to shoot in the evening, thus having advantage over those who come from their homes many miles out and return the same day. Some of the neighboring towns along the foot of the bluff are almost as favorably located as the camps. From the village of Gladstone it is but two miles out to the nearest point on the lake, in ordinary seasons, but when the river rises the water approaches to within less than a mile of the village. Gladstone is on the C., B. & Q. R. R., and is the centering point for sportsmen coming from the East. Here they buy their ammunition and hunting supplies; and it is also one of the shipping points for those having game to sell. Oquawka and New Boston further up the river are other points.

At Gladstone many of the villagers rely on the gun to supply their table with meat in the duck shooting season. Many derive no little revenue from the sport by selling their game to local shippers. Every boy in the village who is lucky enough to have a gun or fowling piece, from an old rusty Government musket to a double barrel shotgun, will sally forth at break of day in the morning and will stay out until darkness closes in in the evening, and they are not always among the unlucky number. Hunters come from inland towns many miles on either side. Burlington, Ia., furnishes a good many, but not so many now as formerly when every Sabbath was a holiday for those employed in the city, who could not well get off any other day. Then throughout the whole Sabbath the reverberating echoes of the shotgun would awaken the still air, and its constant and steady pound would be heard for miles back beyond the bluffs.

When game is to be shipped to market, it is taken to the nearest railroad station, and if there be a carload on hand a car is ordered and the birds tied in groups and suspended from the roof and sides of the car as thick as they can be conveniently packed, taking care, however, to leave air passages for ventilation between them at suitable intervals. In this way they reach market in a good salable order, even though many of them may have been killed a week, if it be cool weather in the meantime. If for sale they are never thrown in heaps at camp nor piled in bulk in shipping unless they are few in number and are to be shipped but a short distance. During the busy season several carloads of these birds have been shipped from one shipping point in a week, while more or less are used for home consumption.

This land containing these swamps has lately found its way into different hands, as a large tract has been bought up and turned over to be used entirely for sporting purposes. A few years ago a syndicate of prominent sportsmen with capital behind them bought up a large tract of this land lying a short distance out from the river bank, around which they put a barb wire fence and erected a fine club house. This house is on the railroad, the main line of the C., B. & Q., which runs directly through the club grounds, and was erected at no little expense. The railroad company stop all local trains, and others if necessary, at this place, which is known as the Crystal Lake and Eagle Grove Club House, and is about three miles out from Burlington. The house is run on the first-class hotel order, and is kept open the entire year. While the hunting season does not occupy all of this time, the fishing season begins as soon as the former closes, and throughout the summer continues until the hunting begins in the fall again, so that with the exception of a month or so in the winter the grounds are continuously occupied. Being a short distance out from Burlington, throughout the long summer season it is a great place of resort for pleasure seekers, who come out, ladies and gentlemen, for a few hours' fishing. These club grounds, however, include but a small portion of this duck shooting territory.

S. H. McMillan.

A BUNK IN A BLIND.

With a genuine feudal independence, the Lake Champlain duck shooter may claim that his blind is his castle. It is undoubtedly the most elaborate affair of the kind in use among the wildfowlers of the country. Totally unlike the bush blind of the Eastern rivers, the reed blind of the West or the box blind of the South, it stands quite alone as a representative type of field architecture. It is, in fact, a miniature house, equipped with all the paraphernalia of domestic economy, thoroughly provisioned and fitted out to stand a siege of six weeks' bombardment by the great army of southward-flying ducks. Let us take a peep at one of these cosy Lake Champlain ducking blinds.

The house part of the blind is very nearly square, about 5x6ft., and 5½ft. high. It has a sloping roof to shed rain, a door at the front end and a small window at one side. On the opposite side there is a board slide which can be opened to provide air or furnish an outlook. Across the back end—the ends being the long sides of the blind—are two bunks or berths, one over the other. A wide shelf under the board slide answers the purpose of a table. Heat and cooking facilities are furnished by a small oil stove standing in one corner by the door. In the other corner is the "armory," a rack in which are placed the guns of the occupant or occupants of the blind, convenient for immediate use. A cupboard under the lower berth contains the dishes, cooking utensils, ammunition, etc., of the garrison, while a big chest, answering also the purpose of a bench, stands conveniently beneath the shelf packed with provisions and other perishable supplies of the gunners. So much for the interior of the house part of the blind. The door opens upon a platform about 3½ft. wide, railed all around and heavily bushed with cedar or pine to such a height that the gunner when erect can conveniently shoot over the wattled boughs. On the front part of the platform is a long, trough-like pen in which are confined the live decoys. The entire structure which I have described is overlaid and concealed with evergreen boughs, so that it looks like a dark green mound standing on the edge, or in the midst of the shallow water.

It may easily be imagined that duck shooting with such comforts and advantages as are provided by these house-blinds is most delightful sport. Especially charming is it to have a brief, sweet taste of the sport for a few successive days, in the midst of one's common vocation and cares, to drive out, as I did, on a certain October evening, straight from my office to the little cedar-covered snuggery of my friend at the mouth of the Lamoille River, and bunk there for three blessed nights, with nothing to do but to eat, and shoot, and sleep, and then, for variety, to sleep, and shoot, and eat! The great busy world slipped so completely out of consciousness that when I came back to it I felt lik a Rip Van Winkle with the rags and tatters of a twenty years' slumber fluttering about me. But, unlike the venerable Van Winkle, I felt as though the vigor and gladness of youth had returned, instead of departed, while I was helping my silent friend with his keg of powder, and listening to the bowling, thunderous echoes of his 8-gauge among the surrounding hills.

I shall never forget the first night—the night of my arrival—and how I bunked like a rabbit in the heart of that mound of cedar; how strange it was, how romantic, with the great desolate flats behind us, stretching away to the bases of the hills, and the broad lake in front, lapping all night long with its waves the platform of our little house.

First, when I had unloaded all my impedimenta, and sent my team back to town, we had supper, and the getting of it; one quite as delightful a process, to me, as the other. We closed our little refuge to the chilling night air, and sat down, in a space quite as circumscribed as the old woman's in the shoe, to our culinary operations. The cheerful little oil stove furnished both light and heat. Everything necessary had been laid out upon the shelf, and we sat before it through all the operations that succeeded—preparing the food, cooking it, eating it, even down to the dish-washing—without once stirring from our places.

There is magic in an oil stove, properly managed. The wonderful rapidity and neatness with which it will deliver into the hands of an expert manipulator dish after dish, all savory and smoking, can only be equalled by that "hat from the audience" under the mazy motions of the magician's wand. My friend in rapid succession placed before me broiled duck, eggs boiled to a turn, potatoes in cream, puffy flapjacks and steaming coffee—to say nothing of his reserves, his bread, his doughnuts, cookies, pies, apples and other home and boughten delights. To be brief, I was confronted with such an array of edibles as would have surprised me out of an appetite had I been less voraciously hungry than I was. But on this occasion I ate and praised the cook by turns, until everything disappeared as mysteriously as it came, and a sense of delicious satisfaction had taken the place of a hollow yearning within. Meanwhile, a pan of water had been heating over the wicks, and, supper done, my friend washed and I wiped the dishes. Then they were stowed away in the cupboard for the night.

Afterward we lit our pipes, and, turning our backs to the shelf, looked out through the little window at the stars. My friend, who had been on the ground a week or more, told me of his daily successes and failures; how Monday's had been a good flight and Tuesday no birds had come in at all; how the evening flight compared with the morning flights; how the big 8-gauge Scott decimated the flocks and tumbled the wild ones at long range, and how the 12-gauge Parker was sure death to anything in the feathered line within 40yds. In return I detailed the news of the town; what had happened since he had been away; what were the principal topics of gossip, and how business was thriving "under the hill." National politics came up for intellectual dessert; and by the time we had settled presidential possibilities our pipes had twice burned to the stems, and we got us to bed.

Not one wink did I sleep all that night; but no dreams could have made more of a wonderland of my surroundings. I was stretched at ease upon the lower berth, under plentiful blankets. The slide over the shelf was slightly open, and I could smell the fresh, clean odor of the flats and the wide lake. Looking through the window on the north, I could see the stars glinting with the steely brightness of midnight. Various were the sounds that came to my straining ears. Overhead my friend was snoring lustily in his bunk. From the pen outside came, every now and then, the restless rustle and quacking of the decoys. A light breeze rippled the water, and the waves lapped the edges of the platform and gurgled underneath it. There were also sounds from further away; some of them mysterious, some easily accounted for. Once or twice I heard a great splash in the water, which, I suppose, was the announcement of a late-arriving flock of ducks. Occasionally a loon laughed and screamed far out on the lake. There were mysterious rustlings in the air, like the swift passage of many small birds. From the hills came the hooting of an owl, and also certain mournful, plaintive cries, which I could not assign to any living creature. Often, too, there were soft stirrings on the roof above, and sudden taps and concussions, as though some small object had dropped there from a considerable height.

I lay there with all my senses alert until the stars began to pale and a gray film seemed drawn across the sky. Minute by minute it grew visibly lighter; and at last my friend stirred, turned over with a long, regretful sigh, and poked his head over the edge of his bunk.

"Ho, hum! Are you awake, Paul?"

"I should say I was."

"How long have you been awake?"

"Since 7 o'clock yesterday morning."

"Well, I declare! Didn't you get a nap all night long?"

"Never once closed my eyes."

"It was the coffee!" exclaimed my friend. "I never thought about that. Well, we must get up. The ducks will be flying soon." Down came a long leg, narrowly escaping a foothold on my head, and balancing on the edge of the lower bunk, my friend dropped lightly backward on the floor. I followed at once, and we both got into our outer garments with all expedition, for it was distinctly cold.

"We won't have breakfast until after the first flight," said my friend. He drew on his dogskin jacket, struggled into his rubber hip boots, and went out on the platform. Presently I heard a great commotion among the live decoys, and then a splash as my friend opened the little gate and stepped off into the water. "It's an elegant morning!" he exclaimed, as I emerged, muffled to the ears. "Just enough wind to keep the ducks flying, and not enough to drift the shot." He stooped, and anchored the drake in about 2ft. of water, directly in front of the blind. Then he came back to the pen, and let loose all the ducks, which went skittering away with a joyous clamor, and settled around their quacking lord. There sat the whole flock, dancing on the water and preening themselves, as pretty a sight as one could wish to see in the gray of the morning.

My friend stood admiring the picture for a minute, and then stepped inside and brought out his big 8-gauge gun. Dropping in a couple of enormous shells, he leaned the gun against the railing of the blind, and then stood slapping his hands on his shoulders and gazing out into the still, thick and blurred air of the early morning.

"Hark!" he suddenly exclaimed. "They are beginning to move. Better go in and get your gun."

From far overhead, faint and vanishing as elfin music, came the sound of the swiftly-cutting wings of a flock of ducks. The shrill, mysterious, vibratory monotone had a strange sort of fascination about it. We listened with bending heads until the last faint pulsation of the air had ceased. Then I went inside and got my gun and a box of shells. "Bring the Parker too," called my friend. So I emerged with a gun in each hand.

At that very instant the expression of my friend's face, and the attitude of his body, underwent a startling and sudden change. He ducked down behind the cedar boughs, with intense excitement animating every feature, and while one hand stole to the barrels of the 8-gauge the other motioned vigorously for me to subside. I did so, crouching upon the floor with a gun on each side of me. "Load up, quick!" whispered my friend. "Mark right—ready!"

At the word he stood up, the hammers of the big gun clicking as he rose. I was in the act of dropping a shell into the left barrel of my Greener hammerless. The boom of the Scott drowned the snap of the barrels, so I locked them and sprang to my feet. Boom, again. The light was so dim I could see only a confused mass of objects towering skyward above the decoys. There was a great fluttering in the water, and the air was full of the rush of wings. Throwing up my light 12-gauge I singled out a duck that had separated from the main mass and was swinging off to the left. The Greener cracked spitefully, and the bird, folding its wings, dropped like lead into the water. The left barrel I fired at random into the now disappearing flock, apparently without any result. Meanwhile my friend had hastily loaded the Parker, and with two rapid shots stopped a couple of cripples that were making off as fast as they could swim.

"Well, that was pretty quick work," he cried gleefully. "Six redheads inside of a minute and a half. You dropped that quartering bird very neatly.

"I didn't expect to," I replied, modestly; "but accidents will happen in spite of the best regulated carelessness. I fired wholly without aim."

"Do so some more," cried my friend, as he waded out to retrieve the birds which the waves were drifting in. Five of them had fallen to the destructive 8-gauge; but, though I didn't tell my friend so, I was prouder with my one bird, killed clean with 3¼drs. of powder and 1oz. of shot, than he could possibly be of his three slaughtered innocents and two crippled, brought down by those successive, wide-spreading hailstorms of shot, aggregating 5oz. of lead from both barrels of his Scott. But duck shooting is duck shooting, America over, and in some localities my friend's 8-gauge would be considered a mere popgun, and his method charity itself, compared with the death-dealing practices of the native gunner.

It was now beginning to grow fairly light, and the whistle of ducks' wings far out on the water in every direction told us that the birds were on the move from their bedding to their feeding grounds. We piled six redheads on the platform and crouched down to wait for further developments. Our decoys, inspired with the old, wild yearning after freedom by the associations of the place and hour, flapped their wings, lifted themselves bodily out of the water and clamored lustily to their brethren on the lake and in the air. Had it not been for the stout string that held the drake to his anchor, doubtless our entire flock would have merrily skimmed away to join their kin. At is was, however, their excitement and clamor only served to lure their wild cousins into unsuspected danger.

Through a convenient loophole my friend kept close watch of the shifting flocks and groups of wildfowl. "Keep low till I give you the word," was his caution. "Ducks are getting to be very suspicious; and no wonder, they have been shot at so much." We had not been crouching behind the green rampart more than five minutes when I saw my friend's grasp tighten on the big gun. He shifted his position a little, looked sharply off to the left and then said in a low voice, "Here come some of those little blue-winged teals. They won't pitch, but we'll rake them as they go by. Now, then, mark left, ready!"

We popped up like jacks in a box, just as some eight or ten of those wonderfully swift-flying little fellows, the blue-winged teals, skimmed past outside the decoys. Boom! Crack! Then a mingled boom and crack and it was all over—with most of the teals. Seven of them lay dead or fluttering in the water. The big gun had done its work again; I was too modest before its stupendous powers of destruction to claim a single bird. I knew that I had selected my pair, but had too much respect for the comprehensiveness of the 8-gauge to believe that I dropped them. Again the Parker came into play and the cripples were quieted.

"Isn't this immense!" exclaimed my friend, all aglow with righteous self-satisfaction.

"Yes, it is—immense slaughter," I responded somewhat ruefully.

"Ah, yes, you mean a big bag," said my friend, condescendingly. "You will learn the stock expressions in time." He dropped a couple more of the big shells into the 8-gauge and sallied out after teals.

Fortunately—for my peace of mind at least—no more flocks were decoyed during the morning flight. Occasional bunches of three or four, with pairs and singles, gave us some delightful shooting of a more sportsmanlike kind. My friend speedily discarded the 8-gauge for this fine work and made some very pretty single shots with the 12-gauge Parker, which I praised as they deserved. As for myself, I occasionally dropped a bird, but more frequently an exclamation of disgust, which seemed to tickle my friend immensely. But the climax came when he proposed that I should try the 8-gauge! Then I indignantly retired to the house part of the blind, and began pealing potatoes for breakfast.

Oh, the romance of those October days and nights in the blind! The morning flights and the evening flights; the snipe shooting on the flats; the excursions up the river banks for woodcock! It all came to an end too soon; and yet they were long days and happy days, and long nights and happy nights—after I learned how to sleep in a bunk under cedar boughs, with a pint of strong coffee singing through all my nerves. I felt as though I had lived a primeval life for ages, when I mounted into my buggy on the appointed day and said good-by to my friend. The wagon groaned with a mighty heap of ducks, and my friend smiled as he said:

"Tell the boys I am having pretty good luck."

"No need of that," I replied, looking down at the spoils; "they'll recognize your work."

As I rode over the brow of the hill behind the flats, a mile away, I heard the dull, throbbing roar of the 8-gauge, and knew that another flock of wildfowl had suddenly been wiped out of the fauna of North America.

Paul Pastnor.

NORTH CAROLINA WATERS.

IT has been such a long time since I have seen anything in your columns pertaining to duck shooting that perhaps a few words about the waters of Albemarle, Pamlico, and Core Sounds, North Carolina, may be of interest to my fellow sportsmen. I will try and recount as far as possible my experience down there during the past three winters on board my ducking sharpie yacht, the Madelon.

One beautiful day in December, 1887, we found ourselves in tow of a smart tug en route through the Albemarle and Chesapeake Canal bound for Roanoke Island, N. C. And a hard time of it did we have, indeed, getting through that blessed old canal. It was a bitter cold night, and our tug captain seemed bound to get through, reckless of consequences to ourselves or anybody else. So, after banging into numerous rafts at the risks of having some stray log punch a hole through the yacht's bottom, and at other time swinging us so close to the shore that it looked as if the masts and rigging would be torn out of the yacht by the overhanging trees, it was with a sigh of relief that the tug cast us free to anchor off North River light. We lay there all one day waiting for a favorable wind, and the next morning at daybreak set sail, and at two o'clock that afternoon we found ourselves safe in the little harbor of Manteo, Roanoke Island. Having procured guides, and made some repairs to our rudder, we set sail the next morning, and that afternoon we found ourselves at anchor in about three feet of water off New Inlet, and about two miles eastward of the Life Saving Station.

The waters of the Sound for many miles in this vicinity are extremely shallow, being not more than 2ft. deep, and there is an abundance of grass and good feed for ducks. I never saw so many brant in my life as seemed to frequent those waters. They were in flocks of thousands, and had we chosen to gun for them with brant decoys we could have loaded the yacht without difficulty. We did indeed kill more than we needed from odd flocks that came to our redhead decoys. But the redhead duck has always had a peculiar fascination for me, and there is nothing more attractive to my eyes than to see the rigging hung with numerous bunches of this splendid bird.

It was not long before we had our sinkbox and 300 decoys placed in position out on a shoal reef along which the birds seemed to travel, and of course it was the proper thing to place my guest safely therein, so that he could have the first chance at the birds. Now, W. is a mighty good fellow and a splendid fisherman, and I think the world of him, for a more jolly friend and better companion in camp it is hard to find. But somehow W. does not seem able to "catch on" to shooting out of a sinkbox. The flight was superb, gang after gang of redheads came sailing along, set their wings, and dropped to the decoys. Up would rise the head of W., bang! bang! would go both barrels, and away would scud the flying ducks, leaving not a feather behind. This we kept up long enough to use up fifty or sixty cartridges, when W. concluded that he could not "catch on," and signalled to me to relieve him. I did so in double-quick time, but alas, the flight was nearly over, and although I remained in the sinkbox until dark, our entire bag for the day, including four birds killed by W., amounted to just half a dozen pair of redheads.

The next morning was calm and foggy. About 10 o'clock the fog lifted, and it became as bright and balmy as an April day. We left the yacht with the sinkbox, expecting to put it into position at once, when there occurred an experience not uncommon in those waters, but which was most unexpected, and decidedly startling.

Now, be it remembered that there was not a cloud in the sky and the gentlest of breezes when we left the yacht. Before we had gotten 500yds. away, a squall was upon us, the like of which I never saw before. It lasted only about fifteen minutes, but must have blown at least seventy-five miles an hour. The whole Sound was white with foam, our sinkbox was sunk in a moment, and it was only by the greatest care and constant bailing that our boat also was not sent to the bottom. The long boat belonging to the Life Saving Station was made fast astern of the yacht, and the wind caused the yacht to go so quickly about that this boat was instantly swamped. And had it not been that her crew with their guns were safely in the yacht's cabin, they too would have gone down. I understand that these peculiar squalls are quite common to these waters. They are dangerous in the extreme; in fact, the following summer the mail schooner (quite a large craft) was caught in just such a squall, and capsized with all on board. It was thought that two lives were certainly lost, an old woman and child, both of whom went down with her, but the day after she sunk, luckily, the Life Saving Crew visited her, and found her lying on her side, only partly submerged, and hearing some sounds inside, they cut away with their axes, and found the woman and child alive, but very nearly exhausted.

We remained some ten days on the flats off New Inlet, and were not fortunate enough to again catch such a flight of redheads as we found the first day. In fact it stormed and blew so hard that most of the time we were unable to use the sinkbox. There is little or no point shooting to be gotten in those waters. The flats are so wide in extent that the birds feed and remain far away from the land. So after ten days down there we regretfully turned our faces homeward, having bagged about thirty brant and about fifty redheads and blackheads.

I paid another visit to those waters in the winter of 1887-'88, and while the brant seemed as abundant as ever, the redheads seemed to have almost disappeared. And the sport was so poor that we came home quite disheartened. So when the winter of 1888-'89 came along I determined to send the Madelon further south, and on the evening of Dec. 31 I found myself on board of her at Morehead City, N. C. The morning of New Year's Day broke bright and clear, and as the rays of the morning sun were reflected upon the buildings and outworks of Fort Macon, which guards the entrance of the harbors of Beaufort and Morehead City, we found ourselves gliding rapidly along with a fair wind, bound for the flats off Harker's Island, Core Sound, distant about fifteen miles. It was not long after we sighted Harker's Island that we began to see considerable flocks of blackheads, and some brant, but alas! no redheads whatever. We proceeded on our way until late in the afternoon, and having located a shoal place where the ducks seemed to be using (feed being abundant there), we determined to try our luck the next morning. That was a beautiful night, the wind fell to a dead calm, and the air was as balmy as April, but no sooner had darkness come upon the waters than the lights of the "fire-lighters" began to creep along the horizon. They appeared in every direction; there must have been at least a dozen boats out, engaged in this murderous work. And every few minutes would come the boom, boom of their guns, a sad reminder to us that our chances for sport were being thus ruthlessly destroyed by the natives who, without the slightest concealment, thus defy the laws of North Carolina.

The next morning was just the day for sinkbox shooting, but few or no birds were to be seen. And although we put out the decoys, and faithfully waited all day, we were not rewarded with a bag of more than a half-dozen blackheads and one or two brant. We remained in that vicinity the remainder of the week, with no success whatever, and having returned to Morehead City on Sunday, Jan. 6, we set sail the following morning for Harbor Island, distant 35 miles, and arrived there that afternoon. This little island, less than an acre in extent, is located right in the mouth of Core Sound; it is of shell formation, and is thought to have been constructed by the aborigines, for numerous specimens of human bones and pottery have been found there. The island now belongs to the Harbor Island Club, a party of New Yorkers, and one of the most genial members thereof, Mr. Lawrence Pike (or "Larry" for short), met me with hospitable welcome, and did everything in his power to make my stay there an agreeable one.

The Harbor Island Club has built a very sightly and comfortable club house, two stories in height, and no one could ask for a better harbor than within its hospitable walls. The sitting-room has two enormous fireplaces, in which a roaring fire is kept up of logs 6ft. long. Their steward, Walter Homans, is a Long Island gunner boy, and they have all the luxuries, including Joe the mulatto waiterman, who is so excruciatingly feminine in voice and manners that some joking club member presented him with a complete suit of feminine attire, crinoline, flounces, bustle and all, in which upon the arrival of any guest Joe delights to array himself, and thus create a sensation at meal time. I was informed that Joe also had a ball dress with low neck and short sleeves, in which he occasionally pranced around, but he did not don it while I was there.

But the ducks were not there. For the first time in eight consecutive years Friend Larry reported himself "left" as to ducking. Day after day the sun rose brightly, and the warm breath of summer breathed upon us. How we prayed for cold weather; how we hoped and watched for a blizzard to freeze up the Northern waters and send the ducks our way. But they came not, and after waiting over two weeks we made sail for Morehead City and came home. The truth of the matter is that ducks are usually plentiful enough in these waters, and, in fact, all along the Atlantic coast. I have information that there are now enormous flocks of them along the Chesapeake, but the mild weather of the past two months has prevented their flight southward, and has caused them to gather on the feeding grounds of the Chesapeake in enormous flocks.

I notice the assertion in your columns that the birds are disappearing, and beg leave to differ with you on that, for to my personal knowledge there were never more birds on the Northern and Chesapeake waters than this and last winter; but for some unknown reason they remain in these large flocks and do not decoy. Every gunner knows by experience that unless the ducks are separated and divided up into small flocks, not to exceed about a dozen birds each, they will not decoy. The truth of it is, that among a large flock of ducks there are always some extra watchful ones, who have learned by experience what a sinkbox is, and these give the alarm to their younger and less experienced companions. Large flocks of ducks also invariably fly high, and, of course, easily discern the gunner. Small flocks fly close to the surface of the water, and these are the ones that come to the decoys. For these reasons there have been comparatively few redheads killed on this coast for the past two or three seasons. Their increase is thus scarcely disturbed at all, and just as soon as these great flocks of birds disintegrate there will be better shooting and greater chances for the success of sportsmen than for years past. I have information from certain points on the Chesapeake, etc., that canvasbacks and redheads never were so plentiful as they have been this year and last year. But they seem to have got educated and to know what a sinkbox is, for when some distance off they rise in the air high enough to look down, and see for themselves whether the flock they are approaching is genuine or not.

ROBERT C. LOWRY.

NEW YORK, Feb. 7.

OLD TIMES ABOUT CHICAGO.

I READ with much interest the description in FOREST AND STREAM of these luxurious resorts, where the wealthy citizens of Chicago recuperate their energies and indulge the sporting sentiment, with the assistance of professional cooks, trained waiters, and well-stocked wine closets. These things contrast strongly with the old days of 1840 50, when that region between the Big Calumet and Blue Island, and the Sag and Lake Michigan was a vast game preserve, needing no protection, since the game was so much more abundant than were the gunners, that no visible impression could be made on the herds of deer, flocks of geese and ducks, swarms of pigeons, flights of woodcock, snipe and plover, packs of grouse, and coveys of quail. Of all these probably only the birds of passage are now to be found in their old haunts, and these only where they find food and protection.

There are perhaps 100 guns at work now in fall and spring where there was one fifty years ago, and the breechloader of to-day is a far more deadly weapon than the old muzzle percussion gun of the forties, and all that wealth and ingenuity can do in the way of boats, blinds and decoys is brought to bear upon the wildfowl of these times.

In 1840 we drove from Chicago through the heavy sand in wagons, a tedious ride of three or four hours, with the chilling norther whistling about our ears. No stopping place whereat to warm one's fingers or take a hot drink between Myrick's, on State street, and the lower Calumet Bridge. Arrived at the river, we did our own pushing in heavy flatboats, without blinds or decoys, taking the shots as they came—a big mallard getting up from the weeds along the bank with a loud squak, or a flock of teal coming down the wind like bullets. Neither did we usually have retrievers, and so lost many ducks in the marsh. From twenty to fifty ducks to the gun was the bag, but there being no sale for them in Chicago at prices which would pay for powder and shot, there were few, if any, market-shooters. Our surplus game we distributed among our friends.

In looking over the list of the members of the Tolleston Club, I find few familiar names—perhaps six or eight—which were known in Chicago fifty years ago, and even those are perhaps not descendants of the sportsmen of 1840.

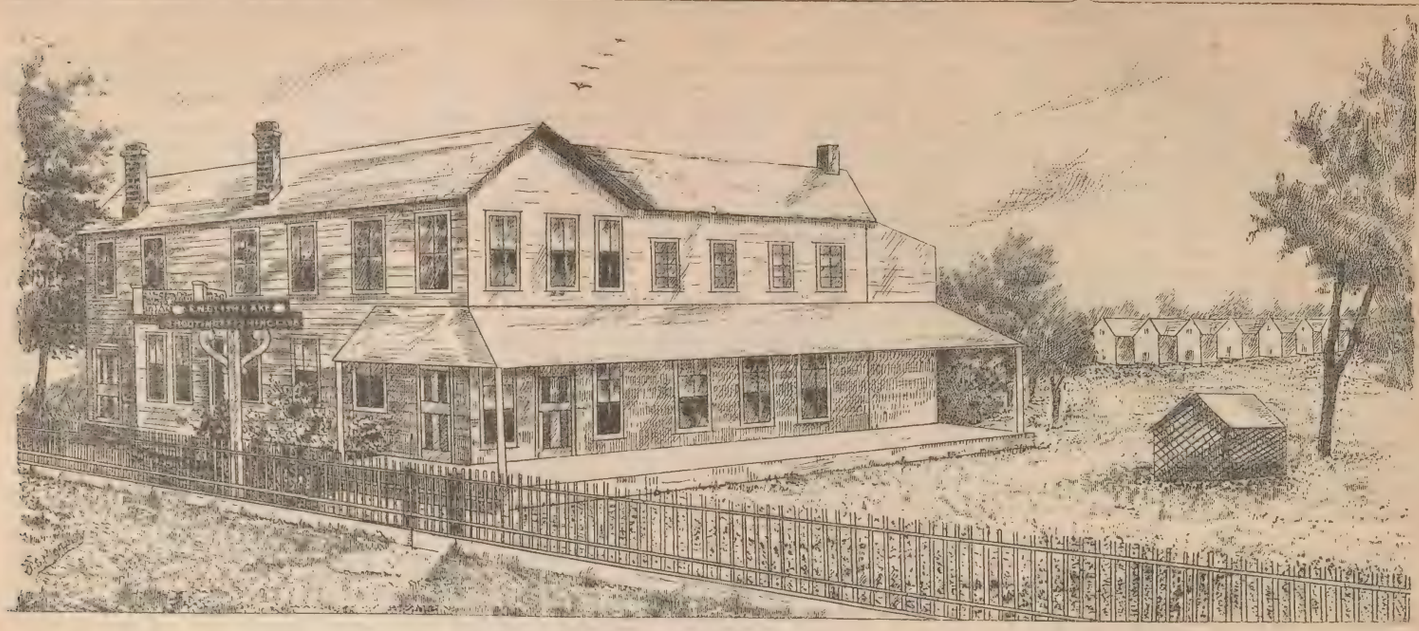
So pass the generations of men. S. C. C.

MARIETTA, Georgia.

THE SHOOTING CLUBS OF CHICAGO.

VII.—THE ENGLISH LAKE CLUB.

THE past year of low water and no ducks detracted from the glory of the English Lake Club, just as it did from that of all the river clubs, and some of the members looked as gloomy as if they didn't ever expect to see another mallard this side of the river Jordan. Even if this were to be the case—which isn't, by a great deal—I should write of the English Lake Club to-day just the same, for there is enough in the past to debar any immediate necessity for a future.



English Lake club house is seventy-two miles from Chicago, and accessible via the Panhandle Railway. The evening train gets you down in time for supper, and if you will tell the conductor that you want to get off at the house, he will stop the train at the club platform, just 47ft. and 5in. from the club house door, and, if you can manage to walk that far, Mr. John Taylor, the club superintendent, will get your baggage in for you. This is better than running on to the station across the lake, a half mile or so, and carrying your own baggage across the railroad bridge.

The grounds of the English Lake Club comprise in all about 5,000 acres, and extend up and down the river about four miles, being in some parts about two miles in width. They are located on one of those sections of the absent-minded Kankakee which were undoubtedly originally intended for a duck marsh, and for nothing else on earth. The "lake" itself is only a widening of the river, about a quarter of a mile by a mile in size. It is named after a Mr. English, an old settler. It formerly was much greater in extent, and indeed took in nearly all of what is now known as the North Marsh. There is water enough in it now to make its passage dreaded by up-bound duck boats on one of the windy spring days. The club owns marsh on both sides of the river, which is a very good feature, since it has a tendency to preserve the game. If the pounding is too heavy for the ducks, they get up and go across the river, and it must be some time before the shooter can make so long a change of base and get at them again. Probably he would not do so at all on that day, and on the next day the ducks would have the same chance over again. This constant shifting of the flight from one part of the marsh to another necessitates a sharp lookout on the part of the shooter, or rather on the part of his pusher. Happy is that pusher who discovers some little "hole" where the birds are feeding on the smartweed, or acorns, or some other of the favorite local products. The pusher watches it for perhaps a day, and then, confident in the instinct of the birds to return to an undisturbed feeding spot, he steals over to the telegraph office, and flashes a hurried message to the club member with whom he happens to have the best understanding. Then the shooter drops any and all business, hurries down to the club, promises the pusher a suit of clothes if they get a hundred birds, and forth sally the two, as quietly as may be, and with the innocent look of those who reck of naught more choice than mudhens. If the "hole" has not been disturbed, or eaten out by the devouring thousands, there is perhaps realized that "big day" which has so long haunted the sportsman's dreams, and he may come home at night with his boat fairly groaning with a feathered freight. Whether this be at some of the almost inscrutable recesses of the North Marsh or the South Marsh, whether it be on Bogus Creek, Bogus Lake, or the Little Yellow, or the Big Yellow, or on the wet meadow, or over in the oak flats—that is a question each day must decide for itself.

Mallards and bluebills make most of the shooting on the English Lake grounds. Redheads and bluebills are abundant in the spring and in the fall, when the water is high. There are a few canvasbacks, but no regular flight. Teal are plentiful. In common with all the river clubs, the English Lake folks unhesitatingly say that the shooting is best in the spring, although a great many of their members decry the practice, as the ducks are at that season in such very poor condition. I have been surprised, in getting about among the clubs, to find so many men of the most intelligent element who persist in spring shooting even while they admit that a general law against it, North and South, would be the solution of the duck supply. If we wait for all the States to pass such a law at just the same moment, it is not likely ever to be passed by any.

The local feed on this marsh seems to consist mostly of wild rice and smartweed. There are, of course, the usual marsh roots and grasses; and there is also a pretty good supply of acorns, the overflowed oak flats being a peculiarity not often found in other sections to such extent as here. Shooting on a smartweed flat in the timber of Little Yellow River, Mr. Chas. E. Willard once killed 100 mallards in half a day. This was in open, bright weather, and yet I am told that the birds came in so fast and close that the pusher, Charles Baker, killed three with his paddle. The barrels of the shooter's gun became so heated that he could not hold them. On the following day Mr. Abner Price killed 52 mallards at the same place. Mr. Price also once killed 115 ringbills in one day's shoot on the marsh.

The year of 1886 seems to have been about as good as any since the organization of the club, in 1879. Referring to the club records, it appears that during that year, in the fall, and from Oct. 20 to 26, such scores as the following were common; 31, 15, 15, 34, 15, 80, 58, 34, 32, 100, 41, 34, 21, 23, 52, 30, 78, 58, 55, 32, 53, 33, 30. On Oct. 31 the scores were: 30, 20, 30, 31, 20, 43, 32, 28, 51, 20, 37, 20. On Oct. 10, 1886, snipe bags were recorded of 17, 44, 52. There were a great many snipe this past fall, and the nature of the country is such that this sport is very often afforded almost at its very best.

ENGLISH LAKE SHOOTING AND FISHING CLUB.

There is usually pretty good rail shooting in August and September, and in September also there is usually good shooting at woodducks. There used to be a pretty heavy flight of woodducks along this part of the Kankakee, and even now they nest in considerable numbers along the oak flats. One nest with seventeen eggs was found by children near the school house, not far from the club building. Harry Hanson, 11 years old, is now the proud possessor of three big wild geese, hatched from eggs he took from a nest and carried home in his dinner pail. Mallards nest all over the wet prairie, and at the edges of the brushy points, usually upon the muskrat houses. The teal seem to prefer higher ground. One teal nest found had twenty-one eggs in it. The Canada goose annually breeds on these marshes in numbers. It is probable that the English Lake shooters kill more geese than any of the other clubs. Mr. Jesse Cummings, with John Taylor as pusher, killed twenty Canada geese in one day last spring, shooting over decoys from a woven grass blind on a shallow overflowed meadow.

The teal flight comes regularly to the English Lake marsh from the 18th to the 20th day of September, no matter what the weather; so, at least, Mr. Taylor's observations would point, and he is a hunter. Once Mr. Chas. Mears was down at the club house and having a rather dull time of it. He had packed his kit together and was about to start home on the evening of the 18th. "I told him to wait for the teal," said Mr. Taylor, "and sure enough on the next day, the 19th, the lake was black with them."

The fall mallard flight usually begins to drop in about the 18th or 20th of October. I have already, in an early note, mentioned the fact that the local nesting mallards make a flight north about Aug. 30, and it is thought that these home birds bring other new birds back with them.

The spring flight usually comes up at the first loosening of the ice, there usually being a flying advance guard, which may remain only part of a day if the marsh is still too close. Sometimes the whole spring flight will go south for a few days. The date of the first spring birds depends upon the weather. In an early season they may appear in March; upon the other hand, shooting may not begin until April 1. The season closes by law April 15. Although there are more ducks in the spring, the scores already cited show that the fall offers birds enough to satisfy a moderate shooter in any ordinary year. It was in the fall, four years ago, that Mr. Jesse Cummings, with John Taylor as pusher, took in 128 shells, and brought out 92 mallards at 2 P. M., the shells being then exhausted. In this case, the boat was level full of ducks, and sat so low in the water that only the combing of the deck stood out. The boat was strained and broken, and was barely got in to the landing in time. That ought to be pretty near good enough fun, and shows what the marsh is capable of doing. After shooting like that, it isn't much wonder that the club shooters complain of a year like this; but the fact is, they would think they had a right to complain of a bag of a dozen or fifteen birds, which to many sportsmen would seem a fair day's shooting. There were a great many days this past fall when English Lake men were growling about "no ducks at all," when a patient hunter might have gotten in with a dozen or so. Mr. Taylor, who has long been a settler on the marsh, and indeed has filled acceptably the place of club superintendent ever since the organization in 1879, says that he does not think the days of the Kankakee are numbered in the least, and points out the fact that, while 1886 was the best year of the marsh, 1880 was the poorest. He thinks it is only low water and local fires that have made the trouble this year.

There are some ruffed grouse on and near the club grounds, and there would be quail if the natives did not murder them off. Rabbits and squirrels also are to be found in some small numbers. The club records show that there are a good many woodcock in season from July 1 and on. The low warm timber lands of the Kankakee offer a tempting field to this bird.

In dull days of the past season it occurred to some of the members to try the Kankakee as a fishing stream. On Oct. 6, Mr. A. M. Fuller took 7 black bass, on Oct. 7 he caught 23, and Mr. Taylor 27. They took 80 black bass out of one "hole" in the river. There might be good fishing in this stream, but illegal spearing and seining is carried on openly, and in one well known case natives were caught using dynamite.

The records show that on Sept. 14, 1887, 12 wild pigeons were killed in the woods near the club house, and what is more singular they were killed by a young lady only fifteen years old, Miss Grace Hazen, daughter of J. T. Hazen, of Cincinnati, O. On this same trip, Wm. Haskins being her pusher, Miss Hazen killed one teal. She shoots in regular hunting coat and hat and handles a rifle as well as the shotgun, ringing the bell on the club target as often as many of the men.

The English Lake club house grounds cannot well be shown in an illustration, as they cover too much country. There is a pleasant little oak grove which fills up the yard close to the house, and it is here that the little rifle target is most usually set up. Here, too, is a contrivance which I do not see at any of the other clubs, and which is a good idea—a sort of little summer house, covered with wire netting, and therefore perfectly ventilated, whis is used as a duck house by the club. It is provided with lock and key, so that no marauding railroad man can slip over from a passing freight train and steal a bunch of ducks, as had been done before this little house was provided. The trap grounds lie between this little grove and the boat houses, which latter are situated upon the edge of a basin, which is connected with the river by a short channel.

There is one club boat house, and there are nine boat houses which belong to individuals. In and about these boat houses one can learn about as much in regard to the industry of modern duck shooting as he can anywhere. I thought John Gillespie's den might do as well as any, so we went into that. He had two boats of the patterns most favored on that marsh, and on the walls hung a full complement of oars, paddles and punt poles. There were 200 duck decoys of all sorts, and a number of profile goose decoys. Tools of different sorts were visible, and indeed there was a whole chest devoted to tools and odds and ends such as a blind maker and boat carpenter might have to use. There were two or three boxes of fishing tackle, which I regret to say I can't approve very highly. If I had worked in a sporting goods house as long as John has, I would have accumulated a lot better supply than that. Boots, sails, nets, rods, and all that, lay around or hung decently suspended. There was a willow blind, such as I have described in a previous article, and also a grass blind and a hay coat. The boats had irons screwed along the bottom, to fit them for running on the ice in the early spring; and I saw some paddles shod on the end with a serrated steel, like a saw blade, to fit them for use upon the surface of the ice. The boat seat was a sawed-off chair, and the favorite boat was arranged so that about 4,000lbs. of stuff could be piled into or on top of it. I saw a contrivance which looked like a brass post auger with a school desk on top of it, and was informed that this was a "marsh seat." You screw the auger down in the mud, and its wide flanges keep it from sinking; then you adjust the seat by means of thumbscrew, and there you are. I would rather sit on almost anything than that sort of a seat, but I should think that it would be nice at a lawn-tennis party. I saw also in this boat house another device, although I believe Mr. Taylor was the owner of it as applied; it was a combination lock attached to the fastening of a spirits keg. Mr. Taylor told me that they took in a gallon or so of whisky on a late hunt in the Indian Territory, and the only way they could devise to keep the negro cook and the visiting Indians out of the keg was to put a lock on it. They did so, and found it a good idea. It would be a good idea if extended to divers other kegs.

As I looked around through this typical boat house and made mental inventory of the curious stock, I began to be impressed with the notion that duck hunting nowadays comes pretty near being a business all by itself. It in no wise lessened this idea to walk through the assortment of boats, of which this club has an unusually good one. There are over 100 boats owned by the club, most of which, when bought of the trade, are of either the Green Bay or Waukegan model. Neither of these boats quite pleased the English Lake men, and in an earlier paper I remarked how Wm. Hine—who, by the way, lives at North Judson, and not at Logansport—had been trying to get just exactly the kind of a boat they wanted. I should think Kane & Co., or Douglas, or some of our folks out here, might supply a craft which would be infinitely better, and I would rather see such firms patronized, believing that the business belongs to them and can be better handled by them. The local boats were not above criticism, by any means. The Green Bay boat, as is well known, is a shallow, wide and straight-bottomed boat. Some such model seems best adapted to the long trips through shallow water and through the boat ways mowed out through the tall "cane" and rice. There is not enough river work to make much need for a higher, rounder and stiffer boat. The Hine boat does not differ widely from Green Bay lines. It is flat, round, with long rake, and is about 15ft. long. There was one little, low, highly-polished butternut boat, as pretty as a racing shell, that took the eye at once, though too pretty for actual service, and there were numbers of others, of good make and finish, and in style different as the tastes of the owners. Most of the boats were partially protected along the bows and sides by tin or copper. It does not take more than half a day or so of work in tough ice to cut through the thin shell of a ducking boat. Nearly all these boats, of whatever make, had a trim and hunter-like look about them, and were strong and light, so that the pusher may easily handle them. The English Lake pushers have never had an accident yet. There are fifteen of these men who are considered regular pushers, and more can be called if wanted. I believe the pusher fee at English Lake is $3 per day.

The original club house was only 24×46ft. in size, and was moved over from the other side of the river in 1879. The first addition was made four years ago, when rooms 18×36ft. were added for the accommodation of the keeper's family. A second addition of 24×36 was later put on, and the total is quite a good sized building, whose exterior, with its long porches, its broad and home-like air, and with the flanking outbuildings of barns, ice houses, sheds, etc., give it much the character of a big farm house, set down on a not very prepossessing farm country, at the edge of a body of scrubby timber, and in the arm of the river. There are about nine acres of farming ground utilized near the house, and at some little distance there are forty acres devoted to oats. 100 tons of hay were this fall put up by Mr. Taylor, who has all the privileges of the farm, besides the emoluments of the club keeper. There are twenty-seven head of cattle and a lot of horses in the barns, but they are just like any other cattle or horses, and I believe none of them are broken to retrieve.

The interior of the house is more prepossessing than its exterior. The first room is the gun room, and this shows the stern sportsmanlike qualities in its furnishings that such a place of congregation should. There is, of course, the usual big box stove, and there are, of course, the proper gun racks, tidy lockers, and shelves for the big tin shell boxes. In the little hall leading to the dining room hangs a large map showing in detail the club's possessions. Near by stands an ornamental bronze gong, of a deep and booming voice, such as may have startled the ears of the Spanish conquerors when they heard the fateful roll of the Aztec war drum. To deeds of high emprise, also, does this modern signal summon, and he must be indeed valiant who comes forth ultimate conqueror in the contest with the hosts of yellow-leg chickens, backed by all the skillful enginery of honest butter, flaky rolls, fair-visaged cream, and coffee, naïve if insidious, the same marshalled, aided and abetted by Mrs. Taylor, who presides over this portion of the club's welfare. As is commonly the case after a scene of wild dissipation of this kind, I have only a vague recollection of separate events, and would not dare say how many times I tried to engage Mr. Taylor's attention in another part of the room, while I endeavored to steal another piece of chicken without admitting that I wanted it. That kind of chicken is only grown in its absolute perfection at English Lake club house.

The sleeping apartments are upstairs, and are uniformly and nicely furnished, with marble stands, good mirrors, durable carpets, etc.

In the gun room there is a very business-like air conveyed by the long lockers, the full racks, the gun implements, etc., and this is well augmented by the imposing front of a very large and beautiful elk head, presented to the club by Messrs. E. Hoyt and John Gillespie, as the little metal inscription states; once the folding doors are opened, however, the spectator is presented a parlor interior which might well serve for an illustration in an architectural magazine's article on modern home furnishing, and which at once arouses the impression that if modern duck hunting has been reduced to a business, it is a mighty pleasant and luxurious business in at least some of its features. I have seen few rooms more unspeakably comfortable looking than the English Lake parlors. There is a nicely tiled fireplace which would measure, I should say, 8ft. across. What rare stories of

the field have been told and are yet to be told beside that vast and flickering flame! I was alone at the club house, but I could easily people the big room with lounging hunters, and could see the smoke wreaths rise and hear the quiet jest and well spun yarn. Deprived of this actually, I fell rummaging in the very well stocked sportsman's library, which seems to hold about all one would want. The furnishings of this room are tasteful and costly. The couches are wide and leather-covered, and the oaken tables, the big chairs, and the good pictures, make up an effect which you wouldn't guess at from anything you saw at the boat houses. Yet this effect is one not less pleasing than the other. It shows what kind of men go shooting nowadays. It shows that the men who have had enterprise and courage enough to set on foot this club have wealth enough and taste enough to draw about them what they please of taste and culture. I knew this anyhow, but as I wandered around the rooms I could not help smiling a little at the old popular picture of the sportsman which made him a shiftless ne'er-do-well. Times have changed since then. Do the non-sporting public know how much, and are they now up with the times?

My visit at the English Lake Club was in the winter, and there were no shooters and no ducks to shoot. In company with the superintendent, Mr. Taylor, however, I went about over the marsh somewhat, and I can say from my own observation that it is a grand one. I should think that its worst drawback would be the fact that a pull of from three to five miles would seem to be necessary to get from the club house into the heart of the marsh, at least during low water. This, however, is not a serious objection, and is balanced by the fact that there is no long ride from the railway to the grounds. For the purposes of a ducking club, and for the further purposes of an organization devoted to general recreation and conducted under the general comity of thorough fellowship, I do not see how nature or art could add very much to the English Lake Club.

Mr. Taylor regaled me with lore of the club, and I wish I had space to repeat much I heard as I sat by the big stove, trying to pick an acquaintance with the big cat, which whips all the shooters' dogs that come about the place, or to make friends with Isis, the absurdly elongated little dachshund that looks on all newcomers with serpentine suspicion. Mr. Taylor gave me much information about the traits of some of the club members, which may be useful some later day. So, talking about the frequent big trap shoots, and recalling big scores, and discussing how best to mark down dead birds in a rice marsh, and reading the club records, and wondering what sort of a year 1889 would be, we at last grew sleepy, and the first thing I knew it was morning, and my train had come to end the very pleasant visit.

In the following list of names there will be recognized many of the most persistent, most practical and most successful duck shooters of this neck of woods. They are true to the creed of the real sportsman; and as they are thus true, it must follow, as the night the day, they cannot then be false to any man. The list: Abner Price, President; Chas. E. Willard, Vice-President; John J. Gillespie, Secretary; Wm. J. Crow, Treasurer; Executive Committee—Abner Price, Jesse N. Cuinmings and John J. Gillespie. Present members—Chas. H. Mears, R. W. Cox, John F. Hazen (of Cincinnati, O.), Abner Price, W. J. Crow, J. N. Cummings, Jas. M. McKay, J. F. Barrett, W. W. Foss, F. A. Howe, Geo. H. Mueller, John B. Sibley, R. W. Stafford, Fred H. Lord, Thos. W. Wilmarth, Edward Engle, W. B. Chatfield, W. A. Barton, T. H. Elmer, Chas. Morris, F. L. Charnley, D. P. Wilkinson, John R. Adams, Chas. E. Felton, Wm. A. Angell, Marshall Field, Geo. F. Anderson, Thos. H. Ball, Daniel B. Scully, F. B. Foster, Wm. H. Bungee, John F. Phillips, S. M. Millard, Walter T. Clark, F. H. Watriss, Ed E. Ayer, T. C. Edwards, A. W. Cobb, Chas. E. Hayden, Frank Floyd, E. H. Lahn (of Alton, Ill.), D. H. Denton, H. B. Bogen, Dr. John E. Owens, C. E. Deam, L. G. Fisher, H. V. Pierpont, Graeme Stewart, R. Deam, R. W. Hosmer, J. P. O'Neill, A. M. Fulton, E. C. Sherman, Frank Pilkin, A. H. Mullikin, John T. Cowles. E. HOUGH.

No. 175 MONROE STREET, Chicago.

THREE DAYS AFTER THE LAST ONE.

MADISON COUNTY, New York.—The bird season which closed with Jan. 1 did not result in the capture of the usual number of birds. The unprecedented wet October kept many from the brush, but some good bags were made during the last of December. I think December should be stricken from the open season, because all know that grouse take to trees much more then than during any other season, which fact causes their death from the hands of fox, rabbit and skunk hunter. I know of a run through which I, in September—finding five or six birds and killing three—was dogged over by a hunter and his brace of spaniels after a hard storm in December, and this man slaughtered from the trees twenty in one day. These birds were driven into this secluded gulf by the severe storm, and undoubtedly they constituted nine-tenths of the grouse in a radius of a mile. How was next season's shooting affected by this act? The sportsmen in our section have a rule that when we have killed all but two or three in a certain cover we will leave these for breeding; and not do as a man who came here on a hunting trip did in his section. He said only one bird was left there, and he hunted three days before he killed her, but he was bound to have her. He must have felt like a conqueror as he held her panting form in his hand.

No sterner fact stares us in the face than this, the game must go unless we use judgment in its preservation and discretion in our killing. Although we have here no strictly market-hunters, nevertheless many facts combine to bring about the above results. Within a radius of twenty miles we have five gun clubs, averaging fifteen to twenty members, or on the whole about 100 wing shots. Add to this another 100 of tree shooters, and you have a small regiment armed with the double-barrel Smiths, Parkers, etc. Besides, where ten years ago you could not find a single well trained dog now you can find scores of pointers and setters.

There is one other condition that injures our grouse shooting. It is allowing woodcock shooting in August. Although many live up to the law others disregard it entirely. If the present Legislature would put August in the closed season for woodcock and squirrel then there would be no excuse for the gunner to be in the brush.

WING.

PATTERN AND PENETRATION TESTS.

LAST summer the FOREST AND STREAM mentioned that it would place on the new grounds of the Suburban Shooting Association at Claremont a screen where tests of shotguns could be made with the least outlay of time and trouble, and with perfect safety. The screen is now finished, and is a solidly built affair of timber with a facing of wood blocks a foot deep, fit to stop any possible rain of shotgun pellets. It is 12ft. long and 8ft. high, with an opening in the center 4ft. square. Two solid shutters close across the opening from the rear, and on these shutters the targets to be fired at will be mounted, while in the center, covered by the target sheet, will be the penetration pad. One discharge will make a double record, and present in a clear and tangible form just what the gun is capable of with the charge in use.

It is proposed to carry on the tests on the same lines followed in the trajectory trials so successfully carried out by FOREST AND STREAM. The only aim and object will be to find out by trial just what any particular gun will do with any particular cartridge shot under carefully noted conditions. With the results attained FOREST AND STREAM has no concern beyond that of having them accurate and indisputable.

The order of test will be simple and exact. A gun is to be tried. It is brought to the range and its pedigree taken. Its shop number, length of barrel, description of same, whether choked and how and of what material, who made it and of what model and gauge, its weight unloaded, and any other points about it worthy of note.

Then the weather conditions will be put down, the wind, its direction and force, the state of the atmosphere as to temperature and moisture, and the barometric pressure.

The cartridges to be used will be placed in a tray, in separate trays for each barrel if different loads are used. Then the gun will be warmed with a few shots fired into the ground. Then the firing will take place, over a bag or a barrel rest if desired, or from the shoulder. The owner or agent of the gun may shoot it, or the range superintendent will act. Each target made is labeled, so that when collected they form a complete story of the gun's doings; 5 shots from each barrel at 40yds. and 5 at 60yds. will make a total of 20 targets. These are for fixed 30in. circles, but to make the test one of the gun independently of the shooter, a clean sheet of paper 4ft. square will be put up and a 30in. circle struck at any point where the best pattern may be shown. This will be done as before, several times for each barrel at each distance. While the shooting is in progress 5 cartridges will be taken from the tray. They will be brought to the office of FOREST AND STREAM, where they will be opened and the manner of loading described, with the weight of powder and shot taken with a pair of scales capable of noting differences down to a single grain. In this way the observations will be broad enough to secure averages that will be fair to the gun and of value to those who are studying the interesting question of shotgun performances. The first trial of the screen will be a sort of free-for-all contest between shotgun makers, each to offer the gun which he considers a model one for the sportsman. He may load it as he pleases, but as above stated all the conditions of the gun's doings will be so set down and analyzed that there will be no inducement to anything but the best work by fair means. The FOREST AND STREAM will test all the guns now before American shooters and pushed on this market. The results when published will furnish a rich fund of information worthy of careful study, and it will be but the opening chapter of the big volume of data which it is expected the new gun-testing screen will furnish on every point of concern to trap and game marksmen.

Editor Forest and Stream:

Just as the FOREST AND STREAM Trajectory Trial settled forevever some of the most important points connected with rifles, so it is to be hoped that the trial of shotguns you are preparing to hold will settle, once for all, the following among other points, in the interests not only of American sportsmen, but of the largely increasing numbers on this side of the Atlantic who are taking interest in your paper.

1. The effect of difference of gauge upon pattern and penetration, both when the loads for which each gauge is regulated are used, and also when the ordinary loads of one gauge are fired from another.

The general opinion seems to be that small gauges throw shot more closely than large, and with equal charges of powder give greater penetration. This is not in accordance with the usual results of many experiments made by myself during the last twenty-five years. I have generally found the smaller bores, especially when unchoked, spread their shot over quite as wide a circle as the larger, and consequently put fewer pellets into a given space. Last year I tried a 28 bore and an 18, with barrels of the same length and of the same metal, both being choked and made by the same company. The 18 beat the 28 in pattern and penetration even when using the loads of the small barrel, and with its own loads was greatly superior.

As regards penetration, experiments with scientific apparatus have clearly proved that a given charge of powder produces far greater pressure on the square inch in a small than in a large bore, and might therefore be expected to drive the shot with greater force; but the effect of the greater pressure is counteracted partly by the gas having a smaller surface of shot to act upon and partly by the extra length of the column of shot causing a large increase of friction between the pellets and the barrel.

The trial held by the London *Field* in 1879 showed that not only do small gauges put fewer pellets into the 30in. circle at 40yds. when loaded with 1oz. of No. 6 shot in the 16 and 20 bores against 1⅛oz. in the 12-bores, but that they even put fewer upon a 10in. square in the middle of the circle. The following were the average patterns of 25 shots with each gun, the shot containing 270 pellets in an ounce:

	On 30in. circle.	On 10in. square.
12-bore	195	45
16-bore	161	56
20-bore	155	34

Twelve guns of each gauge were tried. The average pattern of the best gun of each gauge was at 40yds.:

	On 30in. circle.	On 10in. square.
12-bore	224	56
16-bore	189	45
20-bore	183	43
At 60yds.:		
12-bore	100	19
16-bore	92	16
20-bore	84	14

In one 12-bore only 1oz. of shot was used, and its average of 25 shots was 183, beating all the 16-bores except one, which averaged 189, and all the 20-bores except one, which averaged 183 also.

The editor of the *Field* afterward tried a 12-bore and a 20 with Nos. 6, 5 and 4 shot, firing 10 cartridges of each size of shot from each gun, the 12 gauge being loaded with 3drs. and 1⅛oz. and the 20 with 2½drs. and ¾oz.

The following were the average patterns at 30yds.:

	On 30in. circle.	On 10in. square.
12-bore.		
No. 6 shot	197	47
No. 5 shot	155	27
No. 4 shot	98	21
20-bore.		
No. 6 shot	146	29
No. 5 shot	87	21
No. 4 shot	78	15

In Long's "American Wildfowl Shooting" there is an account of some trials of large bore guns at 40yds. against a target 1ft. square. Among them were two 10-gauges fired with only 1oz. of No. 4 shot and 4drs. of powder. One put on the target an average of 72 pellets and the other of over 57.

The guns used at the *Field* trial and also those of Mr. Long were all choke-bored, and the results show clearly that the large gauges made closer patterns than the small, nine or ten years ago. Within the last two years some wonderful shooting has been obtained from 28-bores, but probably the same principles applied to the larger sizes would cause them to maintain their superiority in closeness, if this were desirable.

2. Another subject of great importance is the effect of length of barrel upon penetration and also upon pattern at long ranges. The majority of the best British gun makers assert that, in 12-bores, barrels of 30in. give better results than any of lesser length, but a few seem to differ in opinion about this, and one sportsman of great experience in guns (Mr. Lane, who signs himself in the shooting papers, "One who has fired 20,000 trial shots at marks") asserts that certain makers who know the secret of boring can produce as good pattern and penetration with 24in. barrels as with any of greater length. He speaks of a 28-bore with 24in. barrels, which makes an average pattern at 40yds. of 221 with the right and 183 with the left, when fired with one ounce of shot containing 240 pellets. He also states that such guns are greatly superior to 12-bores for ranges beyond 50yds., and that they carry large shot better. In direct opposition to such views your correspondent, "Cyrtonix", wrote to FOREST AND STREAM about the end of 1884, and again in April of the present year, strongly advocating 16-bores, with barrels of 34 or 36in., and asserted that they would give more penetration with 2¾drs. of powder than 10-bores with 5drs. He also said that barrels of 36in. are as easily handled by those accustomed to them as barrels of ordinary length, a point upon which very few sportsmen will agree with him.

3. The effect of difference of gauge upon the closeness and regularity with which the large sizes of shot are thrown, has not yet been clearly determined. Nearly all writers upon firearms say that narrow bores throw small shot best, and wide bores the larger sizes. Dougall, the London maker, in his book upon shooting published in 1875, said that this rule applies to 10 or 12-gauge as compared with 16 or 20, but that barrels of 36 gauge, if of 36 or 40in. in length, greatly excel the larger gauges with large shot.

It seems to me that any comparison of gauges must be fallacious unless the barrels be of the same length. In my own experiments I have found, with one or two exceptions, that the large gauges beat the small with large sized shot. A 42-gauge with 26in. barrels carried No 9 (about 600 pellets to the ounce) very well indeed, but all larger shot went in clusters. A 17-bore threw No. 7 shot (about 340 to the ounce) with such closeness and regularity that a snipe at 40yds. could rarely escape, but it scattered badly with any larger shot that I tried. A 16-bore by one of the best London makers, though a wonderfully hard hitter, did not carry any shot, from No. 7 upward, so closely as a 12-bore, both having 30in. cylinder barrels. I have, however, at the present time a 16-bore with 28in. barrels, recess choked, made for me nine years ago, which throws No. 3 shot (about 135 pellets to the ounce) with great closeness, and makes a better pattern with buckshot than any other gun of any gauge that I ever saw tried.

4. The difference (if any) in shooting qualities between barrels choked at the muzzle and those with a "tulip" or "recess" choke, is at present unsettled. Most of the best gun makers adhere to the former plan, but I know of at least three celebrated makers who use the "recess" choke, and have seen guns made by two of them which could hardly be surpassed in closeness and regularity of pattern. The recess plan has two decided advantages for work in wild countries. It will carry bullets as accurately as a cylinder bore and without the least risk of injury to the barrel, and it will also make splendid shooting with soft shot, whereas the muzzle choke requires hardened shot for good work, the pellets of soft lead being so deformed by the constricted part of the bore as to cause a bad pattern. After trying hard shot for duck shooting I came to the conclusion that it does not kill so well as soft, and that it is liable to break our teeth when eating the game, so discarded it altogether.

5. The relative penetration of fine and coarse powder is still a matter of dispute. In trying them up to forty yards, with cards one inch apart in a rack, the fine grain has shown a decided superiority over the coarse, but some sportsmen contend that the latter gives more penetration at long range through keeping the shot more together and deforming the pellets less.

6. In rifles there appears to be no doubt but that extra weight of barrel adds slightly to the velocity of the bullet. In shotguns it seems probable that penetration depends more upon the elasticity of the barrels than upon weight, for some of the hardest-hitting guns are very light. Perhaps this point may be determined in your trial, if some of the British 12-bores of 7lbs. weight or less contend against the heavy weapons preferred in America.

A great deal of misconception about penetration has arisen through the methods used for testing it. Paper pads are probably the most unreliable of all. When the sheets are pressed closely together a hard-hitting gun will often penetrate fewer than a weak shooter, owing to the extra velocity causing the pellets to flatten. The same gun will vary greatly in successive shots, according to the number of sheets in a pad, and also according to the looseness or closeness with which they are pressed together.

The *Field* force gauge is quite as much a test of the simultaneous arrival of the whole charge of shot as of its penetration. A hard-shooting gun, from which the pellets arrive consecutively, will not show so great a force as a feeble weapon which sends them in a mass.

Some months ago a water target was described in the English sporting papers, but it is never mentioned in them now. It seems very probable that after shot reaches a certain degree of velocity, its penetration into water would begin to decrease, owing to the extra resistance offered to very swiftly moving bodies. This principle was well illustrated by some experiments with bullets, described in Cleveland's work on American rifles, published in 1864.

On the whole, the most satisfactory test of penetration is, perhaps, that of firing at cards, placed half an inch apart in a rack, as recommended in Long's "American Wildfowl Shooting." With care in procuring the cards of the same thickness and weight, and keeping them at an even state of dryness, the results of trials are remarkably uniform. The number of cards pierced also increases exactly as the proportion of powder to shot is increased, which is the result reasonably to be expected.

In conclusion, I would say that the most important point to be settled in your trial is the best gauge for any given weight of gun. Suppose, for instance, 7lbs. as the weight which a man of average strength and endurance can carry with comfort in a long day's shooting, 3 to 3¼drs. of the strongest powder and 1⅛ to 1¼oz. of shot can be fired from it without unpleasant recoil. The question is, whether a 12-bore is best for such charges, or whether, as some think, a 16 or 20-bore of the same weight and length of barrel would throw them with superior pattern and penetration. Extra long shells are now made for these smaller bores, so that there need be no difficulty about getting in the larger loads. J. J. M.

DUBLIN, Ireland.

QUAIL IN MARYLAND.

Editor Forest and Stream:

Your correspondent "Del. A. Ware," writing from Dover, Del. says: "The Delaware State Game Society is doing good work in waging war against illegal trapping of game." I have lived in this State for two years and have seen none of the "good work," on the contrary, gunners pay no attention to the game laws. In the neighborhood of Frederica, Milford and down through Sussex county the quail were being slaughtered forty days before the season opened. I enticed a bevy upon my place by planting buckwheat, which I allowed to remain standing. All but three of these birds were killed before Nov. 15. Of course I know who did the shooting, but cannot afford to incur the ill will of my neighbors by punishing them.

It is my opinion, if instead of "an appropriation for the buying of game girds to be loosed through the State," the money was spent in securing the arrest of illegal shooters we would have as a result a large increase of game. VICTOR M. HALDEMAN.

MILFORD, Del., Feb. 16.

WEST VIRGINIA.—*Editor Forest and Stream:* In FOREST AND STREAM of the 7th I noticed a query as to the best place for black bear. Let me suggest Greenbrier and Pocahontas counties, in West Virginia. White Rock and Greenbrier Mountains in the former county are said to be well supplied with black bear. These animals are also reported numerous in the Williams River region, Pocahontas county. Should Dr. Dwyer wish to visit West Virginia to try his luck and pluck on black bear he will do well to write to Henry Gilmer, Esq., Lewisburg, who can give him all the information he desires. Mr. G. would likely accompany him in a chase after bruin should his business permit, and if the doctor wants a good companion. The best time in the spring to hunt bears here would be from the 1st to the 20th of March, because during that time we often have good tracking snows, and later in the spring it is a rare thing to see the ground white twenty-four hours at a time. It is thought that the West Virginia Legislature will change the game law to a certain extent if its members get through quarreling over the Senator in time.—P. C. O. (Lewisburg, W. Va.).

GROUSE, GUNS AND SNARES.—*Editor Forest and Stream:* If a person understands the art of setting snares, he can catch a whole flock of grouse or partridges if he sets the snares while the birds are in flocks, before the leaves begin to fall. After the birds are scattered, and the leaves begin to fall, the snarer does not have as good a show as the shooter (who can shoot). A good shot, one who understands the tricks and habits of our partridge, with a dog that knows how to work them up carefully, is in my opinion about as destructive to partridge as the condemned snarer. There are probably three hunters to one snarer; the shooter gets at least half the birds. There are many more hunters than there were ten years ago. Hunting and snaring kill the birds. The farmer and land-owner should regulate the killing on his territory so that "supply will exceed the demand," then there is a chance for this noble bird to increase.—FARMER.

STRAHAN, Ia., Feb. 11.—I consider your paper worth double the subscription price, and will not do without it as long as I am able to rake enough together to pay for a subscription. Game is very scarce here this winter, there are a few prairie chickens on the river bottom, but rabbits seem to have been killed off. Quail are very scarce here; I have seen but one covey of sixteen this winter.—H. W.

SUNDAY HUNTING IN OHIO.—For hunting on Sunday, three men of Gregg's Corners, O., were arrested, and one docked in the sum of $48. The residents there mean to enforce the law.—CANIF.

PUTTING OUT QUAIL.—Dover, Del., Feb. 4.—The Delaware State Game Association has contracted for 2,000 live Southern quail to be turned loose in the State. Indeed game was shot so close this season that a petition is likely to go before our Legislature at its present session, asking for an act to prohibit the killing of game for one or two years. Such an act would be acceptable to lovers of good sport and to those desiring an increase in our game supply.—DEL. A. WARE.

NEWPORT FISH AND GAME ASSOCIATION.—This club is in a prosperous condition; it has a membership of forty, a boat house on Lily Pond, where the black bass fishing is now fair, a fruit of the club's work of restocking the pond. Trout have been put into Neilson Pond. The Newport anglers are taking common sense measures to provide good fishing for themselves.

THE NEW YORK LEGISLATURE.

[*Special Correspondence of Forest and Stream.*]

ALBANY, Feb. 19.—Senator Collins has introduced two bills. One of them prohibits the importation of game into this State and forbids the selling out of season, whether killed in this State or outside.

The other bill appropriates $2,500 for a fishway at Lackawaxen, where the States of Pennsylvania and New Jersey come up to the New York State line. It is expected that each State will contribute the same amount, thus making $7,500 in all.

Assemblyman McAdam has introduced a bill prohibiting the sale of speckled trout in Oneida county at any time.

The Assembly Committee on Game Laws has reported the following bills: McAdam, prohibiting the shooting of partridges outside of Oneida (ordered to a third reading); Savey, for the protection of fish in Lake Ontario adjoining Cayuga county (to third reading); Little, prohibiting the selling of quail and partridges in Niagara county for three years more; McAdam, amending the general act of 1879 so as to prohibit the shooting of ducks in spring (to third reading).

Senator Hawkins's bill for the protection of oysters, etc., has passed both houses and gone to the Governor.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Camp-Fire Flickerings.

"That reminds me."

260.

THE communication from "J. M. S." which, under the heading of "The Bronzebacks of Sussex," appears in your issue of the 7th inst., reminds me of the following facts:

Will, John and the humble scrivenor hereof were fishing in the Fox River, Wisconsin, one afternoon late in the summer of 1887 and caught twenty-one black bass and one pickerel, the lot weighed exactly 55lbs. on scales as honest as ever "aided and abetted" a grocery man in "the struggle for existence."

Will can disport the delusive sproat and feathers with a sinful seductiveness, the result, I suspect, of closely observing the maneuvers of the appetizing "bluebottle" on a molasses barrel, and scrutinizing the habits of boneless cod and canned salmon; but John, being a master mason, fishes "on the square," with a rod from nature's workshop and the sinuous and succulent earthworm for bait. John had hooked a big bass (in fact he had a lien on most of our catch) and was trying to land him after the manner of the Scotch navigator—by main strength and stubbornness—when Will, who was watching the tug-of-war with dubious eyes, remarked: "Let him play, John, let him play." "Yes," said John, "just as soon as I get him in the boat he can play all he pleases."

HOODOO.

AURORA, Ill.

Sea and River Fishing.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

THE STEEL ROD.

Editor Forest and Stream:

In regard to the standards designated by "Splasher" of elasticity, pliability, weight and strength, as mentioned in last issue, these requirements were all (to me) very satisfactorily met, in the rod used last season. The balance needed correction for use as a casting or fly-rod; durability as yet undetermined. The eight ounce fly-rod just submitted, guides outside, fulfils, so far as I can see, all the necessary requisites of a fly-rod in above mentioned points, and including a proper balance.

I never permit my rods to remain jointed over night, but separate, clean, wipe and bag, as all good anglers should at the close of each day's fishing.

There was no protection to the bare metal where united at joints, and a little oil wiped on prevented rust. I see no more need to have the rod rust than a gun. How it will affect the rod by having a wet line drawn through I cannot say, as I use guides outside, and also bottle up, with a vial cork, the opening of the tube joints at butt. The joints being on last season's rod slightly tapered (from being telescopic) were that much objectionable, but those made now are parallel at joints, and exactly equivalent to the ferrules on rods as commonly united.

I never "tackled" a setter dog. Solomon says "spare the rod," but, if the dog didn't mind it, I would hang on to the rod and land the dog. BLACK BASS.

Editor Forest and Stream:

Errors in my article in your issue of Feb. 14 make me say just the reverse of what I intended. Instead of "the strength and durability of the metal rod was next questioned," read "the strength and durability of the metal rod was not questioned." Instead of "I wrote more from the standpoint of one who requires such flexibility in a rod as enables them to use the most delicate tackle," read "I wrote more from the standpoint of those who require such flexibility in a rod as enables them to use the most delicate tackle." Instead of "and when the steel rod is so made as to equal the cost of the best split-bamboo," read "and when the steel rod is so made as to equal in cast the best split-bamboo." SPLASHER.

CEDARVILLE, O.

THE VIRTUES OF MUD.

Editor Forest and Stream:

In Charles Barker Bradford's pamphlet on black bass fishing at Milton Lake, N. J., he says: "The fish under and about the bridge are very tempting, but also very wary, and the residents say that they are but seldom caught from the bridge itself. If fished from the bridge they will lie there and never move a fin; the current is weak, and if scared away by a stone or twig they will return in a second or two, almost to the same spot. Now, if any of my fishing friends think they can catch these bridge bass I will guarantee to show them (or they can go and see for themselves) from six to a dozen of the beauties lying there at any time. When I do not succeed with them to my satisfaction I get some one to systematically drop stones and drive them up stream, where, perhaps out of pure unadulterated cussedness, they seem to readily take a fly."

I can tell Bradford a better way to take either bass or trout that have grown too familiar with man and his methods to be enticed from their native element by the usual means. I have found that where there is a current the best mode of procedure is to go a few rods up stream and cave in a bank or dig up the bottom until the water is very muddy. This I keep up until the cloud of thickly earth-colored water reaches within a few yards of the pool that shelters the "big ones." I then wade down and cast a worm bait (the large night-walker is the surest) into the muddy water, allowing it to float down into the pool with the muddy cloud not ahead or behind it but in the part of the current that is the most deeply colored. Try this and I will wager that you will be rewarded with a strike in a moment. I first saw this practiced by a Maori guide recommended to me by an old fisherman in Christ Church, New Zealand. We were fishing the Avon River above the public gardens and saw plenty of fine large English brown trout in the deep holes that would not notice anything I carried in my well-stocked book. We tried worms with no better success. The fish were not even shy; they would nose the bait but not take it. The Maori explained his method and I prepared for it as above described, and soon had three fine fish out of the first pool.

In casting into muddy water, do not use either shot or float, but allow the worm to drift down with the current, letting 15 or 20ft. of line lie in the water. This gives the worm the appearance of floating down without being attached to anything, and I have never known it to fail. Whether the fish form the impression that high water is bringing down an extra supply of worms or not I do not know, but I do know that the moment they see muddy water coming down stream they begin to show signs of activity, and when the lure reaches them they take it, provided the operation of discoloring the water takes place far enough above the pool not to alarm them, and is kept up long enough to allow the pool to become well muddied. I have tried this in many different streams and always with killing effect, both on trout and bass, and am sure if my friend Bradford will carefully pursue this plan he will surely basket some fine fish from his pool of "bridge bass."

Your correspondent "G. E. W." might also find this method of great value to him in angling in his pond near Taunton, Mass., where, he complains, the black bass, though plenty and of great size, seldom take a bait.

J. CHARLES DAVIS.

JERKED TROUT.

ON a promising morning during the second week in September a friend and myself, who had been for some time sojourning at Smith's Lake, in the heart of what is left of the wilderness proper of the Adirondack region, started with our guides for a trip to Clear Pond, noted for the size and beauty of the speckled trout that thrived in its pellucid waters, as well as for the variety of catches made therefrom. It was our avowed intention of exhausting every means known to anglers of some experience in the endeavor to capture a fair creel of some of the "old settlers." A pull across the western end of the lake soon brought us to the north inlet, where the rough and stony carry of half a mile leads up the inlet to the navigable stream which forms the outlet of Harrison Pond. Having launched our boats in this stream, the sportsmen took their places in the bow and the guides silently paddled up to and through the pond, each with eager eye intent on surprising a deer feeding along the shore and obtaining a shot en route. The season was getting late, however, and we were not disappointed in the fact that none were seen, notwithstanding the fact that it is a famous resort for deer.

The carry from Harrington to Clear Pond is a well cut out trail of a mile and one-half, and leads through a magnificent growth of beech, birch and maple, after first passing one-third of a mile of tamarack and balsam swamp. The glimmer of Clear Pond is seen through the trees for quite a distance as the trail slopes gradually toward it. It is a beautiful sheet of spring water, pure and bright as crystal, shaped somewhat like the letter Q, and nearly three-fourths of a mile in diameter. In some places the water has quite a depth, and is remarkably clear and transparent, as the name implies. It is fed entirely by springs within its compass, and an outside area of but limited extent.

Our first trial was in the orthodox way of fly-casting, and although persisted in, and several changes made, no trout of any unusual size could be lured. Then a trial of minnows was had, both trolling and casting, with but little better result. Then artificial baits were tried for a time, including the phantom minnow and spoon trollers, but the catches made were not up to the standard. The guides then induced a trial of angleworms and chub tails in still-fishing in the best-known localities, and with long lines, and were disappointed in the result. It began to be conceded that there was not much show of getting any of the big fellows until springtime should again whet their appetites, and an early bird with a worm struck them on some favorable day.

As a last resort, some 9-foot leaders were gotten out and adorned with a gang of three selected large bass flies, a set of swivels arranged, and half an ounce of sinkers completed the preparation for trolling with long lines in deep water. Before casting off we gratified what we considered a whim of our guides, by consenting to permit them to add a worm upon the hook of each fly, "that in case a fish struck and was not hooked, but got a taste, he would try it again." Whether this had any-

thing to do with our success remains an open question; but the fact is, that we very soon began to obtain remarkable strikes, and were rewarded by bringing to net during the remaining two hours that we fished no less than twenty-three of the finest speckled trout that either of us had ever before seen at one time. The smallest weighed over three-quarters of a pound, the next smallest a trifle over a pound, and ranging up to the three largest, which pulled the scales at 2¼lbs. each. They were, indeed, a splendid string, and had afforded us magnificent sport in handling with our 7oz. split-bamboo rods, and excited the admiration and possibly the envy of all who saw them when they were proudly exhibited on our return to the log sportsman's hotel at Smith's Lake. The greater part were served for supper, and were found of fine flavor and the meat firm and of the salmon color.

The writer tried an experiment with a few of the largest to determine whether "jerked trout" would be palatable and could be kept for any length of time, and the result was so satisfactory that it is given for the benefit of the readers of the FOREST AND STREAM. The trout after having been nicely dressed and washed, were placed over night in a weak brine, that they might thoroughly slime. Then after washing and then drying with napkin, they were slightly peppered sufficiently as for cooking. A jerking rack was improvised by putting cleats and birch slats across near the top of a box 3ft. long, set on end. The trout having been placed on the rack, an iron pot with coals fed by bits of birch, was placed under them, and the front of the box closed by a board held in position by a stick slanting to the ground. A slow fire was kept up—except during the night—for two days, and the trout were thus slowly cooked and thoroughly dried and smoked, and were reduced nearly one-half in bulk. Some were served hot from the rack and pronounced delicious. Others were kept and served at intervals of one to three months, and found to be in nice condition and very palatable. A number of sportsmen who partook agreed that trout thus prepared would be a convenience for preserving and prevent wasting when more were caught than could be at once used, besides being an acceptable variety to camp stores, and in shape to carry for lunch or home use.

The red-ibis was the most eagerly taken of the flies used; the grizzly came in as a fair second, while the white-miller was but occasionally struck.

There are numerous bodies of water in the Adirondacks where large trout are known to exist, but are exceedingly difficult to catch, especially late in the season. Notably so is Spring Pond near the Bog River chain of ponds, mentioned in Colvin's report of the Adirondack survey, stocked originally by the veteran sportsman A. E. Kerr. After the experience recorded, it might prove advantageous for sportsmen to add a few bass flies to their trouting paraphernalia, and try deep trolling when visiting such waters. The season having closed ere another opportunity presented, the relative merit of additional worm appetizer remains yet to be tested. E. S. W.

GARRETTSVILLE, O.

THE CARP AS FOOD.

Editor Forest and Stream:

I beg to differ with you as to the edible qualities of carp and suckers. Their very habits would at once to my mind settle this question. They live in the mud or sluggish water except when running up to spawn. Their food consists of dead and decayed substances that lie upon the bottom and are sucked up, squiggled and then swallowed with portions of mud. Sometimes they come in contact with the spawn of other fish, which are gulped with as much avidity as a piece of half decomposed animal matter. You say "they are always kept a few days in pure cold water before they are killed." Of course this would tend to work off some of the food effluvium and improve the flavor of the flesh. Again you say "much of the blame attached to this fish really belongs to its surroundings." Of course it does—living in the mud and picking any decayed matter deposited there would make the fish offensive to both smell and taste. But why does he seek such "surroundings?" Simply because it is his nature. Why don't the sucker exhibit more enterprise and sometimes capture a live bit of food if he expects to adorn a plate on a gentleman's table? But no, he has no such elevated notions. His instincts are low, his tastes are low and he must always be classed with "those that breathe out contagion to this world." H.

Editor Forest and Stream:

I was interested and amused by reading to-day, in your issue of this week, the communication of Mr. Hapgood, of Boston, that great center of learning and information; concerning the capture of a "mysterious millpond monster," which is duly described with semi-scientific minuteness, worthy of Bostonian culture. Being myself a Massachusetts man, I naturally felt proud of the elucidation, and especially because it treated of the best-abused fish in American waters, and one which I delighted to champion for a dozen or more years past, as the files of the FOREST AND STREAM will abundantly testify. I cannot understand why the communication should have reminded me of another Boston incident, but it did, and although "chestnuty" I will repeat it. When the Colorado beetle, or potato bug, had been for several years ravaging the country, a specimen was caught in the suburbs of Boston, and duly brought before a highly-cultured class of Boston scientists for identification. A young lady of the class adjusted her eye-glasses, and examining the beetle promptly announced its scientific name, whereupon the poor beetle at once rolled over and died. Is it not possible that the shooting of this fine carp, in the zenith of its spawning season, saved it a more horrible, scientific death?

But seriously, now, is it a wonder that the Massachusetts Fish Commission cannot understand why the people of the State do not engage in carp culture, when they know so little of the carp? (See last report of the Commission). Hundreds of Massachusetts farmers would engage in the fascinating industry if they knew the intrinsic value of the carp, the ease and comparatively slight expense of inaugurating the business, and when started systematically, how very little attention is required ever after, and finally, how much more profitable the business is than the same areas devoted to any other farm industry. As before intimated, the carp has been outrageously belied, and mainly by those who do not know a carp when they see it. I have investigated several cases where carp have been publicly pronounced a very inferior table fish, and by prominent gentlemen, who would not knowingly misrepresent any subject under discussion. In every instance I have ascertained that they had eaten of carp which had been taken out of season, as was the case with the one shot in the pond at Shirley, Mass., "early in September." In the vicinity of Boston, carp will commence spawning in May, and continue spawning from time to time until October, providing the weather is moderately warm and the conditions of the pond are favorable. These months, then, are properly the close season, when the carp is unfit for table use. But, even during the cold months, if taken direct from waters having muddy or otherwise filthy bottom, they will be found to be in poor flavor. If, however, they are placed in clear, cold water for two or three weeks, and screened or floored from contact with the earth, they will be found to be second only to the *Salmonidæ*. MILTON P. PEIRCE.

COLUMBUS, Ohio.

FLORIDA EXPLORATIONS.—Feb. 9 the Grampus took a seine boat fully equipped for cruising along the shore and in the lakes and lagoons of Florida to Indian Key, 75 or 80 miles from Key West and about 30 miles from the point where Dr. Henshall was to go in her among the islands, to enter Biscayne Bay. Feb. 11 the Doctor, with two seamen and a local pilot, left the Grampus for Biscayne Bay. The Grampus returned to Key West Feb. 12 and was joined by Mr. W. C. Kendall, who will accompany her to the Gulf fishing banks as naturalist.

GOOSE FISH IN BRACKISH WATER.—A correspondent, "C.," living in New Jersey, mentions the capture of a goose fish or angler (*Lophius piscatorius*) near the mouth of the Cohansey River, about Dec. 20, 1888. This is a very unusual locality for this marine species and it is not to be wondered at that the fishermen did not know it. The length of the fish was four feet. The stomach and mouth contained fifteen large menhaden. Daniel Biggs was the fortunate captor of the curiosity.

LARGE BASS CAUGHT THROUGH THE ICE.—West Winsted, Conn.—*Editor Forest and Stream:* One week ago to-day Will. White, of this borough, caught a smallmouth black bass 21in. in length and weighing 5¼lbs. On the following Saturday the same fisherman secured another of the same species weighing 4¼lbs. Both these elegant fish were taken from Little Pond about 1½ miles north of Winsted, and were caught while fishing through the ice for pickerel with tips.—B.

NEW HAMPSHIRE TROUT IN JANUARY.—Conway, N. H., Feb. 16.—E. B. Hodge, Fish and Game Commissioner of the State, was here this week and had ten fishermen brought before J. C. Wood, J. P., charged with catching brook trout in January. They all pleaded guilty and were fined in sums from $5 to $50 each and costs. This will put a stop to illegal fishing in this part of this State for the present. They were catching brook trout ranging from 2 to 6½lbs. each.—SACO.

NOVA SCOTIA FISHES.—Mr. Harry Piers, an assistant in the Colonial Museum at Halifax, records the following fishes as new to the fauna of Nova Scotia: Oceanic bonita (*Euthynnus pelamys*), harvest fish (*Stromateus triacanthus*), swell fish (*Tetrodon* sp.). The last we suppose from the description to be the common *T. turgidus*. The oceanic bonito was eaten at one of the hotels and pronounced excellent.

Fisheulture.

SAWDUST IN STREAMS.

THE effect of sawdust in lakes and streams has been discussed by many writers and with conflicting opinions. In the second part of the Report of the U. S. Commissioner of Fish and Fisheries, Mr. James W. Milner gives the result of his observations on the Great Lakes. Speaking of Green Bay, he says that whitefish were formerly taken in abundance in the spawning season in a number of rivers emptying into this bay; but sawmills are numerous at present on all of these streams, and the great amount of sawdust in the rivers has caused the whitefish to leave them. The effect of the sawdust, he states, is to cover up the spawning grounds and destroy the food of the fish. Watson, in the third part of the same report, charges the sawdust with the destruction of the purity and aërated condition of the water, so changing its character as to revolt the cleanly habits of the salmon. He mentions the experience of Mr. Arnold, who had seen the gills of salmon filled with sawdust. Mr. Mather, in Transactions American Fishcultural Assoc., 1882, and in these columns of the same year, thinks that sawdust is destructive to the young by covering up the spawning grounds and by polluting the water with turpentine from the pine and tannin from oak. Mr. J. J. Brown, of Ludington, Mich., in Bulletin V., U. S. Fish Commission, charges the sawdust and shingle shavings dumped into Lake Michigan with the annihilation of the feeding grounds of fish. The statements of "Sportsman" and Livingston Stone in recent numbers of this paper, are very positive as to the deleterious influence of sawdust in polluting the water, killing the young and promoting the growth of fungus. Mr. Stone believes that after the spawning grounds are covered with sawdust the stream can produce no more trout.

Charles G. Atkins, in Part II., Report of U. S. F. C., speaks of the Penobscot River. He finds that sawdust has interfered with the success of certain fishing stations, but the salmon are not prevented from ascending to their spawning beds, which are free from obstruction and seem to suffer no injury from the refuse. Prof. H. Rasch, an eminent authority in Norway, communicated his views on the sawdust question to the Norwegian Hunting and Fishing Association in 1873. He admits that rivers on which there is considerable cutting of timber gradually become more and more destitute of salmon, but thinks that the injury is not to the fish directly, but is caused by limiting and partially destroying the spawning grounds. He cites the river Drammen, which was greatly polluted by sawdust for many years and in which the salmon decreased constantly until the fishermen at Hellefos begun hatching them artificially and planting the fry annually. Having access to the upper part of the river, which was comparatively free from sawdust, the ascending fish seemed to be little affected by the mill refuse from below Hellefos. His opinion, based upon experience on the Drammen River and the Soli, was that unless the salmon are prevented by impassable dams from ascending above the mill locations, the sawdust will not drive them from the streams nor materially injure them. "Piscator," Charles Hallock, and Milton D. Peirce have produced statistics and observations to prove that sawdust in streams of Nova Scotia and Massachusetts has not injured the fishing for trout and has not unfavorably affected any of the river fisheries.

From the foregoing survey it will be evident that there are two sides to the question as to the influence of sawdust in streams and lakes, and it may be possible that some of the States which have legislated against the deposit of this substance in certain waters have placed unnecessary restrictions upon an important industry. Unless spawning grounds are actually covered and feeding grounds destroyed, there would seem to be no case against the sawdust. At all events, the instigators of this legislation should produce evidence of deleterious effects to be remedied by legal enactments, and show that such pollution is necessarily and always fatal and cannot be mitigated by measures to aid the ascent to the spawning beds.

Editor Forest and Stream:

In your last issue, in an article treating on sawdust in streams, it is held that such pollution does not prevent the population of the waters unless the spawning grounds or feeding places are invaded by the deposit. It seems to me that as long as such a contingency might exist, it furnishes a sufficient warrant for prohibitive legislation on the part of the States. I would add in the interest of the owners of saw mills, that if they would give the matter a moment's serious thought they could see in the laws forbidding the dumping of their refuse in the streams a means of permanent benefit to themselves. Let them dig a pit, such as used for charcoal burning, except that a flue should be run up from the center to promote draught. The flue could be constructed of flat stones, and the entire cost would only be the labor, while the benefits would be lasting. Into this pit all the ashes and refuse of the mill could be put and burned, the fire being introduced from the top of the flue. When the mass is reduced to ashes the mill owner will find himself in possession of a fertilizer especially valuable for low lands contiguous to all bodies of water—his own lands or those of his neighbors. Farmers have little use for sawdust, but they all understand and appreciate the value of ashes. J. D. J.

NEW YORK.

Editor Forest and Stream:

Let me thank Mr. Hallock and Mr. Peirce for their cool-headed utterances on this sawdust question. I have been for many years investigating this subject, and have under my hand many such facts as I published in my former letter, and it is cheering to have them so effectively buttressed as they have been by similar experiences and facts. That laws have found their way upon the statute books of the country prohibiting the passing of sawdust into the streams is not proof that to do so is an evil. Many other laws have found their way there as well only to be repealed after more was known upon the subject, and I feel quite sure that the law against sawdust ought to and will share the same fate, and because it never should have been enacted, as the necessity for it does not really exist.

At the risk of wearying you on the subject, I add a few more facts, which to me are quite significant. The River St. John, in New Brunswick, is only to a limited extent on its branches encumbered with mill dams, but it is and has been for nearly a century abundantly supplied with sawdust, still it produced during the six years from 1876 to 1881, of salmon, an annual average of 172,942lbs., and during the six years from 1881 to 1887 210,366lbs, an excess during the latter over the former period of 224,544lbs. Its product of alewives during the former period was 10,018bbls. per annum, and during the latter period 16,622bbls., an increase during the latter period of 39,624bbls. The fish killing properties of sawdust do not seem to be very formidable on the river, though much of it is of that horrid pine which "Sportsman" seems to think is so deadly in its results. The following catch of shad on the river during the years indicated also tells its own story in the same direction: 1878, 429bbls.; 1879, 521bbls.; 1880, 613bbls.; 1881, 1,885bbls.; 1882, 1,882bbls.; 1883, 1,728bbls.; 1884, 2,420bbls.; 1885, 2,189bbls.; 1886, 2,716bbls.; 1887, 3,950bbls. These fish were mostly caught during the month of May while full of spawn.

The whole Province of New Brunswick with her large fish-producing rivers, except the St. John, clear and clean of mill dams and sawdust, produced of salmon per annum during the nine years from 1869 to 1877 1,789,930lbs., and during the ten years from 1878 to 1887 but 1,189,980lbs., a decrease of 599,950lbs. per annum; and of alewives during the former period 23,053bbls. and the latter 17,714bbls. per annum, a decrease of 5,339bbls. per annum. Those figures of course include the St. John, so that while anadromous fish of all kinds are increasing on the sawdust-cursed St. John by including the produce of her clean rivers, we see there must be something at work much worse than either dams or dust. Had the reverse of these figures been the result he would be a much bolder man than I who undertook to prove that sawdust did no harm; but as it is I claim that I have made a strong point in favor of the innocence of sawdust. If the deadly dust is as ruinous to fish as some suppose, it should produce results in a series of years which could leave no doubt upon the mind of any person.

The very best thing to be done for anadromous fish in your country as well as ours is to put good fishways in the dams at any cost and add to the fish year by year by artificial culture, and the imaginary sawdust evil will soon vanish and the lumbering interests will be saved a needless expense.

Your New Brunswick correspondent "Fisher" seems to think that I am not informed as to the enormous size of the New Brunswick trout, which he seeks to make one think are very whales as compared with the troutlings of Nova Scotia, which he intimates are too small to be killed by sawdust! When he takes this singular position, he proves nothing so much as that he and his companions—in the contention that sawdust kills fish—are advocating error and wrong, because no two of them can agree as to how or why it is so destructive; see Livingston Stone's view as compared with "Fisher's" and "Angler's". There are as many theories as writers; but all are provokingly economical of facts, and it is facts we want; we have been familiar with groundless theories from childhood, and it is about time the theories were supported, to some extent at least, so give us data and don't ask us to take fancy for fact.

As to the size of trout in Nova Scotia, I have seen thousands that weighed from 1lb. to 4 and 5lbs., and one or a half dozen may be seen in the museum at Halifax weighing from 5 to 7lbs. They catch double the quantity every year taken in New Brunswick. It is quite evident "Fisher" should be more sure of his facts. His Province produced of trout in the year 1886, 65,650lbs., and Nova Scotia the same year, 131,562 lbs., double the New Brunswick catch; and in 1887 the former Province caught but 71,765lbs. in her clean rivers, while the latter Province in her sawdust-poisoned waters caught 155,469lbs., being 11,939lbs. more than double that of New Brunswick, the increase in Nova Scotia in a single year being nearly 20 per cent. as compared with less than 10 per cent. in New Brunswick. Had the result been the reverse of this the facts would at once be accepted as conclusive against the deadly dust; as it is I claim them as being overwhelmingly in the opposite direction.

He discourses on the poisonous gases from rotting sawdust, and I will not waste space in refuting this idea, so flippantly put forth from time to time, but demand that the

dead fish from such causes be produced in some single river or stream in America. It cannot be done, hence full-grown men should discard such transparent nonsense. His closing remarks are fully answered by the facts and figures given above. I am prepared to figure on either single rivers, whole Provinces or districts, on single or periods of years, and the facts in all cases will be overwhelmingly against his contentions. This is too important a matter to be settled either one way or the other without conclusive facts; and if sawdust so kills fish as to deplete our streams, facts in the form of dead and dying fish should be at hand in all directions, and by hundreds and thousands on certain streams and at certain seasons, but nothing of the sort is ever seen, except in the imagination of the disappointed sportsman.

PISCATOR.

WISCONSIN FISH COMMISSION.

THE twelfth report of the Commissioners of Fisheries of the State of Wisconsin for the years 1887 and 1888 shows a most gratifying condition of affairs as the result of intelligent propagation and protection of valuable fishes. The amount of money expended during the two years was about $35,000, and the following tabular statement exhibits, in part, what was accomplished therewith:

DISTRIBUTION OF FISHES.

	1887.	1888.
Brook trout	2,930,000	2,285,000
Rainbow trout	1,345,000	1,590,000
Wall-eyed pike	8,800,000	4,450,000
Carp	17,865	25,437
Whitefish	31,500,000	18,000,000

The catch of fish, as officially reported by the wardens for the years 1886, 1887 and 1888, was as follows:

	Pounds.	Value.
1886	4,924,149	$169,739.44
1887	5,541,744	250,168.88
1888	8,780,780	270,595.06
Increase of 1887 over 1886		$80,429.44
Increase of '888 over 1887		20,426.18
Total increase for two years		$110,855.62

Reference was made last week to the success and public indorsement of the Commission's work, and we now quote the best of the report:

"We submit this part of our report with the utmost assurance that it will prove eminently satisfactory. To stock our Great Lakes with food fishes and protect the young fish planted, till they reach maturity, has been until the past few years a great question, and not wholly removed from doubt as to its final success. In the light of modern improvements, however, a more extended experience, and with the fruits of the labor bestowed on the matter by the boards of Fish Commissioners of the several States bordering on the lakes, together with the noble work being done by the Dominion of Canada, we can unhesitatingly say that the question has been stripped of the doubts and misgivings surrounding it. The most skeptical now admit its solution.

"The fishermen who have had a life-time experience in the business, thus acquiring a practical knowledge of the various kinds of food fishes, their habits, food, spawning, etc., were slow to believe that the stock could be increased by the efforts of the Fish Commission or wardens. We are pleased to report that all fishermen who have given the subject a moment's intelligent thought or watched the rapid increase of food fishes in our lakes, are now unanimous in the belief that the planting of fry, together with our present law for their protection, is of great benefit to an important industry.

"We regard the opinion of fishermen, who are the most interested in this subject, as of great value. They not only had to be converted to the idea of propagation, but their minds had to be cleared of a strong prejudice against the Commission—a prejudice that had been engendered through unwise and impractical legislation. They had the idea, too, that the Commissioners were more especially interested in stocking the streams and inland lakes with speckled trout than they were in trying to increase the supply of food fishes of great commercial value. We are glad to say this prejudice has at last been wholly removed. The conversion is complete. We should consider this evidence sufficient and would willingly rest our case, did we not have other testimony so near at hand. The fish merchants, who are as intelligent as any class of business men, are strong in the belief that without the aid that has been extended to the industry by our State, the business of taking fish would not and could not be made to pay. Thoughtful and practical people, who, by their close proximity to the fishing grounds have had an opportunity to watch the results of the planting and protecting of young food fish, are loud in their praise of the benefits arising from an intelligent treatment of this industry.

"The law of 1885 was the first really practical measure adopted by our State. It was based upon practical ideas and was well calculated to arrest the useless and reckless destruction of the most valuable food fishes. And while the legislature did not think it wise to go further that year, it was a great stride in the right direction. It invited the attention of fishermen and fish dealers to a great industry that by their own acts was being rapidly and certainly ruined. There was a general awakening along the whole coast, and in obedience thereto a convention of fishermen and dealers was called to meet at Fort Howard in the winter of 1887, and the present law was the outcome.

"Chapter 520 of the laws of 1887 re-enacts the most valuable portions of the law of 1885, and adds to that the suggestions of the fishermen's convention at Fort Howard. It is a wise and practical measure, and has done a great work toward restoring a much depleted industry. The most valuable provisions in this law are those that require all ova to be impregnated and planted by the fishermen; that protect young and immatured fish; that prevent the throwing of offal in the water, and that require all fishermen who are engaged in fishing as a business to make reports to the warden of their district as to the amount of fish caught, their value, the number of nets and boats used, and the number of men employed, together with such other information as may be required from time to time. This last provision is of great benefit, as it brings to the minds of those who are called upon to legislate in its behalf the great value of the industry, and points out the importance of providing for it and properly guarding it.

"We are pleased to say that, so far as our information extends, the law is obeyed by fishermen; they are largely in favor of a strict adherence to its provisions, and are willing to co-operate with the wardens in its enforcement. If this is not true of all the districts, it is reasonable to assume that the wardens can improve the local sentiment by more frequent visits and a more thorough explanation of the objects and provisions of the law.

"Our fishing interests were, previous to this law, fast being narrowed to very small proportions. For many years this great natural resource has been on the decline. Each year, capital invested in the business yielded a smaller return. Every inducement for profitable investment had been removed. The business was looked upon as one that in former years had been profitable, but its restoration to a paying basis seemed hardly probable. We think the figures contained in the present report justify the hope that this great industry has not only been checked in its downward course but that a healthy reaction has been brought about. It is now in a fair way to restoration."

One very interesting part of the report (referred to in another column) is the appreciation expressed by Wisconsin railway managers of the work of the Commission and its effect upon summer pleasure travel.

The custom among land owners in some parts of the State of renting portions of creeks flowing through their premises to individuals and sporting clubs from the cities has the effect of monopolizing the food supply, and the Commissioners will refuse to furnish fry for stocking such streams.

Wisconsin has the reputation of distributing more trout than any other State, and the result is seen in the great increase of summer visitors, who go there largely to enjoy the fishing.

A preliminary report on a peculiar disease affecting the eyes of trout, by Prof. Edward A. Birge, of the State University, is to be found in the appendix. "Two symptoms characterize the disease. First, an enlargement of the eyes, finally resulting in blindness; secondly, the formation of vesicles filled with gas on the skin of the head and mouth." "The disease seemed to spread in the pond where observed, and affected a considerable proportion of the fishes. It did not spread to other ponds, nor did it cause any considerable mortality. It seemed to increase in warm weather and to decrease as winter came on. * * * It was thought to be a bacterial disease, but very careful and somewhat elaborate experiments have failed to find bacteria of any kind in the case."

The Commissioners very justly appeal to the Legislature to make a standing annual appropriation for the expenses of their work, since its value is no longer doubtful. They receive no compensation and yet have placed the State in the front rank with regard to her fisheries.

The reports of the wardens bear unanimous testimony to the complaints of fishermen about the admitting of Canadian fresh fish free of duty, the result being to lower the price paid to the fishermen, while the consumer reaps no benefit at all.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

March 19 to 22, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2332, New York. Number of entries already printed **6923.**

INTELLIGENCE OF THE BEAGLE.

Editor Forest and Stream:

I read with pleasure the articles in FOREST AND STREAM about the intelligence of man's truest friend, the dog. Allow me to add my mite attesting the high order of intelligence of the sportive little beagle.

Mr. W. J. Hembree, Denver, S. C., who has been my lifelong friend and hunting companion, has a beagle bitch Nell (Thom, A.K.R. 6777—Venus) and a half-breed bitch Muse (— —Venus) that are exceptionally good rabbit killers, but are exactly opposites in the disposition of game when caught. When Nell catches a rabbit she almost invariably starts with it to Mr. H., and if not intercepted seldom fails to deliver it to him with evident pride and satisfaction. On the other hand, when Muse catches one, she tries to evade the observation of Nell and carries the rabbit to some quiet spot and buries it.

Mr. H. has "caught on" to this trick and has taught Nell to hunt for the buried rabbits. One very cold windy day last week Mr. H. felt satisfied that Muse had caught a rabbit, and so told Nell to "go fetch 'em," which she began to do in a businesslike way—by going to Muse and smelling of her, apparently to be sure a rabbit had been caught. Satisfied of this she raised her bristles and started on the back track of Muse, closely followed by Mr. H. with Muse at his heels looking very dejected and cross. On they went across the railroad, through a swamp and then through a very thick patch of pines and brush, finally coming out in a clearing. Here Nell was somewhat bothered to keep the trail, owing to the high dry wind and the lapse of time since the trail was made. After a few circles she got right again and led off across a piece of cultivated land, going in the direction of a piece of timbered land lying just across a public road.

On nearing the road Muse began to show signs of uneasiness, and finally ran in ahead of Nell as if to turn her from her purpose. Being ordered back she reluctantly gave up all opposition, and allowed Nell to have her way undisturbed.

But the chase was nearly over, for Nell, shortly after crossing the road and entering the woods, made a short circle or two and went up to an old log and scratched away some leaves and brought the rabbit forth, much to the discomfiture of Muse.

It should be stated, in justice to Nell, that being heavy in whelp she was not in the race that ended in the catching of the rabbit, and knew nothing whatever about the rabbit being caught until told to get it. Over a half mile of ground was gone over from where the start was made to where the rabbit was found. She has frequently performed feats similar to this.

I have a little beagle puppy (Dan—Weasel) whelped Oct. 17, 1888, that is very intelligent for his age. When this little fellow gets thirsty and there is no water handy he has been known to go to where the water bucket is and looking up at it bark with as much judgment and precision as an old veteran coon dog would when he knows there is a coon above him. This the pup keeps up till some one gives him water, when he drinks his fill and evidences his gratitude by wagging his tail and other unmistakable signs of pleasure. This little fellow never had any training to enable him to tell where the water bucket was kept, and must have learned by observation or the sense of smell, which in either case is unusual in a pup of his age. BLUE RIDGE.

DENVER, S. C.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream.

I most heartily concur with "Tallyho" as to shooting foxes before the hounds. His position, as taken in your paper of Feb. 7, is absolutely impregnable. To kill a fox in any way when before the hounds is butchery, not hunting. Of course, there is an exception to this if foxes become overplentiful and must be thinned out; but even then, if they are vigorously chased for a few weeks, they will conclude the neighborhood unhealthy and emigrate. Increasing years and failure of bodily vigor have caused me to give up fox hunting for some years past; but I can honestly say that in the many years in which I did follow the sport, I never assisted in the killing of a fox, and I never knew a true fox hunter who did not look down on it as foul play. The reasons for this are not necessary; "Tallyho" has given them in stronger words than I can. BULGER.

FAYETTE COUNTY, Pa.

Editor Forest and Stream:

I have hunted foxes for the last ten years and have shot and dug out from eight to twelve each winter, and have owned a good many hounds, but have never owned nor seen one that could catch our red Wisconsin foxes, and I doubt it very much if "Tallyho" owns one that can do it. I am of the opinion that our Northern fox can run faster than the foxes in the South. The fox hunting in this part of the country is entirely on snow, and it is not so easy to get a shot at Mr. Fox as it is made to seem by "Tallyho." Foxes must be remarkably plenty in Massachusetts when it is possible for seven to be killed in one day. I hope that "Tallyho" can sell me some young hounds or refer me to some one that can guarantee dogs to catch our red fox.

Let us hear from the owners of those very fast packs. I very much desire to get such dogs as "Tallyho" mentions, if it is so very much more sport to hunt with that kind of dogs. E. G. B.

SCOTT, Wisconsin.

THE AMERICAN COURSING CLUB'S MEET.

APISHAPA, Col., Feb. 6.—*Editor Forest and Stream:* If not too late I should like to make a few remarks upon the last meet of the American Coursing Club in Kansas. I did not see your report until a short time ago (when one of the best friends the sport has in America kindly sent me a copy), or perhaps you would have heard from me at an earlier date. Before going any further I should like it to be understood that I give place to no man as a true friend of greyhound coursing, and that whatever I say is in the most friendly spirit, and my only wish is to benefit coursing in America. I hope to see coursing meetings established in all parts of the States; in fact I have no doubt that inclosed coursing near the large cities will be one of the most popular sports in America, and that very shortly. No sport when properly conducted and when understood takes such a hold of true lovers of field sports as greyhound coursing. There is no lover of sport in America who is not under obligation to the American Coursing Club. Those gentlemen took hold and have stuck to it. They were called all kinds of names and laughed at; but they stood their ground, and have now got a meeting that they may justly be proud of, and many thousands of people journey great distances to see the sport.

What I wish to call attention to is the judging and the undue length of some of their courses, and I hope they may be able to overcome this in future. Not being able to attend, of course I have only your report to guide me, and must be governed accordingly. No doubt the judges gave their decisions according to their honest opinions; but by the rules of coursing they were in many cases very unjust. No one can help making mistakes I know, and I have seen that best of all judges, Mr. Jas. Hedley, do it more than once, yet for the good of the sport they ought to be mentioned, and guarded against in future if possible. Take Miss Smart vs. Rich and Rare. Miss Smart scores ten points, then they have a give and take course of four and a half miles, the judge gets unsighted and calls it a no course. According to the rules of coursing a no course is when the judge thinks there was not plenty of work done to justify him in giving a verdict. Surely four and a half miles after one dog had scored ten points before the other scored was plenty to satisfy any one. Miss Smart most undoubtedly won, and it was cruel to send her to the slips again. The judge ought to have decided upon what he saw up to the dogs becoming unsighted.

Miss Rose vs. Plymouth. Plymouth scored eight for one and a half miles, placed Miss Rose who never scored, yet got the course. How could she win if she never scored?

Young Golddust and Little Lady Glendyne. Lady killed after 130 yards. Now the Lady most undoubtedly won, and it was hard luck for her to go in again, and be put out, when she again led and did all the early work, and so placed the other dog, after she had completely collared the hare and played herself out.

Those are in my opinion a few of the worst decisions that were given; such ought by all means to be guarded against in future by Messrs. Nash and Williams, or they will do coursing great injury, unintentionally, of course, on their part. I also suggest to the management that they plant some of the ground to trees, coarse grass, sage, gorse or any other cover, that the hares can escape to, and so prevent those long and cruel courses that will spoil any good greyhound, I care not how game a dog he may be. On the plains at Altcar, England, they have sluices and long boxes that the hares can make their escape to, and so prevent needlessly long and cruel courses. When a course becomes over a mile in length it loses its fascination to true sportsmen, and becomes cruel both to dogs and hare, who ought to save her life if she can stand up before two greyhounds for that distance. I hope that greyhound coursing may be introduced to the public of New York, in fact brought to their city before long in some of their parks. WILLIAM GREEN.

ANTI-DOG CRANKS IN MASSACHUSETTS.—Andover, Mass., Feb. 16.—*Editor Forest and Stream:* The spite of a few of the farmers of Essex county has again shown itself in a meeting lately held for the purpose of discussing the dog laws of the State (which, to say the least, are bad enough now). These farmers want the tax raised from $2 and $5 to $5 and $10, with the conditions that all dog owners shall be obliged to keep their dogs on their own grounds, not to be let out on the roads or streets without a keeper, also that any dog may be shot at sight if found off his own premises. Now, this thing has been tried before by farmers in the western part of the State, but, thanks to the friends of the dog, the Massachusetts S. P. C. A. and the New England Kennel Club, the law was not passed. It will not be this time, either. The friends of the dog in Massachusetts and Essex county will again arise and bring all the influence possible to bear in favor of our best friend. Let the lovers of the noble animal in Massachusetts be up and ready to defend their pets when the time comes. Our representatives are not the kind of men to let the prejudice of a few farmers run away with them.—ESSEX.

COLUMBUS SHOW.—Pittsburg, Feb. 15.—*Editor Forest and Stream:* In your Columbus report you forgot to say that Keystone Kennels' rough St. Bernard dog Meinrad took reserve or vhc.; also in smooth bitches Keystone Kennels' Lola took reserve, instead of Ala Kennels' Princess Louise.—A. STUCKY.

COLLIES AT PITTSBURGH.

Editor Forest and Stream:

The statement of Mr. Shaffer, that his dog was finally allowed second by the "managers" at Pittsburgh, reveals a stupidity that so far stands unequalled. Where shall we search for its peer? "Construction" won't do; putting a defendant on the jury to try his own case falls a bit short; appointing on a committee four out of five who were ineligible don't rival it. Making a rule that a club shall not describe bronze medals as such but must say "club medals," nor even the wonderful apologies for the A. K. C. that reek so strong, still fall behind this performance. Do you want to know why? Well, remember that the class was once judged and Rob Roy got first, when Mr. Shaffer "kicked" and it was discovered that his dog had not been judged, the superintendent, acting entirely within his authority as the agent of "the managers," ordered a re-judging, then Prince was put first. I heard the active secretary, Mr. McClain, read the action of the "meeting of managers," and it distinctly based the reversal of the re-judging on its being "unauthorized." This was simply false, the rules distinctly provided for re-judging in case of "mistake," and what greater mistake could happen than the show attendants leaving an exhibitor's dog on its bench? There was only one justification possible in this case; that was, that the dog was absent from its bench when the class was called, by the act of its owner or his agent. This would have effectually estopped Mr. Shaffer from any right to a re-judging, and while it was set up as a defense of "the managers" after their "decision" had been given, it was only as a "I heard so" and was vigorously denied by Mr. Shaffer in my hearing. Anyhow, had it been the case, the stupidity of basing a verdict on other grounds, when such a solid reason as this could be given, is about equal to the giving a completely bogus pedigree to Corsair, when he was probably by DuVernat's Lion ex Dr. Sawtelle's Venus.

The climax was reached, however, when the "managers" decided that Prince, although not entitled to be first, was good enough for second! Isn't this just simply immense? There was not a "manager" who could till a black and tan collie from a "pure" Gordon (this requires "pure" judgment), nor could one of the lot have told whether Caractacus or a five dollar "shepherd" were the better if put together before him, yet they took it on them to decide that Mr. Shaffer's dog was better than one of Mr. Evans' St. Bernard-collies! Did mortal man ever hear before of a show committee (even when acting as "managers") deciding on the merit of a dog? "Well" somebody will say, "what is all this fuss about? The Western Pennsylvania Poultry Society is dead and will not come up again." Just this little thing. If said society now applied for membership in the A. K. C., it would be admitted. Several writers (one of whom must have known of this performance) urged it to apply for re-admittance, and past history of the A. K. C. shows that it is ever ready to admit any Falstaffian brigade that may apply, and it is the presence of just such "members of this association" that makes the A. K. C. obnoxious to many exhibitors. I have twice stated in print, that the owners of the Western Pennsylvania Poultry Society are incompetent to direct a show. Need any stronger evidence than this be given? The late show answered its purpose, the debts incurred at former shows are either paid off or reduced to a trifling amount, nobody wants "the managers" any more as show directors, hadn't they better quit?

Pittsburgh is a great doggy center. At New York in 1883, we won seven firsts and one second with nine dogs shown, mastiffs, bull-terriers, setters and pointers, don't we deserve better management?

I forgot to say that I learn on inquiry that it is a fact, that a vigorous kicker against Mr. Wixom being allowed to take his dogs away before the show closed, actually made an agreement with the "managers" that if he didn't get his dogs to the show, his entry fees were to be refunded to him! Mr. Krueger certainly had nothing to do with this, yet the profound "managers" actually tried him for "favoritism!" Great snakes! W. WADE.

HULTON, Pa., Feb. 15.

WITH HOUNDS ON BRUIN'S TRAIL.

I HUNT bears with a pack of from five to twelve black and tan hounds, of Virginia origin, I think; but I procured my first stock from an old and enthusiastic hunter and frontiersman, now living in Menard county, Texas.

On the 10th of April last a Pueblo Indian, belonging to my outfit, returned toward dusk, after the general hunt for fresh tracks of bear and pumas; and not without some signs of mental disturbance—for he was young and a new hand—informed us that he had seen the tracks of a large bear and of a small one; and while watching the valley from the mesa he had also seen a medium-sized black bear crossing an open space below; he fired at it at a long range and missed. We asked why he did not follow, and he replied by owning that he was afraid. It did not take long to see that all the coupling chains, rifles, etc., were in thorough working order, and next morning, shortly after daybreak, we started, C., the Indian, a Mexican and myself, with three couple of hounds.

On arriving at the foot of the mesa we tied our horses and proceeded on foot for about half a mile up the side of a very steep hill on our way to where the Indian had seen his bear. However, before getting there we found a fresh track. It was but the work of a minute to uncouple the dogs and away we went, or I should say, away went the hounds in full cry, for we had some distance to toil up the hill before reaching ground level enough to put the pace on. When we arrived at the first bench or flat the whole pack could be plainly heard running to our right, at the same time we observed the fresh track of a large bear going off to the left, and thinking that while we might get a shot at him, the dogs would tree the other on the right, the Indian and I followed his track, C. went after the hounds and the Mexican made straight for the top of the mesa. Expecting one of them to run up as they nearly always do, I walked slowly for half a mile or so, crossed a deep ravine and sat down on the opposite side in some brush to watch the course of events. The dogs had run out of hearing, but were coming back toward us, though still some distance off. I should think we had been here about fifteen minutes, yet it seemed hours, when the dogs came to the top of a gulch not far distant, and the baying became so audible that I could not stay there any longer; so leaving the Indian behind to cut off bruin's retreat in case I missed him, I proceeded down the steep side of the gulch, steadily at first, to prevent falling or making a noise, but as the baying came nearer I increased my pace till I stumbled and rolled to the bottom. However, I was only slightly scratched, not hurt. Struggling up the opposite side, I waited a minute, no longer, for breath. On they came. I could hear the blundering old bear smashing oak brush and scrub in his course, and snapping his teeth at his tormentors, but they were all well aware of the danger of a too close proximity, and eluded him every time. He passed a little above me, and owing to the dense brush I did not catch a glimpse of him, but as I ran forward I saw Rosy in the lead as usual, and the rest of the pack a yard or so behind. Letting them pass I took to my heels in their rear. Here C. and the Indian, who had heard the dogs alter their course, came running up, and we had a good race to see who would get there first. However, we had not far to go, for on emerging from the brush we found the dogs ascending a trail, at no great pace. I went up just behind them, and was somewhat disconcerted and puzzled to know why they did not go faster, and where the bear had gone, when, suddenly, Rosy stopped dead, and commenced a series of long, unearthly howls, with muscles set, and tail erect. She was right under my nose, but I could see nothing remarkable, till the matter was explained by Spot, who dashed under a large flat rock close by, from beneath which came a savage growl and a screaming dog.

Matters now became exciting around that rock. Three dogs simultaneously made a run for the hole, the noise kept up by the rest was deafening. Of course I was well prepared for the advent of old bruin, so when he came floundering out after a dog I let him have it between the eyes with my .50-95. The instant the shot was fired every dog was on him pulling, hauling, tugging in all directions, a living, howling mass, that threatened to roll down the hillside and over the bluff below. When they had worried him to their hearts content, we tied them up to examine our bear. He proved to be a cinnamon with a very long, sandy coat, probably a two-year-old, for he was small and I should think weighed about two to three hundred pounds. We then went to look at the rock, which had probably sheltered him all the winter. The hole underneath was just big enough for him to squeeze in, and must have fitted close all round the body.

The rest was soon done, the bear skinned, the dogs fed as much as they could eat, and the remainder of the meat taken back to camp, which was not far away. I do not know what became of the bear that made the large track; anyhow we never saw his foot marks any more. We did not hunt him that day, as I make it a rule always to go to camp after a kill, in order to give the dogs a good rest for the next hunt.

We found our Mexican in camp; having lost track of the hounds he went home to cook up some dinner, which was very acceptable just then. So ended our first successful spring run. If your readers care to hear any more about the bears of New Mexico, and the way we hunt them, I will send you some of our fall runs at a future date.

A. P. F. COAPE.

NEW MEXICO.

MENTALITY IN DOGS.

DO fanciers ever realize that there is something in dogs, that in its dim and glimmering way, corresponds to intelligence in man? Perhaps my term of "mentality" may be objected to as too pretentious, but I know of no better title for that peculiar faculty shown in the prœminently useful breeds of dogs. "Instinct" hardly goes far enough, for that is a quality possessed by all animals, while none but dogs commonly show the apparent use of a reasoning power, an ability to distinguish between cases and the course of action called for under varying circumstances. For instance, a cow will sometimes learn how to pull the peg inserted behind a gate to keep it shut, or to press down a pump handle to draw water, or a horse will know his way home over a road he has traveled but once, etc., etc. But all these seem but imitative in their character. To illustrate, I must quote instances in the breeds I know best: *i. e.*, mastiffs and bobtails, and must be forgiven if I repeat stories that I have told in the past. What prompted my Gipsey (before she departed for the canine paradise she certainly earned) or what now prompts her son Lion when a woman or child goes off the place, particularly after dark, that they will go along if they can? If a man goes, they are somewhat indifferent, but if prevented from following a woman or child, they would and will fret in a distracted way. What taught them that women and children needed a protection that full-grown men didn't? Why will Lion allow the housemaid to hammer the hired man and only frets and fumes, pushing himself between them, whining and barking, but if the case is reversed and the man hammers the woman, he jumps on the former, knocks him down if possible, or catches his arm or leg? The man feeds him, looks after him, and as far as association goes, the man should be the favored one, yet he never misses taking the side of the weaker party. (Of course, the "hammerings" are all in sport, serious work in that line would be very dangerous were any mastiff around that I have ever known.) What taught Gipsey, Lion, Boadicea, Bertha, Persephone, Lee's Turk, etc., that if the house was left without any of the family, or only one of the women, they must not go out of it until adequate protection returned? Why did the very old, crippled Maidstone Nellie bristle up her back, bare her teeth, growl like a tiger, and advance at a crowd of roughs gathered at my gate? She paid no attention to them when they were quiet, but when the air became blue with curses, she took in the situation at once. When Hector was passing along a public road and saw a woman beating a child with great severity and the child howling, what impelled him to jump the fence, and without offering to hurt the woman, just growl at her and push between her and the victim of her brutal temper? Forty or fifty years since, Mr. J. W. Thompson's Juno was lying in a room and two tramps came into the adjoining hall and walked off with a piece of meat lying on the table in the hall; from whence came the impulse that directed Juno to follow them and bring them back to the house? She didn't see the theft. Why is it that any mastiff will bristle up and growl if a crowd assemble near his owner's premises, and stand looking, pointing, etc., at it? What suggested the discrimination Gipsey made between the glazier she found cutting at a pane of glass in the house and the man who might pick up something in the yard? The former she knocked down, the latter she obliged to drop what he had taken, and she evidently recognized that one looked like burglary and the other was only petty larceny. Persephone didn't object to a stranger going to the front door, but when she saw a man go in the back door she followed and dragged him out of the house by his coat tail. Then the bobtail, Bob, drew on his inner consciousness for the knowledge that rams should not be allowed to fight, that corn thrown down to the chickens was not to be taken by the hogs, that a sick animal in the field must be laid aside by him, and all intruders must be kept at a respectful distance, that he must bark like all possessed if he found a sheep in such difficulty as being fastened by the hindleg in a wire fence, that all strange dogs must incontinently be chased out of fields where stock were; if no stock should happen to be in the field, Bob might have a play with the stranger, but let the latter cross the fence to where the stock were, there would be war unless the stranger left at once. Dame Judith knows which cows are dry and which want milking after once seeing them; the cows which are left in the barnyard she knows are not needed, and afterward never brings them, while she does know that those taken into the stables are wanted there, and she will hunt all over a field to bring one that she knows is wanted, passing by a dozen times those she knows are not wanted. She also knows that strange dogs are improper visitors in fields with stock, but she differs from Bob in that she will attack such a trespasser with the utmost ferocity, while Bob simply drives them out of the field. Bob knows that a hen's nest found in a field must be promptly reported by barking until somebody comes for the eggs, but as the eggs are not gathered from a turkey's nest, Bob does not report the latter. Now, not one of the dogs I have mentioned ever received any specific training that led it to perform the work I have described; the mastiffs never received any training whatever. One of the latter, Boadicea, was bred by Mr. Wynn, and he knew no more about her wonderful powers of discrimination than he did of the late Brigham Young's family, as she was merely an inmate of his breeding kennel, and her wisdom was not shown until she became a member of her American owner's family. The two bobtails were broken to drive stock, but never taught any of the things I have mentioned. To avoid any appearance of personal interest, I may say that of all the dogs mentioned, only three belonged to me. Of course, this mentality or whatever it may be called, is not an original characteristic of dogs in their natural state. It is fair to presume that the special intelligence shown in particular fields of work is the result of training and use in such work of many generations of ancestors, in fact, no other contention is admissible, and it is certain that these proclivities are tolerably firmly fixed in certain breeds; that is, the mastiff has the watchdog qualities, the collie or the bobtail, the stock-caring instinct (par parenthesis, bobtails are elegant watchdogs), but fixed as these traits are, it is simply absurd to claim that they are inevitable attendants on the breeds, that is, that we can keep on breeding mastiffs in crowded kennels like so many black Essex pigs, and with as much attention to their mental and moral development as is given to a coop of Plymouth Rock fowls, and still retain their discriminating wisdom. To do this their owner must make them part of his family, part of his daily life, let them lie by his fireside, accompany him in his walks abroad, and learn to associate themselves with him and his. So the collie breeder cannot with a ghost of reason expect that his collie, bred for show and show alone, knowing nothing about a sheep, without the faintest idea of which is the "business end" of a cow or horse or whether sheep are to be driven or killed, are to rival Hogg's Yarrow. No doubt much of the old inbred disposition yet remains dormant in both breeds. I know it is so with mastiffs, but in the name of common sense how is it to continue if no measures are taken to perpetuate it? The present fashion of making "a mastiff" simply a question of snubbiness of nose, or "a collie" only a rival of a tapir in snout and a bear in coat, will doubtless result in most "typical" specimens, but where will the usefulness of the breeds come in and how many people will continue to keep them when their usefulness is gone? Do you not remember Dr. Gordon Stables' story of the Cockney, inquiring of the Scotch shepherd, who had just sold him a collie at a long price, why he didn't raise collies instead of sheep and the Scot's reply, "We migthna aye find fules to buy them?"

To carry the war into Africa (how precious little do I know of the geography of this Africa), pugs are pet dogs, it is supposed that ladies and children keep them for household playmates. Yet I have heard it said of this and that "crack," "he (or she) is snappish." Surely a snappish dog is not a fit playmate for little children; and as a matter of information, do your pug breeders ever inquire into the temper of animals they breed from? Suppose your great crack is bad tempered (I know nothing about it) would he not be as extensively used as a stock dog as any other in your land?

Of course "mentality" does not come within the domain of show decision, but is that any reason for entire neglect of it? When your breeders are breeding animals that the merest infants are to play with, is it not a requirement of common honesty that they sell safe ones? Whether they do it or do not, I do not pretend to say, but I do know that if they keep on building everything on the twist in a tail (or whatever "type" may be) they will eventually be putting off some very bad bargains on a simple-minded public. It may surprise many to be told that a bobtail is one of the very best of pet dogs, and a most charming companion, but it is true nevertheless. Mastiffs are my first love, and I will not concede that any dog equals them, all things considered; but I must admit that purely as companions, no dog I ever knew equals a bobtail. All that we have so far had have that charming disposition, affectionate, quiet, always near one, solicitous of notice, yet never fussy, forcing themselves on attention, overwhelming one with frantic demonstrations, and becoming somewhat of a nuisance. Bob, Sir Lucifer and Dame Judith will jump up beside one for quite a time, yet never jumping on one. With all their desperate courage, and tremendous powers as gladiators, no dog is less prone to pick fights, although when one is forced on them, they become very much interested. This, however, is straying from the subject. What is now on my mind is to impress on all dog lovers, that there is a nobler quality in dogs than "type"; that as our servants, friends and companions, their mentality is infinitely their most important quality, and while we may raise heaven and earth to shorten a mastiff's nose, or lengthen a collie's, or corkscrew a pug's tail, let us keep in mind what it is that makes a dog "the friend of man.—*W. Wade in the Illustrated Kennel Magazine.*

BOSTON DOG SHOW.

WE have received the premium list of the fifth annual dog show of the New England Kennel Club to be held at Mechanic's Hall, Boston, Mass, April 2 to 5. The prizes in the prominent classes are: Challenge, $20 and $10; open dogs, $20, $10 and $5, bitches the same; puppies, $5, $3 and bronze medal. In some of the other classes the prizes are: Challenge, $10 and $5; open dogs, $10, $5 and bronze medal; bitches the same, with silver and bronze medals for puppies. In a few of the remaining classes the prizes in the challenge classes are $5 and $3, with $10, $5 and bronze medal in the open. The St. Bernard Club's cups (two of $25 and six of $15 each) will be competed for; also the Collie Club trophy, and two specials of $10 each, and the club medal for the best puppy are offered by the Collie Club. The grand challenge cup of the Fox-Terrier Club will be competed for, and the home-bred puppy stakes will be decided. The club also offers a special of $25 each for best kennels—not less than four—of mastiffs, St. Bernards—rough and smooth—pointers, English setters, Irish setters, collies and fox-terriers; $10 each for deerhounds, spaniels, beagles, bull-terriers, Yorkshire terriers and pugs. The judges are: Mr. Frederick Gresham, London, England, mastiffs, St. Bernards, bloodhounds, spaniels, collies, fox, Irish, Airedale, Welsh, Skye, Scotch, Dandie Dinmont, Yorkshire and toy terriers, and miscellaneous classes; Mr. Chas. H. Mason, New York, English, Irish and Gordon setters, Newfoundlands, foxhounds, beagles, dachshunde, basset hounds, poodles, pugs and Italian greyhounds; Mr. C. J. Peshall, Jersey City, N. J., pointers; Mr. H. W. Smith, Worcester, Mass., deerhounds and greyhounds; Mr. J. W. Newman, Boston, Mass., the remaining classes. Entries close March 11. J. W. Newman, secretary, 6 Hamilton place, Boston, Mass.

CHICAGO DOG SHOW.

WE have received the premium list of the first annual dog show of the Mascoutah Kennel Club, to be held at Chicago, Ill., April 9 to 12. The judges are: Major J. M. Taylor, English, Irish and Gordon setters, pointers, foxhounds, beagles and Chesapeake Bay dogs; Mr. J. H. Whitman, retrievers, Irish water, field and cocker spaniels; Mr. James Mortimer the remaining classes. In the prominent classes the premiums are: Challenge, $20 and $10. Open, dogs, $20, $10 and medal; bitches the same, with $10, $5 and medal for puppies. In some of the less important classes it is $10 and $5 in challenge classes, with $10, $5 and medal in the open classes. In the remaining classes it is $10, $5 and medal. Kennel prizes of $25 each are offered for St. Bernards, both rough and smooth; deerhounds, pointers, English, Irish and Gordon setters, collies, fox-terriers, largest kennel sporting and largest kennel non-sporting dogs. The Mastiff Club, the St. Bernard Club and the Fox-terrier Club offer valuable specials, and in addition there is one of $25 for best American-bred mastiff, the same for best St. Bernard, $10 for St. Bernard puppy, silver medals for both pointer and setter dogs and bitches that have been placed at American field trials, $25 for best American-bred collie, $25 for best bulldog or bitch, $10 for best uncropped bull-terrier, $40 silver cup for best American-bred fox-terrier. Entries close March 25. Mr. Geo. H. Hill is superintendent, room 36, 34 Monroe street, Chicago, Ill.

COCKER SPANIELS.—BLACK—1st and 3d, Campbell & Blake's Belle and Nettie; 2d, T. F. Shepard's Capt. S.—ANY OTHER COLOR—1st, R. Y. Cadmus's Dash. *Puppies:* 1st and 2d, Campbell & Blake's Tom and Jim.

BEAGLES.—1st, D. O'Shea's Tomboy; 2d, T. Funnell's Bunny.

FOX-TERRIERS.—1st, D. O'Shea's Frank; 2d, G. H. Smith's Nellie. *Puppies:* 1st, A. Jackson's Crib.

COLLIES.—*Dogs:* 1st, F. Rawson's Rysdyke. *Bitches:* 1st, 2d and 3d, J. A. Armstrong's Crathie, Mazzie and Vixen.—PUPPIES—*Dogs:* 1st, 2d and 3d, J. A. Armstrong's Young Bruce, Roland and Signal. *Bitches:* 1st, 2d and 3d, J. A. Armstrong's Nellie, Treyler and unnamed.

BULLDOGS.—1st, Campbell & Blake's Remus.

BULL-TERRIERS.—*Dogs:* 1st, D. O'Shea's Danger; 2d, F. A. Hamilton's Eyekey; 3d, G. H. Smith's Jack. *Bitches:* 1st, withheld; 2d, F. P. Craves's Jess; 3d, G. R. Nicoll's Gyp.

BLACK AND TAN TERRIERS.—1st, V. Liddicoat's Fannie; 2d, P. Sturm's Jumbo; 3d, J. Brown's Saylor.

PUGS.—*Dogs:* 1st, F. Hope's Dandy; 2d, W. O. Heinlien's Trix; 3d, C. H. Miller's Pixey, Jr. *Bitches:* 1st, A. W. Niblock's Mollie; 2d, withheld; 3d, C. H. Miller's Countess Leonora. *Puppies:* 1st and 2d, C. Kivvin's Levi and Ben.

WHIPPETS.—1st, Campbell & Blake's unnamed.

POMERANIANS.—1st, A. Brawn's Jack.

MALTESE.—1st, Dr. W. E. Bessey's Dot.

POODLES.—1st, A. Feyerbend's Mingo.—BLACK—1st, J. McGuire's Susie.

TOY TERRIERS.—1st, Campbell & Blake's Zing; 2d, J. McQuinn's Lady; 3d, R. S. Cunningham's Lady C.

SCOTCH TERRIERS.—1st withheld; 2d, W. Argle's Maud.

SKYE TERRIERS.—1st, G. W. Smith's Cannie; 2d, W. Argle's Major.

IRISH TERRIERS.—1st, D. O. Shea's Garryowen.

IRISH WATER SPANIELS.—1st, W. Kelley's Flo; 2d, F. Lee's Barney.

D.

DOG TALK.

SOME one who read in our last issue the plaintive appeal from Breakabeen sends in this letter from the "Professor," who, it appears, is not dismayed, and has the grit to make a dog man after all if he once gets started with a healthy pup: "BREAKABEEN, Jan. 29, 1889. — — —: My gorden setter pupy is 13 months old. he is manged since last March after I bought him at Pa last March. he will die tomorrow or next time. If you have any gorden setter pupies to be colored with dark, Mahogany tan & white spot on his breast & red spots on his face near their eyes. how much will you sell one if he is 2 months or 6 weeks old & he is all health. I dont want any disease pupies. If he is diseased before 3 or 4 months I will return him to you back. Answer me Prof Wm B B—— Prop."

The Newark *Call* is responsible for this: "The cook in the family of Mr. Horace N. Congar, 65 Washington street, lost a small shawl. One evening she saw Spot, Horace Congar, Jr.'s little fox-terrier, pull the missing wrap from beneath some kindling wood in the furnace room, and carry it to her sleeping box. There the dog whirled about until she had wound herself up in the shawl, and then lay down to sleep. The next morning she again hid her stolen blanket in the woodpile. This clever trick won her the shawl, and now that her ownership is recognized she doesn't conceal it, but every day removes it from the box to give it an airing, and every night puts it back again."

Mr. C. H. Mason writes us that the following subjects have already been selected for illustration in the second volume of "Our Prize Dogs," viz.: Mr. F. Windholz's English setter Count Howard, Mr. John E. Thayer's deerhounds Robber Chieftain and Ramona, Mr. H. W. Huntington's greyhound Cassandra, Mr. E. S. Porter's bulldog Lion, Mr. John E. Thayer's fox-terriers Raby Mixer and Richmond Dazzle, Mr. P. H. Coombs's Yorkshire terrier Bradford Harry, and Miss Edith M. Van Buren's Italian greyhound Cupid. Nearly all the other breeds will be represented by typical specimens, and there will also be portraits of a number of the prominent winners in England.

One of the forthcoming shows was to receive a large number of entries from a certain clique, provided it came into the "fold." The club agreed, but refused to be dictated to in the management of its own affairs. In due course a list of independent, honest and competent judges were chosen and premium lists mailed to the clique, who refused to make entries. It is now quite clear that certain parties intend, if possible, to own the judges and control all awards at bench shows. This they will never do until more than one-half of the exhibitors are dishonest. As might be expected the boycotted show has a very large entry and the quality is exceptionally good. With the exception of Boston and New York it will in all probability be the best show of the circuit.

Anent the Long Island way of doing to death penned rabbits, a correspondent who attended the Pittsburgh show writes: "At the Pittsburgh show I questioned all the fox hunters I met as to their views on catching rabbits and then devilling them to death with dogs, and without an exception they condemned it with scorn and loathing, as beastly rabbit murder and without a semblance of sport."

The Maine Legislature proposes to tax dogs $1 and bitches $3. Perhaps that will change the status of the animal there, where as the world now wags, dogs are held by the courts to be *ferœ naturæ*.

A Brooklyn gentleman has a dog that was presented to him by a Russian noble. In formation he is something like a field spaniel, but his coat is not unlike a Skye terrier's. He has a pedigree as "long as your arm," but owing to the nobleman having died and omitted to forward the name of the breed, the owner cannot tell which group he belongs to.

We have news that Troy will have an entry of at least 400 dogs and the quality is of an exceptionally high order. It could not fail to be otherwise with such a list of judges.

A well known dog man writes us that he feels positively sure that Mr. German Hopkins was asked to judge fox-terriers at New York, but that out of courtesy to his employer he declined and recommended Mr. Belmont for the office.

Mr. F. R. Hitchcock has had the misfortune to lose by death his well-known pointer dog Tammany. He died Feb. 14 from paralysis.

We predict that there will be a turn-up in another of the specialty clubs before very long. A prominent fancier says that he will not remain a member of a club that is run in the interest of one man and subservient to a ring.

The management of one of the bench shows have engaged the superintendent to judge a number of classes. This is a mistake. None of the shows are so well managed but that there is room for improvement; and when a man enters his dog he has a right to expect that the superintendent's time will be given to the proper care of the valuable property intrusted to his charge. "Penny wise and pound foolish" is not a desirable motto.

Mr. Geo. L. Fish of New Bedford, Mass., is going in for Irish terriers, provided he can get two or three of the right sort. Experience in breeding bull-terriers has taught him that good ones are few and far between.

There is an impression at home (not abroad) that Mr. H. W. Lacy, who handles Mr. Hopf's dogs, is the same Mr. Lacy who was once a very popular and successful exhibitor of black and tan terriers in England.

The latest thing in judging at a dog show is the *pollice verso* style.

We learn with surprise and regret that it is Mr. H. W. Huntington's intention to sell his entire list of greyhounds. This means the disposal of a notable collection—Cassandra with sixteen prizes, Balkis with thirty-six, Memnon with fifty-six, and Highland Chief with ten. There will be here a capital opportunity for buyers, but the greyhound fancy cannot well afford to lose such an ardent member as Mr. Huntington, and we hope that he may yet reconsider his purpose.

The Albany club is fortunate in having as fine a building for show purposes as can be found outside of the largest cities. It is about one-half as large as the Madison Square building and of similar construction. It is perfectly ventilated and has a large open space at the rear for exercising the dogs. The management of the show is desirous of doing all that can be done to secure convenience and satisfaction to exhibitors. The city, of course, has its attractions, and the show will stand a good chance of being a popular and successful one.

The proposition made by some anti-dog cranks in the Massachusetts Legislature, and alluded to by "Essex," is not likely to get beyond the committee room; but dog owners in that State will do wisely to keep an eye on the progress of the measure and do their best toward squelching it. The poor dog appears to come in for more than his share of assault this winter. A New Jersey bill authorizes his killing on sight, if found hunting game, a Wisconsin bill forbids the use of a dog in hunting birds, and this Massachusetts

measure is designed to tax the life out of a dog or kill him if he shows his nose in public. The only redeeming feature of this year's legislation referring to dogs is the Maine measure to tax and make them personal property. This move is prompted by a desire to make everybody responsible for the damage wrought by dogs, but the effect of the law, if enacted, will be beneficial.

At a meeting of the New Jersey Kennel Club, on Feb. 16, Mr. C. J. Peshall was unanimously re-elected as delegate to the A. K. C.

At a meeting of the National Dog Club, last Tuesday evening, it was decided to amalgamate with the associate membership of the A. K. C., on certain conditions, the acceptance of which will probably be discussed at the A. K. C. meeting this afternoon.

ROCHESTER DOG SHOW.—The premium list of the first annual dog show of the Rochester Kennel Club is now ready. The show will be held March 19 to 22. The judges are: Mr. James Mortimer, mastiffs, bloodhounds, deerhounds, greyhounds, dachsbunde, poodles, Italian greyhounds, collies, bulldogs, all terriers and miscellaneous; Miss Anna H. Whitney, St. Bernards, Great Danes, Newfoundlands and pugs; Mr. H. Clay Glover, all setters, pointers, foxhounds, beagles and basset hounds; Mr. A. C. Wilmerding all spaniels. Mr. Wm. Tallman is superintendent. The premiums in the more important classes are $10 in the challenge classes, with $10 and $5 in all the open classes with the exception of the wire-haired fox-terrier class, in which it is $5. A number of specials are offered and many are expected. Entries close March 6. The address of the secretary is Harry Yates, Box 466, Rochester, N. Y.

ALBANY DOG SHOW.—Albany, Feb. 19.—*Editor Forest and Stream:* Quite a number of entry blanks had been sent out when it was discovered that the printer had by mistake used the cut of the Westminster Club in preparing them. Due apology was at once made to the officers of the Westminster Club, and a new set of forms issued. Both entry forms and premium lists can be obtained at the Westminster show at the exhibit of Spratts Patent. A large number of the exhibitors at Albany will come direct from the New York show, and many also from Troy, who will go on to Utica. Arrangements have been made for keeping dogs over Sunday that are sent from Troy. A large and convenient stable has been provided, a watchman will be placed in charge, and every effort will be made to provide for the comfort and safety of all dogs arriving on Saturday.—G. B. GALLUP, Secretary.

MASCOUTAH KENNEL CLUB.—Chicago, Feb. 12.—*Editor Forest and Stream:* An article in the Chicago *Sunday Herald*, of Feb. 3, stated that Harry L Goodman was a partner and half owner in the Oakhurst Kennels, located at Auburn Park, Ill. I beg to say that Mr. Goodman is not a partner of mine in said kennels, nor is any one else. They are and always have been my sole property. Mr. Goodman was sent to Europe by me last fall, under instructions to make purchases, which he did to my satisfaction. On his return he took the position of superintendent for me, which place he now holds. By publishing the above you will greatly oblige and correct an impression which may possibly exist in the minds of some of your many readers as to the ownership of the Oakhurst Kennels.—R. P. H. DURKEE (Oakhurst Kennels).

UTICA SHOW.—*Editor Forest and Stream:* We have made arrangements so that dogs can be sent to reach us any time after the close of the Albany show and will be taken care of at the hall. Have divided class 54, beagles, challenge, and made class 54½ for bitches; also added kennel prize for beagles, greyhounds and black and tan or Gordon setters, to consist of not less than four. St. Joe Kennels, Miles, Mich., offer free service of Wacouta Nap for best mastiff bitch in the show. Wentworth Kennels offer free service of Rigi for best smooth-coated St. Bernard dog and bitch, American bred, in the show. Other specials will be announced later. —FT. SCHUYLER KENNEL CLUB.

BUFFALO SHOW.—*Editor Forest and Stream:* If the "Anxious Exhibitor" at the last Buffalo show will write me about the special prize he won, and who it was that offered it, I will do what I can to get it for him; but I think he is mistaken about winning any, except it might be a medal, as I know of only three specials besides, and they were shipped long ago. It would also be a good plan for those who won N. D. Club medals to write Mr. Huntington full particulars, name of dog, breed, etc. The Buffalo Fair Association medals will soon be ready, and I assure you they will be fine.—J. OTIS FELLOWS, Supt. at the last Buffalo Show.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Briarthorn. By Capt. Weeks, Philadelphia, Pa., for black and tan Gordon setter bitch, whelped Oct. 8, 1888, by Thorne (Malcolm's Malcolm—Malcolm's June) out of Bell (Turk—Splash).

Killarney. By A. L. Finney, West Medford, Mass., for red Irish setter dog, whelped Dec. 14, 1888, by Timmey (champion Brush—Young Lill) out of Colleen Bawn II. (A.K.R. 4796).

Gladys. By John W. Gale, Providence, R. I., for dark red Irish setter bitch, whelped May 30, 1888, by champion Tim (champion Biz—Hazel) out of Lady Edith (champion Rory O'More—Lady Berkeley).

Peveril. By Waverley Kennels, Noroton, Conn., for black and white greyhound dog, whelped Dec. 22, 1886, by Old Sportsman (Rocket—Lucy) out of Nan (Lion King—Coral).

Ivanhoe. By Waverley Kennels, Noroton, Conn., for lemon and white St. Bernard dog, whelped March 1, 1887, by Courage II. (champion Oscar II.—Snowden) out of Zellah (champion Rector—Jura).

Sir Walter. By Waverley Kennels, Noroton, Conn., for sable collie dog, whelped Dec. 7, 1887, by champion Rutland out of Heather Bell.

Waverley Kennels. By A. Wallack and D. Yardley, Noroton, Conn.

NAMES CHANGED.

Jack to Little John. By Waverley Kennels, Noroton, Conn., for black and white cocker spaniel dog, whelped Aug. 21, 1886, by Wallace II. (Wallace I.—Minnie) out of Susette (champion Sport—Suanee).

Compton Bob to Black Dwarf. By Waverley Kennels, Noroton, Conn., for black cocker spaniel dog, whelped Nov. 13, 1887, by champion Compton Bandit (champion Compton Brahmin—Woodland Queen) out of Dolly (Compton Monk—Ethel).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Melody—Trailer. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Melody (Trailer—Music) to his Trailer (Racket—Fly), Feb. 7.

Bonnie—Sir Walter. Waverley Kennels' (Noroton, Conn.) collie bitch Bonnie (Rob Roy—Fairy) to their Sir Walter (champion Rutland—Heather Bell), Jan. 7.

Fairy—Sir Walter. Waverley Kennels' (Noroton, Conn.) collie bitch Fairy (champion Rex—Kitty Mac) to their Sir Walter (champion Rutland—Heather Bell), Jan. 13.

Mollie R.—Bang. ——'s (Wilkesbarre, Pa.) pointer bitch Mollie R. (Tempest—M'liss) to Bryn Mawr Kennels' Bang (Price's champion Bang—Salter's Luna), Feb. 9.

Vandalia—Bang. Bryn Mawr Kennels' (Philadelphia, Pa.) pointer bitch Vandalia (Bang Bang—Zanetta) to their Bang (Price's champion Bang—Salter's Luna), Feb. 7.

Devonshire Countess—Bang. Barnes Bros.' (Philadelphia, Pa.) pointer bitch Devonshire Countess (Harry's Sam—Croxteth's Rival Queen) to Bryn Mawr Kennels' Bang (Price's champion Bang—Salter's Luna), Feb. 12.

Portland Lilly—Beaufort H. Geo. W. Lovell's (Middleboro, Mass.) pointer bitch Portland Lilly (Glenmark—Zanetta) to his Beaufort H. (champion Beaufort—Zuba), Jan. 24.

Fedora—Belthus. P. C. Ohl's (Plainfield, N. J.) English setter bitch Fedora to H. F. Schellhass's Belthus, Feb. 14.

Queen V.—Heather Jack. H. W. Thayer's (Franklin, Mass.) Gordon setter bitch Queen V. (Gem—Rose) to G. E. Browne's Heather Jack (Argus II.—Jessica), Feb. 15.

Flossie—Little John. Dr. Munson's (Noroton, Conn.) cocker spaniel bitch Flossie (Rex—Nan) to Waverley Kennels' Little John (Wallace II.—Susette), Nov. 29.

Flossie—Bradford Harry. A. H. Thaxter's (Bangor, Me.) Yorkshire terrier bitch Flossie to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Feb. 13.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dixie. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Elmore's Flute—Thorne), Feb. 15, six (three dogs), by his Little Duke, Jr. (A.K.R. 2389).

Flossie. Col. R. J. Hamilton's (Springfield, Mass.) pug bitch Flossie, Feb. 12, five (four dogs), by his Toodles.

Flossie. Dr. Munson's (Noroton, Conn.) cocker spaniel bitch Flossie (Rex—Nan), Feb. 1, nine (four dogs), by Waverley Kennelf' Little John (Wallace II.—Susette).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jolley's Tom and Sue. White, black and tan beagle dog and black, tan and ticked bitch, whelped June 26, 1887, by Thom (A.K.R. 6777) out of Venus), by John L. Jolley, Denver, S. C., to A. C. Krueger, Wrightsville, Pa.

Bob Lee and Monnie. White, black and tan beagle dog and black, white and tan bitch, whelped June 9, 1888, by Thom (A.K.R. 6777) out of Nellie, by Blue Ridge Beagle Kennels, Denver, S. C., to Dr. L. G. Clayton, Central, S. C.

Nick. White, black and tan beagle dog, whelped June 5, 1888, by Dan out of Dinah, by Blue Ridge Beagle Kennels, Denver, S. C., to Dr. L. G. Clayton, Central, S. C.

Gloucester—Snowflake whelps. Black, white and tan English setters, whelped Nov. 8, 1888, by Geo. W. Lovell, Middleboro, Mass., a dog each to C. Lindell, Boston, Mass.; D. F. Wilbur, Middleboro, Mass.; Fred Phillips, Brockton, Mass., and a bitch each to Chas. Copeland, Lakeville, Mass., and S. McBurney, Middleboro, Mass.

Peter. Black cocker spaniel dog, whelped Feb. 29, 1887, by champion Black Pete out of Fannie Obo, by H. C. Bronsdon, Boston, Mass., to G. B. Foss, same place.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. W. C., Jamesport, L. I.—I have lately purchased a hunting dog, but am afraid he will lose his eyesight unless something is done for him. His eyes are considerably inflamed and run water; I think he has ingrowing eyelashes. What can I do for him? Ans. Examine the eyes carefully, and if you find ingrowing hairs pull them out. Get a solution of zinc sulphate, 2grs. to the ounce of water, and drop a little into the outer angle of the eye and let it diffuse itself over the ball. Do this morning and evening. If the lids seem granular and inflamed touch them with bluestone lightly once daily.

S. O., Eaton, N. Y.—What are the causes of canker in the ear of a dog? What are the symptoms? What remedy shall I use? Is it incurable when running three months? Ans. Symptoms, pain, heat, swelling, shaking and scratching of head, discharge of offensive nature. Wash the ears carefully and let a few drops of the following fall into the ear two or three times daily:

℞ Bromo chloral	ʒ ii
Tr opii	ʒ ii
Aq	ʒ ii

Mix. Sig. External.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

MARYLAND CLUB.—Write to Mr. F. Blackwood Fay, Boston, Mass.

F. B. S., Allentown.—Where can I purchase lancewood for rod making? Ans. J. H. Monteath, 133 Center street, New York.

D. BRISTOL, R. I.—Bang is by Price's Bang (Coham's Bang—Price's Vesta) out of Salter's Lorna (Francis's Sancho—Lass). Jean is by Glenmark (Rush—Romp) out of Girl (Tell—Maryland).

L. W. M., Dillingersville, Pa.—1. Can the American clay-bird be thrown from the bluerock trap? 2. There was a report circulated that the American clay-bird was no longer manufactured, is there any truth in the report? Ans. 1. Yes. 2. It is made by Al Bandle.

F. M. F., Lost Nation, Iowa.—I am thinking of taking a trip in a skiff down a small stream. I would like to know which would be the best for me to use, the common oar or the bow-facing oar. I have no experience with either. Ans. The bow-facing; but learn to handle them by practice before you set out.

SUBSCRIBER, Denver, S. C.—1. Is a dog bred in London, Ont., and brought from there to the United States, an imported dog? 2. In the pedigrees of some beagles we have two champions by the name of Rattler, one of them by Rover out of Old Music, and the other one by Warrior out of Rosey. Are they both right? If not, which one is wrong? 3. Can you give the breeding of the beagle bitch imported Actress? She is given as the dam of Banker. Ans. 1. Yes. 2. Both are right. 3. No breeding is given.

GUIDO, Memphis, Tenn.—What is the best food to bait wild ducks? How should it be done in lake? Wild ducks eat lotus, yonquepins. Can Carolina or Louisiana rough rice be raised as duck food in Mississippi and Arkansas lakes? Ans. Wild rice has been extensively sown in waters as bait for wildfowl, and in many instances with great success. See reports of what has been done by some of the Chicago shooting clubs, as related in late issues. The wild rice has come from Canada and Wisconsin. Perhaps some of our Southern readers can tell us about the practicability of sowing the Carolina and Louisiana rice.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers gave me the best of satisfaction. I have averaged nearly 80 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

WAS HE INSURED? is a question we ask almost as naturally after a man's death, as after a fire; because it is coming to be recognized as much a matter of business prudence to insure one's life as it is to insure against loss by fire. There are many good business men in the world, and it might be a matter of wonder where they all insured their lives did not the annual reports of the companies call attention to the immense business done by some of them. Here is the NEW YORK LIFE, for example, whose report appears in another column, with an annual income of twenty-five million dollars, with assets to the amount of ninety-three millions, and carrying nearly four hundred and twenty millions of insurance on its books. It paid over ten millions to policy holders in 1888, and wrote a hundred and twenty-five millions of new insurance. This Company carries about fourteen per cent. of all the insurance in force in American companies, and does about twenty-five per cent. of the new business. Its success is the result of superior management, and is well deserved.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE COOPER-CASHMERE RIFLE.

MR. W. M. COOPER, of this city, has recently designed a rifle for military and sporting purposes. The Cooper-Cashmere rifle, as it is called, is a magazine capable of being used as a single-shooter. The caliber is .32, small enough to allow soldiers to carry a large supply of cartridges. The principal advantage noticeable in this rifle is that the breech block which sustains the recoil has little or no connection with the loading and firing mechanism, being a solid block, having a perpendicular motion and covers the whole base of the cartridge with the exception of a small slot underneath occupied by the extractor. The extracting hook is so arranged that it does not appear until pushed into its place; it is not connected with the freeing pin, and no damage can come to it by the snapping of the hammer. The working model was very strongly constructed, and it was claimed that it would stand the strain of the most powerful explosive ever used. The finishing was very good, and taking into consideration that the entrance to the magazine is covered by a slide which fits tightly, there is no doubt but with a little oil the breech mechanism would be perfectly watertight.

The barrel and magazine are made out of a single piece of steel, which renders it strong enough to prevent any bending if used in a bayonet charge, and also renders the magazine impervious to a sword cut. The bayonet is quite unique, being automatic and half round in form, hollowed out to fit the barrel; it is fixed by pressing a button, which releases the cocking pin, when it can be pulled up to the muzzle.

This rifle can be made to use a detachable magazine, which will be placed in front of the lever like the Lee Remington, but circular in form, and will hold twenty cartridges. The general outline of the rifle resembles the Martini-Henry, but it has a hammer which, by some, is regarded as an advantage. The device for locking the magazine differs somewhat from the Remington, and, on the whole, Mr. Cooper has invented a new rifle all through. Patents have been secured in England, France, Belgium, Austria, Italy, Canada and the United States. The thirteen points claimed were allowed in all the countries named except the United States, which allowed eleven.

The cartridges are 4½in. in length, containing 55grs. powder and 250 lead, which will be used in a 30in. barrel having a twist of 1 in 16in. R. L.

TORONTO, Feb. 14.

BOSTON, Feb. 16.—The weather conditions were very fine for rifle shooting to-day, an unusually good one for this season of the year. A light wind from 3 o'clock. A large number of shooters were on hand and entered all the matches. Mr. Monroe won the medal in the 20-shot rest match to-day and Mr. Charles the champion medal. Following are the best scores:

Twenty-shot Rest Match.

J R Monroe	12	12	9	10	12	11	10	9	9	11

WILMINGTON, Del., Feb. 18.—There was to-day a small attendance at Healdmoor Rifle Range, but those who attended enjoyed sport until dark. A match had been arranged between C. Fehrenbach and C. Heid, to take place during the afternoon, but as Mr. Held did not put in an appearance the match was postponed. The stakes are held by a leading member of City Council, who will insist upon the consummation of the match and a strict compliance with its terms. The scores made were as follows, standard American target:

Revolver Match, 50yds.

C Heinel, Sr.	5	6	6	10	8	6	5	10	10	8—74
J W Geyer	9	5	4	7	7	6	7	4	10	7—66

C Magehan	61	50
W G Siller	61	53
C Sherman	57	53
H B Thurston	54	53

Mr. H. Fuerman, of No. 9 West Ohio street, is anxious to hear from gentlemen who may wish to form a private rifle and revolver club, which shall possess its own premises, and be an organization distinct from any one gallery or range.—E. HOUGH.

ST. LOUIS, Mo., Feb. 16.—The members of the St. Louis Pistol Club once more failed to record a score of better than 80. The attendance was fair, but the scores were miserably poor. This week's shooting is about on a par with that of the previous meeting, and is, to say the least, a mighty bad showing for what was supposed to be the crack organization in this country. Many of the members are not satisfied with the present range and target, and are in favor of a return, when the present tournament is finished, to the old target and 12yds. range. "This change, though," said one of the members, "should not be made. They should keep on using the present range and target, but if they hope to make big scores they must put in more practice. Without it they can never expect to make a better showing." Standard American target, .22cal. pistol:

W J Lord	5	8	9	9	6	6	7	6	10	4—77
L V D Perret	8	7	8	10	9	5	6	9	8	6—76
W Bauer	5	8	5	7	10	10	7	9	9	6—76
E Mohrstadt	6	9	7	10	10	6	8	8	6	4—74
L H Race	5	8	9	9	6	6	7	6	10	4—70
A J Lee	6	10	5	7	7	10	7	5	5	7—69
M Summerfield	6	6	4	7	9	6	10	8	6	6—68
M Billmeyer	7	8	6	8	8	6	5	7	6	6—67
W H Hettell	4	10	7	6	7	6	7	8	5	6—66
H Griesidieck	6	7	8	4	9	6	6	8	6	6—66
A E Bengel	5	9	6	6	6	7	4	6	7	6—63
W Mackwitz	5	9	4	7	7	4	6	7	0	8—57

UNSER FRITZ.

PHILADELPHIA, Feb., 14.—Hartranft Rifle Club was out in full force this afternoon at their weekly practice shoot. Messrs. Daily, Coulston, Doyle and Master Hillman were guests of the club during the day. Mr. Daily indulged in some pistol practice, in which Messrs. Coulston and Travis also took a small part. Standard target, 50yds., off-hand:

C L Dailey	9	8	9	10	9	9	10	9	10	8—91
	9	10	10	10	9	9	7	8	8	7—87
	10	9	7	7	10	9	8	10	9	8—87
	7	6	8	9	8	9	9	9	10	7—32
	9	10	8	7	10	8	6	8	8	10—84—431
Ed Travis	8	6	9	7	8	7	5	7	9	5—71
	7	6	9	7	9	8	8	6	7	10—77
Geo W Coulston	8	6	8	8	8	9	9	10	8	6—79

At 200yds. off-hand, Standard American target, the club members made the following official scores:

Ed Travis	9	9	8	8	9	10	9	8	4	7—81
Geo Doyle (mil)	10	9	8	6	9	7	6	7	5	5	4—76
E Kolb	4	9	4	9	9	6	9	7	10	7—74
Wm Wurflein	10	8	9	9	7	10	6	9	9	4—79
J L Laudeur (mil)	8	5	8	7	7	6	5	5	8	4—69
L L Tobeldt (mil)	5	10	6	5	5	4	5	7	9	8	4—67
J J Mountjoy	8	5	9	4	9	3	10	7	5	6—66
E Stees, Jr	7	4	5	7	8	8	7	5	6	0—62
J H Buehles	3	3	6	6	4	8	5	3	10	4—52
H Steinbeisser	1	4	3	6	5	6	4	9	2	4—45
J T Oliver	2	4	3	6	5	6	4	9	2	4—45

As the wind was from 5 to 9 o'clock, blowing about a 15-mile breeze, it was with a great deal of judgment that the above scores were made.

BOWMANVILLE, Ont., Feb. 16.—A return shooting match between Bowmanville and Highland Creek was held at the latter place to-day, 5 shots each at 200 and 400yds., Bowmanville using military rifles, Highland Creek sporting rifles. The following is the score:

Bowmanville.	200yds.	400yds.		Highland Creek.	200yds.	400yds.
W S Russell	22	22—44		R Parker	21	14—35
J B Mitchell	21	20—41		T Parker	20	20—40
J Sando	22	21—43		J Westney	22	22—44
W C King	23	21—44		W Chester	19	22—41
N S Young	22	21—43		W Morrish	22	22—44
D Beach	22	22—44		J Morrish	24	22—46
J Horsey	21	21—42		G Chester	22	23—45
J H Morris	23	22—45		W Closson	19	21—40
E Lumpton	23	22—44		C D Closson	24	21—45
J Curtis	21	22—43—433		Humphrey	22	23—45—425

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Middlesex Gun Club, Dunellen, N. J., Friday, Feb. 22.
New York Suburban Shooting Grounds Association, Friday and Saturday, Feb. 22 and 23.
Omaha, Neb., Gun Club Tournament, April 16, 17 and 18.
Amateur Tournament, St. Louis, Mo., April 23, 24, 25 and 26. Fred A. Fodde, Manager.

THE BUFFALO TOURNAMENT.

BUFFALO, N. Y., Feb. 15.—One of the most enjoyable shoots that Buffalo has had for some time was held there Feb. 13 and 14. With the excellent sleighing the six-mile drive from the hotel to shooting grounds was one of the most pleasant features of the entertainment. Jacob Koch escorted the party to the grounds, and there the genial Charlie Oehmig met and cared for all. Jake kept things moving, but the pace was too warm for some, and the second day saw an appreciable dropping off in number of entries. The Keystone traps and targets were advertised to be used, but owing to delays in freights at this time of the year, did not get there in time. Jake says that this spring Buffalo will have a tournament that will eclipse anything ever attended by local shots. Following are the scores:

Wednesday.—Shoot No. 1, at 9 singles, entrance $1, three moneys:

Hadley	111111111—9	Babcock	101111111—8
Luther	101111101—7	Koch	111111111—9
Wagener	111101100—6	Foote	110101011—6
Lynch	011010011—5	Whitney	111111011—8
Wyness	111101111—8	Brown	001110111—6
Oehmig	001110101—5	Pope	110010110—5
Andrews	110111111—8		

Ties div.

Shoot No. 2, at 12 singles, entrance $2, four moneys:

Hadley	101111111111—11	Babcock	111001111111—10
Besser	011111111111—11	Page	101111111100— 9
Luther	111111111112	Pope	110101101010— 7
Kelsey	111111111112	Lynch	000011110111— 7
Andrews	101101111110— 9	Brown	111100100003— 6
Wyness	111111111101—11	Koch	110111011111—10
Whitney	111111111112	Skucse	101000111013— 6

Ties div.

Shoot No. 3, at 50 singles, $7 entrance, six moneys:

W C Hadley	01110011110111101111010111011110111110011111111—39
J A Whitney	01011111111101101111010111111111111111111111111—44

Keeney	11110110110011101011111001101011111111101101100—36
Foote	01110110111111111111101010010001011011101101101—34
Wagner	11111111111111111111111111111111111111111111111—47
Koch	11111110111011111111111111111111111111111111111—45
Russell	01111100101111001001100110110101111111111111101—36

Wagner first money, Luther second, Koch and Kelsey third, Whitney and Andrews fourth, Lynch fifth, Besser sixth.

Shoot No. 4, at 9 singles, entrance $2, four moneys:

Luther	011111011—7	Pope	011110011—6
Kelsey	111111111—9	Baker	111110111—8
Brown	101101010—5	Andrews	111110111—8
Hadley	111111111—9	Wagner	110110011—6
Besser	111111111—9	Sugan	111111001—7
Whitney	111101101—7	Koch	111111001—8

Ties div.

Shoot No. 5, at 9 singles, entrance $2, three moneys:

Hadley	111111111—9	Andrews	110101011—6
Besser	111111111—9	Pope	111101011—8
Kelsey	111111111—9	Page	110011101—6
Luther	011101101—6	Baker	111111111—9
Brown	000111111—6	Whitney	011111111—8
Wagener	111001111—7	Koch	111111101—8

Ties div.

Thursday.—Shoot No. 1, at 9 singles, entrance $2, three moneys:

Wagner	111111110—8	Wetmore	111111111—9
Kelsey	111111111—9	Koch	111111011—8
Andrews	111111111—9	Oehmig	101111100—6
Elliott	111010100—5		

Ties div.

Shoot No. 2, at 9 singles, entrance $2, three moneys:

Wagner	101111111—8	Wetmore	110111111—8
Kelsey	111111111—9	Oehmig	110101010—5
Andrews	111111100—7	Wasson	111111011—8
Elliott	101000111—5	Koch	111111010—6

Kelsey wins first, second shot off and won by Wagner, third won by Andrews.

Shoot No. 3, at 9 singles, entrance $1, four moneys:

Murphy	111111111—9	McCally	111111111—9
Oehmig	110100111—6	Swartz	011110111—7
Wasson	111111101—8	Bush	111111111—9
Ed Smith	101111111—8	Harmes	101111111—8
Elliott	111111111—9	Finzens	111111010—7

First shot off and div. by Bush and McCally, second and third div., fourth won by Oehmig. KENO.

FORESTER GUN CLUB TOURNAMENT.

DAVENPORT, Ia., Feb. 15.—The eighth annual tournament of the Forester Gun Club, which began on Tuesday, has just closed, and in point of numbers and entries was a great success. On Tuesday the air was rather sharp and made it somewhat unpleasant for the shooters. Wednesday and Thursday finer weather could not have been desired by any one, but to-day (Friday) it was cold and rainy, making it rather disagreeable. A number of prominent sportsmen were present—C. W. Budd, of Des Moines; J. R. Stice, of Jacksonville, Ill.; H. A. Penrose, of the Keystone Target Co.; S. A. Tucker, of the Parker Gun Co.; J. F. Kleinz, of Philadelphia, who has challenged the winner of the American championship cup, to be contested for by Budd and Stice, March 5 next, at Jacksonville, Ill.; H. B. Jewel, of Wabasha, Minn.; J. H. Ruble, of Albert Lea, Minn.; W. Fred Quimby, of New York, and Richard Irwin, of Philadelphia, who is rapidly coming to the front as a shooter.

The scores on the first day stood:

Shoot No. 1, 7 single rises, 30yds., both barrels, from 5 ground traps, 22 entries, entrance fee $7, and the prizes were 40, 30, 20 and 10 per cent.

W F Quimby	0111111—6	J F Kleinz	1111111—7
H A Penrose	1101111—6	J B Smith	0000101—2
C M Powers	1111111—7	J Davis	1011011—5
W Harbaugh	1011101—5	Bob White	1011011—5
J W Dukes	1111100—5	J R Stice	1101111—6
F Parmele	1111101—6	C E Cahoon	1101111—6
R Irwin	1111110—6	Dr Stone	1111110—6
Al Runge	1101111 6	E Berg	0010010—2
C W Budd	1111011—7	J W Howard	1110100—3
A Roland	0110100- 3	F O Davis	1111010—5
T Yearnshaw	1111111—7	D Franklin	1111011—6

All ties div.

Shoot No. 2, 7 single rises, 26yds., ground traps, single birds. Entrance $5, prizes 40, 30, 20 and 10 per cent.; 20 entries:

Quimby	1101010—4	Scott	0110011—4
Stone	1010111—5	Blake	1010111—5
Harbaugh	0111011—5	Penrose	1111100—5
Kleinz	1111111—7	Parmele	110 111—6
Smith	1110111—6	J Davis	1101111—6
Berg	1111011—6	Bob White	0111011—5
Yearnshaw	1111111—7	Stice	0111111—6
Cahoon	1111111—7	Lallin	1111011—6
Budd	1101111—5	Dukes	1011111—6
Runge	1101010—4	C M Powers	0171111—6

Ties divided.

Shoot No. 3, 7 single rises, 30yds., both barrels, 5 ground traps. Entrance $8, prizes 30, 25, 20, 15 and 10 per cent.; 26 entries:

Quimby	1111111—7	Harbaugh	1011111—6
Budd	1001111—5	Penrose	1111110—6
Stice	0111110—5	J Davis	1111111—7
Berg	0111110—5	Smith	1110111—6
Parmele	1111111—7	Kleinz	1010010—4
Runge	1111111—7	Adams	1010010—4
Dukes	1111101—6	Cahoon	1110110—5
Roland	1101100- 4	White	1111111—7
Blake	1100001—3	Franklin	1010111—6
Emerson	0110011—4	Lallin	1111111—7
Yearnshaw	1010111—5	Howard	1001110—4
Powers	0110111—5	F O Davis	0111111—6
Stone	1110111—6	Irwin	1011000—3

Quimby, Parmele, Runge, J. Davis, White and Lallin divided first money; Smith and Stone second; Budd, Stice and Yearnshaw third; Rowland, Kleinz, Adams and Howard fourth; Blake, Emerson and Irwin fifth.

This being the end of the programme, and as the boys had a little time to spare, an extra was shot. This was at 5 rises, ground, traps, entrance $4, including birds:

Quimby	10111—4	Powers	01110—3
Kleinz	11111—5	Stice	11111—5
Budd	11111—5	Cahoon	10001—2
Parmele	11101—4	Lallin	11111—5
Runge	01100—2	Irwin	10101—3
Penrose	10101—3	Smith	10011—3

Ties divided.

Feb. 13.—The attendance to-day was much better than on the first day, and the shooters appeared to take more interest in their work, having apparently just got warmed up to it. The shooting was as follows:

Shoot No. 4, 8 single rises, 30yds., both barrels, 5 ground traps. Entrance $8, including birds:

Budd	10111111—7	Scott	01101010—4
Gilman	11101011—6	Cahoon	01111111—7
Penrose	11111011—7	Parmele	11111111—8
F O Davis	01101110—5	J Davis	11110001—5
Blake	11101111—6	C Fish	11100101—5
Yearnshaw	11010111—6	Roland	11001111—6
Kleinz	11110111—7	Runge	11111110—7
Quimby	00011111—5	Adams	11101000—4
Smith	01101011—5	Irwin	11111110—7
Powers	11111111—8	Dukes	01011100—4
Harbaugh	11101111—7	Laflin	01111110—6
Stice	11111101—7	Tucker	11101101 6
Hughes	10111011—6	Emerson	10100001—3
White	11110111—7	Cropper	11011100—5

First money was divided between Powers and Parmele; second money between Budd, Kleinz and Irwin; third money between Penrose, Hughes and Laflin; fourth money between Quimby and Smith; fifth money between Scott, Adams and Dukes.

Shoot No. 5, 4 pair double rises, 21yds., Rudolph traps. Entrance $6, including birds:

Quimby	00 00 10 01—2	Smith	10 11 11 01—6
Hughes	11 10 11 00—5	Dukes	10 10 01 10—4
Harbaugh	00 10 00 00—1	Adams	01 10 00 10—3
Bob White	11 11 11 11—8	Porter	01 11 01 10—5
Franklin	11 11 01 00—5	Blake	00 10 10 01—3
Budd	11 10 10 11—6	Stice	00 01 11 11—5
Kleinz	01 10 00 11—4	Kemper	10 00 01 10—3
Laflin	10 10 11 11—6	Cahoon	10 10 11 10—5
Roland	00 10 11 11—5	F O Davis	11 10 11 01—6
Tucker	10 00 11 11—5	Cropper	01 10 01 10—4
Parmele	00 11 11 11—6	Howard	10 10 11 01—5
Runge	01 10 01 11—5	Booth	01 11 00 01—4
Davis	10 01 01 00—3	Yearnshaw	01 10 11 00—4
Powers	01 11 01 00—4		

Bob White carried off first money without any assistance; Budd, Laflin and Smith divided second money; third money was captured and divided by Hughes, Franklin and Howard; Yearnshaw pocketed fourth money.

Shoot No. 6, 7 single rises, 30yds., both barrels, 5 ground traps; entrance $7, including birds:

Budd	0111111—6	Irwin	1111100—5
Hughes	1111111—7	Penrose	1111111—7
Quimby	1111001—6	Powers	1101111—6
Parmele	1011111—6	Gilman	1111111—7
Williams	1111011—6	Gordon	1111111—7
Dukes	1111010—5	Cropper	1111010—5
Berg	1111111—7	Franklin	1100101—4
Kleinz	1010111—6	Bob White	1111111—7
Blake	1110111—6	Van Patten	1010100—3
Tucker	1111101—6	Porter	1111101—6
Stice	1111111—7	Scott	1010110—4
Roland	1111111—7	Laflin	1111101—6
Smith	1111111—7	Yearnshaw	1111111—7
Adams	1011010—4	Booth	1010100—3
J Davis	1111110—6	Howard	1111010—5
Runge	1110111—6	Mosher	0110100—3

First money was divided by Hughes, Berg, Roland, Smith and Penrose.

Feb. 14.—This was the third and great day of the tournament, and was marked by the elegant complimentary dinner given the visiting shooters by the club. The dinner was prepared and served by the club caterer, Frank Taylor, and was most tempting. Mr. Quimby of New York, was called upon to make a few remarks in behalf of the Eastern shooters who were present, and expressed the gratification the Eastern men had experienced in meeting such good fellows in the West. Mr. C. M. Leonard, in behalf of the Western shooters, then arose and thanked Mr. Quimby for his kind expressions, and then said that there were a few of the Western boys who were likely to get into trouble—that Carver was after Budd and Stice, and would make it warm for them. And then Budd and Stice were intending to have a match, after which Kleinz, an Eastern shooter, was ready to challenge the winner. The shooting of the third day was as follows:

Shoot No. 7, 7 single rises, 30yds., both barrels; from 5 ground traps; entrance $6, including birds:

Gilman	1111111—7	Stone	0111111—6
Bob White	1111111—7	Berg	0111111—6
Dukes	1101111—6	Laflin	1111001—5
Powers	1111101—6	Penrose	1101111—6
Converse	1110111—6	Stice	1111110—5
Hughes	1111111—7	Booth	1110011—5
Harvard	1011010—4	Mosher	1111111—7
J Davis	0111111—6	F O Davis	1110011—5
Quimby	1111111—7	Tucker	0111111—6
Racester	0101110—4	Kleinz	1011111—6
Smith	1100111—5	Irwin	1101101—5
Cahoon	1110111—6	Williams	1111001—5
Budd	1101111—6	Porter	1110111—6
Runge	1011110—5	Franklyn	1101000—3
Yearnshaw	1111111—7	Chambers	1010110—4
Parmele	1111111—7	Cropper	1111011—6

First money was divided by Gilman, White, Hughes, Quimby, Yearnshaw, Parmele, J. Davis and Mosher; Kleinz and Porter took second; Stice, Booth, Irwin and Williams divided third, while Howard, Racester, Davis and Chambers took fourth.

Shoot No. 8, 4 pair double rises, 21yds., Rudolph traps; entrance $5, including birds:

Bob White	11 11 11 00—6	Smith	10 00 00 11—3
Stice	11 10 10 10—5	Porter	11 01 11 11—7
Hughes	11 10 11 11—7	Laflin	10 11 01 01—5
Parmele	10 11 10 11—6	Cahoon	00 11 11 11—6
Stone	11 10 11 01—6	Yearnshaw	11 01 10 11—6
Elliott	00 01 00 00—1	Dukes	10 11 10 11—6
Roland	01 00 01 01—4	Jordan	00 11 10 00—5
Budd	11 11 00 10—5	Kleinz	10 11 10 00—4
Mosher	10 00 10 00—2	Howard	10 10 10 00—3
Franklyn	11 00 11 00—4	Tucker	00 00 11 11—4
Harvard	11 10 11 01—4	Williams	11 11 01 00—5
Harms	00 11 11 00—4	Booth	00 00 00 01—1
Quimby	01 10 00 00—2		

The four prizes were divided as follows: First, Hughes, Porter and Budd; second, Bob White divided with Parmele; third, Gilman and Williams; fourth, R. Kleinz took it all.

Shoot No. 9, 6 single rises, 20yds., one barrel, ground traps, entrance $5:

Quimby	111110—5	Smith	111110—5
Parmele	011111—5	Chambers	101011—4
Converse	111111—6	Stone	111110—5
J Davis	111111—6	Stice	111011—5
Hughes	010111—4	Berg	111111—6
Budd	100111—4	Kleinz	110111—5
Cahoon	111111—6	Irwin	111111—6
Porter	110111—5	Dukes	110110—4
Van Patten	001001—2	Tucker	111011—5
Williams	110101—4	Laflin	111111—6
Emerson	101010—3	Shade	101000—2
Mosher	010010—2	Booth	011011—4
Gilman	101101—4	Cropper	111101—5
Powers	011110—4	Elliott	011000—2
Yearnshaw	111111—6		

First money was divided by Converse, Davis, Cahoon, Yearnshaw, Berg, Irwin and Laflin; second money was divided between Quimby, Smith, Tucker, Stice and Cropper, while Booth, Chambers, Dukes, Gilman and Powers had third.

Feb. 15.—When the boys awoke this morning and found it drizzling rain it rather gave them the blues; but, nothing daunted, they went to the park and commenced their last day's sport. The shooting resulted as follows:

Shoot No. 10, 7 single rises, 30yds., both barrels, 5 ground traps; entrance, $7, including birds; four prizes, 40, 30, 20 and 10 per cent.:

Gilman	1111111—7	Irwin	0111111—6
Quimby	1010010—3	Converse	1101101—5
Williams	1111100—5	Wilson	1111011—6
Stone	0001001—3	Budd	1111111—7
Dukes	1111110—6	Stice	1101110—5
Parmele	1111111—7	Cropper	1111101—6
Yearnshaw	1010101—4	Laflin	1111111—7
Porter	1111011—6	J Davis	1101111—6
Hughes	1111011—6	Powers	1111111—7
Cahoon	1101111—6	Kleinz	0011111—5
Churchill	0001110—3	Bob White	1111111—7

The prizes were divided as follows: First, Parmele, Budd, Laflin and Bob White; second, Irwin and Porter; third, Kleinz, Stice and Williams; fourth Yearnshaw enjoyed all alone.

Shoot No. 11, 8 single rises, 30yds., both barrels, 5 ground traps, entrance $7 including birds; five prizes, 30, 25, 20, 15 and 10 per cent.:

Budd	11111111—8	Cahoon	10110110—5
Stice	11111110—7	Booth	10110101—5
Williams	11111011—7	Laflin	11111011—7
Stone	01011100—4	Scott	10011111—6
Hughes	11111111—7	Cropper	01111111—7
Parmele	11111111—8	Churchill	11111111—8
J Davis	10111111—7	Yearnshaw	11010011—5
Converse	11101101—6	Porter	11111111—8
Kleinz	11111011—7	Howard	10011001—4
Irwin	10011111—6	Gilman	10111110—6

The prizes were divided on the tie shoot as follows: First, Budd, Parmele and Porter; second, Hughes, Stice, Laflin and Cropper; Irwin, Converse, Scott and Gilman; fourth, Booth took all; fifth, Howard and Williams.

It was getting rather late when the ties on No. 11 were shot off and some of the boys proposed that they have an extra instead of No. 12, and that it be shot under the Monaco rules. This was agreed.

The Monaco Extra, 5 single rises, boundary 19yds., 5 ground traps, entrance $4 including birds. The score:

Kleinz	11111—5	Stone	11111—5
Parmele	00111—3	Laflin	11110—4
Budd	11111—5	Caboon	11011—4
Wagner	00111—3	Cropper	11110—4
Robeson	00111—3	Howard	11011—4
Stice	11011—4	Churchill	10111—4
Gilman	11111—5	Yearnshaw	11100—3
Converse	11110—4	Booth	10101—3
Porter	01111—4	Williams	01101—3
Scott	01111—4	Hughes	10110—3
Irwin	11111—5		

TOURNAMENT NOTES.—During the third day H. A. Penrose was taken sick and had to be taken to the hotel, where he was attended by Dr. Stone, one of the shooters, who brought him around all right.

The Forester and Burlington clubs have adopted the Keystone target and traps. For two days a constant target practice was kept up from two Peoria B. B. traps and one Keystone, and during this time not one bird was broken from delivery of the Keystone.

The semi-annual tournament of the Foresters occurs in August, when they usually have a good time considering the season of the year.

The Foresters' park is about as fine a one as can be found in the West. By next season they hope to have wooden buildings instead of a tent.

NEW YORK SUBURBAN.

NEW YORK, Feb. 19.—*Editor Forest and Stream:* The attention of our executive committee has been called to the composition of the team from the Union Gun Club that recently did up the Newark boys in such good style, and we are asked by several country clubs if such a team will be allowed to enter at our tournament. Our reply is "That only clubs which have been organized more than three months can enter, and only shooters who have been members for that length of time and who have paid the usual club fees and dues and have shot in practice shoots upon the grounds of said club." We have notified the different members of our classification and tournament committees to see this ruling faithfully carried out. By giving this notice in your paper, parties who may think such a thing might be done on our grounds will be assured that all rights in the matter will be protected. Yours truly,

N. Y. SUBURBAN SHOOTING GROUNDS ASSOCIATION
(per CHAS. RICHARDS).

DR. CARVER.—The challenge sent out by Dr. Carver has been accepted by Bandle, Stice and Budd, all at 100 live pigeons, Hurlingham rules, $250 a side. The Bandle match will be shot at Cincinnati, the Stice match at Chicago and the Budd match at Des Moines.

UNKNOWN GUN CLUB.—Regular monthly shoot at Dexter's Park, Jamaica Plank Road, Feb. 14. Although the weather was very cold there was a large attendance of expert wing shots. The club's gold medal was won by President H. Knobel, Sr. The full score of the shoot is as follows:

W Skidmore (25)	1100010—3	C Plate (26)	1100111—5
H Hubbell (26)	1110000—3	J Rathjen (24)	1111110—6
W Gilman (23)	1110111—6	G Ellenhorst (22)	1010010—3
H Rankin (23)	0010010—2	H Knobel, Jr (27)	1000111—3
Dr O'Brien (21)	0011001—3	R Stillwell (22)	0110111—5
H Cahill (24)	0011011—4	A Hass (25)	1110111—6
J Schultz (23)	0101011—4	H Knobel, Sr (24)	1111111—7
J Boyle (23)	0111101—5	E Vroome (25)	1110111—6
H Simmons (24)	1110011—4	C J King (27)	1110101—5
Dr Hopkins (23)	0111110—5	H Muller (24)	1010101—4
H Van Staden (23)	1011100—4	Jumbo, Jr (26)	1110010—4
M Brown (25)	1110101—5		

Ties for second prize divided by Rathjen and Hass; ties for third prize won by Brown. Referee and scorer, Mr. R. Stillwell. The postponed match between Messrs. W. Gilman and A. Hass was declared off, it being too dark to complete it.

WATSON'S PARK.—Grand Crossing, Ill., Feb. 11.—John J. Kleinman vs. J. E. Price, 50 tame live pigeons, 5 ground traps, 80yds. bound. Shot under Illinois State rules; $100 prizes. Kleinman, 32yds., 10-bore; Price, 30yds., 10-bore:

J J Kleinman....1012120000012111211202111101112211210102011121111—39

Forsna.....0101111010111110111011101—	18

Shady.

WELLINGTON, Mass., Feb. 13.—The regular shotgun matches of the Boston Gun Club to-day were well patronized, the strong winds, however, preventing high scores. Following is a summary: First event, 5 clays—Flanders. Second event, 5 Peorias—Flanders and Savage. Third event, 5 clays—North. Fourth event 5 Peorias—Johnson. Fifth event, 5 straightaway clays—E. M. Whittle, G. M. Savage and Roberts. Sixth event, 5 Peorias—Savage. Seventh event, 5 clays—Roberts. Eighth event, 10 Peorias—Wild and North first, Johnson, Savage and Williams second. Round third, Green fourth. Ninth event, 10 clay-pigeons—Johnson, Flanders and North first, E. M. Whittle and Roberts second, Savage third, Stone and Round fourth. Tenth event, 5 Peorias—Roberts and E. M. Whittle first, Johnson second, Round, North and Kirkwood third, Green and Savage fourth. Eleventh event, 3 pair Peorias—Roberts. Twelfth event, 5 clays—E. M. Whittle. Thirteenth event, 7 straightaway Peorias—Savage, Johnson and Roberts. Fourteenth event, 7 straightaway clays—Roberts. Fifteenth event, 5 Peorias, Burlingham rules—Johnson. The matches 8, 9 and 10 were for the Boston Gun Club prizes and resulted as follows: C. North and B. Johnson first, E. M. Whittle and Roberts second, G. H. Savage and Flanders third, Wild and Williams fourth, E. Round and D. Kirkwood fifth, Green sixth, H. K. Stone seventh, R. E. Whittle ninth, Marr tenth.

CHICAGO Feb. 9.—Teams of the Lake George Sportsmen's Association and the Gun Club met this afternoon at Watson's Park, Grand Crossing. The day was all that was desired as to weather and temperature, as the excellent scores accomplished testify. A number of well-known shooters from other clubs constituted the audience. Shortly after 2 o'clock the sport began. The teams were composed of 10 men each, from the two clubs, and the 20 sportsmen represented the best shooting talent of Chicago. They were all picked men. The match was under the Illinois State rules, 10 birds to each man, the cost of the birds to be defrayed by the losing team. The excitement over the scores made was intense as the match progressed. At the finish some satisfaction was expressed over the matter of scoring, but the referee awarded the trophy to the Gun Club by the following score:

The Gun Club.		Lake George Sportsmen's Ass'n.	
Hutchinson	1101000001—4	Hamline	0000101001—3
Willard	0111111100—7	W Foss	1110010101—6
H Foss	0111111111—9	Still	1000101100—4
Lord	1010001001—4	F Weed	0111111101—8
Wilcox	0000101110—4	J Phillips	1001110001—5
Barton	1101000111—6	Turtle	1101100111—7
Mussey	0111010111—7	Lewis	1001100101—5
Stone	0001111110—6	Orvis	1011110110—7
Dingee	1110001101—6	Place	0100111111—7
Wadsworth	1110101110—7—60	Booth	1001111001—7—59

Each team has now won a match. The deciding contest will be shot off in the near future.

MONTREAL, Feb. 13.—Notwithstanding the blizzard that was blowing this afternoon, eight men stepped to the score on the Montreal Gun Club grounds. It was the eighth handicap competition for the club Greener, and as Cowley had already two ties on it he was looked upon as a probable winner, but he was not allowed to get the gun without a struggle for it. The scores do not come up to the average, but when the blustering weather is considered they were very good indeed. The winners of previous competitions with their scores were:

1. W McCaw	13	5. J Paton	16
2. A Lockart	17	6. E Cowley	19
3. E Cowley	17	7. R James	18
4. N Parker	17	8. E Cowley	15

Following is to-day's score. Eighth competition for club Greener, 20 Peoria blackbirds, 18yds. rise:

R James (hcp. 2)	0011000000001001010 — 8
N Parker (hcp. 2)	0.0101100510011000010— 9
W Lamsden (scratch)	0110110101000111000—11
E Cowley (hcp. 4)	1111010110100111010—15
W Mack (hcp. 4)	0111000010000000000— 8
B George (hcp. 4)	1000300100000100000— 7
J Paton (hcp. 2)	0101110011011001010—12
A Alexander (hcp. 3)	0101011000101100101O—12

TORONTO, Feb. 16.—The Toronto Gun Club held a sparrow shooting meeting at Woodbine Park this afternoon, when a match was shot between teams of 12 chosen by the president and vice-president, the premier officer's side winning by only two birds. The terms of the match were 15 birds each, 18yds. rise, for a supper to be given at the club rooms, to be shot after the match between 10 men of the Guelph Gun Club and 10 of the Toronto Club. Following is the full score of to-day's contest:

President's Team.		Vice-President's Team.	
C Small	9	Geo Briggs	10
G Hansaw	11	P Beldam	11
A Elliott	10	N Kipp	10
S Staneland	6	Ed Reid	10
Geo Leslie	7	R Meldrune	2
B Pearsall	13	Wayper	9
W Felstead	8	T Sawdon	6
J Worden	9	D Blea	13
J Fanner	12	A Purse	10
W McDowall	11	C Ayre	9
R Dixon	10	Geo Pearsall	10
D Hales	7—118	L Lauden	11—111

WELLINGTON, Mass., Feb. 16.—In the contest for the silver pitcher to-day Stanton won by breaking 15 birds straight. Since a number is handicapped to a distance of 21yds. each time he wins, it is doubtful as to its being captured for six months at least. In this match the following scores were made: Bradbury 10, Swift 9. Stanton 15, Choate 9, Weld 10, Bradstreet 12, Sanborn 8, Lang 14, Lee 12, Field 9, Tucker 10, Warren 14, Schaefer 10, Snow 10, Payson 7, Short 6, Chase 12, Perry 13, Baxter 9, Stone 4, Bowker 12, Scott 14, Pumphrey 13, Nichols 10, Melcher 12. In the merchandise match the scores made were as follows: Perry 11, Warren 17, Lee 8, Bradstreet 12, Chase 11, Scott 9, Lang 12, Schaefer 9, Field 12, Snow 12, Baxter 10, Stanton 10, Weld 14, Short 7, Bowker 11, Pumphrey 13. In the sweepstake matches the winners were: Six bluerocks, Bradstreet, Melcher, Perry, Bowker and Chaset 6 clay-pigeons, Lang; 6 bluerocks, Choate and Baxter 6 macombers, Bradstreet and Perry; 6 bluerocks, Weld, Swift and Pumphrey; 6 bluerocks, Choate, Perry and Stanton; 6 clay-pigeons, Chase, Choate, Bradstreet, Scott and Schaefer; 6 bluerocks, Perry, Chase, Weld, Sanborn and Stone; 6 macombers, Stanton; 6 macombers, Perry, Bowker and Choate; 9 bluerocks, Weld and Nichols; 8 pairs clay-pigeons, Perry, Lee, Tucker, Field and Bowker; 7 bluerocks, Stanton, Bradstreet, Tucker, Chase and Pumphrey; 8 clay-pigeons, Stanton, Warren, Scott and Lang.

THE CAPITAL CITY GUN CLUB.—Washington, D. C., Feb 12.—Match for the champion medal of the Capital City Gun Club, Mr. Hunter used for the first time the new Parker hammerless, 12-gauge, 7lbs. 5oz., and shells loaded by Hunter's loader:

F K Harper (18).1100101101101111010001111111111101101100111110101—34
J H Hunter (18)..1111111111101101111111111001111001110111110111111—42

Llewellin.

AMERICAN SHOOTING ASSOCIATION.—New York, Feb. 13. —*Editor Forest and Stream:* I am directed to inform you that in the list of gentlemen who have been requested by the American Shooting Association (Limited) to act as an advisory board, the name of Justus von Longerke, of this city, should have been included.—Elliot Smith, Secretary.

IN THE NEW YORK SUBURBAN shooting, on the Suburban Grounds, Claremont, Jersey City, to-morrow and Saturday, merchandise matches will be shot each day, 20 singles, 50 cents entry, prizes consisting of traps, powder, shot, wads, loaded cartridges, for highest scores. To-morrow the four sets of prizes will be worth respectively $32.35, $6.95, $5.55 and $4.55. Saturday they will be $8.95, $7.90, $6.90 and $4.55. For full programme apply at the Association office, 291 Broadway.

QUIMBY AGAINST THE WORLD.—From a rumor that we hear, trap-shooting matters in Cincinnati have received an unexpected impetus, and we may look for a series of matches, as all the boys have been seized with a thirst for score; but strange to relate they are all after the scalp of one man, and that one the genial Fred Quimby, who is at present making a tour among the Western trade. Hearing of his intended arrival, the boys took care that he should find an extra large mail awaiting him, and every letter contained a challenge to shoot under every conceivable rules and conditions. This speaks well for their valor, but as our Fred is not wont to swallow a bluff, some of them may be made to bite the dust. We shall anxiously await further news from the Paris of America.

MADISON, Wis., Feb. 16.—The following officers were duly elected at the last annual meeting of the Lake City Gun Club: Prest., A. M. Daggett. Vice-Prest., C. F. Ford. Sec., Wm. G. Dunn. Treas., Dr. R. W. Hurd. Trustees: L. Fauerbach, A. A. Mayers, A. C. Meyer.—Wm. G. Dunn, Sec.

OTTAWA, Feb. 16.—The St. Hubert's Gun Club had the seventh match for the Thompson cup this afternoon, and, although Geo. White has captured President Thompson's handsome silver cup, the contest for second place proves very close. Mr. White to-day added another 19 to his score, and now has 17, 17, 18, 19 and 19, each out of 20 shot at, a total of 90 out of 100 shot at. Thompson cup, 7th competition at 20 each:

Geo White	19	B Trudeau	12
W Johnston	16	A Throop	12
E King (4 start)	15	A Seth (3 start)	12
R Dalton	14	Dr Martin	10
J Deslauriers	13	Dr Equis	7

A strong wind was blowing during this shoot and that, to some extent, accounted for the small score of some of the men. E. King now leads with 79 out of 100 for second prize.

WOODSTOCK, Ont., Feb. 15.—A trap and handle pigeon match took place here this afternoon under Dominion rules, between Messrs. Harwood and Miller, Thompson and Meadows, 15 birds each, for $50 a side, resulting in the following score:

Miller	1100110111101101—10
Harwood	1011110101011011—10
Thompson	1101011001001100— 7
Meadows	1010101011011110—10

MONTREAL, Feb. 12.—The annual meeting of the Dominion Gun Club was held to-night at the City Hotel, and there was a large number of members present. Reports of the president, secretary and treasurer for the past year were read and proved highly satisfactory, and showed the club to be in a flourishing position. After discussing some club business it was unanimously resolved that the club join the Dominion Gun Alliance. The annual election of officers was then proceeded with and resulted as follows: President, Dr. F. W. Barnes; Vice-President H. A. Ekers; Secretary, Lewis T. Trotter; Treasurer, T. W. Lesage; Captain, C. H. Wallace; Committee, A. H. C. Walfoll, J. Allan, H. Emond, E. L. Clark and Gus Brault.

OMAHA, N. B.—The annual State shooting tournament will be held this spring at the fair grounds, under the auspices of John J. Yardin, on the 13th, 17th, 18th and 19th of April. Most extensive preparations are being made, and it is confidently expected that it will prove the most successful shooting tournament ever held in the State. Mr. Hardin has already engaged 5,000 live pigeons and made all other arrangements on elaborate scale. Besides the live birds there will be two or three matches at artificials in progress throughout each day.

KEOKUK, Iowa, March 12, 1883.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. Lowrie.—*Adv.*

Canoeing.

A CRUISE IN A DORY.

CHIPS FROM THE MONA'S LOG.

I WAS born within sound of the ceaseless moan of old ocean, in a ship-building town in New England. My earlier years were from force of circumstances intimately associated with the adze, oak chips and hand-made trunnels, and very forcibly with an old-fashioned steam box. Perhaps that accounts for my love of the water. At any rate, the wide open sea and quiet inland streams possess a charm hard for me to withstand.

My first river cruise was made in a cranky "flat iron," decked with bed ticking. Since that eventful pilgrimage between the slimy, thatch-grown banks of the crooked Ipswich River I have canoed it more or less every summer. Each trip, however, convinced me more than its predecessor that I needed a larger craft than one 16ft. by 30in. for comfort's sake. I found I needed a craft large enough to be comfortable under sail; one that could be easily portaged in the cars or in a wagon, and, moreover, easily rowed when the wind wouldn't waft.

One day last March, while in Boston, I took a tour of observation and inquiry along the wharves, thinking I might find the boat that would come within my rather exact requirements. While watching the unloading of a fishing schooner, just in from George's, the ocean tugboat, B. W. Morse hauled alongside of T wharf and made fast. At her stern was a centerboard dory, which the captain said he had picked up off Highland Light, Cape Cod, while running into Provincetown for an anchorage during the blizzard two days before. It was blowing heavily at the time, he said, and an ugly breaking sea was running, when the man at the wheel sighted the castaway through the blinding snow squalls as she rose upon the crest of the seas. Thinking some poor fellow had lost his vessel to the eastward, and was perishing from exposure, the tug was hove to, to wait for the dory to drift down. A huge wave hurled the frail craft against the tug's quarter, and before the sea fell from under her she was easily hauled inboard. No traces of her vessel or owner could be found, and the tug ran into Provincetown.

The captain's narrative set me to thinking something like this: Two dories have crossed the Atlantic; all the deep-sea fishermen use this handy, buoyant little craft, which also predominates in every New England seaport town where boat fishing is followed for a livelihood. If that dory can keep keel up in a storm that will drive a powerful steam tug into harbor, and is light enough to be hauled from the water over a vessel's rail before a sea can fall from under her, wouldn't she make a first-class boat for vacation cruising upon large bodies of water?

Then the important question as to a dory's sailing qualities arose. Would she stand up under a good spread, and would she work to windward? I asked a salt-incrusted old fellow with a black pipe in his mouth, who was stretched out on a heap of nets, if a dory could sail well. He eyed me for a moment in evident distrust; removing the pipe he got up and opened his mouth: "Why, man, the dories round Provincetown and Swampscott will outsail anything of their length. Portugese dory fishermen are always the last in in a blow, and they don't start first, either. A dory, she'll sail like a witch when she's built that way."

That settled it, and I purchased the derelict for a $10 bill. I found she was a lapstreak 18ft. long, with 5ft. beam and about 20in. deep amidships, with plenty of rise at bow and stern. Her bottom was oval, 14ft. long by 18in. wide, thus giving considerable rake to bow and sternpost. She was a sailing dory and her bilge was very full, giving stability and power. I found to my chagrin that one of her strakes was stove amidships, and I worried day and night as to how I should repair the fracture. A warm day and a little patience fixed the plank as good as new, and I was supremely happy.

The mast steps and thwarts were originally placed for a schooner rig, with the jibstay fastened in the eyes, no bowsprit being used; I placed the step and thwart as far forward as possible. Then I decked her over with ½in. white pine, supported by stout arched carlins, 7ft. forward, 2ft. aft and 10in. at the sides. A 2in. white oak coaming encircled the oval cockpit. A pair of long-shanked oarlocks were fitted firmly to the coaming 10in. aft the amidship thwart. Although rather timid of hatches, I did place one in the after deck and packed it not; for I cut a circular hole in the deck and fitted in a circular tin box minus the bottom, and with a telescopic cover with a handle, which gave me an opening 10in. in diameter. The centerboard was well forward, and to give the boat a good grip I had a drop rudder made with an immersed area of 15×12in.; the tiller was 3ft. long, and to prevent it fouling with the mizen sheet; a traveler was dispensed with and the sheet rigged after the simple yet very handy fashion of the Vineyard and Block Island fishing boats. I rivetted a very stout chafing batten around the gunwale, and then thoroughly painted the Mona inside and out.

I rigged her with two sprit sails, and got them nicely balanced after a few trials. The mainsail was peaked up well and had no boom. At the clew was fastened a lug sheet, which was very handy, and rendered the sail easy to furl in case of a squall. The mainsail had three sets of reef points. The mizen was a standing rig. For bad weather I used the mizen forward, and a very small dandy aft, and got a very good balance. The storm sail was seldom taken from its gaskets under the port-side deck. A strap and cords held the mainsail when furled along the starboard washboard.

The Mona's tent was satisfactory. It was made of heavy duck and tanned, as were the sails. Two uprights at either end of the cockpit supported the ridge which did service as a sprit and projected a foot over the cockpit. The sides of the tent were fastened under the chafing batten by a series of hooks in the same manner in which a shoe is laced. The ends, which were in one triangular piece, were fastened by a similar arrangement across the decks. In each end a flap rolled up for a door and fastened with a strap like the sides of a carriage top. A window was placed in each side and end of the tent and formed convenient windows. The peak of this tent was 40in. from the grating in the bottom of the dory and the side decks gave ample shelf room when the tent was set.

I carried a 75-cent lamp stove and would not attempt a cruise without it. When not in use this handy, yet much persecuted utensil was stowed in a tight box in the bows and out of the way. It did not slop over and did not smoke, but it did cook nicely and gave plenty of light and grateful warmth during cold storms while riding it out in some sheltered creek or hauled out high and dry on the beach. I must add here that I carried two light rollers, and with their aid I could move the heavily loaded boat a considerable distance, even over mud. I was provided with a good Chester anchor and 50 fathoms of ⅛in. cable, which were stowed under the deck forward of the centerboard. A grub box was stowed under the forward deck, as were my blankets and "duds" in oiled cotton bags.

At length my holiday came and I was free for a three weeks' outing. I had planned trip after trip, and studied the maps at my disposal till I knew more of the coast and rivers of New England than I had ever learned of my own family history. A cruise down the Merrimac and around the coast from Newburyport to Boston at last seemed the most feasible, and one morning found me at Lawrence, and afloat with a canoe as far as Essex for my traveling companion. I intended to follow the Merrimac to its mouth, take the Plum Island, Ipswich, Essex Canal and Essex rivers to Essex, then take open water to the Saugus River, and the ocean to Boston, which itinerary was carried out to the letter before my wanderings ended.

Everything being finally pronounced correct we waved adieu to the urchins and omnipresent loafers who had assembled to see us off, and grasping oars and paddle we shot out into the river. Aided by the strong current we floated past high gullied banks surmounted by dense groves of maples and birch, and skirted with alders, swamp and smoky maples. In places the gnarled and twisted roots formed fantastic networks where freshets had washed the earth away. The river bed is a streaked yellowish clay, hard and smooth, with few dangerous submerged rocks. Above the water mark was a deposit of white dust sifted into the grass, reeds and driftwood.

Rowing soon proved too much of an exertion for both of us, and taking advantage of the little air there was stirring we stepped our masts, and with lazily drawing sails stood close into the rushes on the Bradford side of the river, startling the dragon fly from cardinal and blue joint. Here and there the sparkling surface was broken by an eddy, or shaded by clumps of alders with an occasional scraggy oak standing alone like a sentinel above the level meadows. Stretching ourselves upon our cushions we grew drowsy; the breeze wafted us along without exertion, its cool breath fanned us into a half sleep, and we were oblivious to aught but day dreams, with now and then a loll against the tiller to keep clear of the bank. I do not know how long we proceeded in this desultory way, as the monotonous, yet ever changing panorama lulled us into a half sleep.

The Mona gradually drew ahead of the canoe, when suddenly I was rudely awakened from my reverie by an unearthly yell from my companion. I tumbled on end just as a rain squall moved past and received a tremendous whack on my brain-case from the jibing mizen. The air seemed full of stars, wind and water (no doubt this phenomenon was heightened by the rap my head had received), and for a moment I stood helpless. Before serious damage was done we got ashore, wet and disgusted. In a few minutes the sun again brightened the smiling water, and we headed toward the ocean with the hard earned conviction that eternal vigilance is the price of an upset at sea.

We descended quite rapidly, for the current quickens between Bradford on the right and Methuen on the left bank. These towns have fertile and highly cultivated farms and meadows, and the rambling farm houses and dwellings gleam on the uplands among groves of oak and pine. The river widens and from its whirling eddies Long Island, one of nature's emeralds, rises from a setting like burnished silver. We landed, and then crossing the river, entered a bush-fringed brook which we followed till we found ourselves in a glen amid a profusion of wild roses and moss-covered rocks which filled the water course. Beneath an oak reclined a couple of Cupid's victims, no doubt exchanging those oft-repeated vows and whispering the same sweet old story which has so often made or marred a life. At any rate they had chosen an Eden for their trysting place, and we thoughtfully turned our backs upon dreams of bliss we had so rudely awakened and retreated into the open stream. A miniature rapid awaited us and before we knew it we were in the rush and tumble of the falls. Below was a sandy cove where sticks and leaves were riding at anchor or drifting round and round in the circling eddies that lapped the sedgy banks. A score of turtles dropped into the quiet water at our approach, and a sleepy bittern, scared out of his wits, flopped away with his precious legs to a more secluded retreat.

Again rain pattered upon us, announcing another shower.

"Was that thunder?" suddenly asked my companion; but there was no need for a reply, for from a black cloud now rising fast we saw a vivid flash of lightning fall.

"I should say it was." I replied, and, getting into my oil clothes, we began to look for a camp as the salt sailor eagerly scans the coast for a haven. The canoeist camper becomes a very fair topographical engineer after a little experience, and a deep ravine under the confines of Haverhill, beneath the skirts of a pine wood, looked to be the best shelter from the fast gathering tempest. Rounding another bend we hear the sullen roar of a rapid, and the tumbling, turbulent Mitchell's Falls burst upon our view. With some difficulty we reached the hillside, and the canoe was carried up the incline and placed on a level beneath a giant beech, while the Mona was run ashore in the lilypads. We put up our tents, and beneath dry roofs watched the river as the rain churned its surface into foam and finally shut its misty water from sight. The shower soon passed, and, finding we had selected a good camp, we made a jolly camp-fire and satisfied the inner mechanism.

"Wouldn't it be a grand thing," said 15×30, "if we had neve-

learned to eat; then we could 'travel light,' as our clan prophet, dear old 'Nessmuk,' puts it."

I could not agree with him, for if I did not assimilate there would be no grub box to monkey with and work myself into paroxisms over during the winter.

As the twilight closed over the hills we sat by the fire, watching the river in silence. Flowing without a ripple, the sunset clouds were reflected upon its quiet bosom, producing another sky which melted into the dark shadows of the tree-fringed banks. The foam of the rapids became grayer and darker, a cold mist hovered above the hurrying waters and hung like a veil as it merged into the blackness of the banks beyond.

Our pipe had gone out while we were watching this wonderful dissolving view, and 15×30 reached for an ember to touch up the weed. A cracking stick on the bank above us sent the "goose flesh" creeping over me in an instant, for I knew not what manner of man or beast we had to deal with.

"What was that?" gasped my companion, with the glowing brand held over the expectant pipe bowl. We investigated. There, on the level ridge not 25ft. distant, calmly stood a dozen cows, reflectively chewing their cuds and eyeing us with open-eyed wonder. I was about to put down the word admiration, but that term would scarcely fit our lack of valor. A yell and rush and the animated milk fountains were dispersed, and sought more congenial quarters.

Putting out the fire we turned into our narrow beds, and adjusting the mosquito netting were ready for nature to put in her work for the next ten hours. But sleep was a long time in coming to us. Listening to the fairy-like music of countless insects, the moaning of the whip-poor-will, the wild laugh of the loon as it blended fantastically with the cadance of the rapids, we at last fell into an uneasy slumber. Once I awoke and indistinctly heard the hoarse rapids and the chilly night wind as it sighed along the hillside. A sturgeon leaped from the water, and the ripple of the closing circles gently rocked my floating bed chamber. When next I awoke it was broad daylight, but the river was concealed by fog, nothing but a few yards of gray rocks and water and a world of gray vapor. Gradually the filmy trees and bushes defined themselves, the fog thinned out and sailed away to the eastward, leaving the air clear, the sky

"Of an azure hue,
Untarnished fair as is the violet
Or anemone, when the spring strews them
By some meandering rivulet."

Mitchell's Falls is a long reach of rocks and broken water, through which a canal 60ft. wide has been cut of sufficient depth to admit the passage of light draft vessels. Nothing had been done to remove this impediment to navigation till 1870, when a large appropriation was made by Congress through the instrumentality of General B. F. Butler. The work, I believe, has been abandoned. The object of this canal was to open the river from the sea to Lawrence and Lowell.

We entered the swift yellow torrent, and in a few moments drifted side by side in a quiet cave below, where, some ten years ago, several coal barges were sunk in a freshet and 300 tons of black diamonds were lost. We had now reached the limit of tide-water, although the Merrimac is backed by tidal influence to Lawrence. The left, or Haverhill side of the river, is shaded by a thick growth of birches and oaks, with here and there tiny beaches of white sand. The right bank is vastly different, being for the most part a rolling country, rich in farms and pastures. With an energy born of the morning we paddled steadily till we came in sight of Haverhill, the gem of the Merrimac valley. Across the river stretches an iron bridge 690ft. in length, supported by five piers and supplied with an improved draw. This bridge was built in 1875 at a cost of nearly $100,000. Haverhill has now some 20,000 inhabitants. Certain portions of the town, or rather city, have an appearance of venerable age, but the river side was leveled by fire a few years ago and has been rebuilt. A few tall masts and sailboats betray the vicinity of the ocean, as we glide under the railroad track, and a festive fireman dumps his ashpan upon our immaculate decks.

As Haverhill and Bradford are left behind the nature of the country changes; that on the right to meadows, on the left to sparsely wooded uplands rising abruptly from the water. Setting sail, we beat around a bend in the river, and then skimmed down a straight reach to Groveland, a mile below. As we proceeded the meadows gave way to hills, and we saw the beautiful town nestled upon the right bank in a grove of lofty pines. The sunlight upon the white cottages gave an indescribable effect, and made a picture worthy a more facile pen than mine. We landed beneath the magnificent bridge which spans the river at this point, and looked over the quaint little settlement. The village store was raided, and our miscellaneous purchases somewhat disconcerted the urchin behind the counter. He toted the crackers, cheese, canned goods, etc., to the fleet in an old meal bag, and we explained the method and workings of our little craft to a round dozen of interested citizens. At Groveland the tide rises 6ft., and floats vessels of 260 tons, besides the steamers with passenger capacity of 1,200. The new bridge was built in 1871, at a cost of $85,000, and is crossed by the Haverhill & Groveland Street Railway tracks. The river is wide and straight for several miles, and very unlike the waters 10 miles behind. With a spanking beam wind, and enough of it, we laid our course for Rock Village, and "let her hum." The dory drew away from her consort as the boats sped through the dancing water, with even a dash of spray now and then, and a rush of white foam under the lee rail. It was glorious, but a trifle flawy as the puffs swooped down off the hills.

GEO. S. HUDSON.

[TO BE CONTINUED.]

W. C. A. EXECUTIVE COMMITTEE.

THE executive committee, W. C. A., held its annual meeting at the Stillman, Cleveland, O., on Jan. 5. All the officers and members of the regatta and executive committees were present with the exception of Vice-Com. D. H. Crane, D. J. Kirkpatrick and C. J. Bousfield. Com. J. R. Bartlett presided. It was moved by Stedman and seconded by Ellard that the meet be held at Ballast Island, July 13-29 inclusive.

Very spirited and well presented discussions were held concerning Class C canoes and their limitations, resulting in their being disqualified from competing for the Trophy or the Gardner cups, which remain for classes A and B only, and the limiting of their sail area, to make them a cruising rather than a racing canoe, the rule for limitation being that of Mr. H. D. Crane, which is as follows: The centerboard or boards to extend no more than 24in. below the garboard, and the maximum sail area to be calculated by adding the length in feet to the beam in inches, and multiplying this quotient by 2½. This equals the square feet of sail area to be carried in any proportion so long as it can be efficiently set, lowered and reefed to three-fourths its area when afloat.

A cup for Class C will be provided by Judge or rather Skipper N. Longworth of Cincinnati. A unanimous vote of thanks was extended to the Skipper for his gift and his kindness. The second week of the meet will be devoted to racing, the regatta beginning Monday, July 22. The hop will be held at Rohberg's, Toledo Club. The programme of races was presented by the regatta committee, as published in the FOREST AND STREAM of Feb. 7. Business being concluded, the meeting adjourned, at the invitation of the Cleveland C. C., to the private dining room of the Stillman, where a bounteous repast was discussed by the hungry canoeists. Many excellent and eloquent speeches, intermingled with both vocal and instrumental music, made the evening a most enjoyable one. O. H. ROOT, Sec'y-Treas.

[We have received with the above a copy of the *menu*, a little tent with the W. C. A. flag above it, the bill of fare being on each side of the tent.]

A. C. A. COMMITTEES FOR 1889.

REGATTA—E. B. Edwards, Peterboro, Canada; E. L. French, Buffalo, N. Y.; D. B. Jacques, Toronto, Canada.

Transportation—C. V. Winne, Albany, N. Y.; W. J. White, Montreal, Quebec; J. N. McKendrick, Galt, Canada; W. McK. Miller, Brooklyn, N. Y.

Camp Site and Arrangements—R. J. Wilkin, Brooklyn, N. Y.; J. Z. Rogers, Peterboro, Canada; J. G. Edwards, Lindsay, Canada; Ford Jones, Brockville, Canada; C. E. L. Porteus, Kingston, Canada.

Cruising—A. F. D. Macgachen, Lindsay, Canada; L. B. Palmer, Newark, N. J.; D. A. Poe, Montreal, Quebec.

Certified: G. W. HATTON, Sec.-Treas., A. C. A.

"CANOE HANDLING."—Now is the time, before the season commences, to look over your canoe and outfit and put all in order for cruising, racing and camping. If you have not Mr. Vaux's indispensable book "Canoe Handling" send at once for the new and enlarged edition.

A. C. A. MEMBERSHIP.—Atlantic Division: Theo. Ledyard, New Rochelle, N. Y.; G. W. Vrceland, Hackensack, N. J.; Wm. T. Roberts, J. A. Barten, E. H. Barten, Philadelphia, Pa.

AGAWAM.—We call attention to the advertisement of this fast canoe, offered for sale on another page.

ATLANTIC DIVISION A. C. A.

THE officers of the Atlantic Division, comprising the States of New Jersey, Maryland, Delaware and parts of Pennsylvania, Virginia and New York, including Long Island, have been at work during the winter in laying out the exact boundaries of the Division, preparing large maps covering all of its territory, and making a list of all navigable and canoeable waters with a view to collecting all possible information regarding them, not only for the use of canoeists, but for general reference. The annual meet of the Division will be held in July, from the 10th to the 22d; and it is intended to arrange the location and programme so as to secure the largest possible attendance from within the Division. To this end all thought of Long Island Sound has been abandoned, as it lies so far from the center of the Division, and efforts are being made to find a suitable site near the Navesink Highlands, probably on the Navesink River below Red Bank. This place can be reached in a couple of hours from Philadelphia, and in about half that time by boat or rail from New York. The general programme, so far as arranged, is to start two cruising fleets, one from the Hudson and one from the Passaic, about Wednesday, July 10, with a rendezvous on Staten Island on Wednesday night, where the New York and Brooklyn clubs will join. The combined fleet will take one or two days, according to the weather, to continue the cruise to camp, arriving not later than Saturday morning, which will really be the first day of the meet proper. If the weather should be unusually bad some arrangement will be made for a steamer to call at Staten Island for the canoes, landing them near the camp and avoiding the rough passage across New York Bay.

The meet will continue during the week, some races being held, but the most interesting events will be reserved for Saturday, July 20. The morning will probably be devoted to racing, in the afternoon a clam bake or similar festival will take place, after which the annual meeting of the Division will be held, followed by a camp-fire in the evening. If a suitable location can be found arrangements will be made so that men who cannot take a vacation from business can send their tents to camp by the first Saturday and spend each night in camp, going to New York every day; while it is expected that many will avail themselves of the half holiday to spend the last Saturday and Sunday in camp and be present at the meeting, though not able to enjoy the entire meet. The programme of races has not yet been arranged by the regatta committee, but the officers have decided to present a special prize for a sailing race over a course of not less than three miles, to be open only to canoes that comply with the following conditions: Each canoe must come within the limits laid down by the A. C. A. rules, and in addition must have a well not less than 16in. wide for a length of 4ft.; there must be a permanent bulkhead forward and one aft, not less than 3ft. from the stem and stern respectively, and with at least 6ft. between them; and there must be room in the well for the crew to sleep, with at least 5ft. between the after end of the well and the centerboard trunk; all centerboards must house without projecting below the keel or above the surrounding deck or coamings; no part of the hull or fittings shall project beyond the beam allowed by the A. C. A. rules. Sails shall be lowered on deck and hoisted again at least once during the race, and the start may be ordered with sails down. The donors of the prize reserve the right to refuse the entry of any canoe which shall violate the spirit of these rules. The programme will include the usual unlimited race, but the above prize is offered in the hopes of securing competition between *bona fide* cruising canoes, and the notice is given at this early date in order that ample time may be allowed for preparation. It is the intention to interpret the above conditions as liberally as possible in the case of existing canoes that are in essential respects cruising craft, and at the same time to bar out boats obviously not suitable for cruising, but built to evade the conditions.

A NEW CRUISING ORGANIZATION.

THE Pequot Canoe Association has just sent out the following circular letter:

To all those interested in boating and yachting, Greeting:

With your permission, we desire to call attention to a movement, that is now in progress, toward uniting the "Small Boat" owners of Long Island Sound into a compact association for cruising, racing, and general good-fellowship, under the flag of the "Pequots."

The Pequot Association was founded in the summer of 1886, as a sub-division of the American Canoe Association, in the effort to popularize canoeing hereabout, but after a two years' experience (following the natural tendency of all boatmen, pleasure sailing upon salt water, with its almost unlimited possibilities in matter of distance, and the consequently increased demands upon sea-going qualities, storage and carrying capacity), the Pequots, while still recognizing the many special features of merit peculiar to the canoe, have so amended their organization as to include larger boats and aim to form a strictly cruising fleet.

In the new order, the canoe finds fraternal companionship with sloop yachts, jib-and-mainsail boats, steam or naphtha launches, sharpies, and the Yankee version of the English yawl; all of the same organization, and through a union of effort, bound for the same good port of concentrated pleasure.

The membership of the Pequots already extends to several ports other than New Haven, and the club pennant insures the certainty of most hospitable and fraternal recognition wherever it is shown in the Sound or adjacent waters, individual members profiting greatly thereby while cruising.

The annual "Meet," with a regular programme of races, in which each class may participate, produces that good natured rivalry resulting in improved types and seamanship, and accompanied by the pleasures incident to camp life with family and friends, including the ladies, naturally proves the date of most profound and pleasurable anticipation in the Pequot almanac.

With the probable selection of one of the "Thimbles" as the permanent summer home of the Association, the members, their families and friends, and cruisers in general, will be welcomed and furnished a delightful rendezvous for the entire season; supplying all the necessities and conveniences of a first-class resort, without the usual cost, that factor being persistently reduced to the very minimum.

The out-of-commission season is enlivened by the annual dinner in October, and a series of monthly camp-fires, where a mutual exchange of cruising and camping experiences, with a pretty large admixture of good music can but please and profit all.

Although we have a complete and thorough organization, it has not been deemed advisable as yet to place a limit upon the style or size of entering craft, and while confessing a decided preference for "single-hand" cruisers, small yachts and small boats of every description will be welcomed, upon the approval of the proper authorities.

We propose to encourage elementary boating, and to such as are interested in matters nautical, but are inexperienced, we would suggest that there is no better school for seamanship, nor a safer, cheaper, healthier, or more pleasant recreation than small boat sailing.

It may interest those giving the matter serious consideration to know that the officers of the association are prepared to furnish gratuitous information regarding all the pleasure craft and appointments of every sort now in the market in this vicinity and in New York, and to aid any would-be member in every way possible that may tend to boom the "small boat navy."

The initiation fee of the association is one dollar, and the dues are one dollar per year. No assessment for any purpose whatever.

F. P. LEWIS, Sec'y-Treas. W. A. BOWDEN, Com.

Past Events.—1887, July 1-6. Annual meet at Lighthouse Point, New Haven Harbor. 1888.—July 18-23. Annual meet at Chimon Island, Norwalk Group.

Fixtures.—1889.—July 31-Aug. 7. Annual meet at the "Thimbles." Aug. 8. General cruise of the whole fleet lasting until Saturday, Aug. 10.

The officers are:—Com., W. A. Borden; Vice-Com., F. P. Sherwood; Sec'y-Treas., F. P. Lewis; Chaplain, Rev. A. N. Lewis. Meas., E. C. Bogart; Captain, Bridgeport Division, J. H. Rowland; Captain, New Haven Division, G. Skiff Ford. The club has now 40 members.

THE A. C. A. YEAR BOOK.—Sec'y-Treas. Hatton writes us that arrangements have been made with Messrs. Pentz and Vaux, of the *Sail and Paddle*, to publish the A. C. A. Year Book on terms most advantageous to the Association. The publishers will print and mail, free of cost to the Association, a book similar to that of last year, but larger and more complete; they in return to have the sole advertising privileges. The book will be issued about May 1, or before, and will be re-arranged, with much new matter, including cuts. This plan relieves the Association of a large item of expense and at the same time secures a better book than in the past. In order to have a complete record of members and canoes, members are requested to send as soon as possible to their Division Pursers their present addresses and the names and dimensions of their canoes where alterations have been made since last year. It rests largely with the individual members of the A. C. A. whether or no the book is complete and accurate and published in season.

LIMITS IN THE "UNLIMITED" RACE.—*Editor Forest and Stream:* I am surprised to see the interpretation of "unlimited" which such an old canoeman as "Katrina" puts forward in his letter to the FOREST AND STREAM of Feb. 7. After reading it one would infer that the "unlimited" race was free from any restrictions whatever, while the facts are that nearly a page of the A. C. A. book is taken up with restrictions which a canoe must conform to in order to enter this same "unlimited" race. The term originated at the time when there were limits both to ballast and sail in the races, and was applied to races in which a man could carry as much ballast and sail as he chose, though at the same time he was limited as now, in beam, depth, drop of board and other particulars, and was by no means free to exercise his ingenuity without regard to rules.—S. D. S.

THE A. C. A. REGATTA REPORT.—Mr. Vaux, the chairman of the committee of 1888, has prepared a very complete record of the work of the committee in the shape of a scrap-book in which are the full reports of the races, as published in the FOREST AND STREAM, the report of the regatta committee, the regatta programme, entry blanks, prize lists, and all the bills and accounts of the committee for 1888. In addition there is a copy of every circular and blank used by the committee, as well as all correspondence relating to its work. This is the first time that information of this kind, almost invaluable to new committees, has been put into convenient and permanent form. The idea originated with Mr. Vaux, and it is to be hoped that future committees will adopt it in turn.

28. Lynn, Club, Lynn.

BUILDING NOTES.

THE new Morgan 40 has been started at Piepgrass's yard. She will be of steel, the plating being 8 and 10 gauge. Her beam will be 12ft. and draft 10ft. Mr. Thomas's steel yawl has the deck laid, and the work is going ahead quite rapidly. She will be 65ft. over all, 52ft. 6in. l.w.l., 14ft. 10in. beam, and 9ft. draft. The keel is laid for the Morgan schooner. Mr. Grinnell's schooner is nearly plated. Her length over all will be 81ft., l.w.l. 65ft., beam 19ft. 10in.

At Bay Ridge Mr. Ayres is busy with three new boats, having completed Mr. Mayberry's launch. The latter now lies in the shop, a very handsomely finished piece of work. Besides Mr. Whitlock's cutter Mr. Ayers will build a 40 from Mr. Gardner's designs for a New York yachtsman, and also a 28ft. c. b. sloop from his own model for Mr. H. B. Ogden, of Brooklyn. The 40 will be similar to Mr. Whitlock's 50, but with 13ft. beam and 9ft. draft. The 30 is now partly planked and the deck frame is in. The yacht is very graceful in outline, with a handsome overhang at each end. The stern promises to be particularly light and pleasing. The frame has occasioned some comment on account of the small scantling, but the best of material and workmanship is employed, and the boat will be not only lighter but stronger than most of her class. Mr. Ogden's sloop will be 33ft. over all, 28ft. l.w.l., 12ft. beam, and about 3ft. 6in. draft, with inside ballast of iron.

At Mumm's yard the Chispa is practically completed, save the final painting. Her mast has been stepped for the past three weeks and is drying out in a way that will tell when she comes alongside some of the new boats whose spars are not roughed out yet. The bowsprit is also in place, a very long stick. The yacht will be launched and fitted out very early in the season, and if there is any truth about the "early bird" she should capture some prizes before other new boats of the class are in commission. It pays in more ways than one to order a yacht in the fall. Next to Chispa is the handsome little compromise sloop that Mr. Mumm is building for sale. She is completed so far as the hull is concerned, except the cabin joiner work.

At South Boston Lawley is pushing rapidly the large fleet of yachts now in hand. A part of the hill will be removed to give room for a new building shed, in which Mr. Boggs' steam launch, designed by Mr. Burgess, will be built. She will be 65ft. on l.w.l. Col. Forbes' schooner is partly planked, and the trunk is completed. The Phebe 40, Mariquita, is almost planked, while the lead keel of the Belmont 40, Mariquita, has been cast, the stem and stern are set up, and the frames are ready. Mr. Richardson's 46-footer, Nepenthe, has been run out of doors, and Mr. Ellis' Nanon is nearly completed. Another 40 from Mr. Burgess' designs will be built for a syndicate of Providence yachtsmen. Mr. Lawley has also estimated on a 3-tonner of the old type, about 28ft. 3in. l.w.l., 4ft. 9in. beam, and with 4¼ tons on keel, for Mr. C. P. Richardson, of New Orleans. The steel steamer at the Atlantic works is plated up and the inside work is going on. She will be launched early and finished by June.

At Salem Mr. Frisbie is planking the 40 and will lay the keel of the 30 this week. The deck joiner work is being pushed rapidly and will be ready before the decks are laid. Capt. Barry Randall, of the cutter Stranger, has arrived from Southampton and will fit out both craft.

At Essex Mr. A. D. Story is building a keel schooner with inside ballast, designed by Mr. T. A. Irving. She is a cruiser, 43ft. over all, 40ft. l.w.l., 15ft. beam and 7ft. 6in. draft.

At Pryor's yard, City Point, the windows have been painted and all cracks caulked to hide from outsiders the new launch building for Mr. C. D. Mosher, of Buzz fame. She is to be about 60ft. long and to show more speed than any of her predecessors.

Lawley has the contract for another 40-footer for New York, designed by Mr. Burgess for Mr. Macomb G. Foster, of the Knickerbocker C. C., an old canoe sailor and paddler, who has lately taken to yachting. She will be a keel craft, 39ft. 6in. l.w.l., 13ft. 6in. beam and 3ft. draft.

At Baltimore Mr. Joseph Hutson has nearly completed a cutter for Mr. Alfred Nickles, of New York. She will be 27ft. 6in. over all, 22ft. 6in. l.w.l., 8ft. beam, about 5ft. draft, with 2,500lbs. of iron in keel. She will have a single jib and will bear the honored name of Benjamin Harrison.

Capt. Cuthbert, of Trenton, Ontario, will build a centerboard sloop for Mr. J. H. Fearnside, of Hamilton, Ontario. She will be 25ft. l.w.l. and 10ft. beam, and is to beat a certain Hamilton yacht under a forfeit of $100.

At Winthrop, Mass., Mr. D. W. Belcher is building a catboat 25ft. over all, 11ft. beam, 3ft. draft. He has in hand also a catboat 17ft. over all, 10ft. 4in. l.w.l., 6ft. 6in. beam and 1ft. 6in. draft. Mr. Belcher has built the fast catboats Mischief, 18ft. 5in. over all, 16ft. 1in. l.w.l., 8ft. 6in. beam, 2ft. draft, and Topsy, also the spritsail boat Mary, 16ft. 4in. long, 7ft. 6in. beam and 2ft. draft, and tae jib and mainsail boats Trouble, 23ft. over all, 20ft. l.w.l., 11ft. beam, 2ft. 3in. draft, and Modoc, the very successful racer of last season.

Williams has nearly finished Com. Corbett's little cutter and has started the second one, while C. A. Borden is building another for the Mosquito Fleet. Mr. Jeff Borden, Jr., has designed one, 21ft. over all, 16ft. l.w.l., for the Pleon Y. C. of Marblehead,

INTERNATIONAL RACING.

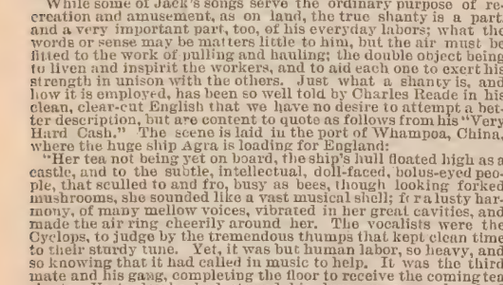
SOME excitement has been created by the announcement of the receipt of a letter some time since from the Royal Clyde Y. C. by the New York Y. C. inquiring whether a challenge would be received under the second deed of gift; to which an affirmative reply was sent. We can state that there is at present not the least possibility of a challenge behind the letter. The mysterious Mr. Phelps, N. A., whose postal card of inquiry created a similar ripple of excitement some time since, is a student of Trinity College, Dublin, who thus far has attained prominence only as a designer of model yachts. The latest reports state that Lord Dunraven's new 60 is to have a centerboard of some kind, but there is no reason to suppose that either she or the new 90 will challenge for the cup this season.

LARCHMONT Y. C.

ON Feb. 13 the annual meeting of the Larchmont Y. C. was held at the Brunswick, New York; with Com. Lowery in the chair. The following officers were elected for 1889: Com., Girard C. W. Lowery, sloop Daphne; Vice-Com., Thomas J. Montgomery, steamer Cosette; Rear-Com., Seymour L. Husted, Jr., schooner Tioga; Sec., William G. Scott; Treas., Eugene L. Bushe. Trustees to serve for one year, William S. Alley, Howard W. Coates. Trustees to serve for two years, Augustin Monroe, William Murray. Trustees to serve for three years, Francis M. Scott, Edward J. Greacen.

The sailing rules were amended to read as follows: "All cabin yachts may carry, in addition to the captain, one man for every 5ft. of length over all or fraction thereof. All open yachts may carry, in addition to the captain, one man for every 3ft. over all or fraction thereof. In racing the club flag heretofore shown on all markboats will be replaced by a blue and white-striped ball, while the blue peter will be replaced by a similar flag with a red in place of a blue ground, the white being unchanged. The course for open boats was made 10 in place of 16 miles, and the following was added to the sailing rules: "Should the regatta committee think it advisable, they may start any classes not more than half an hour before or after the balance of the fleet, in which case a notice to that effect must be posted in the club house before 9 A. M. the morning of the race." The membership limit of 600 is likely to be reached shortly. The fleet now includes 190 vessels.

THE MUSIC OF THE WATERS.



"And if you ask for a song of the seas,
We'll heave the capstan round.
With a yeo heave ho, and a rumbelow,
The anchor's apeak and away we go,
Hurrah for the homeward bound;
Yeo-ho, heave ho,
Hurrah for the homeward bound."

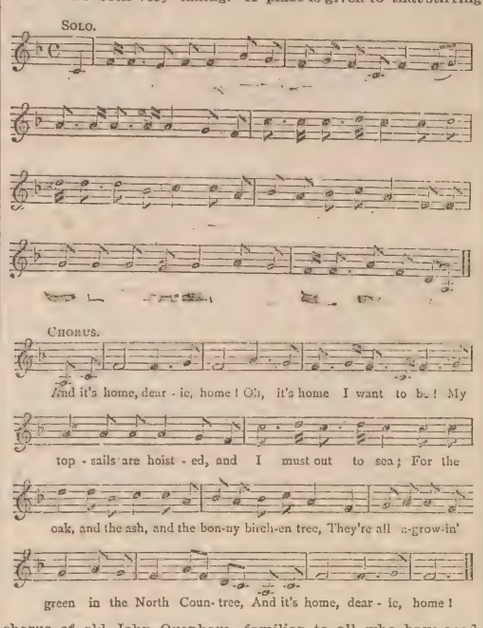
SO sings the light-hearted and lighter-heeled Nanki Poo, and the reason why he does not at the same time hitch up his trousers in true (stage) sailor fashion, is the same that he has for not carrying his name on his handkerchief; his picturesque but scanty wardrobe boasts neither of these useful if not absolutely indispensable articles.

The sea song as known to the average landsman comprises a large and varied collection, ranging in excellence from the bold and spirited compositions of Dibdin down to that last dreary specimen of namby-pamby jingle that has been so aptly paraphrased as "White wings, they make me so weary." Beyond these limits the knowledge of the white-gloved and swallow-tailed tar of the concert stage, and his fellow fiend the picnic tenor, goeth not; and it would surprise and perhaps shock both to learn that the sea has a school of music peculiarly its own, and as distinct from theirs as the music of Wagner's Trilogy is from the set marches and conventional arias of Donizetti and Bellini. There are, nevertheless, many songs born of the sea, peculiar to it, and partaking thoroughly of its restlessness and freedom from restraint and conventionality; which songs are classed under the general name of "shanty," or "shanty song". If the origin and meaning of the term are not plain at first sight, they become so as soon as the word is spelled as it sometimes is, "chantey," an obvious corruption of the French *chanter*, to sing.

While some of Jack's songs serve the ordinary purpose of recreation and amusement, as on land, the true shanty is a part, and a very important part, too, of his everyday labors; what the words or sense may be matters little to him, but the air must be fitted to the work of pulling and hauling; the double object being to liven and inspirit the workers, and to aid each one to exert his strength in unison with the others. Just what a shanty is, and how it is employed, has been so well told by Charles Reade in his clean, clear-cut English that we have no desire to attempt a better description, but are content to quote as follows from his "Very Hard Cash." The scene is laid in the port of Whampoa, China, where the huge ship Agra is loading for England:

"Her tea not being yet on board, the ship's hull floated high as a castle, and to the subtle, intellectual, doll-faced, bolus-eyed people, that sculled to and fro, busy as bees, though looking forked mushrooms, she sounded like a vast musical shell; for a lusty harmony, of many mellow voices, vibrated in her great cavities, and made the air ring cheerily around her. The vocalists were the Cyclops, to judge by the tremendous thumps that kept clean time to their sturdy tune. Yet, it was but human labor, so heavy, and so knowing that it had called in music to help. It was the third mate and his gang, completing the floor to receive the coming tea chests. Yesterday he had stowed his dunnage, many hundred bundles of light flexible canes, from Sumatra and Malacca; on these he had laid tons of rough saltpeter, in 200lbs. gunny-bags; and was now mashing it to music, and all. His gang of fifteen, naked to the waist, stood in line, with huge wooden beetles called commanders, and lifted them high, and brought them down on the nitre in cadence, with true nautical power and unison, singing as follows, with a ponderous bump on the last note in each bar:

Here goes two, Owe me there two, &c.



"And so up to fifteen, when the stave was concluded with a 'Spell, oh!' and the gang relieved, streaming with perspiration. When the saltpeter was well mashed they rolled on butts of water on it, till the floor was like a billiard table. A fleet of chop boats then began to arrive, so many per day, with the tea chests."

Such is the shanty and such its chief use, and there are hundreds of these crude but vigorous songs upon the sea, every nation having its own. Now and then, as in the instance given above, one is found in a novel or tale of sea life, but it is only recently that this peculiar and interesting branch of music has found a friend both able and willing to collect and arrange it, and to present the best part of it in attractive form.

Some two years since, at the suggestion of the editor of the *Shipping World*, Major E. R. Jones, United States Consul at Cardiff, the task was undertaken by Miss Laura Alexandrine Smith, daughter of the Russian Vice-Consul at Newcastle-upon-Tyne; and the result is a most interesting volume entitled "Music of the Waters," lately published by Kegan Paul, Trench & Co., London.

A thorough musician, a pleasing writer, and full of enthusiasm, Miss Smith was specially fitted for the work, and she well deserves the success that is likely to attend her labors. Her studies and researches have been carried on in every possible direction; through correspondence with persons in distant seaports; through study of many collections of old songs; and through searches in person in the forecastle and about the docks, sometimes taking down an air as it was hummed for her by a sailor. The amount of material thus collected made the task of arranging and assorting, rejecting much that was useless and yet leaving out nothing essential, a very difficult one. Further than this, there are, besides the shanties proper, many sea songs of comparative merit which might seem to claim a place in such a collection, and yet are not recognized by Jack himself as a part of his repertoire, or as having the true nautical ring; and it is no easy matter for the landsman to discriminate between the true and the imitation. The selection, however, has been very well made, and such songs as the "Lorelei," where introduced, are accompanied by good reasons for their admission.

The first chapter is taken up with English and American shanties, among which we find such old friends as Old Stormy, Rio Grande, Reuben Ranzo, Whisky for My Johnnie, The Flash Packet and several versions of the ever-popular "Roll a Man Down," one of which will be found in the FOREST AND STREAM of May 29, 1885. Perhaps the best in the whole collection is one that may be familiar to the readers of Black's novels, a shanty of far more than average merit, credited to the sailors of the north of England, entitled "Home, Dearie, Home." The air and chorus are both very taking. A place is given to that stirring

chorus of old John Oxenham, familiar to all who have read "Westward Ho," but we are left in doubt as to how much of the song was written by Kingsley and how much is genuine, nor is the air given. The song itself is probably new, but the old chorus has vigor and vitality enough in it to have kept it alive since the days of Franky Drake, with its

"Randy dandy, dandy O,
A wiet of ale and brandy O!
With a rumbelow and a 'Westward ho!'
Hey, my mariners, heave O."

We are loth to admit it, but America has little to be proud of in the way of national songs, either of the land or sea, nearly all of them being mere adaptations of words and music belonging to other nations, as in the case of "My Country 'tis of Thee." Miss Smith does full justice to our sea songs, such as they are, mentioning in particular the famous one of "Hull's Victory," or the "Constitution and Guerriere," but there is very little room for national pride even in this, as the words are set to a well known English air. The war of 1812 gave to the young nation nearly all of its sea songs, many of them lively and stirring enough, but at the same time there are few that are anything better than adaptations of Dibdin and other English song writers, and we find the Hornet's victory sung to the tune of the "Battle of the Nile," "Truxton's Victory" to "Hearts of Oak," "The Freedom of the Seas" to "Ye Gentlemen of England," and "Perry's Victory" to "Admiral Benbow." Such borrowed ditties may be good enough for all the navy that the United States could boast of during the last twenty years; but let us hope that with the new fleet of war vessels there will arise some poet of sufficient ability to enshrine in stirring and original words and music the deeds of her old time sailors, of which America can never be too proud.

The second collection of songs, a very good one, deals with the Gaelic boat songs, and will be appreciated by all readers of Black's novels. Here are given "Fear A Bhata," "The Skye Boat Song," "Ho, Ro, Clansmen," and "The King Sits in Dumfermline Town."

We do not know whether to credit it to the musical skill and taste of the coaly bargemen and watermen of the Tyne or to the local pride of the authoress, but she has gathered together a very interesting collection of songs peculiar to Newcastle and the Tyneside. All of them are evidently born of the river and its busy life, the famous "keels," the fishing, and also of the sad days of the press gang—"Here's the tender coming, pressing all the men."

The Canadian boat songs have a chapter to themselves, several good ones being given, though we miss the best, perhaps, of all—"A La Claire Fontaine." We find, however, an old friend in a new dress, and at first failed to recognize under the title of "V'le L'Bon Vent" the "Boule Roulant," familiar to many American canoeists.

Though well known throughout Canada, its first real introduction on this side of the line was probably at the meet of the American Canoe Association at Grindstone Island, in 1885. The occasion was a grand camp-fire, such as is held every year; the scene, the top of the round hill overlooking the calm St. Lawrence, a clear blue sky above, against which arose the smoke and flame from a huge pile of logs and stumps. The whole camp, some two hundred or more, was scattered in a straggling circle in the semi-darkness that framed the bright glow of the fire, while from one side or another in turn came a song, a story or a bit of music on a guitar or banjo, varied at times by a rousing chorus in which all joined. In one of the pauses there stepped quickly from the darkness into the brightest of the firelight a tall, muscular figure, surmounted by the picturesque striped Canadian "toque," and started up in Canadian French, with a rolling reverberation of resounding r-r-rs, the chorus:

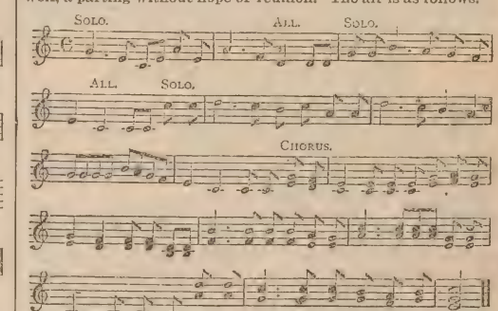
"En roulant ma boule-le,
En roulant ma boule-le;
Roull roulant, ma boule roulant,
En roulant, ma boule roulant,
En roulant, ma boule-le."

The singer was the chef of the Deseronto camp, a French Canadian cook of the lumber camps, an artist whose bread was the envy of the entire canoe camp, a poem in flour and water.

Among the odd bits of flotsam and jetsam in the form of song and story that are thrown up each year at this same meet is a good sea song which we have never seen in print, a reminiscence of the whaling days of our correspondent "Tarpon," an old sailor as well as canoeist. The first verse is as follows:

"Once more with flowing northern gales
We're bounding o'er the main,
Those verdant hills of the tropic isles
We soon shall see again.
Five sluggish moons have waxed and waned
Since from those shores sailed we,
But now we're bound from the Arctic ground,
Rolling down to old Mohea."

"Rolling down to old Mohea, my boys,
Rolling down to old Mohea,
We're once more bound from the Arctic ground,
Rolling down from old Mohea."



The French sailors and fishermen are credited in the next chapter with some very good songs, among them being one which, though not properly a sea song (being, we believe, rather a child's song, like "Malbrock"), deserves at least a passing notice, the hero being well known to all lovers of Thackeray. The title is "Le Petit Navire," the little ship, and the song several verses of which Miss Smith has been unable to supply, goes on to tell how there was once a little ship which had never sailed far before, which put to sea and undertook a long voyage to the coast of Guinea, and how at the end of six weeks there was nothing left on board "but one split-pea." The sailors draw lots as to who shall be killed and eaten, and the one who draws *la courte paille* is none other than that famous discoverer of "Jerusalem and Madagascar and North and South Amerikee," Little Billee. In short, it was from this little poem that Thackeray derived his amusing yarn of the "Three Sailors of Bristol City."

The Italian and Scandinavian sea songs each fill a chapter of their own, the former being, as one would expect, more musical and poetic, largely composed of boat and fisher songs, which partake of the easy and indolent character of the sunny shores of Italy. The Scandinavian songs, on the contrary, are far more vigorous and partake of the sea entirely, as becomes the descendants of the Vikings.

The German songs are few in number, but include some very good ones. Miss Smith has included in the collection a little song which we have heard in this country, but the music of which we have never been able to find in print, and which she is probably the first to put in type. Though the excuses she is forced to make at times for the words apply to part of this, the song is a peculiar one in some respects. The air is a very plaintive one, well fitted to the sad words of the chorus, and both are entirely at variance with the rather nonsensical words of the song itself. Though popular with sailors it is worth while to point out that it is evidently not a sailors' song, but probably owes its origin to the immigrant, who at Hamburg says farewell forever to the Fatherland, and whose efforts to keep his courage up and the tears down are evidenced in the nonsense of the verses no less than in the pathos of the chorus:

"Ach es fällt uns so schwer,
Aus der Heimath zu gehen,
Wenn die Hoffnung nicht wär
Auf ein wieder, wiedersehn,
Lebe wohl, lebe wohl,
Lebe wohl, lebe wohl,
Lebe wohl, auf wiedersehen."

When the sailor sings of parting, he at the same time couples with it a speedy and safe return; but in this case it is a final farewell, a parting without hope of reunion. The air is as follows:

Though not a sailor's song no one will quarrel with the presence of Heine's beautiful "Lorelei," especially as it is accompanied by a very good translation, preserving much of the rhythm and poetry of the original, the same, we believe, which Mark Twain has given in his "Tramp Abroad." There is much that is worthy of notice in the songs of the Dutch sailors and fishermen, the Russian sailors, and the Greek, Japanese, Chinese, Indian and the Nile boatmen, but we have not space to discuss them in detail. The final chapter of the book is devoted to the superstitions, customs and water legends of the sea, rivers and lakes. Among other water spirits are mentioned the Necks, in which connection we would call attention to the song published in our columns a few weeks since. Taken altogether the collection is a most unique and comprehensive one, and all lovers of the sea will join us in wishing to the authoress the success she so well deserves for bringing into public notice one of the brighter sides of the hard life of the sailor. If the old saw be true, that a fiddle is as good as ten men on a purchase, then the "Music of the Waters" should be equal at least to a whole outfit of steam winches and capstans.

HINTS ON YACHT ENGINES AND BOILERS.

BY FAR too many different kinds of engines and boilers are used that are not well adapted to the work. In looking over the yachts in service it is found that engines of all descriptions are in them, styles that were not intended for any such work or position, therefore are bungling, taking up valuable room, are not regular in motion, and are unsatisfactory in almost every way, and in many instances are far from being economical, and the owner may not be well enough acquainted with steam machinery to realize their wastefulness. Every upright engine is by no means fitted for a yacht because it is upright, and the failure to realize this to the full extent is the cause of many owners of yachts having put in engines that have turned out very unsatisfactorily as to running, speed, etc. With an engine and boiler properly planned and arranged for a yacht, there is no reason for their taking or spoiling so much room needed for other purposes; every inch of space in a boat is valuable, as those who have had experience well know, and the machinery should be planned to be as compact as it is possible to make it (and here we are to note what perfection is possible in this line if we will make it so). It would seem when we see the crude plan and surplus size of engine, boiler and connections in many yachts, that there was no approach to perfection obtainable, and then again in a few boats we see the effects of good planning and the use of an excellent engine and boiler, the whole occupying small space and giving entire satisfaction.

The prime requirement of a good yacht engine is capability to maintain a high speed. Usually a high rotation of engine gives the best results (with a proper corresponding pitch of screw). If we want a high rotation of wheel on account of its ability to drive the boat at speed, then an engine that will not only run up to the fast revolution desired but one that will maintain this speed on a long run without breaking down or heating any part, packing giving out, or pump failing to work or anything causing a stop, or a slack down, which often occurs with many boats, is needed.

Regular motion is of much importance, irregularity in this respect wastes steam by the jerky motion of wheel absorbing power in such a way that a large proportion of it is not available for driving the yacht as it should be. Next, it fast wears and brings a heavy strain on all parts of the engine, tending to loosen them and heat the bearings. Next, the unpleasant irregularity of the boat's motion and jarring are failures that should not and need not exist.

Economy of room occupied by engine and boiler and connections is an element appreciated by all yacht owners. As has been noted above, it is possible by proper planning to bring the space taken down to a minimum.

A low center of gravity should be secured in all engines, as a top-heavy machine in a high-speed yacht, with its narrow beam, is, especially in rough seas, an unsatisfactory affair (if not dangerous).

Accessibility of Parts.—When on a cruise the time is valuable, and that spent over the engine causes uneasiness and impatience; therefore, packing, setting up a box or nut, or any little attention the engine may require, should be quickly and easily possible. Both the engine and arrangement of connections control this.

Simplicity is a valuable feature in any machine, and especially in a yacht engine, where we want one easily got at. The fewest possible number of joints or working parts are desirable, thereby limiting the amount of wear, liability to heat, etc. The simpler a machine the stronger it can be made, securing direct motion and strains. In many boats, especially small ones, those who are running them are practically unacquainted with steam; therefore, the simpler the engine the better.

The economical use of steam is of importance from a financial point, but more important on account of space taken up by the coal, and weight to be transported, every 100lbs. lowering the speed of the boat. This makes it highly desirable on a small launch as well as on a large yacht, to have an engine that will give the highest economy.

A proper plan giving direct motion; large journals, guides and all moving surfaces, preventing excessive heating and giving long life and satisfactory working of engine is essential.

In far too many engines poor and improper material is used, the makers trying to increase profits, or being forced by competition to use cheap material. Connecting rods, shaft, piston and valve rods should be of good steel, connecting rod brasses should be of a proper composition of brass, main shaft bearings should also be of the same composition, giving good wearing ability and minimum amount of power used to overcome friction; bearings should not be formed of babbit metal run around the shaft when bearing

caps are on, as is done in many instances, giving a cheap miserable affair. The metal of the cylinder should be of as fine and even a texture as possible, with proper hardness to secure the proper retention of its cylindrical form as long as possible and also prevent improper wearing of valve seat, causing the valve to leak and waste steam. The link should be of steel, made wide and hardened, with joints at end of eccentric rods that give a large surface, thereby preventing excessive wear and lost motion, which causes an imperfect motion of valve and thereby an irregular and wasteful working of engine.

Fine workmanship is an element of great control over the satisfactory running and life of the steam engine, but in 75 per cent. it is far from a fair standard. The cylinders are not bored evenly throughout, and are left with a rough, coarse feed; heads are packed with rubber, that soon burns or blows out, instead of being ground in as they should be, thus giving a joint that needs no packing and always remains tight, and the head can be taken off or put on quickly with no trouble. Piston packing should be nicely fitted and ground to an easy and perfect fit, both in head and cylinder; side valves should not be ground in with emery, but planed and scraped to a fit and tested under steam pressure; steam chest cover should be grooved and a copper wire packing used; this gives a good wearing joint, tight, and one that allows the cover to be taken off and replaced with little trouble, not requiring scraping and a new packing every time, as with rubber packing; piston and valve rods should have a fine finishing feed run over them, and then be draw-filed by a machinist who knows his business. Filing in the lathe is a barbarous way of finishing a rod. The rod packing should be patent metallic, which lasts steam tight for a long time, requiring no repacking; rods on which this is used are found after a year or more of constant running to be as perfect as when put in. Guides and cross heads must be fitted and adjusted to secure a motion in perfect line, not wearing the rod or packing onesided or cramping the piston head and putting excessive wear on the piston rings.

Connecting rod brasses and shaft brasses should be such a fit in the bearings as to move easily for adjustment, and not give a loose fit in any direction or position, scraped to an even bearing on shaft journal, and against the collars on shaft. Engines should be double-cranked in every instance, this preventing wearing and springing out of line; the link should be hardened and then ground to give a perfect and easy fit of block in any position of link, with no lost motion anywhere, thus securing a fine working of valve, and insuring the link and block from excessive wear, as is found in many engines whose links are of soft material, not hardening in the least, because it is in this way easily and cheaply made. Eccentrics often give much trouble and improper working of valve, by slipping around on the shaft from their right position, which is caused by the slipping of set-screws used to hold them, instead of their being keyed, which should be done with every eccentric, as there is no reason for ever moving them from their original place.

The general plan of an inverted cylinder engine, except on the small launches or largest yachts, is very good; it gives a low center of gravity, and a compact engine, the long connecting rod putting less wear on the journals, and giving a more direct and even motion, and less jar to the boat. With the valve gear in use on most small yachts little or no expansion of steam is obtainable, where by a proper plan of engine an early cut off and high expansion is admissible, thus making a marked saving in fuel. The use of a double engine is excellent practice, giving uniform speed, and admitting usually very good expansion of steam. A boat in point is one my experience acquainted me with, one in which a double high pressure non-condensing engine run at 180 revolutions, giving exceptional high speed of boat (boat about 40ft. long). The economy in the use of fuel is also very marked. The boiler is a water tube, occupying small space for the power developed, is quick to raise steam, and supplies the engine easily. As yachts increase in size the advantage of a compound condensing engine is very apparent, developing a given power on 50 per cent. less fuel, the expansion of the steam is carried to an extended limit, thus utilizing much more of the power which it contains. Next, the pressure of 12 or 13lbs. additional, which is made available on the large piston by the vacuum of the condenser, gives a great increase in power from a given amount of steam. When a large power is desired in a boat, the cost of a compound condensing engine is more than for a high pressure non-condensing, but only about one-half the boiler capacity is required to develop the given power through the compound engine, thereby, through the less cost of boiler, helping to counterbalance the extra cost, the reduced amount of fuel used gives a great saving in the cost of running.

As to form of engine, it is controlled by circumstances. With an engine using half the coal the saving in space taken by the coal is of much importance. The surface condenser should be used by all means, the jet condenser is not a proper thing in any instance of steam engineering, where it can possibly be avoided. The method of running a surface condenser without the use of a circulating pump is seldom if ever taken advantage of, though it saves the cost of a pump and the power required to run it. What is required to condense the exhaust steam is cold water; now when the boat is surrounded and floating in water above the level of the condenser, giving a chance to lead it in directly from the bow, thus forcing it to circulate through a properly-placed tube, the needlessness of a pump is apparent; this, of course, cannot be done in all instances, but is available in some.

By a proper proportioning and balancing of parts against steam pressure it may be practicable to make a high expanding and condensing engine without compounding; thus securing the advantage to quite an extent of a compound engine by the use of a single cylinder condensing. There are practical examples which lead us to think this can be satisfactorily accomplished, thus giving simpler and more compact engine, more easily handled.

BOILERS.

A very large per cent. of the boilers used in yachts are not well fitted for the purpose; they are large and clumsy; their center of gravity is high; they are excessively heavy from the large amount of water they contain; the fire boxes are improper in shape and size; they are not economical, etc. In the first place, a boat boiler should be as simple as it is possible to make it, because it can be more perfectly made. In an irregular boiler, particularly when the sheets are heavy and thick, the forging of them to shape or sharp angles is a difficult job, seldom attained without some injury to the metal; small cracks are started on the edges, which weaken the sheet and allow a chance for corrosion to work; the metal by the forging is hardened in spots, and internal strains are caused by it, which are not counteracted by proper annealing. Next, simplicity is demanded, because it gives more chance to keep the boiler clear from scale, and can be thoroughly watched to detect cracks or deterioration of metal and corrosion, which is a serious element at work against boilers. It may start along a seam or in the smallest crack or in the laminated plate, where it has a chance to work its destruction fast and sure if not detected and prevented. The simple boiler is much stronger, both from the element of taking the strains of pressure direct, and, as has been mentioned, can be more properly made; next, it is more easily handled in all ways.

Steam room in a boiler should be large, and area of water surface sufficient to allow a free disengagement of steam, thereby not carrying water up with it, causing excessive moisture in steam, which beside the disadvantage of having it in the engine is very wasteful of fuel. A perfectly plain, simple firebox (free from all patent arrangements), that has an area of grate in proper ratio to the heating surface, will give invariably the highest economy when properly fired, and as complete combustion obtained as is possible.

Simplicity recommends the cylindrical upright where it can be used, and not have the center of gravity too high. In high speed yachts with their narrow beam we want as much stability as can be secured, especially in rough weather, and a high boiler which brings a heavy bulk of water far above the loadline, gives by the swashing back and forth of the water it contains a dangerous effect, added to every roll of the boat. When an upright cannot be used, the proper form should be governed by circumstances, but the first and most important element to consider is simplicity. A properly made watertube is an excellent and very satisfactory boiler, giving perfect safety, easy and quick steaming, and light weight, both of metal and water contained. Capacity to carry extremely high pressure gives extended expansion in engine and thereby high economy, which is only attainable with a high initial steam pressure. The boiler should be fed by an injector, and on a small boat an independent bilge pump should be so connected as to be used as a boiler feeder if any accident happens to the injector. On large yachts two injectors should be used, one for a relay, as the bilge pump from the nature of the pump has too large a water cylinder.

W. H. WESTON, M. E.

CHELSEA, Mass.

CLASSIFICATION BY CORRECTED LENGTH.

Editor Forest and Stream:

I cannot imagine any one who has considered with horror and amazement the prodigious monsters which the 40ft. class has already developed—40ft. with upward of 50ft. boom and 30ft. hoist—not agreeing with every word in your article of Jan. 31 in deprecation of such a type. If such boats are to come into any class then farewell to all racing in it to any save very wealthy men. It is not want of racing spirit that kills yacht racing, that is a thing too strongly implanted in human nature to be wanting. Every man will race if he only has a chance. Not an owner of a cruiser, but if on a cruise chance throws an even bit across his way but will race her all day with keenest pleasure.

What kills racing is "racing machines," and the object of all racing rules should be to handicap them out of existence, and enable men to keep a boat for pleasure and racing too. But opinions may differ as to how this can best be done.

Any one who considers the result of the season's racing in the United States and in Great Britain will be struck with the difference in the results as displayed in the development of type. As to what it has been here I need not say, you have done so more clearly than I could. Size every way is victorious, more beam, more depth, more lead, more sail, more crew, more money, and monstrosities, good for smooth water racing and good for nothing else. But in Great Britain Yarana beats Petronilla, with more beam and sail, all around the islands. May and Neptune with their sail plans cut down to bring them into the 40 rating to even less than a snug cruiser's allowance sweep their class. In the 20's the new Vreda, head of the class, has gone back to the dimensions that have been accepted as the best possible for a cruising 20-tonner, 45ft. long by 10.5 wide with 2,600ft. of sail. In the 10's the best boats out of a score of racers are Dis (a smaller Vreda), Dolly Varden, a comfortable old square-sterned cruiser, and Lollypop, a 30ft. boat with 1,400ft. of sail, designed for a cruiser and not for racing at all. The "lengthers," such as Curtsy and Verena, are out of it altogether. All along the line sail and size have been routed effectually.

Why such a difference? At the first blush one would say that the system of measurement must be radically different to produce such different results. But it is not so. Both countries measure by length and sail; and not long since, when the question of racing Katrina against Yarana was up, the *Field* showed that the latter's time allowance from the former was almost identical by the rule of the N. Y. Y. C. and the British Y. R. A. Where, then, is the difference? for difference there must be to produce such marked difference in results. In his introducton to "English and American Yachts," Mr. Burgess says: "It was not the measurement as a basis for allowance which killed the beamy boat [in Great Britain], but the unfortunate classification by this measurement, which compelled a wide boat to compete with boats far longer and larger every way." Substitute length for beam, and you have the reason of the difference between the result of the English and American racing rules. It is classification, not measurement, that makes the difference.

The British are the more logical in this matter. If length and sail are the two factors of size to be taken into account in measurement, then surely classification should be by reference to these two factors also, and that is what the British rule does. For a 20-rater you may have your boat as long as you please and as much sail as you please, but the combined product of length and sail must not exceed such a number as when divided by 6,000 will give 20, *i. e.*, 120,000. A man is free to experiment in any way he pleases, but with the class limit fixed hard and fast with reference to both factors of size, it is impossible to outbuild.

By the rules of the United States one factor only, that of length, is taken into account in classification, the other is used only in calculating allowance. The size of the class is fixed only in one direction, in all others it is free to grow as it pleases. So every man takes all the length the class allows, and enters into a competition, the result of which no one can foretell, to pile up beam and draft and lead and sail. The work of outbuilding is going on as briskly as ever it did under the old Y. R. A. rule in England. A heavier tax on sail may do something. It is hard to say what its effects on type would be. As like as not, as the English designers pointed out in discussing, in their evidence before the committee of the Y. R. A., the probable effect of the continuance of the severe restriction on sail in the B and C classes, it would result in cutting down displacement to an undesirable extent. But time allowance is always unsatisfactory. The object of establishing classes at all is to do away with the necessity of it as far as possible. And there can be no doubt that if the class limit were fixed by both factors of size, designers would bring their boats exactly up to the limit, and the races would be practically without allowance.

Consider the effect on the 40-footers of classifying them by both length and sail area. As it is, the only way one can hope to beat Baboon, let us say, is by a bigger boat; that is what Mr. Morgan and others hope to do. But suppose the change is made. Then how does the problem stand? Suppose, for illustration, we consider the English 20 rating which corresponds most nearly with the 40-footers. Baboon has, I suppose, about 3,000ft. of sail, therefore $\frac{40\times3,000}{6,000}=20$. Now try her with Vreda or Bayadere. Then we have $\frac{45\times2.666}{6,000}=20$. Then we have a competition that will actually tell us something of type, a competition where model must win, not size. I do not suppose anybody will have much doubt that in good racing weather the long lean boat would beat the sail carrier easily, while apart from speed the former would be all that was desirable and the latter all that was not. All the difficulties of slight construction, tearing out the inside of a boat before a race, etc., disappear at once. Because if you take the length you must take a small area, and the consequent necessity for all these tricks is gone.

Pardon this lengthy scrawl, but it does seem to me that logic and experience alike point to the desirability of classifying by both factors of measurement instead of by one.

ECONOMY.

EASTERN Y. C.—The 19th annual meeting of the Eastern Y. C. was held on Feb. 2 in Boston, the following officers being elected: Com., Henry S. Hovey, schr. Fortuna; Vice-Com., Alanson Tucker, schr. Clytie; Rear-Com., F. Gordon Dexter, schr. Foam; Sec., Edward Burgess; Treas., Patrick T. Jackson, Jr.; Meas., Edward Burgess; Council at Large, Charles O. Foster and J. Malcolm Forbes, the other members of the council being the flag officers, treasurer and chairman of the house and regatta committees; Regatta Committee, Charles H. Joy (chairman), J. Story Fay, Jr., T. Denny Boardman, William S. Eaton, Jr., and Richard D. Sears; Committee on Admissions, J. Malcolm Forbes (chairman), Frederic Cunninghain, B. W. Crowninshield, Augustus Hemmenway, F. Gordon Dexter, Percival L. Everett, John A. Burnham, E. V. R. Thayer, Henry D. Burnham, T. Denny Boardman and A. A. Lawrence; House Committee, J. Henry Sleeper (chairman), B.W. Crowninshield, F. E. Peabody, C. Linzee Tilden and Henry H. Buck. The club has a membership of over 600.

A STEAM YACHT IN COLLISION.—The steam yacht Meteor, Mr. A. E. Bateman, American Y. C., left Norfolk on Feb. 14 at 3 P. M. for Old Point Comfort, in charge of Capt. O. Ludlow. Beside her owner and his family she had on board the Rev. Canon Knox Little and son, of Worcester, Eng., Gen. V. D. Groner and several ladies. When between Sewell's Point and the Rip Raps the yacht collided with the sidewheeler Wyanoke, of the Old Dominion Steamship Co., bound from Norfolk to New York. The bow of the Meteor was very badly damaged, while the starboard wheel of the steamer also suffered considerably. Both vessels proceeded to Norfolk where the Meteor was docked. Her damage is stated at $2,500. She was lately altered considerably in hull and rig under the direction of Mr. A. Cary Smith. It is not known yet where the blame lies.

ICE YACHTING.—The present season has proved a most disappointing one to the ice yachtsmen, there being very little good ice anywhere. Some sailing has been done on Toronto Bay, in spite of the thin ice. On Feb. 14 a race was sailed on the Hudson, at Carthage Landing, N. Y., over a 5m. course, in a strong S. W. wind. The starters were Ranger, Van Voorhees and North Star. Ranger, a lateen-rigged boat, won in 5m. On Feb. 16 the first race of the season was sailed on the North Shrewsbury, in a high wind and with snow over the ice. The course was 12m., the winner, Bella, covering it in 41m. 20s. The White Wings, of Burlington, Vt., was the last boat in, so she was shipped home. A race for the second class pennant was also sailed, being won by by the Kitty.

ATLANTIC Y. C.—At the annual meeting of the Atlantic Y. C. the following officers were elected: Com., Jefferson Hogan, yacht Haze; Vice-Com., Edwin B. Havens, yacht Athlon; Rear Com., Thomas P. Fiske, yacht Fanny; Treas., H. C. Wintringham, yacht Nomad; Rec. Sec., Paul H. Jeannot; Meas., Henry J Gielow; Cor. Sec., W. T. Wintringham; Trustees, William Peet, J. R. Maxwell, S. Loines, Jacob T. Van Wyck, P. H. Jeannot and F. C. Swan; Regatta Com., Charles T. Pierce, L. M. Sheldon, Jr., and H. B. Howell.

CORINTHIAN Y. C. OF CHICAGO.—Five new boats are now building for members of this young and active club, which will begin its series of fortnightly races in June. The club has offered a gold watch as a prize for a series of races on the Indian River, Fla., where some of its members spend the winter. The new club house at Chicago is now completed.

THE 53FT. CLASS.—The latest addition to this class in the New York Y. C. is the beautiful centerboard sloop Eleanor, owned by Police Inspector "Alex" Williams, who was elected at the last meeting. The new yacht is one of the finest in her class, and is likely to have a pull on all the cups, as her owner is not only an old sailor, but a practical mechanic and shipbuilder.

RHODE ISLAND Y. C.—The second annual dinner of the Providence Y. C. was given on Feb. 14, nearly 200 persons being present. The club has interested itself actively in favor of a naval reserve, and the subject was discussed at length during the evening. Letters were read from Sec. Whitney, Gen. Paine and Com. Soley, of the Dorchester Y. C.

RACING ON LAKE ERIE.—A match for $1,000 per side is now being talked of between the White Wings, of Hamilton, the City of the Straits, of Detroit, and the Minnie M., of Chicago. The Cleveland Y. C. is moving in the matter with its accustomed spirit, and every inducement will be offered to the three boats.

CALIFORNIA AND AUSTRALIA.—It is reported that Mr. J. D. Spreckles, owner of the schooner Lurline, will offer a $10,000 challenge cup for an international race between the yachts of the Pacific coast and Australia. Such a generous gift would give the much needed stimulus to Pacific yachting.

SEAWANHAKA COR. Y. C.—The next lecture of the Seawanhaka C. Y. C. will be delivered by Lieut. Sidney R. Staunton, U. S. N., on Feb. 23, at 8:30 P. M., sharp. The subject will be: "Aids to Navigation—Lights and Lighthouses, Buoys, Fog Signals—their Value and Reliability."

CHANGES OF OWNERSHIP.—Flossie, schooner, has been sold to Mr. J. W. Hill. She will have a new double head rig and cabin fittings. Wanda, cat, has been sold to R. E. Robbins by W. D. Sheldon. Nonpareil, cat, has been sold to Wm. O. Taylor by Edward Lanning.

IROQUOIS.—The steel schooner Iroquois, formerly the Julia, designed by Mr. A. Cary Smith, and built by Mr. C. W. Chapin in 1885, has been sold by Mr. T. J. Coolidge to a member of the Seawanhaka C. Y. C.

AN AMERICAN DESIGN FOR DUTCH WATERS.—Mr. A. Cary Smith is now at work on a design for racing centerboarder for Holland, to sail on the shoal waters of the Meuse. She will be 40ft. l.w.l., 15ft. 9in. beam., 4ft. draft.

NEW YORK YACHT RACING ASSOCIATION.—The next meeting of the New York Y. R. A. will be held at the Gilsey House, New York, on March 8.

NORMA, steam yacht, Mr. E. C. Rand, was disabled south of Cape Henlopen by the breaking of a coupling.

HUNTER'S PATENT

Safe & Rapid Loader.

Pat. April 17, 1888. Pat. April 17, 1888. Pat. May 29, 1888.

The Collins Gun Company, of Omaha, Nebraska (the oldest and largest gun house in the West), writes: "We will be only too pleased to allow you to use our name as reference, and would say that we have tried every loader that has been placed on the market, and without any hesitation pronounce your machine the only machine yet that we have ever seen that is worth anything for our use, to wit, loading wood, Schultze or black powder for trap or game shooting."

Mr. Curtis Wright, a well-known club man of Connersville, Ind, says: "The loader is at hand, and more than meets my expectations. It is a beautiful piece of mechanism, and perfect in every way; it is made for both strength and convenience, and cannot fail to take the lead in the market, as no one could ask anything better. The shooting fraternity owe you a vote of thanks for getting out so complete an article."

A number of other references on application.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps. Prices and full description address,

The White Goat,

The Forest and Stream Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

FORTY-FOURTH ANNUAL REPORT

OF THE

NEW YORK LIFE INSURANCE CO.

Office: Nos. 346 & 348 Broadway, New York.

JANUARY 1, 1889.

Amount of Net Assets, January 1, 1888.....$79,912,317.17

REVENUE ACCOUNT.

Premiums	$22,391,981.11	
Less deferred premiums, January 1, 1888	1,174,340.36	$21,127,590.75

Shooting and Fishing in Canada.

The subscriber, who has had many years' personal acquaintance as a surveyor with the forests and streams of the Maritime Provinces of Canada, as well as with those of part of Quebec, is prepared to act as resident Canadian agent for any association of sportsmen in the United States, for the purpose of pointing out and directing parties to localities for fishing as well as for hunting moose, caribou, bear and other game; also for procuring canoes, guides and hunters, and the securing of all supplies required for a camping outfit—the guides engaged would be such as are personally known to him. Proper reference given on application. EDWARD JACK, Fredericton, N. B., Canada.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, FEBRUARY 28, 1889.

VOL. XXXII.—No. 6. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE TWO DOG CLUBS.

AFTER a brief and tempestuous career the National Dog Club announces its intention to merge into the associated membership of the American Kennel Club. When the former body was organized last July we expressed the conviction that there was in this country room for two clubs, one on the scheme of the American, a club of clubs, and one working on the lines laid down by the projectors of the National, a club of individual breeders, each club working in harmony with the other for the common good. We frankly acknowledge that in taking this view we did not foresee the virulence of the assaults which were to be made upon Dr. Perry and his associates by individuals representing the older club. The character of these abusive onslaughts is so well known that there is no necessity of recalling them by specific mention. It is enough to say that while those persons who thought it their duty to bespatter Dr. Perry with charges of duplicity and bad motives may have believed all that they wrote, and may have persuaded others of the truth of their charges, no one personally acquainted with Dr. Perry and his associates ever questioned their perfect sincerity, honesty of purpose, and straightforward conduct. Dr. Perry has borne himself all the way through with conspicuous ability, dignity and credit. His club has been potent for good in a measure; beyond that, whatever benefit might have been achieved by it has been thwarted by its over-zealous, and we think mistaken, opponents.

Now that the breeders, by the action of the National Dog Club, in amalgamating with the American Kennel Club, appear to be again united, the American Kennel Club has a clear field before it; and in the future it must be judged by its record, as it has been in the past. The degree of confidence and support given to it will be measured by the good sense and justice of its actions. The good sense and justice of its actions will depend upon the composition of its delegates.

It is to be hoped that the club may commend itself by its performances, and that the kennel interests of the country may be conserved and advanced by open, fair, honest, judicious government.

PRACTICAL FOREST RESTORATION.—I.
